PROCESS FOR MANUFACTURING HIGH-PURITY O-TOLUIC ACID

Nobuyuki Tokura; Tadayoshi Takefumi; Shunichi Matsumoto, and Yoshihiro Shiokawa, all of Kurashiki, Japan, assignors to Mitsubishi Gas Chemical Company, Tokyo, Japan

Filed May 15, 1990, Ser. No. 523,868
Claims priority, application Japan, May 17, 1989, 64-121590
Int. Cl.[5] C07C *51/42*
U.S. Cl. 562—494 15 Claims

1. A process for the manufacture of high purity o-toluic acid which comprises:

subjecting an oxidation product of o-xylene to distillation to remove therefrom low boiling point components such as unreacted o-xylene and benzoic acid, and high boiling point components, of which the major component is o-methybenzyl o-toluate, thus obtaining crude o-toluic acid,

treating said crude o-toluic acid with ammonia of an amount 1 to 1.2 mole equivalent of o-phthalic acid contained in said crude o-toluic acid, and

subjecting the product thus treated to distillation.

5,011,988

RECOVERY OF IDA AND GLAUBER'S SALT FROM WASTE CRYSTAL LIQUORS

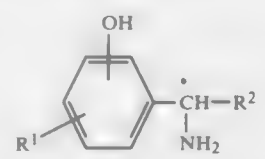
Jon C. Thunberg, Milford, N.H., assignor to W. R. Grace & Co.-Conn., Conn.

Filed Oct. 11, 1989, Ser. No. 419,920
Int. Cl.[5] C07C *227/42*
U.S. Cl. 562—554 54 Claims

1. A process for separating iminodiacetic acid and sodium sulfate decahydrate from a starting aqueous solution comprising iminodiacetic acid and sodium sulfate, said process comprising the steps of:

a. forming a slurry which is a solid mixture of iminodiacetic acid and sodium sulfate decahydrate, and a mother liquor; and

b. separating the solid mixture from the mother liquor.



5,011,989

OPTICALLY ACTIVE HYDROXYBENZYLAMINE

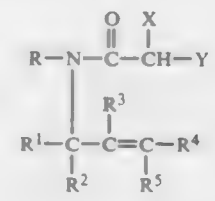
Yukio Yoneyoshi, Otsu; Gohfu Suzukamo, Ibaraki, both of Japan, and Yoji Sakito, Montreal, Canada, assignors to Sumitomo Chemical Company, Limited, Osaka, Japan

Filed Oct. 3, 1988, Ser. No. 251,789
Claims priority, application Japan, Oct. 9, 1987, 62-256017
Int. Cl.[5] C07F *5/00*
U.S. Cl. 564—8 9 Claims

1. An optically active amine-boron compound obtained from an optically active amine represented by the formula (I)

(I)

wherein R^1 denotes a hydrogen atom, lower alkyl group or lower alkoxy group; R^2 denotes a lower alkyl group; * signifies an asymmetric carbon atom; and the hydroxyl group is located on the phenyl at the ortho- or metaposition relative to the asymmetric carbon atom, and a boron hydride compound.



5,011,990

PROCESS FOR THE PREPARATION OF N-ALLYLAMIDES FROM O-ALLYLIMIDATES

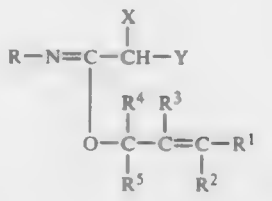
Raymond A. Felix, 5949 Ralston Ave., Richmond, Calif. 94805

Filed Dec. 27, 1988, Ser. No. 291,082
Int. Cl.[5] C07C *233/13*
U.S. Cl. 564—161 14 Claims

1. A process for the manufacture of a compound having the formula

I

wherein,



R is an unsubstituted or substituted aromatic group or an unsubstituted or substituted aliphatic group;

each of R^1, R^2, R^3, R^4 and R^5 is independently selected from hydrogen. $C_{1\text{-}4}$ alkyl or phenyl;

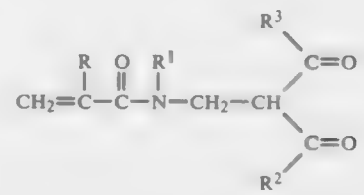
X is halogen; and

Y is halogen or an unsubstituted or substituted aromatic group;

which process comprises the rearrangement of a compound having the formula

II

wherein R, R^1, R^2, R^3, R^4, R^5, X and Y are defined above, by treatment of said compound II with a catalytic amount of a palladium(O) transition metal catalyst.



5,011,991

2-((METH)ACRYLAMIDOMETHYL)-1,3-DIKETONES

Bernhard Nick, Ludwigshafen; Kaspar Bott, Mannheim, and Guenther Schulz, Bad Duerkheim, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Jun. 2, 1989, Ser. No. 360,989
Claims priority, application Fed. Rep. of Germany, Jun. 8, 1988, 3819455
Int. Cl.[5] C07C *235/00*
U.S. Cl. 564—204 3 Claims

1. A 2-[(meth)acrylamidomethyl]-1,3-diketone of the general formula (I)

(I)

where R, R^1, R^2 and R^3 are each independently of the others defined as follows:

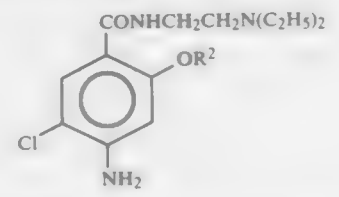
R as hydrogen or methyl,

R^1 as hydrogen, methyl or ethyl,

R^2 and R^3 each as alkyl of from 1 to 6 carbon atoms or unsubstituted aryl of from 6 to 20 carbon atoms or a phenyl radical substituted by one halogen radical or one phenyl radical or one or two alkyl radicals, R^2 and R^3 being identical to or different from each other.

5,011,992

PHARMACOLOGICALLY ACTIVE SUBSTITUTED BENZAMIDES



Ivo Monkovic, Fayetteville, and David Willner, Dewitt, both of N.Y., assignors to Bristol-Myers Squibb Comany, New York, N.Y.

Continuation of Ser. No. 876,020, Jun. 19, 1986, abandoned, which is a continuation-in-part of Ser. No. 729,513, May 6, 1985, Pat. No. 4,808,624, which is a continuation-in-part of Ser. No. 625,742, Jun. 28, 1984, abandoned. This application Aug. 22, 1989, Ser. No. 397,650

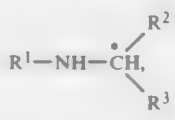
PROCESS FOR THE PREPARATION OF OPTICALLY ACTIVE SECONDARY AMINES

Henoit Pugin, Münchenstein; Gerardo Rimos, Arlesheim, and Felix Spindler, Starrkirch-Wil, all of Switzerland, assignors to Ciba-Geigy Corporation, Ardsley, N.Y.



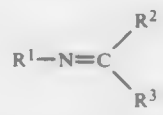
Filed Jul. 19, 1988, Ser. No. 221,403

Claims priority, application Switzerland, Jul. 31, 1987, 2870/87

Int. Cl.[5] **C07C** *209/88*

U.S. Cl. 564—302 **11 Claims**

1. A process for the preparation of optically active secondary N-aliphatic amines of the formula I



(I)

in which R^1 is linear or branched C_1–C_{12}alkyl, cycloalkyl having 3 to 8 ring C atoms, heterocycloalkyl which is linked via a C atom and has 3 to 8 ring atoms and 1 or 2 heteroatoms selected from the group consisting of O, S and NR^4, a C_7–C_{16}aralkyl or C_1–C_{12}alkyl which is substituted by the cycloalkyl or heterocycloalkyl or heteroaryl mentioned each of which can be unsubstituted or substituted by C_1–C_{12}alkyl, C_1–C_{12}alkoxy, C_1–C_{12}alkylthio, C_1–C_6halogenoalkyl, halogen, —OH, —CN, C_6–C_{12}aryl, C_6–C_{12}aryloxy, C_6–C_{12}arylthio, C_7–C_{16}aralkyl, C_7–C_{16}aralkoxy or C_7–C_{16}aralkylthio, it being possible for the aryl radicals in turn to be substituted by C_1–C_4—alkyl, C_1–C_4alkoxy, C_1–C_4alkylthio, halogen, —OH, —CN, —$CONR^4R^5$ or —$COOR^4$, secondary amino having 2 to 24 C atoms,

R^5 being H or independently being as defined for R^4 and R^4 being C_1–C_{12}alkyl, phenyl or benzyl, or R^4 and R^5 together being tetramethylene, pentamethylene or 3-oxapentylene; R^2 and R^3 are different from one another and are C_1–C_{12}alkyl which is unsubstituted or substituted by —OH, —CN, halogen, C_1–C_{12}alkoxy, benzyloxy, secondary amino having 2 to 24 C atoms,

or —$COOR^4$, or are cycloalkyl having 3–8 ring C atoms, C_6–C_{12}aryl which is unsubstituted or substituted as above for R^1 where the latter is aralkyl and aryl, or C_7–C_{16}aralkyl or —$CONR^4R^5$ or —$COOR^4$ in which R^4 and R^5 are as defined above; or R^1 is as defined above and R^2 and R^3 together are alkylene which has 2 to 5 C atoms and is, if appropriate, interrupted by 1 or 2 —O—, —S— or —NR^4— groups, and/or is unsubstituted or substituted by =O or as above for R^2 and R^3 when the latter are alkyl, and/or is condensed with benzene, furan, thiophene or pyrrole which is unsubstituted or substituted as mentioned above for the aryl radicals, or R^2 is as defined above and R^1 and R^3 together are alkylene which has 2 to 5 C atoms and is, if appropriate, interrupted by 1 or 2 —O—, —S— or —NR^4— groups, and/or is unsubstituted or substituted by =O or as above for R^2 and R^3 when the latter are alkyl, and/or is condensed with benzene, furan, thiophene or pyrrole which is unsubstituted or substituted as defined above, and * is predominant R-configuration or S-configuration, by the asymmetric catalysed hydrogenation of prochiral ketimines of the formula II

(II)

in which R^1, R^2 and R^3 are as defined above, in the presence of complex salts of a noble metal having chiral ligands, which comprises carrying out the hydrogenation at a temperature from −20° to 80° C. and under a hydrogen pressure from 10^5 Pa to 10^7 Pa and adding to the reaction mixture catalytic amounts of an iridium compound of the formula III or IIIa

(III)

or

(IIIa)

in which X is two olefin ligands or a diene ligand, Y is a chiral diphosphine the secondary phosphine groups of which are attached through 2–4 C atoms and which, together with the Ir atom, forms a 5-membered, 6-membered or 7-membered ring, or Y is a chiral diphosphinite the phosphinite groups of which are attached via 2 C atoms and which, together with the Ir atom, forms a 7-membered ring, Z is Cl, Br or I and A⊖ is the anion of an oxygen acid or complex acid.

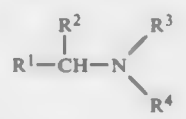
PROCESS FOR THE PREPARATION OF AMINES

Wolfgang Kiel, Odenthal, and Heinz Ziemann, Leichlingen, both of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany



Filed Jul. 5, 1989, Ser. No. 375,762

Claims priority, application Fed. Rep. of Germany, Jul. 20, 1988, 3824519; Oct. 13, 1988, 3834848

Int. Cl.[5] **C07C** *209/24, 209/26, 209/28*

U.S. Cl. 564—321 **18 Claims**

1. A process for the preparation of amines of the formula

in which

R^1, R^2 and R^3 independently of one another denote hydrogen, straight-chain or branched C_1–C_{12}-alkyl, C_3–C_8-cycloalkyl, C_6–C_{12}-aryl or C_7–C_{10}-aralkyl and

R^4 represents hydrogen, straight-chain or branched C_1–C_{20}-alkyl, C_6–C_{12}-aryl, C_3–C_8-cycloalkyl or C_7–C_{10}-aralkyl,

where at least one of the radicals R^1 to R^4 represents aryl or aralkyl which are monosubstituted to trisubstituted by halogen in the aromatic moiety,

by catalytic hydrogenation of reaction products of oxo compounds of the formula

and nitrogen compounds of the formula

$$R^3—NH—R^4$$

with the abovementioned meanings for R^1 to R^4, which is characterized in that a Ni-containing and/or Co-containing catalyst is employed and that the reaction is carried out in the presence of organic sulphur compounds of the formula

$$R^5—S(=O)_n—R^6$$

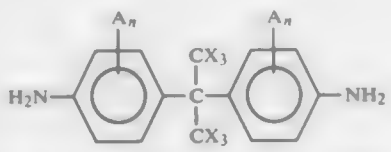
which

R^5 and R^6 independently of one another denote straight-chain or branched C_1–C_{12}-alkyl, hydroxy-C_2–C_{12}-alkyl, carboxy-C_1–C_{12}-alkyl or phenyl and furthermore

R^5 and R^6 together may represent —CH=CH—CH=CH—, —$(CH_2)_4$—, —$(CH_2)_5$—, —$(CH_2)_5$—, —$(CH_2)_2$—S—$(CH_2)_2$— or —$(CH_2)_2$—O—$(CH_2)_2$—

R^6 additionally may denote hydrogen or CO-C_1–C_{12}-alkyl and

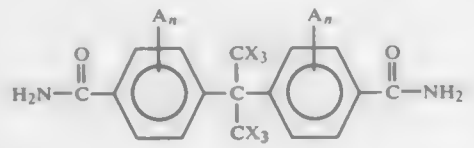
n assumes the value 0 or 1.



5,011,997

PROCESS FOR BIS(4-AMINOPHENYL)HEXAFLUOROPROPANE

James R. Hazen, Coventry, and William R. Lee, E. Providence, both of R.I., assignors to Hoechst Celanese Corp., Somerville, N.J.



Filed Oct. 7, 1987, Ser. No. 105,857

U.S. Cl. 564—335 **7 Claims**

1. A process for the preparation of a substituted or unsubstituted aromatic diamine having the formula:

wherein: A is a substituent which is independently selected from lower alkyl of 1 to 3 carbons, chloro or fluoro; n is an integer independently selected from 0 to 2; X is a halogen selected from chloro and fluoro; comprising:

(1) a first step of dispersing in an alkaline reaction medium an aromatic diamide of the formula:

wherein A, n and X have the meanings set forth above;

(2) a second step of contacting said diamide with an alkali metal hypohalite in an amount effective to rearrange said diamide to said diamine; and

(3) subjecting said reaction mixture of said second step to reducing conditions whereby any reaction by-product formed in said second step is converted to said diamine.

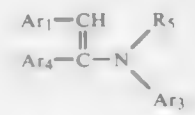
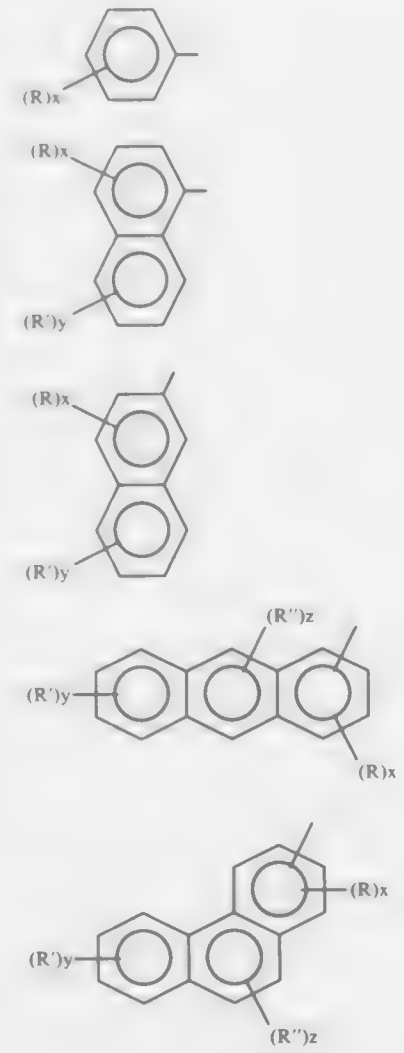
AROMATIC TERTIARY AMINES, ENAMINES, DEOXYBENZOINS AND BENZILS

Allan S. Hay, 5015 Glencairn Ave., Montreal, Quebec H3W 2B3, and Martino Paventi, 11786 28th Avenue, Montreal, Quebec H1E 9Z7, both of Canada



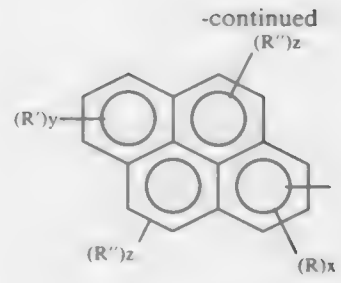
Filed Jan. 6, 1990, Ser. No. 475,992
Int. Cl.[5] **C07C** *211/45, 211/55*
U.S. Cl. 564—384 **2 Claims**

1. An enamine of formula (V):



(V)

wherein Ar_1, Ar_3 and Ar_4 are each aromatic radicals independently senamine of formula (V):



(V)

wherein Ar_1, Ar_3 and Ar_4 are each aromatic radicals independently selected from:

-continued

x and y are integers independently selected from 0, 1, 2 or 3 and z is an integer independently selected from 0, 1 or 2 and R, R′ and R″ are each independently selected from halogen atoms selected from F, Cl and Br; alkyl of 1 to 6 carbon atoms, alkenyl of 2 to 6 carbon atoms; aryl of 6 to 12 carbon atoms; aralkyl of 7 to 18 carbon atoms, aralkenyl of 8 to 18 carbon atoms, alkoxy of 1 to 6 carbon atoms, thioalkoxy of 1 to 6 carbon atoms; aryloxy of 6 to 12 carbon atoms and thioaryloxy of 6 to 12 carbon atoms, and R_5 is alkyl of 1 to 8 carbon atoms or a radical Ar_6, wherein Ar_6 is an aromatic radical as defined for Ar_1, Ar_3 and Ar_4 above.

5,011,999

PROCESS OF PREPARING NON-CYCLIC POLYALKYLENEPOLYAMINES EMPLOYING GROUP VB METAL CATALYSTS

Robert G. Bowman; George E. Hartwell; David C. Molzahn, all of Midland, Mich.; Enrique G. Ramirez, and John E. Lastovica, Jr., both of Lake Jackson, Tex., assignors to The Dow Chemical Company, Midland, Mich.

Filed Feb. 23, 1989, Ser. No. 314,528
Int. Cl.[5] **C07C** *209/16, 209/64;* **C07D** *295/023, 295/13*
U.S. Cl. 564—479 **26 Claims**

1. A process for preparing non-cyclic polyalkylenepolyamines comprising contacting a difunctional aliphatic alcohol and a reactant amine in the presence of a catalyst under reaction conditions such that a mixture of polyalkylenepolyamines enriched in non-cyclic products is formed, the catalyst containing (a) a niobium phosphate or tantalum phosphate wherein the mole ratio f phosphorus to niobium or tantalum is no greater than about 1.3 or mixtures thereof, or (b) mixtures of said niobium and/or tantalum phosphates with a Group VB metal oxide.

TOTAL SYNTHESIS OF CHIRAL 2-AMINO-1,3-DIOLS

Carl R. Illig, and Alexander L. Weis, both of Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Oct. 30, 1989, Ser. No. 428,799
Int. Cl.[5] **C07C** *209/42*
U.S. Cl. 564—489 **3 Claims**

1. A process for the preparation of chiral 2-amino-1,3-diols comprising the steps of:

A. Performing an aldol condensation with a 3-haloacetylated chiral oxazolidinone with an aldehyde using conditions which preserve the chirality of the resulting aldol condensation product;

B. Treating the aldol condensation product with an alkali metal azide;

C. Treating the product of step B with a borohydride reagent to produce a chiral 2-azido-1,3-diol product; and

D. Reducing the azide of step C to an amine to produce the chiral 2-amino-1,3 diol product.

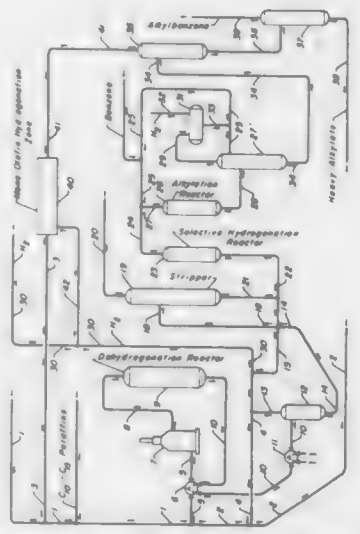
PROCESS FOR THE PRODUCTION OF ALKYLAROMATIC HYDROCARBONS USING SOLID CATALYSTS



Bipin V. Vora, Darien, and Paul R. Cottrell, Arlington Heights, both of Ill., assignors to UOP, Des Plaines, Ill.

Continuation-in-part of Ser. No. 290,479, Dec. 29, 1988, abandoned. This application Sep. 18, 1990, Ser. No. 584,214

Int. Cl.[5] C07C *2/66*

U.S. Cl. 585—315 **7 Claims**

1. In a process for the production of an alkylaromatic hydrocarbon by the reaction of an aromatic hydrocarbon with monoolefinic hydrocarbons in the presence of paraffinic hydrocarbons wherein a C_6–C_{22} paraffinic hydrocarbon feed and a recycle stream are combined and the combined stream is passed through a dehydrogenation reaction zone maintained at dehydrogenation conditions effective to produce a vapor phase dehydrogenation reactor effluent stream comprising C_6-minus light hydrocarbons, C_6–C_{22} paraffinic hydrocarbons, C_6–C_{22} monoolefinic hydrocarbons, C_6–C_{22} diolefinic hydrocarbons and hydrogen, that is cooled and partially condensed to form a vapor-liquid dehydrogenation reactor zone effluent that is passed to a vapor-liquid separation zone to separate said vapor-liquid dehydrogenation reactor effluent stream into a vapor phase process stream comprising hydrogen and a liquid phase process stream comprising dissolved hydrogen, C_6-minus light hydrocarbons, C_6–C_{22} diolefinic hydrocarbons, C_6–C_{22} paraffinic hydrocarbons and C_6–C_{22} monoolefinic hydrocarbons which is passed with a hydrogen feedstream through a selective hydrogenation reaction zone containing a selective hydrogenation catalyst that is maintained at selective hydrogenation conditions, wherein said amount of hydrogen in said hydrogen feedstream is selected to convert substantially all of said C_6–C_{22} diolefins to the corresponding monoolefinic hydrocarbons and to produce a selective hydrogenation reaction zone effluent stream substantially free of C_6–C_{22} diolefinic hydrocarbons and said liquid phase process stream is passed through a stripping zone operated at conditions to selectively

separate C_6-minus light hydrocarbons and produce a hydrogenated effluent stream comprising C_6–C_{22} paraffinic hydrocarbons and C_6–C_{22} monoolefinic hydrocarbons that is passed with an aromatic hydrocarbon stream into an alkylation zone maintained at alkylation-promoting conditions to alkylate said aromatic hydrocarbon and to produce and alkylation zone effluent stream comprising alkylaromatic hydrocarbons and C_6–C_{22} paraffinic hydrocarbons that is passed to an alkylation separation section to recover an alkylaromatic hydrocarbon stream and said recycle stream; the improvement wherein, the recycle stream is saturated, said liquid phase process stream is passed first to said stripping zone, and a liquid phase effluent from said stripping zone is passed directly to said selective hydrogenation reaction zone and the effluent from said selective hydrogenation zone is passed directly without intermediate separation from said selective hydrogenation zone into said alkylation zone, said alkylation zone contains a solid alkylation catalyst, said alkylation zone effluent contains C_6–C_{22} monoolefinic hydrocarbons and said recycle stream is passed from said separation section through a monoolefinic hydrocarbon hydrogenation zone and contacted with a hydrogenation catalyst at hydrogenation conditions to convert essentially all of said monoolefinic hydrocarbons to paraffinic hydrocarbons and completely saturate said recycle stream.

TURBULENT FLUID BED PARAFFIN CONVERSION PROCESS

Amos A. Avidan, Yardley, Pa.; Margaret Nemet-Mavrodin, Cherry Hill, and Jorge L. Soto, Westville, both of N.J., assignors to Mobil Oil Corp., Fairfax, Va.

Filed Feb. 14, 1989, Ser. No. 310,136
Int. Cl.[5] C07C *5/00*
U.S. Cl. 585—417 **24 Claims**

1. A fluidized bed catalytic process for the conversion of a feedstock comprising paraffins into a product stream containing olefins and aromatics comprising the steps of:

(a) maintaining a fluidized bed of catalyst particles under paraffin aromatization conditions in a turbulent sub-transport flow regime;

(b) controlling the relative concentration of catalyst particles having a major dimension of less than 32 microns at between 10 and 50 weight percent, said catalyst particles having an apparent particle density of about 0.9 to 1.6 grams per cubic centimeter and a size range of about 1 to 150 microns, and an average catalyst catalyst particle size of about 20 to 100 microns;

(c) charging said feedstock to said fluidized bed at a rate sufficient to provide a superficial fluid velocity within said fluid bed of about 0.3 to about 2 meters per second; and

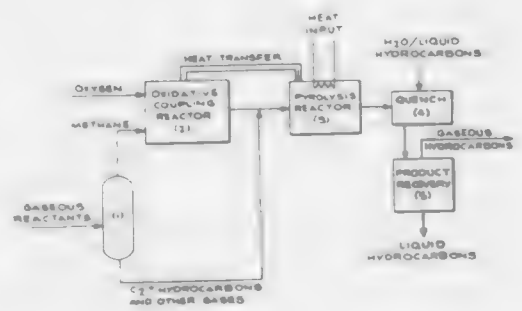
(d) recovering hydrocarbon product containing a major amount of olefins and aromatics.

5,012,027

DUAL PROFILE SURFACE-IMPREGNATED DEHYDROGENATION CATALYST AND PROCESS

Hayim Abrevaya, Wilmette, and Tamotsu Imai, Mt. Prospect, both of Ill., assignors to UOP, Des Plaines, Ill.

Continuation-in-part of Ser. No. 289,137, Dec. 23, 1988, Pat. No. 4,880,764, which is a continuation-in-part of Ser. No. 221,977, Jul. 20, 1988, Pat. No. 4,827,072, which is a division of Ser. No. 131,882, Dec. 11, 1987, Pat. No. 4,786,625, which is a continuation-in-part of Ser. No. 18,541, Feb. 25, 1987, Pat. No. 4,716,143, which is a continuation-in-part of Ser. No. 871,356, Jun. 6, 1986, abandoned. This application Nov. 9, 1989, Ser. No. 435,150
Int. Cl.[5] C07C *2/00, 4/00, 5/00*
U.S. Cl. 585—443 **24 Claims**



1. A catalytic composite comprising a first component selected from Group IA and Group IIA elements of the Periodic Table of the Elements or mixtures thereof, a second component selected from iridium, osmium, or mixtures thereof, a third component selected from one or more elements of Group IVA of the Periodic Table of the Elements, platinum, and a support having a nominal dimension (d) of from about 50 to 10,000 microns, the catalytic composite characterized in that the platinum is surface-impregnated upon the support such that the average concentration of the platinum in the outer 0.2 d layer of the support is at least 2.0 times the average concentration of the platinum in the 0.4 d core of the support, in that the second component is surface-impregnated upon the support such that the average concentration of the second component in the outer 0.2 d layer of the support is at least 2.5 times the average concentration of the second component in the 0.4 d core of the support, and in that the ratio of said outer 0.2 d layer platinum average concentration to said 0.4 d core platinum average concentration is not more than 0.8 times the ratio of said outer 0.2 d layer second component average concentration to said 0.4 d core second component average concentration.

PROCESS FOR UPGRADING LIGHT HYDROCARBONS USING OXIDATIVE COUPLING AND PYROLYSIS

Victor Gupta; Christopher L. Bodolus, both of Cleveland Heights; Christos Paparizos, Willowick, and Wilfrid G. Shaw, Lyndhurst, all of Ohio, assignors to The Standard Oil Company, Cleveland, Ohio

Filed Jul. 11, 1986, Ser. No. 884,474
Int. Cl.[5] C07C *2/00*
U.S. Cl. 585—500 **22 Claims**

1. A process for converting a gaseous reactant comprising methane or natural gas to higher molecular weight hydrocarbon products comprising:

(1) contacting said gaseous reactant with an oxidative coupling catalyst at a reaction temperature in the range of about 500° C. to about 1100° C. for an effective period of time to form an intermediate product comprising ethane, ethylene or a mixture thereof; and

(2) pyrolyzing said intermediate product at a temperature in the range of about 900° C. to about 1500° C. for an effective period of time to form said higher molecular weight hydrocarbon products using sensible heat generated during the formation of said intermediate product.

5,012,029

CONVERSION OF METHANE

Scott Han, Lawrenceville; Daniel J. Martenak, Trenton, both of N.J.; Robert E. Palermo, New Hope, and Dennis E. Walsh, Richboro, both of Pa., assignors to Mobil Oil Corp., Fairfax, Va.

Filed Oct. 16, 1989, Ser. No. 422,367
Int. Cl.[5] C07C *2/02*
U.S. Cl. 585—500 **12 Claims**

1. In a method comprising preparing a feed mixture of methane and oxygen gas or air, said mixture containing about 3 to about 15 volume percent O_2, and reacting said mixture at 150 to 3000 psig and at 350° to 500° C. whereby selectively forming said methanol, the improvement comprising, in combination:

including in said feed mixture an amount up to about 5 volume percent of a reaction modifier having 2 to 6 carbon atoms, said amount being effective to redirect said selectivity from methanol to-liquid hydrocarbons; and,

reacting said feed mixture with included modifier in the presence of a catalyst comprising a crystalline aluminosilicate zeolite having a silica to alumina ratio of at least 12 and a Constraint Index of 1 to 12, thereby directly forming a mixture of organic compounds including unreacted methane and liquid hydrocarbons.

PROCESS FOR PREPARING POLYBUTENES WITH INCREASED REACTIVITY

Kelley R. Lane, Winfield, and Wayne P. Schammel, Naperville, both of Ill., assignors to Amoco Corporation, Chicago, Ill.

Filed Oct. 10, 1989, Ser. No. 418,855
Int. Cl.[5] C07C *2/02*
U.S. Cl. 585—527 **6 Claims**

1. A process for preparation for viscous, liquid polybutene polymers with increased reactivity which have a vinylidene structure of at least 50 wt. % and are of a weight average molecular weight of from about 1,000 to about 10,000, which process comprises:

(a) feeding a butane-butene stream into a suitable reactor at a reaction temperature within the range of from about −20° C. to about +50° C., at a pressure to maintain said feedstream in a liquid state;

(b) feeding into said reactor a catalyst consisting essentially of $AlCl_3$ and a liquid organic nitro compound which is unreactive with said aluminum chloride and does not neutralize the Lewis acid, wherein said $AlCl_3$ of said catalyst is present in a range of from about 0.02 wt. % to about 0.20 wt. % of total weight of said butane-butene stream, wherein said $AlCl_3$ is solubilized in said liquid organic nitro compound to form a homogeneous catalyst and said $AlCl_3$ solubilized in said liquid organic nitro compound is present in a range of from about 2.3 wt. % to about 57 wt. % of the weight of $AlCl_3$ plus said organic nitro compound;

(c) polymerizing butenes of said butane-butene stream in the presence of said catalyst to prepare a polybutene having at least 50 wt. % vinylidene structure and a weight average molecular weight in the range of from about 1,000 to 10,000; and

(d) separating said polybutene from said reaction mixture.

PROCESS FOR SEPARATING STYRENE FROM STYRENE-CONTAINING HYDROCARBON STREAMS

David A. Weingaertner, Houston, and Lynn H. Slaugh, Cypress, both of Tex., assignors to Shell Oil Company, Houston, Tex.

Filed Aug. 7, 1989, Ser. No. 390,007
The portion of the term of this patent subsequent to Aug. 7, 2007, has been disclaimed.
Int. Cl.[5] C07C 7/00
U.S. Cl. 585—806 11 Claims

1. A process for extracting styrene from a styrene-containing feedstock which comprises:
(a) reacting said feedstock with an anthracene at a temperature ranging from about 175 to about 275° C. to form a styrene adduct with anthracene,
(b) separating said adduct from the feedstock,
(c) heating said separated adduct at a temperature of from between about 250 to about 450° C. to produce a mixture comprising anthracene and styrene, and
(d) individually separating styrene and anthracene from the mixture formed in step (c).

5,012,035

POLYPHTHALATECARBONATE MEMBRANES FOR AROMATICS/SATURATES SEPARATION

Guido Sartori; W. S. Winston Ho, both of Annandale, and Robert E. Noone, Neshanic Station, all of N.J., assignors to Exxon Research and Engineering Company, Florham Park, N.J.

Filed Jul. 11, 1990, Ser. No. 550,914
Int. Cl.[5] C07C 7/144
U.S. Cl. 585—819 8 Claims

1. A method for separating mixtures of aromatics and non-aromatics into aromatic-enriched and non-aromatic-enriched streams comprising:
(a) contacting said aromatics/non-aromatics mixture with one side of a polyphthalatecarbonate membrane, and
(b) selectively permeating the aromatic components of the mixture through the membrane.

5,012,036

POLYARYLATE MEMBRANES OR AROMATICS/SATURATES SEPARATION (C-2415)

Guido Sartori; W. S. Winston Ho, both of Annandale, and Robert E. Noone, Neshanic Station, all of N.J., assignors to Exxon Research and Engineering Company, Florham Park, N.J.

Filed Jul. 11, 1990, Ser. No. 550,916
Int. Cl.[5] C07C 7/144
U.S. Cl. 585—819 9 Claims

1. A method for separating mixtures of aromatics and non-aromatics into aromatic-enriched and non-aromatic-enriched streams comprising:
(a) Contacting said aromatics/non-aromatics mixture with one side of a polyarylate membrane, and
(b) selectively permeating the aromatic components of the mixture through the membrane.

CABLE ENTRY DEVICE FOR EMI SHIELDED CABINETS

Harley R. W. Summach, Ashton, Canada, assignor to Northern Telecom Limited, Montreal, Canada

Filed Jun. 28, 1990, Ser. No. 545,167
Int. Cl.[5] H05K *9/00*
U.S. Cl. 174—35 C 5 Claims

1. A cable entry device for admitting a shielded cable into an EMI shielded cabinet, comprising:

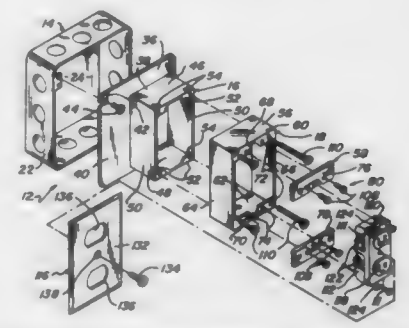
an electrically conductive first member including an elongate semicylindrical shell having a transverse integral flange;

an electrically conductive second member similar to the first member;

the members cooperating together to form, from the semicylindrical shells, an elongate cylindrical shell having an internal diameter selected to provide electrical contact with a shield of the shielded cable and to form, from the integral flanges, a transverse face to abut with the cabinet;

means for compressing the semicylindrical shells onto the shield; and

means for securing the transverse face to a bulkhead of the cabinet;



wherein the means for securing comprises external threads adjacent the flange carried on the elongate semicylindrical shells and a nut for engaging the external threads and wherein the flange is positioned approximately midway along the elongate semicylindrical shells.

5,012,043

ADJUSTABLE OUTLET BOX ASSEMBLY AND METHOD OF APPLICATION

Michael R. Seymour, 3516 N. Clarence, Wichita, Kans. 67204

Filed Feb. 21, 1989, Ser. No. 312,716
Int. Cl.[5] H02G *3/08*
U.S. Cl. 174—57 33 Claims

1. An adjustable outlet box assembly secured to a support member adapted to receive a cover panel material secured to the support member and abutting said adjustable outlet box assembly, comprising:

(a) an outlet box assembly secured to the support member;

(b) a box cover assembly connected to said outlet box assembly having a receptacle box member extended outwardly toward the to be installed cover panel material; and

(c) a variable depth ring assembly having a variable ring member telescopingly mounted about said receptacle box member, a keeper plate assembly positioned adjacent said variable ring member, and a plate anchor assembly to anchor said keeper plate assembly against the variable ring member and adjustable connector means mounted between said keeper plate assembly and said variable ring member and engagable with said receptacle box member; whereby said adjustable connector means is operable to move said variable ring member relative to said receptacle box member to place an outer surface of said variable ring member in a predetermined adjacent position relative to the cover panel member to be installed.

5,012,044

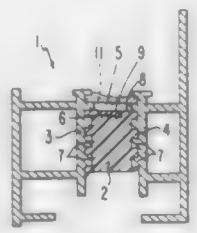
ASSEMBLY INCLUDING A LIGHT ALLOY PROFILED MEMBER HAVING ONE OR MORE INSULATED ELECTRICAL CONDUCTORS AND PROCESS FOR FORMATION THEREOF

Jean-Claude Guyard, Le Croisic, France, assignor to Norsk Hydro a.s, Oslo, Norway

PCT No. PCT/NO89/00006, § 371 Date Nov. 8, 1989, § 102(e) Date Nov. 8, 1989, PCT Pub. No. WO89/06858, PCT Pub. Date Jul. 27, 1989
PCT Filed Jan. 11, 1989, Ser. No. 399,484
Claims priority, application France, Jan. 12, 1988, 88 00272
Int. Cl.[5] H01B *7/00, 13/00;* H02G *5/00;* H01R *25/14*
U.S. Cl. 174—98 26 Claims

1. An assembly comprising:

a linearly elongated profiled section of light alloy material, said section including linearly elongated, integrally connected walls defining a cavity, at least one of said walls



having integral therewith linearly elongated parallel projections extending into said cavity;

an electrically insulating material molded into said cavity and solidified therein to from a solidified insulating filling that is intimately adhered to said section by said projections being rigidly embedded in said solidified insulating filling; and

at least one linearly elongated conductor intimately adhered to and embedded in said solidified insulating filling, said conductor being of the identical light alloy material as said section, being electrically insulated therefrom and being employable as an insulated conductor insulated by said solidified insulating filling, and extending parallel to said section said at least one conductor and said solidified insulating filling having respective bared outer surfaces.

14. A process of forming an assembly including a linearly elongated section of light alloy material and at least one linearly elongated electrical conductor of identical light alloy material electrically insulated from said section and capable of use as an insulated conductor, said process comprising:

extruding or drawing as a unitary, integral structure said

linearly elongated section including linearly elongated, integrally connected walls and a linearly elongated provisional wall connected to at least one of said walls of said section, such that said walls and said provisional wall define a cavity, with at least one of said walls having integral therewith linearly elongated parallel projections extending into said cavity, and with said provisional wall having integral therewith at least one linearly elongated projection extending into said cavity;

molding an electrically insulating material into said cavity and solidifying said insulating material to form a solidified insulating filling intimately adhered to said section and to said provisional wall by said projections being rigidly embedded in said solidified insulating filling; and

removing said provisional wall, thereby maintaining said at least one projection thereof rigidly embedded in said solidified insulating material as said at least one conductor electrically insulated from said section and employable as an insulated conductor insulated by said solidified insulating filling, and also thereby baring respective outer surfaces of said at least one conductor and said solidified insulating filling.

CABLE WITH AN OVERALL SHIELD

Kazuhiro Sato, Tochigi, Japan, assignor to Sumitomo Electric Industries, Ltd., Osaka, Japan

Filed Mar. 1, 1989, Ser. No. 317,593

Claims priority, application Japan, Mar. 3, 1988, 63-50384; Jun. 14, 1988, 63-146578

Int. Cl.[5] H01B *7/34*

U.S. Cl. 174—106 R **7 Claims**

1. A shielded cable, comprising:

an assembly of one or more core wires; and

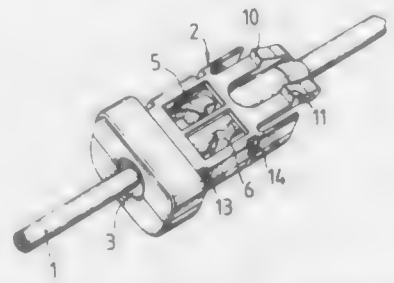
a shielding member including a plurality of element wires braided around said assembly, each of said element wires comprising:

a conductor of high conductivity; and

stainless steel strands woven around said conductor.

5,012,046

CABLE ENTRY DEVICE FOR ELECTRIC APPLIANCES



Barry Gobin, Spennymoor, United Kingdom, assignor to Electrolux Northern Limited, Newton Aycliffe, United Kingdom

Filed Jun. 22, 1989, Ser. No. 370,264

Claims priority, application United Kingdom, Jun. 23, 1988, 8814968

Int. Cl.[5] H02G *3/22, 15/007;* **H01R** *13/58*

U.S. Cl. 174—135 **4 Claims**

1. A cable entry device comprising a body in the form of a one-piece molding made from a resilient plastic material, said body including first and second body portions, at least one locking tab for locking said body portions to each other in a closed position, at least one of said body portions incorporating a pair of spaced apart cable grips for gripping a cable and resisting withdrawal of the cable from said body, a flexible and resilient web interconnecting said body portions and serving to bias said body portions into an open position, said web including an aperture for receiving the cable and constituting a hinge about which said body portions are angularly displaceable about an axis which is transverse relative to the longitudinal extent of the cable, and at least one retaining catch molded integrally with said web for retaining said body in an appliance.

5,012,047

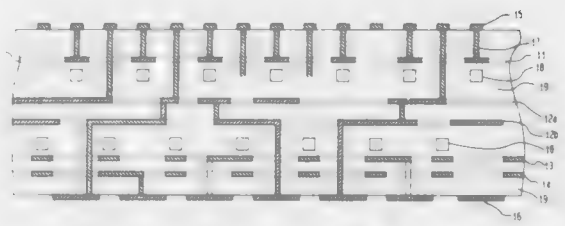
MULTILAYER WIRING SUBSTRATE

Akihiro Dohya, Tokyo, Japan, assignor to NEC Corporation, Minato, Japan

Continuation of Ser. No. 178,013, Apr. 5, 1988, abandoned. This application Feb. 16, 1990, Ser. No. 481,726

Claims priority, application Japan, Apr. 6, 1987, 62-82845

Int. Cl.[5] H01B *7/34;* **H05K** *7/20*



U.S. Cl. 174—250 **14 Claims**

1. A multilayer wiring substrate comprising:

a ground layer of mesh pattern;

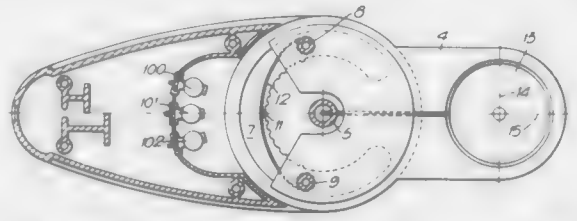
a signal wiring layer;

an insulating layer providing insulation between said ground layer and said signal wiring layer; and

a plurality of hollows provided inside said insulating layer and disposed along said mesh pattern.

5,012,048

POSITION INDICATING DEVICE



Stephen G. McGonigal, Hemel Hempstead, and Lindsay MacDonald, Buzzard, both of Great Britain, assignors to Crosfield Electronics Limited, London, England

Filed Jun. 20, 1989, Ser. No. 369,393

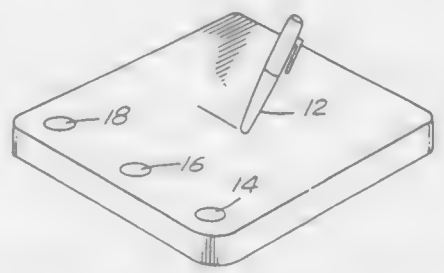
Claims priority, application United Kingdom, Jun. 21, 1988, 8814735

Int. Cl.[5] G08C *21/00*

U.S. Cl. 178—18 **7 Claims**

1. A manual position indicating device comprising a body portion that can be moved by hand across a surface; a support member movably mounted to said body portion, said support member including a graticule and associated signal generating or detecting means for interaction with position determining apparatus, whereby the relative positions of said graticule and said body portion are selected by suitably moving said support member and said body portion relatively to one another; and locking means for locking said support member relative to said body portion in a number of different positions.

5,012,049



POSITION DETERMINING APPARATUS

J. Alan Schier, 7105 Owens St., Twunga, Calif. 91042

Continuation-in-part of Ser. No. 292,947, Jan. 3, 1989, Pat. No. 4,885,433. This application Oct. 12, 1989, Ser. No. 420,352

Int. Cl.[5] G08C *21/00*

U.S. Cl. 178—19 **5 Claims**

1. A position determining apparatus for locating the position of a transmitter known to be located on a predetermined line, comprising:

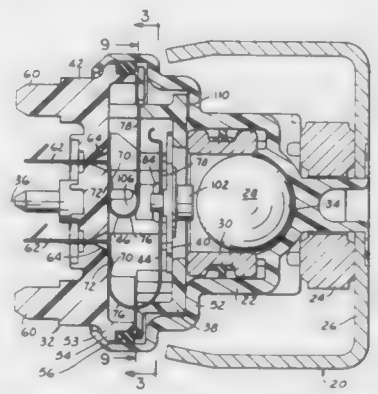
(a) transmitter means for transmitting modulated signals, said transmitter means comprising a transmitter located on said predetermined line;

(b) at least two spaced apart signal receiving means for receiving said modulated signals transmitted by said transmitter means for converting said signals to first output signals and then for transmitting said first output signals;

(c) a first detector means for receiving and analyzing said first output signals from said signal receiving means in order to determine the phase of said output signals and then to generate and transmit a second output signal corresponding thereto;

(d) computation means for receiving said second output signal and for determining the position of said transmitter means along said predetermined line.

5,012,050



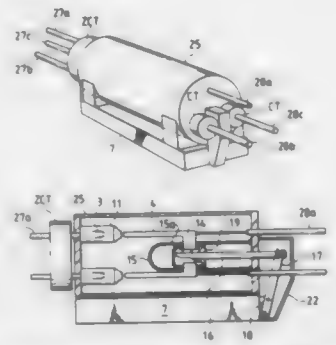
DUAL POLE SWITCH ASSEMBLY FOR AN INERTIA ACTUATED SWITCH

Michael R. Sewell, Chatham, Canada, assignor to Siemens Automotive Limited, Chatham, Canada

Filed Feb. 23, 1990, Ser. No. 483,860

Int. Cl.[5] H01H *35/14*

U.S. Cl. 200—61.45 R **12 Claims**



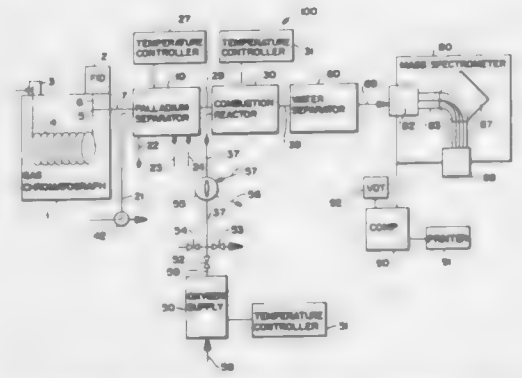
1. In an inertia switch device in which a normally restrained inertial mass overcomes its restraint in response to a predetermined velocity change, such as a deceleration, to displace the actuator of an electrical switch assembly via which the device gives a signal of the occurrence of such a predetermined velocity change, the improvement which comprises said electrical switch assembly comprising a contact enclosure containing a set of two, resiliently deflectable electrical contacts both of which contacts are disposed in resiliently deflected conditions within said contact enclosure to a predetermined spacing distance so long as the device does not experience such predetermined velocity change, said actuator being disposed on said electrical switch assembly for displacement along a predetermined path of travel with respect to said set of contacts for acting upon said set of contacts when such predetermined velocity change occurs, one of said two electrical contacts being further resiliently deflected in response to displacement of said actuator along said predetermined path of travel upon occurrence of such predetermined velocity change to engage and also further resiliently deflect the other contact of said set thereby creating switch closure of said set causing the device to give a signal indicative of the occurrence of such predetermined velocity change.

5,012,051

THREE-PHASE COMMON CONTAINER-TYPE CIRCUIT BREAKER

Masanori Tsukushi; Osamu Koyanagi; Yasuharu Seki; Tokio Goto, and Yukio Kurosawa, all of Hitachi, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Nov. 9, 1989, Ser. No. 433,956
Claims priority, application Japan, Nov. 14, 1988, 63-285690
Int. Cl.[5] H01H *33/56*
U.S. Cl. 200—148 B 5 Claims



1. A three-phase common container-type circuit breaker in which breaker units (3, 4) of three phases are accommodated in a common container (25), both ends of each of these breaker units are extended out of the container via lead conductors (27*a*, 27*b*, 27*c*, 28*a*, 28*b*, 28*c*), and a common operation unit (7) for driving the breaker units of three phases is provided on an outside of the container, wherein said breaker units of three phases and said lead conductors at both ends thereof are arranged on imaginary straight lines that are in parallel each other nearly passing through vertexes of an equilateral triangle, and said operation unit is juxtaposed at a position opposed to one side (28*b*–28*c*) of said equilateral triangle.

5,012,052

ISOTOPE-RATIO-MONITORING GAS CHROMATOGRAPHY-MASS SPECTROMETRY APPARATUS AND METHOD

John M. Hayes, Bloomington, Ind., assignor to Indiana University Foundation, Bloomington, Ind.

Filed Mar. 22, 1988, Ser. No. 173,297
Int. Cl.[5] H01J *49/26*
U.S. Cl. 250—288 22 Claims

1. A method for determining isotopic abundances of at least one substance in a mixture in a single continuous process, comprising the steps of:

mixing the mixture with a first carrier gas;

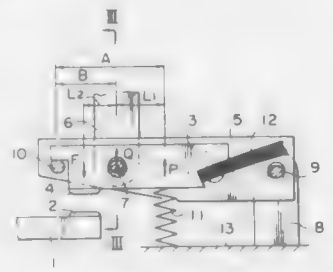
introducing the mixture and first carrier gas into a gas chromatograph to resolve the mixture into at least one discrete substance mixed with the first carrier gas;

eluting said at least one discrete substance and first carrier gas from said gas chromatograph to an interface;

separating in said interface all of said first carrier gas from said at least one discrete substance such that all of said discrete substance remains within said interface for further processing;

combusting said discrete substance to form a combustion product mixture having a plurality of combustion products; and

directing at least one of said combustion products to an isotopic mass spectrometer for determination of isotopic abundances;



wherein said at least one discrete substance is eluted from said gas chromatograph in a discrete band having a measurable width, and the width of said band is not substantially increased as said at least one discrete substance moves through said interface to said mass spectrometer.

5,012,053

CONTACT DEVICE FOR A SWITCH

Wasaburo Murai, Osaka, Japan, assignor to Terasaki Denki Sangyo Kabushiki Kaisha, Osaka, Japan

Filed Mar. 21, 1989, Ser. No. 326,283
Claims priority, application Japan, Mar. 24, 1988, 63-68241
Int. Cl.[5] H01H *3/60, 1/52*
U.S. Cl. 200—288 5 Claims

1. In a contact structure for a switching device comprising; a stationary contact rod having a stationary contact; a movable contact arm rotatably supported by a pivot on a movable contact support member;

a movable contact provided at one side of said movable contact arm in relation to said pivot;

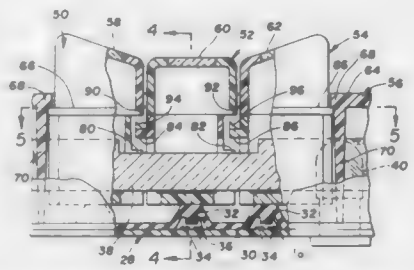
said stationary and movable contacts forming butt contacts;

said movable contact arm connected to a flexible conductor defining an electrical path when said switching device is closed or opened;

a mechanical link means engaging said movable contact support member for closing or opening said electrical path;

a contact spring means provided on said movable contact arm to bias said movable contact toward said stationary contact so as to produce a mechanical pressure there between when said switching device is closed;

a stopper means provided on said movable contact support member to prevent the rotation of said movable contact arm about said pivot when said switching device is opened and permits rotation of said movable contact arm about said pivot when said switching device is closed;



the improvement comprising said stopper means being located so as to engage with said one side of said movable contact arm, and said contact spring means being provided between another side of said movable contact arm in relation to said pivot and a stationary portion of said switching device thereby biasing said movable contact arm toward opening and eliminating chatter.

5,012,054

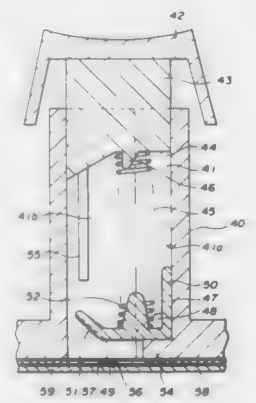
CLOSELY SPACED BACK-LIT PUSH BUTTON ARRAY

Mark Z. Rada; John W. Willis, and Marta E. Stewart, all of Kokomo, Ind., assignors to Delco Electronics Corporation, Kokomo, Ind.

Filed May 14, 1990, Ser. No. 522,696
Int. Cl.[5] H01H *9/16*
U.S. Cl. 200—314 4 Claims

1. A switch panel assembly including a housing having an aperture in one face thereof, a switch array mounted in said housing opposite said aperture to define a housing cavity therebetween, a longitudinal array of partially translucent push button elements disposed in said cavity and extending in part through said aperture, and longitudinal lightpipe means disposed in said cavity for back-lighting said button elements during low ambient lighting conditions, the improvement wherein:

each of the button elements is longitudinally retained by two or more interlocking key and keyway features formed on said housing and lateral sidewalls of said button elements; and



juxtaposed longitudinal sidewalls of said button elements have interleaved laterally extending tab and recess features within said cavity which operate to substantially prevent detectable light in said cavity from exiting the cavity between adjacent button elements.

5,012,055

SPRING LOADED PUSH-BUTTON SWITCH HAVING PREDICTABLE SWITCHING TIME DESPITE VARYING SPRING CHARACTERISTICS

Toshimasa Matsui, Iwaki, Japan, assignor to Alps Electric Co., Ltd., Tokyo, Japan

Filed Nov. 9, 1989, Ser. No. 435,221
Claims priority, application Japan, Dec. 12, 1988, 63-160388[U]
Int. Cl.[5] H01H *13/28*
U.S. Cl. 200—408 2 Claims

1. A push button switch comprising:

a switch housing;

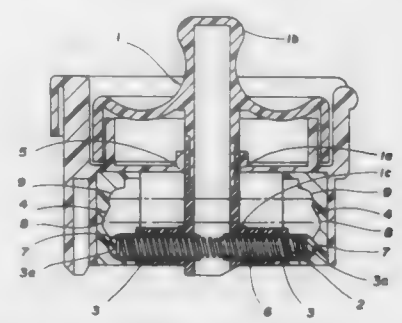
an operating member slideably received in said housing, wherein sliding said operating member in a first direction a certain distance into said housing actuates said switch;

a substantially cylindrical shaped spring means having a first end contacting said operating member and extending within said housing so that sliding said operating member in said first direction initially compresses said spring means;

a rocker element having first and second arms, said rocker element being located within said housing, said rocker element being pivotable about a pivot point such that said first arm and said second arm move in substantially opposite directions when said rocker arm pivots about said pivot point, said spring means having a second end contacting said rocker element proximate to said pivot point such that said rocker element is in a substantially non-tilted position when said operating member is at a substantially fully extended normal position, said second arm being arranged on said rocker element so as to be substantially parallel to said cylindrical shaped spring means, said second arm contacting an inner wall of said housing when said rocker element is in said substantially non-tilted position to restrict said rocker element from tilting in a first direction;

a push pin connected to said operating member and extending within said housing, said push pin not contacting said first arm of said rocker element when said operating member is in said fully extended normal position, said push pin contacting said first arm of said rocker element when said operating member is displaced a first distance into said housing by a force applied to a first end of said operating member so as to cause said rocker element to initially tilt a first amount in a second direction, opposite to said first direction, due to a force applied to said first arm by said push pin,

said push pin causing said rocker element to have an increased tilt when said operating member is displaced by a second distance so as to cause said spring means to buckle due to said increased tilt of said rocker element, wherein buckling of said spring means causes said rocker element to fully tilt without additional depression of said operating member; and



electrical contacting means being actuated by said rocker element when said rocker element is in its fully tilted position, said electrical contacting means for making or breaking an electrical circuit.

5,012,056

CONTROL DEVICE FOR USE IN AN ELECTRICAL SWITCH

Thomas Abel, and Klaus Hirschfeld, both of Luedenscheid, Fed. Rep. of Germany, assignors to Firma Leopold Kostal GmbH & Co. KG, Luedenscheid, Fed. Rep. of Germany

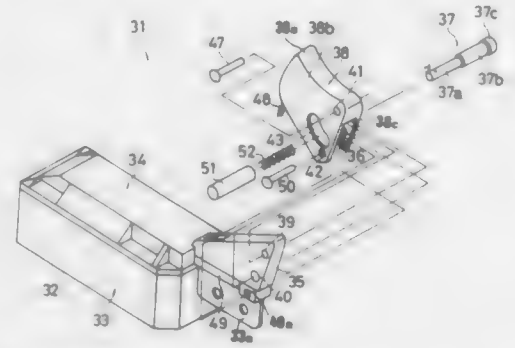
Filed Oct. 10, 1989, Ser. No. 418,511
Claims priority, application Fed. Rep. of Germany, Oct. 10, 1988, 3834390
Int. Cl.[5] H01H *25/06*
U.S. Cl. 200—519 23 Claims

1. A control device for an electrical switch with an actuation element that is mounted in a housing in such a way that it can be angularly and axially displaced, as well as at least one latching pin which can be influenced by the actuation element and

that is likewise mounted in the housing in such a way that the at least one latching pin can be angularly and axially displaced, that is spring loaded, and that has at least one latching track system assigned to it, whereby the at least one latching track system includes latching tracks having molded pathways running in axial and angular directions, through which the at least one latching pin is driven during displacement of the actuation element and whereby the molded pathways each are provided with several indented rest positions assigned to different switch settings, including in at least one of the latching tracks (4), at least one additional molded pathway (12) which runs inclined to the actuation directions of the at least one latching pins (3), which during a displacement of the at least one latching pin (3) in one of the actuation directions necessarily and simultaneously produces a displacement of the at least one latching pin (3) in the other actuation direction.

5,012,057

TRIGGER SWITCH



Tsutomu Inuyama, Yatsuka, Japan, assignor to Omron Tateisi Electronics Co., Kyoto, Japan

Filed Mar. 15, 1989, Ser. No. 323,024

Claims priority, application Japan, Mar. 15, 1988, 63-33266[U]

Int. Cl.[5] H01H *13/02*

U.S. Cl. 200—522 **3 Claims**

1. A trigger switch, comprising:

a grip member having a lock pin receiving hole;

a trigger member made of resin material and having a front end adapted to be pressed and a side wall;

a metallic pivot pin passing through said grip member for pivotally attaching said trigger member to said grip member;

trigger spring means for urging said front end of said trigger member away from said grip member;

an electric switch main body adapted to be actuated by pivotal movement of said trigger member;

a metallic lock plate fixedly secured to said side wall of said trigger member and provided with a slot having an expanded portion and a narrow portion, said lock plate being spaced from said pivot pin;

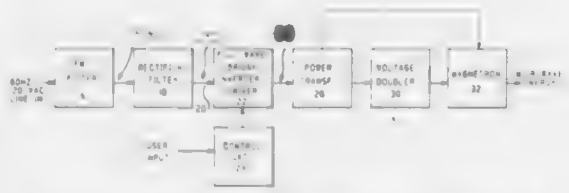
a lock pin passing through said lock pin receiving hole of said grip member and said slot provided in said lock plate so as to be axially movable, said lock pin having a large diameter portion and a small diameter portion, the large diameter portion of which can be received in said expanded portion of said slot but which cannot be received in said narrow portion of said slot;

lock pin spring means normally urging said large diameter portion of said lock pin into said expanded portion of said slot; and

a cap fitting over the small diameter portion of the lock pin against which a force can be applied against the urging of the lock pin spring means.

5,012,058

MAGNETRON WITH FULL WAVE BRIDGE INVERTER



Peter H. Smith, deceased, late of Anchorage, Ky. by Pamela S. Smith, executor , assignor to General Electric Company, Louisville, Ky.

Continuation of Ser. No. 138,138, Dec. 28, 1987, abandoned.

This application Aug. 1, 1989, Ser. No. 390,491

Int. Cl.[5] H05B *6/64*

U.S. Cl. 219—10.55 B **3 Claims**

1. A microwave energy generating system comprising:

a magnetron operable to generate microwave energy for cooking;

a power transformer having a primary winding and a magnetron powering secondary winding connected to supply power to said magnetron;

a full wave bridge inverter circuit with first and second input lines and first and second output lines, said first output line connected to a first end of said primary winding, said second output line connected to a second end of said primary winding, said inverter circuit having first, second, third, and fourth switches, each of said switches having an input terminal, output terminal, and a control terminal, each control terminal operable to close and open its associated switch, said inverter circuit further having a control circuit for controlling all of said switches by their control terminals such that,

during a series of first time intervals:

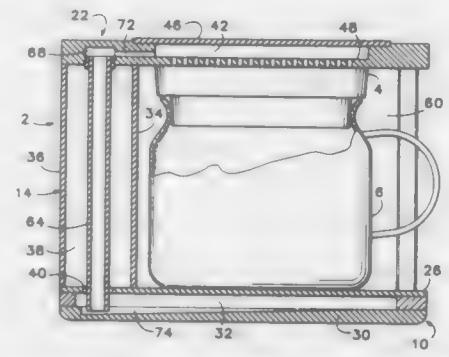
said first switch is closed to operatively connect said first input line to said second output line, said fourth switch is closed to operatively connect said second input line to said first output line, and said second and third switches are open, the closure of said first and fourth switches causing current flow in a first direction in said primary winding.

and such that during a series of second time intervals, alternating with said first time intervals:

said second switch is closed to operatively connect said second input line to said second output line, said third switch is closed to operatively connect said first input line to said first output line, and said first and fourth switches are open, the closure of said second and third switches causing current flow in a second direction, opposite to said first direction in said primary winding;

and wherein said first and second switches extend in series between said first input line and said second input line and said third and fourth switches extend in series between said first input line and said second input line, and wherein said control terminals of said first and third switches float with respect to said second and fourth switches, and further comprising an isolated drive circuit, and wherein said control circuit is operable to control said first and third switches by way of said isolated drive circuit applying signals to the control terminals of said first and third switches and wherein said isolated drive circuit includes a first capacitor which charges up when said second switch is closed and wherein the charge of said first capacitor closes said first switch responsive to said control circuit, and wherein said isolated drive circuit includes a second capacitor which charges up when said fourth switch is closed and wherein the charge of said second capacitor closes said third switch responsive to said control circuit.

5,012,059



APPLIANCE FOR HEATING WATER BY MICRO WAVE POWER

John M. Boatman, Portland, Oreg., assignor to Donald C. Riddle, Portland and William M. Bernard, Jr., Beaverton, both of, Oreg., part interest to each

Filed May 10, 1989, Ser. No. 350,611

Int. Cl.[5] H05B *6/80*

U.S. Cl. 219—10.55 E **8 Claims**

1. An appliance for dispensing hot water, comprising:

wall means defining a reservoir for receiving water to be heater, a filling aperture for introducing water into the reservoir, a heating chamber located at least partially above the reservoir, and a discharge aperture for allowing heated water to leave the heating chamber, the wall means comprising first wall means bounding the reservoir horizontally and second wall means which define the heating chamber and bound the reservoir vertically at its top, the reservoir having a bottom surface,

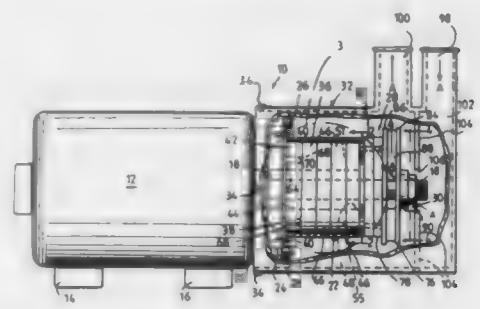
a tube extending in the reservoir and defining a passage having first and second open ends, the first end of the passage being close to the bottom surface of the reservoir and the passage being in open communication with the reservoir by way of its first end and not otherwise and opening into the heating chamber at its second end, and

a plug for sealing the filling aperture,

at least part of the wall means being substantially transparent to electromagnetic radiation within a range of wavelengths that is selected to be such that electromagnetic radiation in that range is absorbed by water, so that when the appliance is exposed to electromagnetic radiation in the selected range of wavelengths, water in the reservoir is heated and is forced from the reservoir through the passage into the heating chamber, where it is further heated and is discharged from the heating chamber by way of the discharge aperture.

5,012,060

PERMANENT MAGNET THERMAL GENERATOR



Frank J. Gerard, 501 Heath Ave., North Lithicum, Md. 21090, and Frank Gerard, 12020 Brooknoll Rd., Kingsville, Md. 21087

Filed Sep. 11, 1989, Ser. No. 405,188

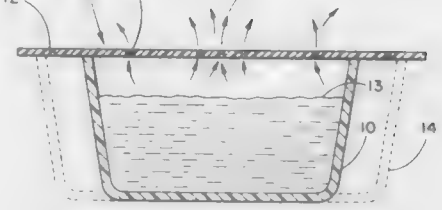
Int. Cl.[5] H05B *6/10*

U.S. Cl. 219—10.51 **9 Claims**

1. A permanent magnet thermal generator comprising at least one stationary permanent magnet, said stationary permanent magnet comprising a disc with a front surface and a rear surface with the front surface having both a north and a fourth magnetic pole located thereon and with the rear surface having both a south and a north magnetic pole located thereon with the north magnetic pole on the rear surface being located behind the fourth magnetic pole on the front surface and the south magnetic pole on the rear surface being located behind the north magnetic pole on the front surface, a rotatable rotor located adjacent said permanent magnet for rotating in the magnetic flux produced by said permanent magnet, said rotatable rotor comprising a non-ferrous heated member located in position to be heated by said permanent magnet and means for moving fluid as said rotatable rotor rotates, and housing means

located around said rotor for confining a fluid around said rotor.

5,012,061



MICROWAVE SAFETY LID

Emmett H. Lesser, 17255 N. Creek La., Farmington, Minn. 55024

Filed Jul. 9, 1990, Ser. No. 549,949

Int. Cl.[5] H05B *6/80*

U.S. Cl. 219—10.55 E **4 Claims**

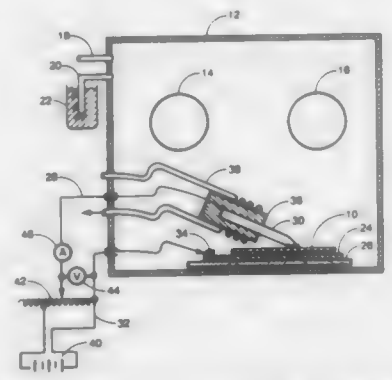
1. A universal microwave-permeable safety lid for use with an open top microwave heating vessel comprising:

a substantially planar microwave permeable member which when placed on the open top of a microwave heating vessel forms a barrier except for a plurality of relatively small gas and vapor permeable openings therethrough which allow the vessel to retain an amount of heated vapors and gases within the lid at ambient pressure and to provide for the venting of vapors and gases, above ambient pressure;

wherein the lid is in a shape describing a corresponding vessel geometry and the openings are in a pattern which distributes the venting over the cover area;

wherein the lid is of a size large enough to accommodate a plurality of sizes of open vessels substantially of the geometry described by the lid, the opening pattern further being configured to accommodate the distributive venting of vessels of several sizes;

the lid being further provided with at least one integral handle configured to extend beyond the side-wall of the vessel; and



wherein the plurality of openings are configured in the shape of back-to-back frusto-conical sections, such that they are easily cleansed, the minimum diameter occurring central to the thickness of the lid.

5,012,062

ARC-TEXTURED HIGH EMITTANCE RADIATOR SURFACES

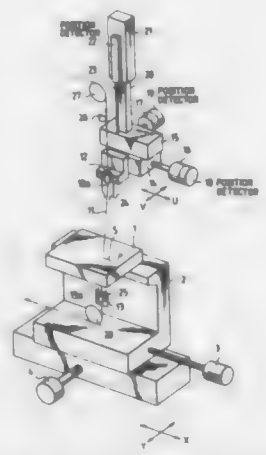
Bruce A. Banks, Olmsted Township, Cuyahoga County, Ohio, assignor to The United States of America as represented by the Administrator of the National Aeronautics and Space Administration, Washington, D.C.

Filed Jul. 18, 1989, Ser. No. 381,240
Int. Cl.[5] B23H 9/00
U.S. Cl. 219—69.11 14 Claims

10. A method of producing a durable high thermal emittance surface on a niobium radiator containing about 1% zirconium comprising

covering a portion of the surface of said radiator with a sheath of inert gas,

forming an arc at said surface of said radiator in said sheath, and



selectively moving said arc over said surface thereby texturing the same.

5,012,063

TAPER MACHINING DEVICE IN WIRE-CUT ELECTRICAL DISCHARGE APPARATUS

Tasuku Kawanabe, and Juzo Kuriyama, both of Nagoya, Japan, assignors to Brother Kogyo Kabushiki Kaisha, Aichi, Japan

Filed Sep. 28, 1989, Ser. No. 413,684
Claims priority, application Japan, Oct. 5, 1988, 63-251403
Int. Cl.[5] B23H 7/[illegible]
U.S. Cl. 219—69.12 4 Claims

1. A taper machining device in a wire electrical discharge machining apparatus for affecting taper machining to a workpiece, comprising:

an upper wire guide and a lower wire guide for supporting a wire electrode in its slanting extension;

upper and lower nozzles integrally provided with the upper and lower wire guides, respectively, for ejecting a machining liquid to the workpiece; and

regulating means,

said wire electrical discharge machining apparatus comprising a worktable extending in a first horizontal plane for mounting the workpiece thereon, a slider extending in a second horizontal plane parallel with said first horizontal plane, drive means for moving the slider in said second horizontal plane and in a vertical direction, the upper wire guide being provided at the slider;

at least one of the upper and lower wire guides and its integrally provided nozzle being horizontally movable, the wire electrode and the workpiece being relatively movable and providing a machining gap therebetween, the wire electrode having an upper bending point at the upper wire guide and a lower bending point at the lower wire guide, and

said regulating means for regulating movement of one of the upper and lower bending points within an imaginary conical body, to thereby avoid mechanical interference between the wire electrode and the upper and lower nozzles, an apex of the imaginary conical body bending defined by a remaining one of the lower and upper bending points as a reference point and the apical angle of the apex being twice as large as an allowable maximum inclination angle of the wire electrode, said regulating means further comprising position detectors for detecting at least one of a vertical and horizontal position of the slider, the position detectors generating signals indicative of said positions, and control means connected to the position detectors for controlling the drive means in response to the signal from the position detectors, said control means comprising:

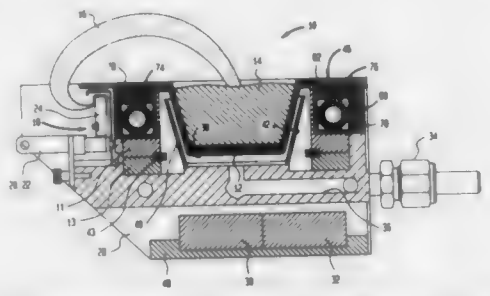
(a) means for detecting a vertical position of the slider;

(b) first means for computing a wire guide span length between the upper and lower wire guides in accordance with the detected vertical position of the slider;

(c) second means for computing a relative horizontal offsetting length between the upper and lower wire guides when the slider is at the vertical position;

(d) third means for computing a maximum inclination angle at the vertical position of the slider;

(e) comparison means for comparing the maximum inclination angle with the allowable maximum inclination angle of the wire electrode; and



(f) means for driving the drive means when the allowable maximum inclination angle is greater than the maximum inclination angle to change at least one of the parameters consisting of the vertical position of the slider and the relative horizontal offsetting length between the upper and lower wire guides.

5,012,064

ELECTRON BEAM EVAPORATION SOURCE

Ping Chang, Danville, and P. A. Joel Smith, San Pablo, both of Calif., assignors to The BOC Group, Inc., New Providence, N.J.

Filed Jun. 29, 1990, Ser. No. 546,269
Int. Cl.[5] B23K 15/00
U.S. Cl. 219—121.15 5 Claims

1. In an electron beam evaporation source having, a crucible for containing an evaporant, electron beam gun means generating an electron beam impacting the evaporant at an impact area thereof for evaporating the evaporant, a pair of pole pieces located along opposite sides of the crucible, magnetic field means transversely connecting the pole pieces and generating a magnetic field across the pole pieces for vertically deflecting the electron beam through an arc of about 270° and into the crucible, and magnetic positioning means for selectively deflecting the electron beam in a horizontal plane so that the impact area of the electron beam on the evaporant may be repositioned to fully utilize the evaporant, the improvement comprising:

the magnetic deflection means comprising a quadrapole having a set of two opposite pairs of electromagnets, attached end to end in a square-like configuration, located so that the electron beam passes between the two pairs of electromagnets, wired and oriented such that the electromagnets of one of the pairs of electromagnets act in concert to deflect the electron beam in a first direction, parallel to the pole pieces, and the electromagnets of the other of the pairs of electromagnets act in concert to deflect the electron beam in a second direction, transverse to the pole pieces, to provide a substantially uniform magnetic deflection field to horizontally deflect the electron beam and thereby to prevent substantial distortion of the impact area that would otherwise occur when repositioned;

the pole pieces having a preselected thickness and a preselected separation to produce a reduced vertical gradient in the flux density of the magnetic field above the electron beam evaporation source sufficient to prevent lengthening of the impact area that would otherwise occur when the electron beam is deflected in the first direction and away from the electron beam gun means;

the pole pieces producing tail regions in the impact area at the extreme transverse positions of deflection of the electron beam in the second direction; and

a pair of surface dipoles connected, at one end, to the pole pieces at an angle of about 45 degrees and positioned along the pole pieces so that the electron beam passes between the other of the ends of the pair of surface dipoles when in an essentially vertical location of the arc of the electron beam to substantially prevent the formation of the tail regions in the impact area at the extreme transverse positions of deflection of the electron beam in the second direction, whereby the maintenance of the impact area substantially free of distortion, lengthening, and the formation of tail regions will ensure that the size of the impact area and thus, the power density of the electron beam at the impact area and the evaporation rate of the evaporant will remain essentially constant in any position of the electron beam.

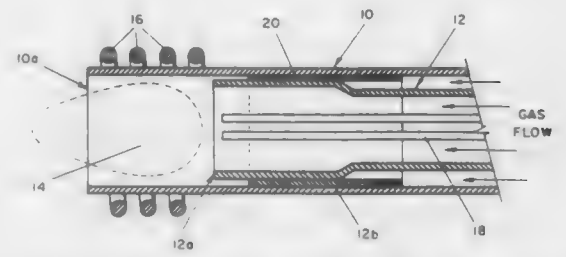
INDUCTIVELY COUPLED PLASMA TORCH WITH LAMINAR FLOW COOLING



Gary D. Rayson, and Yang Shen, both of Las Cruces, N. Mex., assignors to New Mexico State University Technology Transfer Corporation, Las Cruces, N. Mex.

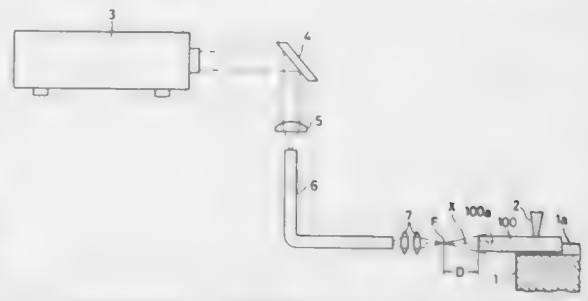
Filed Nov. 20, 1989, Ser. No. 440,233
Int. Cl.[5] B23K 9/00
U.S. Cl. 219—121.52 16 Claims

1. An inductively coupled gas plasma torch comprising:

an outer tubular sleeve and an inner tubular sleeve, said inner tubular sleeve being positioned concentrically within and spaced inwardly from said outer tubular sleeve, said outer and inner sleeves being adapted to receive a coolant gas flowing between said sleeves and a plasma gas flowing within said inner sleeve, said outer sleeve and said inner sleeve each including a discharge end, said discharge end of said inner sleeve being spaced longitudinally inwardly from said discharge end of said outer sleeve whereby there is provided a heating zone between said discharge ends of said outer and inner sleeves, said inner sleeve being stepped up in diameter along a portion of its length extending from said discharge end of said inner sleeve, and

a tubular insert having inner and outer surfaces and having a discharge end and an inlet end, said tubular insert being positioned concentrically and snugly fitted between said outer tubular sleeve and said portion of said inner tubular sleeve having a stepped up diameter, said insert further

including multiple longitudinal linear gas flow channels opening outwardly from said outer surface of said insert;



whereby coolant gas introduced into said torch between said inner and outer tubular sleeves is constrained to flow through said gas flow channels of said tubular insert and emerges therefrom in a laminar flow that extends along said inner surface of said outer sleeve through said heating zone.

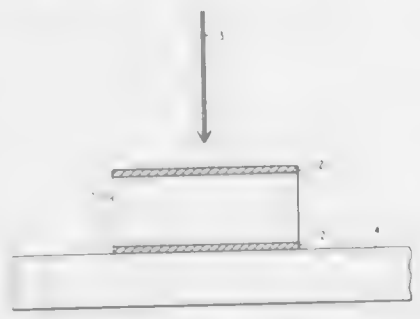
5,012,066

METHOD OF AND APPARATUS FOR MANUFACTURING EYELESS SUTURE NEEDLE

Kanji Matsutani, and Tadashi Otsuka, both of Takanezawa, Japan, assignors to Matsutani Seisakusho Co., Ltd., Takanezawa, Japan

Filed Aug. 15, 1990, Ser. No. 567,763
Claims priority, application Japan, Aug. 31, 1989, 1-223123
Int. Cl.[5] B23K 26/00
U.S. Cl. 219—121.68 13 Claims

1. A method of manufacturing an eyeless suture needle, comprising the steps of:



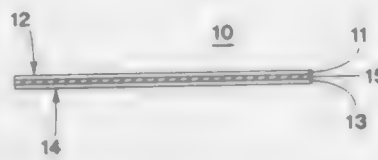
(a) forming a mounting hole in a proximal end face of a needle material in such a manner that said mounting hole extends along an axis of said needle material, a gut being adapted to be inserted into and fixed to said mounting hole; and

(b) applying an energy beam to the proximal end face of said needle material to anneal a proximal end portion of said needle material.

5,012,067
DIAMOND CUTTING METHOD

Junichi Sato, Tokyo, and Minoru Shimizu, Osaka, both of Japan, assignors to Showa Denko K.K., Tokyo and Osaka Kongo Seito Co., Ltd., Osaka, both of, Japan

Filed Oct. 20, 1989, Ser. No. 424,447
Claims priority, application Japan, Oct. 20, 1988, 63-265780
Int. Cl.[5] B23K *26/00*
U.S. Cl. 219—121.72 17 Claims

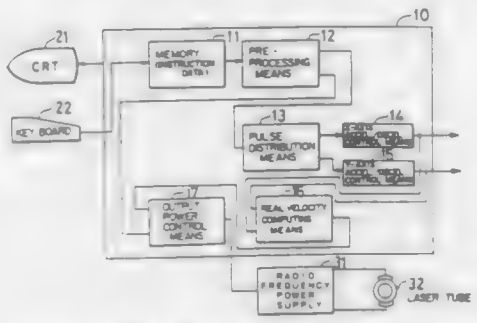


1. A method of processing a diamond workpiece, comprising forming a metallic membrane or layer on at least one surface of the diamond workpiece and then machining the diamond workpiece with a laser beam.

5,012,068
SUSCEPTOR FOR CONVERTING MICROWAVE ENERGY INTO HEAT AND METHOD OF USE

Alan R. Anderson, 707 Pheasant Run, West Chester, Pa. 19382

Filed Nov. 15, 1989, Ser. No. 436,729
Int. Cl.[5] H05B *6/80*
U.S. Cl. 219—10.55 M 32 Claims

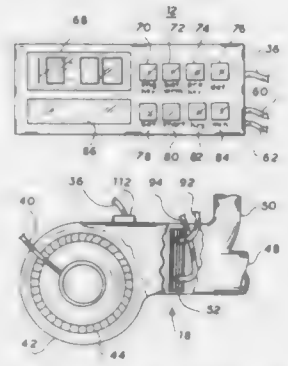


1. A process of preparing food in a microwave oven, comprising:
(a) determining the wattage of said oven;
(b) locating a susceptor means for converting microwave energy into heat in said oven, said susceptor means having a microwave interactive material integrally associated therewith; and
(c) placing a container of food in the oven directly on top of the susceptor means, said container comprising a material substantially transparent to microwave energy,
wherein said susceptor means has two opposing faces of differing susceptibility to microwave energy, a more insulating face and a less insulating face, said susceptor means positioned with its less insulating face in contact with the container in a low power oven and its more insulating face in contact with the container in a high power oven.

5,012,069
POWER CONTROL METHOD IN A CNC LASER MACHINING SYSTEM

Takeji Arai, Minamitsuru, Japan, assignor to Fanuc Ltd., Minamitsuru, Japan

PCT No. PCT/JP89/00041, § 371 Date Sep. 6, 1989, § 102(e) Date Sep. 6, 1989, PCT Pub. No. WO89/07035, PCT Pub. Date Aug. 10, 1989
PCT Filed Jan. 18, 1989, Ser. No. 415,233
Claims priority, application Japan, Jan. 29, 1988, 63-018603
Int. Cl.[5] B23K *26/00*
U.S. Cl. 219—121.62 9 Claims

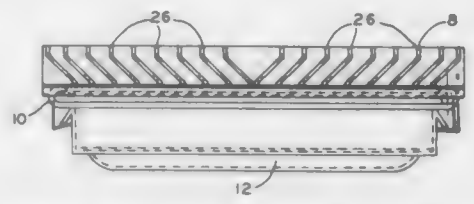


1. A power control method in a (computerized numerical control CNC) laser machining system including a CNC apparatus and a laser machining apparatus for machining a workpiece, said method comprising the step of:
lowering a machining velocity, and at the same time,
lowering an output power of a laser beam by reducing both a pulse duty ratio and a pulse frequency.

5,012,070
VEHICLE PREHEATING SYSTEM USING EXISTING VEHICLE HEATING SYSTEM

Mark E. Reed, Pierre, S. Dak., assignor to Durkin-Reed, Inc., Pierre, S. Dak.

Continuation-in-part of Ser. No. 357,213, May 25, 1989. This application Apr. 10, 1990, Ser. No. 506,817
Int. Cl.[5] B60L *1/02*
U.S. Cl. 219—202 12 Claims



1. In a vehicle having a body defining an engine compartment separated from a passenger compartment by a firewall, a liquid cooled internal combustion engine in the engine compartment, a storage battery forming a component of the vehicle electrical system, a heater assembly having a core adapted to receive heated liquid from the engine through water conduit passageways and including electrically driven fan means powered by the vehicle electrical system for discharging heated air from the heater core into the passenger compartment, the improvement comprising;
said heater assembly including a housing having at least one outlet for said discharging of heated air,
said fan means when operated defining an air flow path directing air from said heater housing through said outlet,
an electrical resistance heating unit disposed externally of said heater assembly housing and disposed adjacent said water conduit passageways,
said heating unit operable to generate heat upon the application of electrical current,
valve means disposed in said conduit passageways to reroute said liquid from said engine to said electrical resistance heating unit,
an electrical connection on said vehicle adapted to be supplied with alternating current from an external source,
electrical circuits between said electrical connection and said heater assembly,
said circuits including a first circuit joined to said electrical resistance heating unit and a second circuit joined to said fan means,
said electrical circuits including means to utilize said supplied electrical current through said second circuit to operate said fan means and through said first circuit to operate said heating unit, whereby
externally supplied alternating current is capable of operating both said electrical resistance heater unit and said fan means to preheat the confines of the vehicle passenger compartment.

5,012,071
GREASE SPLATTER CAPTURE SHIELD

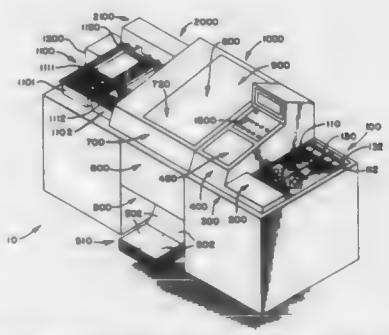
Mitchell C. Henke, Fort Wayne, Ind., assignor to Lincoln Foodservice Products, Inc., Fort Wayne, Ind.

Filed Nov. 14, 1989, Ser. No. 436,383
Int. Cl.[5] F27D *7/04*; F24C *15/12*; A47J *36/38*
U.S. Cl. 219—400 3 Claims

1. A splatter capture shield for a baking pan adapted for use in an impingement oven, said capture shield comprising:
a plurality of elongate shield elements, reach said shield element including a vertically straight air flow receiving portion adapted for receiving heated, columnated jets of air, said shield elements also having slanted portions arranged to be vertically overlapping whereby vaporized particles flowing upward through said capture shield tend to deposit on one of said shield elements, and said shield elements being spaced apart to allow air to flow through substantially all of said capture shield.

5,012,072
CONFORMABLE FUSING SYSTEM

Robert G. Martin, Irondequoit, and Alan M. Litman, Webster, both of N.Y., assignors to Xerox Corporation, Stamford, Conn.



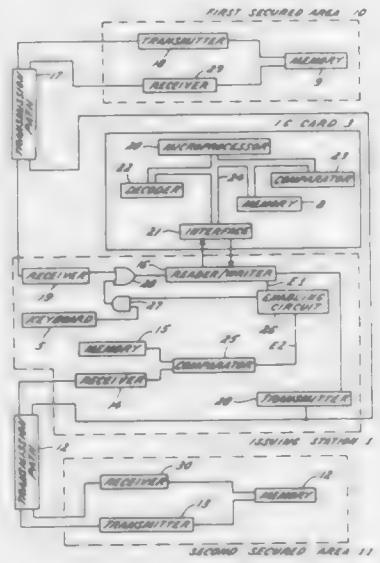
Filed May 14, 1990, Ser. No. 522,934
Int. Cl.[5] G03G *15/20*
U.S. Cl. 219—469 12 Claims

4. In an electrostatic copying machine having fusing apparatus of the type defining a nip through which support material bearing toner images is moved in a given direction for fusing the toner images onto the support material, the fusing apparatus comprising:
a heater roll disposed transverse the direction of movement of the support material, the heater roll having a longitudinal direction and a hoop direction, being stiff in the longitudinal direction and conforming in the hoop direction,
a core supporting the heater roll, the heater roll being disposed about the circumference of the core, the core including a rigid shaft, a sleeve disposed about the shaft, and a plurality of flexible fingers interconnecting the shaft and the sleeve, the fingers adapted for compression toward the shaft, and
a back up roll disposed transverse the direction of movement of the support material, the back up roll being stiff in the longitudinal direction and conforming in the hoop direction, the engagement of the heater roll and the back up roll defining an elongated, essentially flat nip.

5,012,073
DATA CARD AND MAILER DATA MATCH/INSERTER SYSTEM

Donald W. Hewitt, Roseville, and David D. Seibel, Bloomington, both of Minn., assignors to Fujitsu Limited, Kawasaki, Japan

Continuation of Ser. No. 866,941, May 27, 1986, Pat. No. 4,734,380, which is a division of Ser. No. 482,964, Apr. 8, 1983, Pat. No. 4,622,671, which is a continuation-in-part of Ser. No. 469,891, Feb. 25, 1983, abandoned. This application May 20, 1987, Ser. No. 53,608
Int. Cl.[5] G06F *15/20*
U.S. Cl. 235—375 74 Claims



1. An inserter system for attaching a card of generally planar, rectangular configuration to a form at a predetermined card attachment location thereon by inserting first and second diagonally opposite corners of the card into corresponding first and second card-corner receiving apertures provided in the form and defining the said card attaching location thereof, said apertures being spaced apart by a distance less than the diagonal dimension of the card between said first and second diagonally opposite corners thereof, comprising:
a card inserter mechanism including means for receiving and releasably retaining a card in a first position,
means for positioning a mailer form with the said card attachment location thereof aligned with and substantially parallel to and displaced from said first position of the releasably retained card to be inserted therein,
said inserter mechanism further including means for supporting said card in a central portion thereof and means for engaging said card adjacent said first and second diagonally opposite corners for deflecting said corners beyond said first position and towards said form, and
means for actuating said receiving and supporting means to release said card and for actuating said deflection means to deflect said diagonally opposite corners of said card about said central support means to enable insertion of said first and second diagonally opposite corners of said card into the said corresponding apertures of the card attachment location of said mailer form aligned therewith, and for thereafter displacing said central support to permit said card to flex to its original planar configuration with the said diagonally opposite corners thereof projecting through the said corresponding apertures and underlying the form, thereby attaching the card to the form.

5,012,074

APPARATUS FOR SECURING AN IC-CARD ISSUING STATION

Shigeo Masada, Itami, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 16, 1988, Ser. No. 168,695
Claims priority, application Japan, Mar. 24, 1987, 62-69830
Int. Cl.[5] G06F *15/30*
U.S. Cl. 235—379 13 Claims

1. A system at an issuing station for issuing IC cards in which the card manufacturer records a manufacturing code in the card and separately transmits the manufacturing code to an issuing station from a secured source, said system comprising in combination:

manufacturer authorization checking means responsive to the manufacturing code recorded in said card and including means for receiving the manufacturing code from the manufacturer, said manufacturer authorization checking means including means for comparing the received and recorded manufacturing codes, and means for producing an authorized card signal when a match is detected between said received and recorded manufacturing codes, thereby identifying the presence of an authorized card;

issuer validity checking means for receiving an issuer identification code from a secured control room and comparing the received issuer identification code with an issuer identification code stored in a memory at the issuing station, said issuer validity checking means producing an issuer authorized signal when a match is detected between said received and stored issuer identification codes; and

means responsive to the presence of both said authorized card and issuer authorized signals for enabling said issuing station to record information in and issue said card.

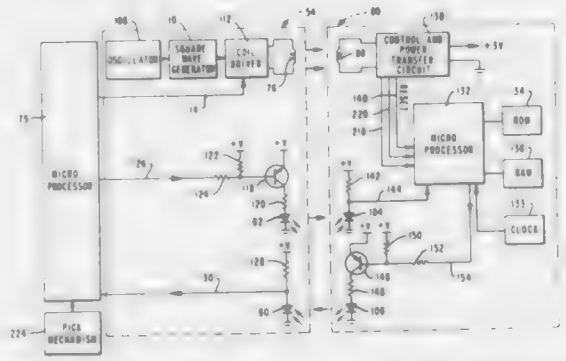
5,012,075

PORTABLE CONTAINER FOR VALUABLE ITEMS

Brian G. Hutchison, Dundee, Scotland, and Ian Gahan, Perthshire, Great Britain, assignors to NCR Corporation, Dayton, Ohio

Filed Dec. 26, 1989, Ser. No. 456,514
Claims priority, application United Kingdom, Sep. 15, 1989, 89209407
Int. Cl.[5] G06F *15/30*; E05G *1/00*
U.S. Cl. 235—379 10 Claims

1. The combination of a container for valuable items and a container receiving means for receiving said container, said container comprising:



door means for said container, said door means having opened and closed positions relative to said container receiving means so as to enable the transfer of items to take place out of or into said container when said container is operatively positioned in said container receiving means and said door means is in said opened position;

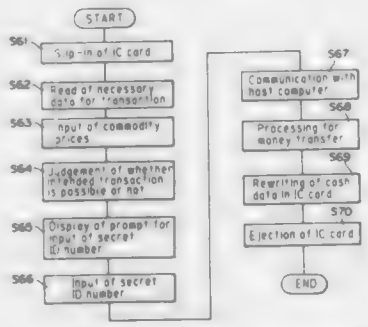
data storing means for storing data;

switch means operatively associated with said door means to actuate said switch means when said door means is opened;

real time clock means for providing date and time of day data;

data processing means for processing data associated with said container; and

battery means for supplying power to said data storage means, said data processing means, and said real time clock means during a period when said container is not inserted in said container receiving means;



said data processing means being effective in response to actuation of said switch means during said period to store in said data storing means data indicating the date and time of day when said door means was opened to cause said actuation.

5,012,076

TRANSACTION METHOD WHEREIN TRANSACTION AMOUNT IS COMPARED WITH ACCOUNT BALANCE BEFORE ID IS ENTERED

Yasuhisa Yoshida, Owariasahi, Japan, assignor to Hitachi, Ltd., Tokyo, Japan

Filed Mar. 1, 1989, Ser. No. 317,397
Claims priority, application Japan, Mar. 2, 1988, 63-47559
Int. Cl.[5] G06F *15/30*
U.S. Cl. 235—379 2 Claims

1. A method for transferring funds from a user's account using a portable storage means, comprising the steps of:

reading a first fund data stored in said portable storage means using a terminal data reading means which is connected to an automatic transaction control means, said first fund data indicating a balance of transferable fund, said transferable fund being a fund contained within an account which is available for fund withdrawal;

entering a transaction amount data into a terminal data entry means which is connected to said automatic transaction control means, said transaction amount data indicating an amount of money to be withdrawn by fund transfer from said transferable fund;

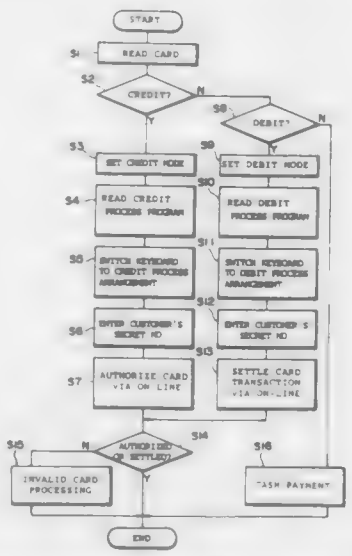
comparing said entered transaction amount data with said read first data using said automatic transfer control means;

requesting a user specific authorization code into a terminal data entry means if and only if said entered transaction amount is less than said read first data;

entering an authorization code into said terminal data entry means only if said entered transaction amount was less than said read first data;

reading data from said terminal entry means which identifies a destination bank account after said entering of said authorization code;

transferring an amount of funds from said transferable fund to said destination bank account and storing a record of said transfer, said transferring being performed by said automatic transfer control means after said entering of said authorization code; and



updating said first fund data stored in said portable storage means by subtracting said transferred amount from said read first data and storing the result in said portable storage means for subsequent use.

5,012,077

CREDIT AND DEBIT CARD PROCESSING TERMINAL

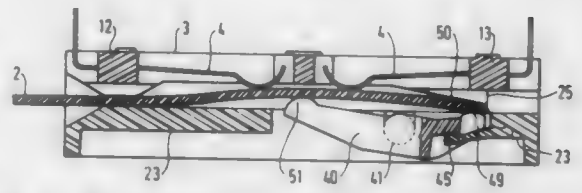
Kimio Takano, Muko, Japan, assignor to Omron Tateisi Electronics Co., Kyoto, Japan

Filed Sep. 29, 1988, Ser. No. 250,553
Claims priority, application Japan, Oct. 7, 1987, 62-253242
Int. Cl.[5] G06F *15/21*; G06K *7/01*
U.S. Cl. 235—380 4 Claims

1. A credit and debit card processing terminal, comprising:

a processor comprising a credit processor for effecting credit card processing on the basis of data stored on a credit card and a debit processor for effecting debit card processing on the basis of data stored on a debit card;

(b) a card discriminator for automatically discriminating whether a card to be used is a credit card or a debit card by reading said data stored on said card; and



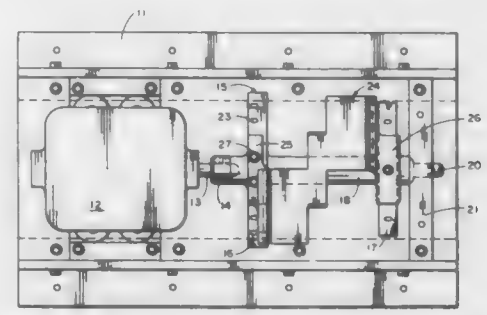
(c) a processing activator for activating any one of said processors in response to said data automatically discriminated by said card discriminator.

5,012,078

IC CARD READER HAVING LEVER THAT BENDS CARD ONTO IC CONTACTS

Michel Pernet, Pontarlier, France, assignor to Alcatel Cit, Paris, France

Filed Jun. 28, 1989, Ser. No. 372,738
Claims priority, application France, Jul. 1, 1988, 88 08934
Int. Cl.[5] G06K *7/06*
U.S. Cl. 235—441 3 Claims



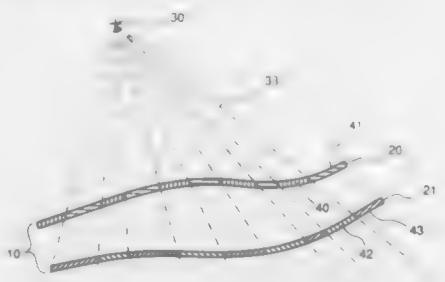
1. An IC card reader comprising: a contact frame, card positioning and guide means carried by said contact frame including an inlet portion and an end-of-stroke portion for guiding an inserted card into a card insertion movement into the IC card reader and positioning opposite ends of said IC card when said IC card is fully inserted in said contact frame, and contact elements for providing electrical connection, conducting pads on a face of said IC card, whereby circuits are established with an apparatus containing the IC card reader, said IC card reader further comprising: a rocking lever having a central pivot on said contact frame, and an actuating cam on one side of the central pivot against which said IC card, upon being inserted, comes to bear at the end of the IC card insertion stroke, thereby pivoting the lever from a rest position to a pressure-applying position, a pressure cam on the opposite side of said central pivot for bearing against the IC card in about a center part thereof relative to the length of the card and on the face thereof opposite said face bearing said conducting pads, when the rocking lever is in its pressure-applying position, thereby bending the IC card between said inlet portion and said end-of-stroke portion and giving the card a convex curvature towards the contact elements and pressing thereagainst to insure circuit completion between the conducting pads on the IC card and the contact elements, and resilient returns means for returning the rocker lever to its rest position when the rocking lever is free of engagement with said inserted IC card.

5,012,079

BAR CODE SCANNER MIRROR ASSEMBLY

Ishwar Singh, Winter Springs, and William Senkevich, Longwood, both of Fla., assignors to LazerData Corporation, Orlando, Fla.

Filed Nov. 13, 1989, Ser. No. 435,158
Int. Cl.[5] G06K *7/10*
U.S. Cl. 235—467 8 Claims



1. A rotatable bar code scanner mirror assembly comprising:

a rotatable mirror support frame;

a plurality of mirrors, each mirror mounted to said support frame in a different intersecting plane to at least one other mirror mounted to said support frame;

each said mirror being shaped to have a pair of generally flat offset portions, each offset from the other on opposite sides of a center axis and said offset portions being connected with a center mirror portion whereby a return beam can reflected off the offset portions and the outgoing beam is reflected off the center portion such that the outgoing and return laser beams use the same scanner mirror assembly and the returning signals are substantially maximized and balanced in amplitude by the offset portions of the mirror.

5,012,080
DIRECTIONAL PARTICLE FILTER
Daniel T. Griscom, 90 Wallace St., #2, Somerville, Mass. 02144
Filed Apr. 19, 1990, Ser. No. 511,107
Int. Cl.[5] G02B *5/22*
U.S. Cl. 250—505.1 **29 Claims**

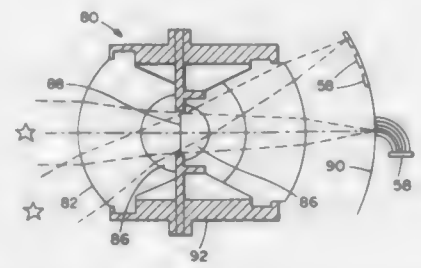
1. A directional particle filter for selectively blocking specific particles whose projected paths intersect a predetermined point relative to the filter comprising

a plurality of non-intersecting surfaces arranged in layers, each surface comprising multiple units, combinations of said units forming passing and blocking tuples, each tuple comprising one unit from each of said surfaces such that the projected path of any specific particle through the filter traverses a single tuple,

all of said blocking and passing tuples being so arranged that the projected path of each specific particle through the filter that intersects said predetermined point relative to the filter traverses a blocking tuple, and the projected paths of specific particles through the filter that do not intersect said predetermined point traverse passing and blocking tuples,

said units being further arranged such that no specific particle deflected by said units passes through said filter.

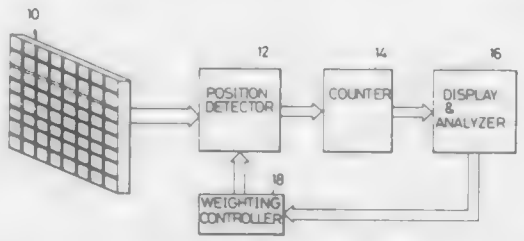
5,012,081
STRAPDOWN STELLAR SENSOR AND HOLOGRAPHIC LENS THEREFOR
Douglas R. Jungwirth, Reseda; A. Phillip Simpson, Rancho Palos Verdes; Mitsuo Kawahara, Perris; Seymour Levine, Topanga, and John M. Kennel, Santa Ana, all of Calif., assignors to Northrop Corporation, Hawthorne, Calif.
Filed Jun. 22, 1989, Ser. No. 369,790
Int. Cl.[5] G01J *1/20*
U.S. Cl. 250—203.6 **22 Claims**



1. A strapdown star tracker for generating navigational navigational information from an assumed position given by an inertial measurement unit aboard a vehicle, and said star tracker being adapted to be strapped down to the vehicle as it moves, comprising

viewing means having an entrance aperture and a field of view for simultaneously focussing radiation from a plurality of stellar objects, or other heavenly bodies, separated one from another by an angular displacement,

means for strapping down said viewing means in a fixed orientation in said vehicle,



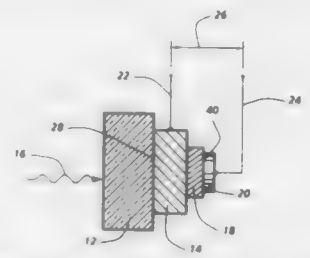
means for converting the focussed radiation to plurality of detectable electrical signals one for each stellar object or heavenly body, and

means coupled to said converting means and responsive to

each said electrical signal for deriving inertial measurement unit correctional information from said electrical signal and for applying the correctional information to the assumed position.

5,012,082
TWO-DIMENSIONAL INCIDENT POSITION DETECTOR DEVICE FOR LIGHT OR RADIATION
Mitsuo Watanabe, Hamamatsu, Japan, assignor to Hamamatsu Photonics K.K., Japan
Filed Feb. 23, 1990, Ser. No. 483,637
Claims priority, application Japan, Mar. 1, 1989, 1-48800; Jan. 29, 1990, 2-18199
Int. Cl.[5] G01D *21/00*
U.S. Cl. 250—208.2 **10 Claims**

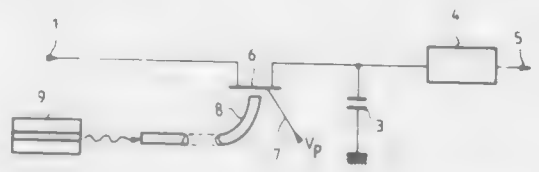
1. A two-dimensional incident position detector device for radiation comprising:



(a) a detector array including a plurality of detection cells in two-dimension arrangement;

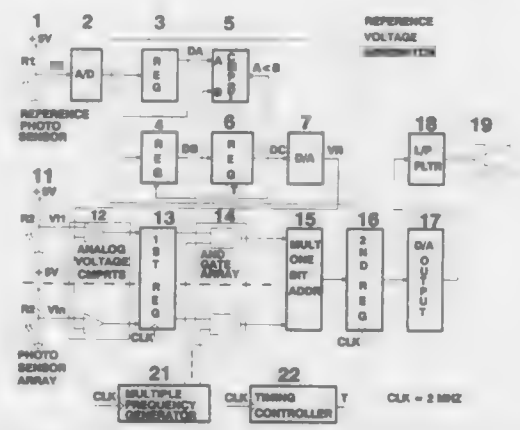
(b) comparator means for comparing an output from a noticed detection cell among said detection cells with outputs from all other detection cells adjacent to said noticed cell; and

(c) incident position determining means for determining a position of said noticed cell as an incident position of radiation when the output from said noticed cell is larger than the outputs from all adjacent detection cells.



5,012,083
LONG WAVELENGTH INFRARED DETECTOR WITH HETEROJUNCTION
Tak-Kin Chu, Bethesda, Md., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.
Filed Jun. 18, 1990, Ser. No. 539,958
Int. Cl.[5] H01J *40/14*
U.S. Cl. 250—211 J **20 Claims**

1. In a photovoltaic detector having a substrate, a first semiconductor layer on the substrate, a semiconductor overlay forming a rectifying junction with the first semiconductor layer and heterojunction means interfaced between the overlay and the first semiconductor layer for establishing a resistance across the rectifying junction, the improvement residing in said heterojunction means being made of a class of material having properties interrelated with those of the first semiconductor



layer substantially limiting radiation absorption thereto while increasing said resistance across the rectifying junction.

5,012,084
MICROWAVE SAMPLE-AND-HOLD UNIT WITH TRANSISTOR
Christian Guiberteau, Longoumeau; Stéphane Ruggeri, Viry, and Michèle Le Paih, Bievres, all of France, assignors to Thomson Composants Microondes, Puteaux, France
Filed Jan. 25, 1990, Ser. No. 470,141
Claims priority, application France, Feb. 7, 1989, 8901532
Int. Cl.[5] H01J *40/14*
U.S. Cl. 250—211 R **10 Claims**

1. A microwave sample--and-hold unit, comprising a switch placed between the input of an electrical signal and a storage capacitor, wherein the switch is a field-effect transistor provided with an optical control device on its channel region, and wherein the transistor is biased on its gate by a DC voltage V_p which keeps the transistor at a point close to its threshold, independently of the value of the input signal.

5,012,085
SELF ADAPTIVE AND SHADOW SENSITIVE ELECTRONIC MUSICAL INSTRUMENT
Ben-I Kyi, 1272 Mt. Quail Cir., San Jose, Calif. 95120
Filed Sep. 28, 1989, Ser. No. 413,628
Int. Cl.[5] G01V *9/04*
U.S. Cl. 250—221 **1 Claim**

1. A Self adaptive and shadow sensitive electronic musical instrument generates music when shadow over any one of photo sensors, comprising:

a reference photo sensor means for generating a voltage V1 which is in proportion to the intensity of the ambient light;

an A/D converter means connected to the reference photo sensor means for converting V1 from analog voltage to digital voltage;

a reference voltage generator means for generating the brightest light intensity value DC within a certain amount of time T, where T is generated from the timing controller;

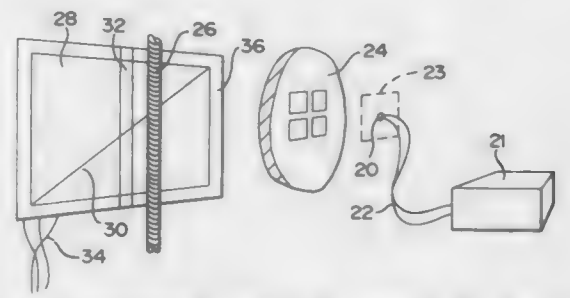
a D/A converter means for converting the brightest intensity value DC to an analog voltage VR which is called reference voltage;

photo sensor array means for generating voltages VI for photo sensors, where the voltage VIi for photo sensor i depends on the intensity of the light above the corresponding photo sensor;

analog voltage comparators means for comparing voltages VI with the said reference voltage VR, when the voltage VIi is higher than the reference voltage VR, which means a shadow is above the photo sensor, then the output of the corresponding comparator is logical one; otherwise, the output is logical zero;

a first register means for synchronizing the outputs from analog voltage comparators;

a multiple frequency generator means for generating frequencies for corresponding photo sensors;



AND gate array means connected to the first register means and to the multiple frequency generator means for performing logical AND operations of which a logical one is output for each corresponding shaded photo sensors;

a multiple one bit adder means for adding all the outputs of AND gate array that the result will be the sum of all shaded photo sensors frequencies;

a second register 3 means for intermediately storing the result of said multiple one bit adder; and

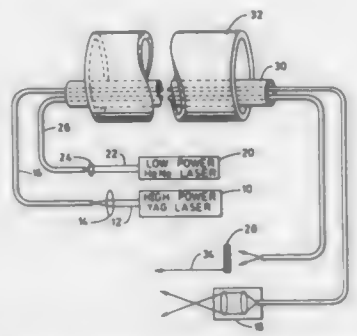
an output D/A converter means connected to the register 16 means for generating an analog voltage which is corresponding to the digital value of said second register 16.

5,012,086
OPTOELECTRONIC PICKUP FOR STRINGED INSTRUMENTS
Timothy J. Barnard, 2141 Crystal Lk. Ct. Dr., #0-269, Utica, Mich. 48087
Filed Oct. 4, 1989, Ser. No. 416,967
Int. Cl.[5] G01V *9/04*
U.S. Cl. 250—222.1 **28 Claims**

1. An optoelectronic pickup for detecting the displaced position of a string having a longitudinal axis relative to a fixed point and translating the relative position of the string into an electrical output signal, comprising:

(a) a means for producing collimated illumination, said illumination radiating along an axis and impinging on the surface of the string and nearby surrounding adjacent areas to the string; and

(b) a detector for detecting the collimated illumination which passes around said string, and also for detecting the resultant shadow cast by said string, said detector includ-



ing a photodetector having an active area which is substantially perpendicular to the axis of the collimated illumination, said photodetector being responsive to illumination and shadows and also being capable of translating the relative portions of each of the illuminated area and shadow area into an electrical signal, whereby the total illumination of the active area of said detector has a direct linear relationship to the relative position of said string over the maximum displacement range of said string during normal operation and having an electrical output signal proportional to illuminated area of said photodetector.

5,012,087

FIBER OPTIC SAFETY SYSTEM

Todd J. Rockstroh, Maineville, and SeethaRamaiah Mannava, Cincinnati, both of Ohio, assignors to General Electric Company, Cincinnati, Ohio

Filed Apr. 13, 1989, Ser. No. 337,788
Int. Cl.[5] H01J *5/16*; G01N *21/00*
U.S. Cl. 250—227.15 **16 Claims**

1. Apparatus for detecting a failure in a laser power transmitting optical fiber, the apparatus comprising:

a single safety detector optical fiber extending along the laser power transmitting optical fiber substantially the entire length thereof;

a jacketing tube, said laser power transmitting fiber and said safety detector fiber being contained within said tube such that laser energy leakage from said laser power transmitting fiber within said tube will cause a failure of said safety detector fiber; and

means for sensing a failure of said safety detector fiber indicative of a failure of said laser power transmitting fiber, said sensing means being positioned at an emergent end of said safety detector optical fiber, proximate to an output end of the laser power transmitting optical fiber.

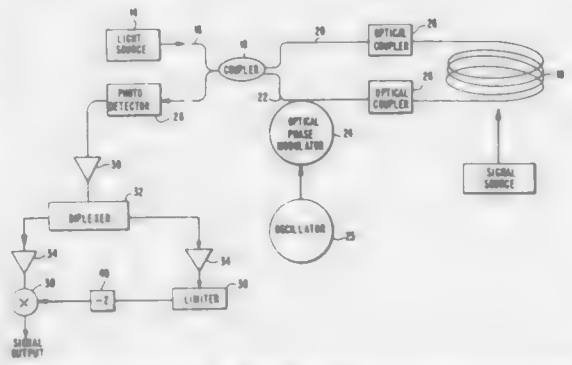
HIGH PERFORMANCE FIBER OPTIC SENSOR

James H. Cole, 9404 Fairpine La., Great Falls, Va. 22066, and Ira J. Bush, 1063 Point View St., Los Angeles, Calif. 90035

Filed Mar. 31, 1989, Ser. No. 330,914
Int. Cl.[5] H01J *5/16*
U.S. Cl. 250—227.19 **14 Claims**



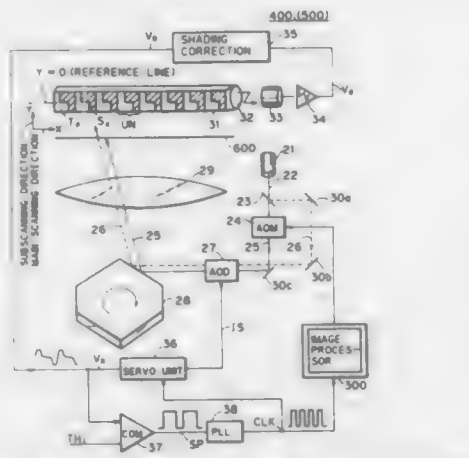
1. A method for measuring high frequency analog signals of low amplitude using optical sensors to convert such signals into electrical signals containing the analog information comprising the steps of:

(a) arranging a fiber optic coil made of single mode fiber optic material so as to have optical path modified by the analog signals;

(b) using polarizing preserving fibers made out of single mode fiber optic material in said fiber optical coil to operate as a depolarizer;

(c) Injecting counter rotating beams of low coherence light into the coil to be modulated by the analog signals;

(d) converting the light beams into electrical signals containing the analog information; and



(e) demodulating the electrical signals to recover the analog information.

5,012,089

SCANNING BEAM CONTROL SYSTEM AND OPTICAL SCALE STRUCTURE USEFUL THERETO

Yasuo Kurusu; Masamichi Cho; Shinichi Nagata; Kunio Tomohisa, and Hiroyuki Shirota, all of Kyoto, Japan, assignors to Dainippon Screen Mfg. Co., Ltd., Kyoto, Japan

Filed Oct. 24, 1989, Ser. No. 426,304
Claims priority, application Japan, Oct. 24, 1988, 63-2677817
Int. Cl.[5] H01J *3/14*
U.S. Cl. 250—235 **21 Claims**

1. A system for controlling scanning of a photobeam along scanning lines defined on an object plane, comprising:

means for generating first and second photobeams propagating in parallel with each other, and first deflector means electrically controllable for deflecting said first and second photobeams in a first direction;

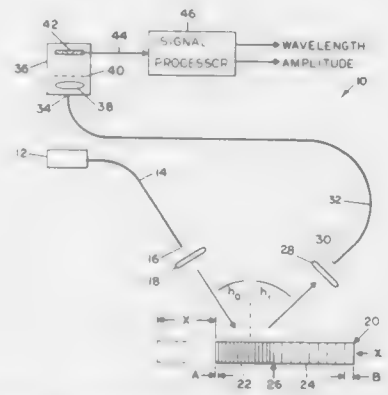
second deflector means for periodically deflecting said first and second photobeans in a second direction;

separator means for separating said first and second photobeams from each other so that said first photobeam is directed to said object plane and said second photobeam is directed to a predetermined first space region;

scale means provided at said first space region for receiving said second photobeam, having a first surface on which a periodic scale pattern extending in said second direction is formed, wherein said periodic scale pattern essentially consists of a linear periodic array of unit patterns each of which includes a spatial combination of first and second areas whose optical characters are different from each other, and a combination boundary of said first and second areas includes a first portion parallel to said second direction,

photoelectric means for receiving a light transmitted from said scale means and photo-electrically converting said light into a first electric signal;

circuit means for receiving said fist electric signal and calculating a first difference between a level of said first electric signal and a first threshold level to generate a second electric signal in accordance with said first difference; and



means for transmitting said second electric signal to said first deflector means in order to change respective deflection angles of said first and second photobeams in said first direction.

OPTICAL GRATING SENSOR AND METHOD OF MONITORING HAVING A MULTI-PERIOD GRATING

William B. Spillman, Jr., Charlotte, Vt., assignor to Simmonds Precision Products, Inc., Wilmington, Del.

Continuation-in-part of Ser. No. 308,239, Feb. 9, 1989, which is a continuation-in-part of Ser. No. 192,716, May 11, 1988, Pat. No. 4,874,941. This application May 5, 1989, Ser. No. 348,341
The portion of the term of this patent subsequent to Oct. 17, 2006, has been disclaimed.
Int. Cl.[5] H01J *3/14*
U.S. Cl. 250—237 G **42 Claims**

1. An optical transducer comprising:

a diffraction grating having a variable grating period;

means responsive to a physical parameter coupled to said diffraction grating to apply a force thereto to strain said diffraction grating in response to the physical parameter;

means for irradiating said diffraction grating at a first predetermined angle with broadband optical radiation, said means for irradiating comprising an optical fiber; and

means for detecting a change in a characteristic of the light diffracted from said diffraction grating as a consequence of the strain experienced by said diffraction grating.

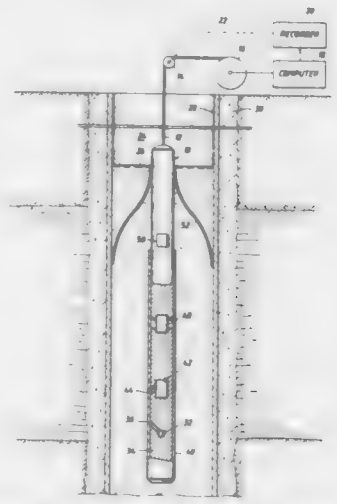
5,012,091

PRODUCTION LOGGING TOOL FOR MEASURING FLUID DENSITIES

Gordon L. Moake, Houston, Tex., assignor to Halliburton Logging Services, Inc., Houston, Tex.

Filed Feb. 27, 1990, Ser. No. 485,703
Int. Cl.[5] G01V *5/12*
U.S. Cl. 250—266 **18 Claims**

1. A method of determining the density of fluids in a well borehole susceptible of difference in fluid density along the well borehole comprising the steps of:



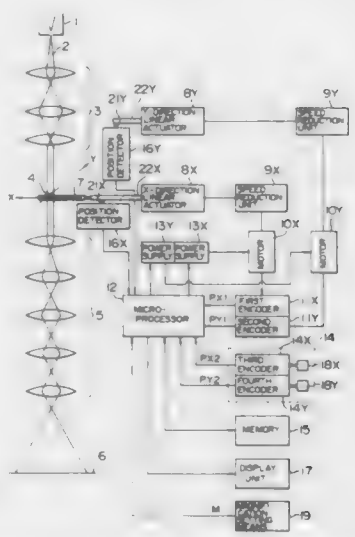
(a) positioning a sonde supported radiation source in a well borehole;

(b) positioning a first sonde supported radiation detector in the well borehole and similar but more remotely spaced second and third radiation detectors in the well borehole;

(c) emitting radiation from the source to interact with electrons of fluids in the well borehole wherein the radiation interacts with the fluid of the well borehole;

(d) measuring the count rate at the first, second, and third detectors as a result of emitting radiation from the source to thereby obtain first, second, and third count rates from the three respective detectors; and

(e) from the three measured count rates, determining the fluid density of fluid which is closer to the first detector



and separately the density of fluid which is nearer the third detector wherein the determinations are substantially independent of response to the materials at the sidewall of the well borehole as a result of radiation impingement thereof.

5,012,092

METHOD AND APPARATUS FOR FINE MOVEMENT OF SPECIMEN STAGE OF ELECTRON MICROSCOPE

Hiroyuki Kobayashi, Mito; Shigeru Izawa, and Motohide Ukiana, both of Katsuta, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Dec. 26, 1989, Ser. No. 456,522
Claims priority, application Japan, Dec. 27, 1988, 63-327783
Int. Cl.[5] H01J *37/26*
U.S. Cl. 250—311 **12 Claims**

1. An apparatus for fine movement of a specimen stage of an electron microscope, comprising:

an electron beam optical system for irradiating a specimen mounted on said specimen stage with an electron beam and forming on a viewing screen a magnified image of said specimen;

a drive unit for moving said specimen stage in X and perpendicular Y directions on a plane substantially perpendicular to the optical axis of said electron beam optical system;

means for setting a value of enlargement magnification, M, of said electron beam microscope;

a first pulse generator circuit for generating a pulse signal PX1 which accords, in number of pulses, with the distance said specimen stage moves in said X direction, and a pulse signal PY1 which accords, in number of pulses, with the distance said specimen stage moves in said Y direction;

input means for instructing movement of said specimen stage and therefore the magnified image of said specimen as viewed on said viewing screen by a desired distance in at least one of said X and Y directions;

a second pulse generator circuit for generating a pulse signal PX2 which accords, in number of pulses, with said instructed movement in the X direction by said input means, and a pulse signal PY2 which accords, in number of pulses, with said instructed movement in the Y direction by said input means; and

drive control means for sending control signals to said drive unit after said input means instructs movement of said specimen stage by said drive unit until the following equations are satisfied:

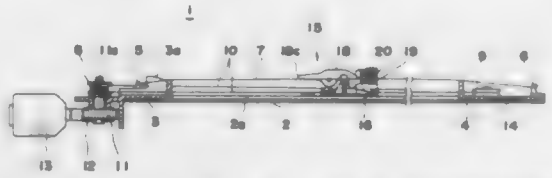
$PX2 \cdot K/M = PX1$

$PY2 \cdot K/M = PY1$

where K is a constant.

5,012,093

CLEANING DEVICE FOR WIRE ELECTRODE OF CORONA DISCHARGER



Tadafumi Shimizu, Osaka, Japan, assignor to Minolta Camera Co., Ltd., Osaka, Japan

Filed Aug. 28, 1989, Ser. No. 399,621

Claims priority, application Japan, Aug. 29, 1988, 63-214474; Aug. 29, 1988, 63-214475; Aug. 29, 1988, 63-214476

Int. Cl.[5] H01T *19/04*

U.S. Cl. 250—324 **31 Claims**

1. A cleaning device for wire electrode which extends linearly under tension for corona discharger comprising:

cleaning member for cleaning the wire electrode through contact therewith;

drive means for moving the wire electrode and the cleaning member relative to each other; and

control means for controlling the drive means in such a manner that after activating the drive means in a direction for the cleaning operation that the drive means is momentarily deactivated and then activated in said direction again.

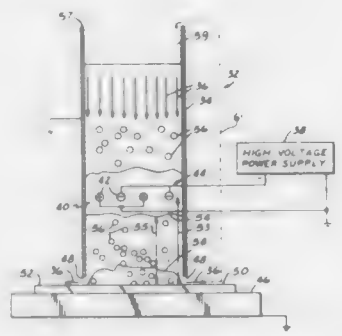
5,012,094

ELECTROSTATIC CHARGING APPARATUS AND METHOD

Thomas A. Hamade, P.O. Box 2963, Farmington Hills, Mich. 48333

Filed Feb. 5, 1990, Ser. No. 475,366

Int. Cl.[5] H01T *19/00*



U.S. Cl. 250—324 **8 Claims**

4. An apparatus for optimally electrically charging a receptor, said apparatus utilizing a gaseous fluid, said apparatus comprising:

a housing having a first end and a second end;

a charger grid member connected with said housing, said charger grid member comprising a plurality of charger grid electrodes, adjacent charger grid electrodes of said plurality of charger grid electrodes being uniformly mutually separated a predetermined distance, said plurality of charger grid electrodes forming a charger grid within said housing between said first end and said second end thereof;

kilovoltage means electrically connected with said charger grid member for selectively electrifying said plurality of charger grid electrodes so as to produce a substantially uniform electric field therebetween, said electric field exclusively establishing a corona in the gaseous fluid, spacing and voltage difference between each adjacent charger grid electrode of said plurality of charger grid electrodes cooperating with a predetermined geometry of said plurality of charger grid electrodes to provide an electric field having an electric field strength between adjacent charger grid electrodes that is at least substantially near, but not including, that electric field strength which would result in spark-over between said adjacent charger grid electrodes;

gaseous fluid mover means for moving the gaseous fluid at a predetermined flow rate through said housing between said first end and said second end thereof;

positioning means adjacent said second end of said housing for positioning the receptor at a predetermined location relative to said charger grid; and

gaseous fluid port means located adjacent said second end of said housing for allowing the gaseous fluid to exit said second end of housing while simultaneously moving over the receptor, and further for routing a predetermined portion of said gaseous fluid exiting said second end of said housing back to said first end of said housing;

wherein said charger grid provides a substantially uniform corona across a cross-section of said housing and imparts a charge onto the gaseous fluid as the gaseous fluid moves from said first end of said housing to said second end of said housing, and the gaseous fluid thereupon at least in part contributes to optimal charging of the receptor as the gaseous fluid exits said housing.

5,012,095

RADIATION IMAGE RECORDING AND READ-OUT APPARATUS

Kazuo Horikawa, and Ichirou Miyagawa, both of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Continuation-in-part of Ser. No. 143,919, Jan. 14, 1988, Pat. No. 4,847,499. This application Jan. 13, 1989, Ser. No. 296,733

Claims priority, application Japan, Mar. 19, 1988, 63-66740; Mar. 19, 1988, 63-66746; Mar. 19, 1988, 63-66748

The portion of the term of this patent subsequent to Jul. 11, 2006, has been disclaimed.

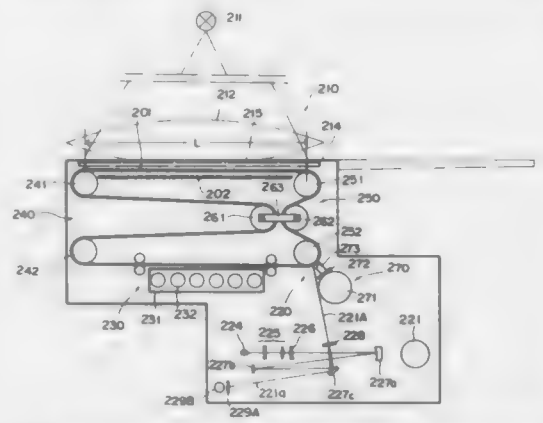
Int. Cl.[5] G01N *23/04*

U.S. Cl. 250—327.2 **11 Claims**

4. A radiation image recording and read-out apparatus comprising:

(i) a recording belt composed of an endless belt provided with a stimulable phosphor layer,

(ii) a group of rollers, around which said recording belt is applied, including two sets of roller sections spaced apart from each other by a predetermined distance, for conveying and circulating said recording belt between said two sets of roller sections along said predetermined distance,



(iii) an image recording section for exposing said stimulable phosphor layer to radiation which has passed through an object to have a radiation image of the object stored on said stimulable phosphor layer,

(iv) an image read-out section provided with a stimulating ray source for emitting stimulating rays for scanning said stimulable phosphor layer carrying said radiation image stored thereon, and a photoelectric read-out means for obtaining an electric image signal by reading out light emitted by said stimulable phosphor layer, which light is emitted in proportion to the stored radiation energy when said stimulable phosphor layer is scanned and stimulated with the stimulating rays, and

(v) an erasing section for eliminating radiation energy remaining on said stimulable phosphor layer prior to recording a next image on said stimulable phosphor layer after a preceding radiation image is read out therefrom at said image read-out section,

wherein the improvement comprises:

(a) said predetermined distance between said two sets of the roller sections being made 1-1.5 times as long as the length

of the largest single image which can be recorded in said image recording section, and each of said roller sections being composed of two roller subsections separated from each other in such a way that an imaginary line joining the separated roller subsections is normal to an imaginary line joining said two sets of roller sections separated by said predetermined distance,

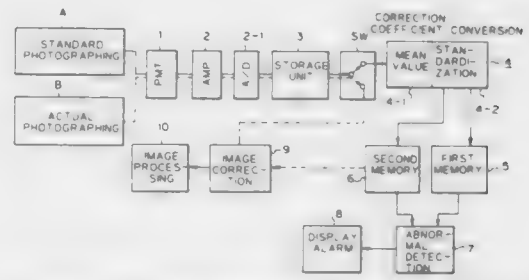
(b) said group of rollers being provided with an idle roller section moveable from a position between said two roller subsections of one of said two sets of roller section, and a position between said two roller subsections of the other of said two sets of roller sections, said idle roller sections being moveable such that a portion of said recording belt can be maintained stationary at said image recording section while a portion of the remainder of said recording belt concurrently can be moved past said image read-out section,

(c) said image recording section being provided so as to face said recording belt moving between a roller subsection of one of said two sets of the roller sections and a roller subsection of the other of said two sets of roller sections, which roller subsections face each other, and

(d) said image read-out section being positioned such that scanning of said stimulating rays is carried out on a portion of said stimulable phosphor layer present on a roller in said group of rollers, which roller does not belong to said idle roller section.

5,012,096

DIGITAL X-RAY APPARATUS



Shiro Takeda, Sagamihara; Fumihiro Namiki, Machida; Yuuichi Sugiyama, Chigasaki; Nobuhiro Iwase; Shinji Tadaki, both of Atsugi, and Nagaaki Koshino, Yokohama, all of Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed May 18, 1990, Ser. No. 525,055

Claims priority, application Japan, May 20, 1989, 1-127583; May 20, 1989, 1-127582; Jun. 7, 1989, 1-144819

Int. Cl.[5] G01N *23/03*

U.S. Cl. 250—327.2 **13 Claims**

1. A digital X-ray apparatus for exposing X-rays transmitted through an object to a photostimulable phosphor plate, for scanning the photostimulable phosphor plate by an excitation beam to produce X-ray image data, and for obtaining an X-ray image, said digital X-ray apparatus comprising:

switch means for switching between a standard photographing mode and an actual photographing mode;

correction coefficient conversion means for converting the X-ray image data to image data having a standardized lightness;

first storage means for storing an initial correction coefficient after standardization in said correction coefficient conversion means;

second storage means for storing a current correction coefficient after standardization in said correction coefficient conversion means;

detection means for comparing a value of the current correction coefficient from said second storage means with a value of the initial correction coefficient from said first storage means, and for detecting whether or not a difference between the value of the current correction coefficient at each picture element and the value of the initial correction coefficient at each picture element exceeds a predetermined threshold value; and

generation means for displaying a number of abnormal picture elements detected by said detection means and for generating an alarm message when the number of abnormal picture elements exceeds a predetermined number, the predetermined number being defined by a ratio of the number of abnormal picture elements to a number of all the picture elements.

5,012,097

RADIATION MEASURING APPARATUS

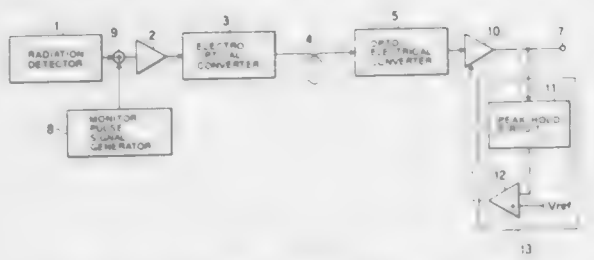
Minoru Oda, Hyogo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 29, 1989, Ser. No. 372,769

Claims priority, application Japan, Oct. 7, 1988, 63-253174

Int. Cl.[5] G01T *1/17, 1/00, 1/15;* **G01J** *5/00*

U.S. Cl. 250—336.1 **4 Claims**



1. A radiation apparatus comprising

a radiation detector which outputs a measurement pulse signal having a pulse height in accordance with detected radiation energy;

a monitor pulse signal generator which generates a monitor pulse signal having a polarity reverse to that of said measurement pulse signal and a pulse height of a fixed value;

an adder which adds said measurement pulse signal and said monitor pulse signal;

an amplifier which amplifies the output signal of said adder;
an electro-optical converter which converts an output signal of said amplifier into an optical signal;
an optical fiber which transmits said optical signals;
an opto-electrical converter which converts an optical signal from said optical fiber into an electrical signal;

a gain controlled amplifier which is supplied with an output signal of said opto-electrical converter; and
a monitor pulse signal detecting circuit which detects a wave height of said monitor pulse signal from an output signal of said gain controlled amplifier and controls the gain of said gain controlled amplifier using the detected wave height signal.

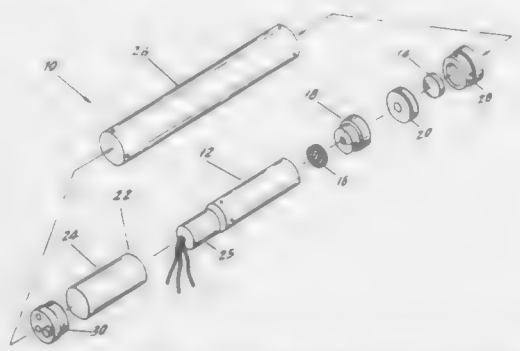
PHOTOMULTIPLIER WITH INFRARED SENSITIVITY



Joseph Lindmayer, Potomac, Md., assignor to Quantex Corporation, Rockville, Md.

Continuation-in-part of Ser. No. 147,215, Jan. 22, 1988, Pat. No. 4,879,186, which is a continuation-in-part of Ser. No. 870,809, Jun. 6, 1986, Pat. No. 4,830,875, which is a continuation-in-part of Ser. No. 786,095, Oct. 10, 1985, Pat. No. 4,705,952. This application Feb. 21, 1989, Ser. No. 313,171

The portion of the term of this patent subsequent to Nov. 10, 2004, has been disclaimed.

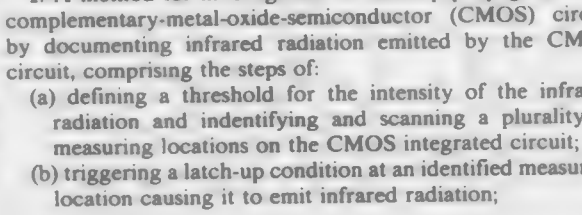
Int. Cl.[5] G01J *1/00, 1/58;* **H05B** *33/00;* **B66D** *1/14*

U.S. Cl. 250—339 **19 Claims**

1. A photomultiplier assembly with extended sensitivity, comprising:
a photomultiplier usefully responsive to electromagnetic energy in a first wavelength region; and
active pre-charged photon energy conversion means for receiving electromagnetic energy of wavelengths longer than said first wavelength region and in a region to which said photomultiplier is insensitive and emitting electromagnetic energy in said first wavelength region in response thereto;
said photomultiplier and energy conversion means being arranged such that the emission of electromagnetic energy in said first wavelength region from said energy conversion means is directed into said photomultiplier, whereby said photomultiplier provides information concerning incident electromagnetic energy of wavelengths longer than said first wavelength.

5,012,099

INTRUSION DETECTION AND IDENTIFICATION ARRANGEMENT FOR LAND VEHICLES



Serge Paturel, Orsay, and Francois Magne, Paris, both of France, assignors to U.S. Philips Corp., New York, N.Y.

Continuation of Ser. No. 355,094, May 18, 1989, which is a continuation of Ser. No. 136,250, Dec. 18, 1987 both abandoned. This application May 1, 1990, Ser. No. 519,351

Claims priority, application France, Dec. 23, 1986, 86 18050

Int. Cl.[5] G08G *1/17*

U.S. Cl. 250—342 **4 Claims**

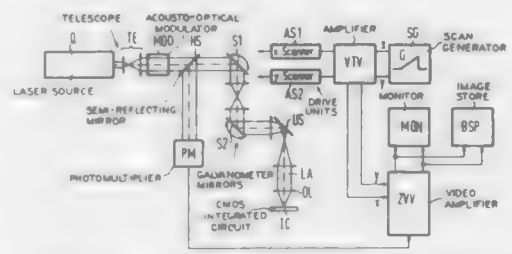
1. An arrangement for detecting and identifying a land vehicle having an undercarriage with turning elements as it passes a reference plane comprising:
a plurality of n pyro-electric detectors for detecting passive infrared radiation which are arranged vertically and adjacent to each other in such manner so as to define in the reference plane n adjacent detection sub-beams having respective sight angles $\theta_{s/n}$ of the order of a few degrees, the sight angle θ_s of said beam being taken in a direction towards the ground from a horizontal line of the reference plane at a height of approximately 1 meter;
an optical system for focusing said sub-beams in said reference plane;
each of said pyro-electric detectors being connected to an analog processing chain including amplifier means and a band-pass filter;
a digital signal processing chain connected to said analog chain which includes sample-and-hold means to recover at least the undercarriage of said vehicle in the form of a curve as a function of time in accordance with which each turning element of the undercarriage assumes the shape of and identifiable characteristic pulse, and
means for detecting the number of pyro-electric detectors that are supplying a signal to indicate the distance of the vehicle from the detector.

5,012,100

METHOD AND APPARATUS FOR INVESTIGATING THE LATCH-UP PROPAGATION IN COMPLEMENTARY-METAL-OXIDE SEMICONDUCTOR (CMOS) CIRCUITS

Erich Plies, and Joerg Quincke, both of Munich, Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Filed May 3, 1989, Ser. No. 346,920



Claims priority, application Fed. Rep. of Germany, Jun. 8, 1988, 3819488

Int. Cl.[5] G01J *5/00;* **H04N** *3/00, 7/18*

U.S. Cl. 250—342 **14 Claims**

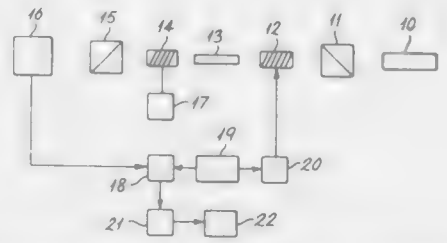
1. A method for investigation of latch-up propagation in a complementary-metal-oxide-semiconductor (CMOS) circuit by documenting infrared radiation emitted by the CMOS circuit, comprising the steps of:
(a) defining a threshold for the intensity of the infrared radiation and indentifying and scanning a plurality of measuring locations on the CMOS integrated circuit;
(b) triggering a latch-up condition at an identified measuring location causing it to emit infrared radiation;

(c) measuring the time interval between the triggering of the latch-up condition and the infrared radiation reaching the predetermined threshold level;

(d) recording the identity of the measuring location and the measured time interval; and
(e) repeating the steps (b) through (d) for each of the remaining measuring locations.

5,012,101

OPTICAL APPARATUS AND METHOD



David M. Goodall, Huntington, and David K. Lloyd, Bath, both of England, assignors to National Research Development Corporation, London, England

Filed Nov. 21, 1989, Ser. No. 440,425

Claims priority, application United Kingdom, Oct. 24, 1986, 8625530

Int. Cl.[5] G01N *21/21*

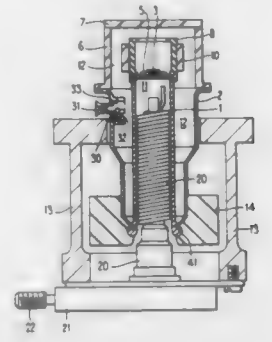
U.S. Cl. 250—343 **7 Claims**

1. Apparatus for use in the analysis of optically-active materials comprising:
a radiation source, container means for a sample of material under examination through which radiation from said radiation source passes to a detector,
polariser means disposed between said radiation source and said container means,
analyser means disposed between said detector and said container, and
modulation means disposed between said polariser and said container to modulate the rotation of the polarisation of radiation from said radiation source
wherein:
said radiation source is a solid state device, and
said polariser means and said analyser means have a depolarisation ratio of the order of 10^{-5} to 10^{-6}.

5,012,102

METHODS OF PRODUCING VACUUM DEVICES AND INFRARED DETECTORS WITH A GETTER

David J. Gowlett, Hampshire, England, assignor to U.S. Philips Corp., New York, N.Y.



Filed May 7, 1990, Ser. No. 521,786

Claims priority, application United Kingdom, May 10, 1989, 8910754

Int. Cl.[5] G12B *15/00*

U.S. Cl. 250—352 **10 Claims**

1. A method of producing a vacuum device having a vacuum space in a chamber of the device, comprising the steps of (a) providing a porous getter in an evacuation tube which forms an outlet of the chamber, (b) evacuating the chamber to produce the vacuum space by means of a vacuum pump connected to the evacuation tube, (c) heating the getter in the evacuation tube so as to activate chemically the getter material and (d) disconnecting the vacuum pump and sealing the evacuation-tube outlet of the chamber while leaving the chemically-active getter in communication with the vacuum space of the chamber to getter gases from the evacuated chamber, characterised in that the step (a) comprises providing the

getter as at least one movable body of the getter material in the evacuation tube, in that step (b) comprises heating the getter body in the evacuation tube at a location distant from the chamber, after which the movable getter body is moved closer to the chamber before sealing the evacuation-tube outlet, and in that the evacuation-tube outlet comprises a vacuum-permeable screen which inhibits passage of the getter material into the chamber.

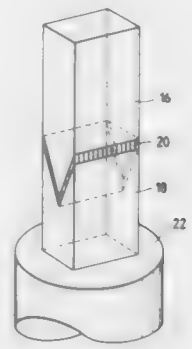
RADIATION DETECTOR



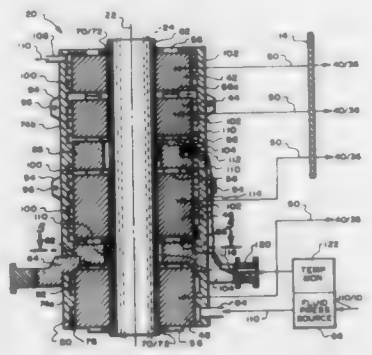
Eiichi Tanaka, and Hiroshi Uchida, both of Shizuoka, Japan, assignors to Hamamatsu Photonics Kabushiki Kaisha, Shizuoka, Japan

Filed Oct. 6, 1989, Ser. No. 418,184

Claims priority, application Japan, Oct. 28, 1988, 63-272373

Int. Cl.[5] G01T *1/20*

U.S. Cl. 250--368 **4 Claims**



1 A radiation detector including:
a scintillator for producing scintillation light in response to radiation applied thereto, said scintillator having a light output portion being in the shape of a single saw tooth;
a light guide for introducing scintillation light outputted from said scintillator, said light guide having a light input portion being dented so as to conform to said light output portion of said scintillator; and
a photodetector for detecting scintillation light outputted from said light guide.

5,012,104

THERMALLY STABLE MAGNETIC DEFLECTION ASSEMBLY AND METHOD OF MAKING SAME

Lydia J. Young, Palo Alto, Calif., assignor to Etec Systems, Inc., Hayward, Calif.

Filed May 17, 1990, Ser. No. 524,508
Int. Cl.[5] H01J *3/32, 37/147, 37/30*
U.S. Cl. 250—396 ML **11 Claims**

1. For a beam column of a lithography machine, a thermally stable magnetic deflection assembly comprising,

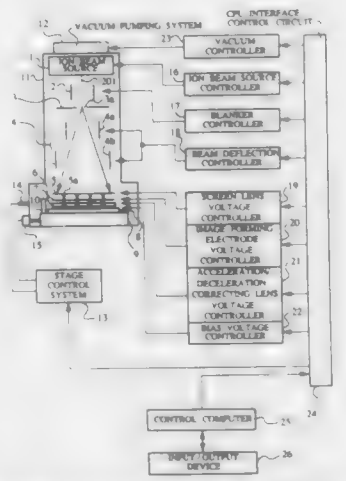
a plurality of magnetic coils each formed of conductors wound on a toroidal coil form of non-metallic thermally stable material,

each coil being coated with a highly thermally conductive potting material,

a hollow pipe of non-metallic thermally stable material,

said coils being stacked on said pipe,

means for vertically spacing each coil from each other, and



means for maintaining said assembly at a selected temperature.

5,012,105

MULTIPLE-IMAGING CHARGED PARTICLE-BEAM EXPOSURE SYSTEM

Masaaki Ando; Masaaki Matsuzaka, both of Fujisawa, and Masahiro Saita, Zushi, all of Japan, assignors to Nippon Seiko Kabushiki Kaisha, Tokyo, Japan

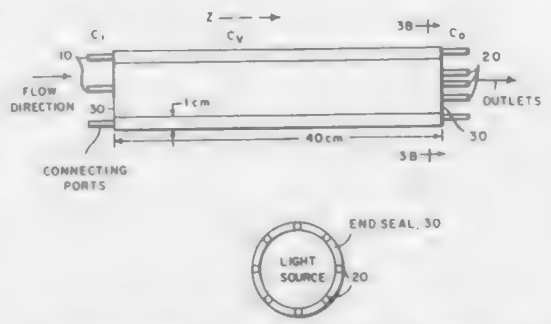
Filed Jan. 26, 1990, Ser. No. 471,280
Claims priority, application Japan, Feb. 2, 1989, 1-24506; Feb. 2, 1989, 1-24507; Feb. 2, 1989, 1-24508
Int. Cl.[5] H01J *37/00*
U.S. Cl. 250—398 **13 Claims**

1. In a multiple-imaging charged particle-beam exposure system including a charged particle beam source, a blanker for deflecting a charged particle beam emitted from said charged particle beam source, an object aperture for shaping the cross-section of the charged particle beam emerging from said blanker, deflector means for deflecting the charged particle beam emerging from said object aperture, and a screen lens having a number of lens apertures formed therethrough for dividing the charged particle beam deflected by said deflector into a plurality of beams, wherein exposure on an object to be exposed is effected,

the improvement comprising:

image forming means interposed between said screen lens and said object for focusing charged particle beams emerging from said screen lens to form images at said image forming means;

acceleration/deceleration correcting means interposed between said image forming means and said object for controlling divergency of said images formed at said image forming means by correcting acceleration or deceleration of charged particle beams emerging from said image forming means, the charged particle beams emerging from said acceleration/deceleration correcting means forming images on said object; and



bias voltage control means for applying a bias voltage relative to a potential at said image forming means to a surface of said object.

5,012,106

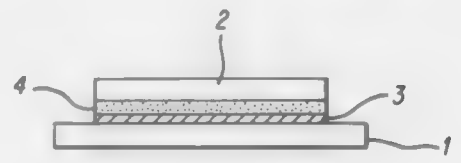
AXI-SYMMETRICAL FLOW REACTOR FOR ^{196}HG PHOTOCHEMICAL ENRICHMENT

Mark W. Grossman, Belmont, Mass., assignor to GTE Products Corporation, Danvers, Mass.

Filed Dec. 23, 1988, Ser. No. 289,639
Int. Cl.[5] B01D *59/00*
U.S. Cl. 250—438 **9 Claims**

1. In a photochemical reactor useful for the isotopic enrichment of a predetermined isotope of mercury, said reactor consisting of a pair of concentric spaced-apart sleeves, said spacing defining an annular gap therebetween, which gap is sealed at each end thereof, said reactor utilizing reactor flow parallel to the central axis of the annular gap;

the improvement comprising: creating axisymmetrical reactor flow with respect to the central axis of the annular gap, by placing a plurality of entrance and exit ports on the respective annular gap seals of said reactor.



5,012,107

RADIATION IMAGE STORAGE PANEL

Akiko Kano; Satoshi Honda, and Kuniaki Nakano, all of Hino, Japan, assignors to Konica Corporation, Tokyo, Japan

Filed Jun. 5, 1989, Ser. No. 361,198
Claims priority, application Japan, Jun. 13, 1988, 63-143639

DETECTION OF NUCLEAR RADIATION

Tom L. Nam, 114 Sixth Avenue, Bez Valley, Johannesburg, Transvaal; Rex J. Keddy, Bevan Road, Rivonia, Transvaal, and Jacques P. Sellschop, 60 Greenhills Road, Greenside, Johannesburg, Transvaal, all of South Africa

Filed Jun. 22, 1989, Ser. No. 370,195
Claims priority, application South Africa, Jul. 6, 1988, 88/4841
Int. Cl.[5] G01T *1/11*
U.S. Cl. 250—484.1 **10 Claims**

1. A method of detecting, counting or otherwise measuring radiation includes the steps of irradiating a diamond containing single substitutional paramagnetic nitrogen with a high dose of neutrons or electrons, exposing the irradiated diamond to the nuclear radiation to cause electrons or holes to be trapped at lattice imperfections within the diamond crystal structure, heating the diamond to cause it to luminesce and utilising the luminescence as a means for the detection, counting or measurement of the nuclear radiation.

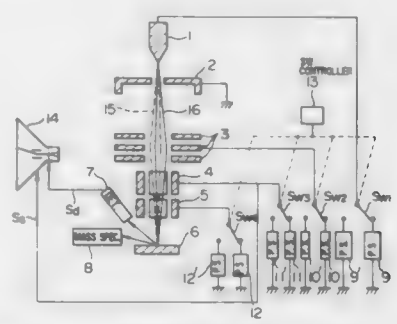
5,012,109

CHARGED PARTICLE BEAM APPARATUS

Hiroyasu Shichi, Koganei; Setsuo Nomura, Tokyo, and Eisuke Mitani, Tokorozawa, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Jul. 11, 1989, Ser. No. 378,286
Claims priority, application Japan, Jul. 15, 1988, 63-175024
Int. Cl.[5] H01J *37/256*
U.S. Cl. 250—491.1 **5 Claims**

1. A charged particle beam apparatus comprising:



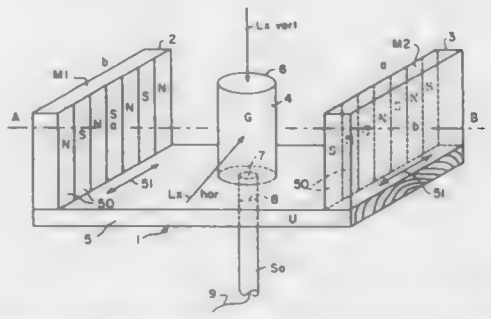
charged particle beam generating means for generating an ion beam and an electron beam as charged particle beams;

a focusing lens system for finely focusing the generated charged particle beam;

a charged particle beam deflecting system for deflecting the focused charged particle beam;

a specimen subjected to irradiation thereof with the charged particle beam;

confirming means for confirming the deviation of the irradiation positions of the ion beam and the electron beam on the specimen from each other; and



coincidence means for making the irradiation positions of the ion beam and the electron beam on the specimen coincident with each other.

5,012,110

SUBSTRATE AND PROCESS AND APPARATUS FOR THE PRODUCTION THEREFOR

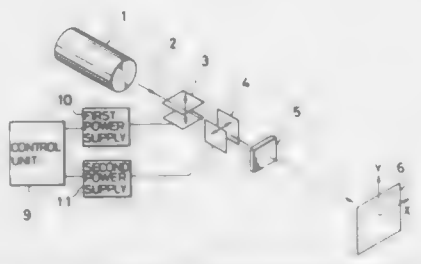
Konrad E. Wropp, Via Storta 78, CH-6645 Brione S/M, Switzerland

Continuation-in-part of Ser. No. 37,752, Apr. 13, 1987, abandoned. This application Aug. 1, 1989, Ser. No. 388,778
Claims priority, application Fed. Rep. of Germany, Apr. 11, 1986, 3612315
Int. Cl.[5] H01J *37/00*
U.S. Cl. 250—492.1 **21 Claims**

1. A process for the manufacture of a synthetic homeopathic substrate for use in treating biological systems comprising the steps of:

placing a substrate between opposing sets of magnets, said opposing sets of magnets having a connection axis and defining therebetween a magnetic field having magnetic field axes wherein said magnetic field axes are oriented toward one another in the longitudinal direction;

feeding information energy from a first energy field to said substrate along a path transverse to said connection axis of said opposing sets of magnets; and



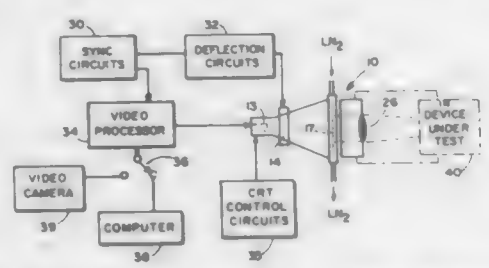
oscillating said information energy from said first energy source as it is fed to said substrate wherein said information energy is impressed on said substrate altering the absorption properties of said substrate such that said substrate will thereafter impart said information energy to a biological system upon transfer of said substrate to said biological system.

5,012,111

ION BEAM IRRADIATION APPARATUS

Kazuhiro Ueda, Amagasaki, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 15, 1989, Ser. No. 366,539
Claims priority, application Japan, Jun. 21, 1988, 63-154108
Int. Cl.[5] G21K *1/043*
U.S. Cl. 250—492.3 8 Claims



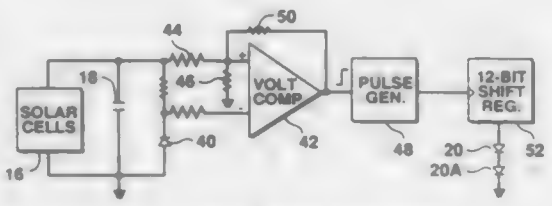
1. An ion beam irradiation apparatus comprising:
a particle accelerator for developing an ion beam;
first deflection means disposed in the path of said ion beam, for deflecting said ion beam in a first direction perpendicular to the axis of the path of said ion beam;
second deflection means disposed in the path of said ion beam, for deflecting said ion beam in a second direction perpendicular to the axis of the path of said ion beam and perpendicular to said first direction in which the path of said ion beam is deflected by said first deflection means;
a first power supply for supplying a first exciting current having a first ac component and a first dc bias component to said first deflection means;
a second power supply for supplying a second exciting current having a second ac component and a second dc bias component to said second deflection means; and
control means for varying magnetic fields developed by said first and second deflection means in response to the amplitude and phase of said first and second ac components and the polarity and magnitude of said first and second dc bias components and thereby controlling the size and the direction scanned by said ion beam.

5,012,112

INFRARED SCENE PROJECTOR

Graham W. Flint, Albuquerque, N. Mex.; Harold A. Papazian, and Ludwig G. Wolfert, both of Littleton, Colo., assignors to Martin Marietta Corporation, Bethesda, Md.

Filed Feb. 21, 1989, Ser. No. 313,082
Int. Cl.[5] H01J *1/46*
U.S. Cl. 250—493.1 18 Claims



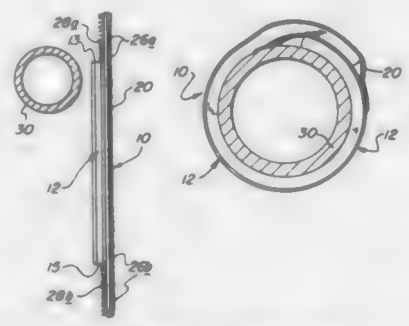
1. A system for producing dynamic scenes represented by infrared radiations comprising:
(a) a cathode ray tube including
(i) an elongate evacuated envelope,
(ii) an electron gun at one end of said envelope for producing an electron beam,
(iii) a window transparent to infrared radiations disposed at the other end of said envelope;
(iv) a luminescent phosphor layer on said window, said phosphor emitting infrared radiations upon excitation by said electron beam from said gun,
(v) grid means for modulating said electron beam intensity, and
(vi) means for deflecting said electron beam;
(b) scanning means for producing a raster on said phosphor layer and connected to said deflecting means; and
(c) means for generating a video signal representative of a dynamic scene and having an output connected to cathode ray tube modulating grid means for producing a representation of said dynamic scene by infrared radiation from said layer.

5,012,113

INFRARED SYSTEM FOR MONITORING MOVEMENT OF OBJECTS

Kenneth H. Valentine, San Diego, Calif.; Diedre D. Falter, and Kelly G. Falter, both of Knoxville, Tenn., assignors to Martin Marietta Energy Systems, Inc., Oak Ridge, Tenn.

Filed Apr. 28, 1989, Ser. No. 345,069
Int. Cl.[5] H04B *10/04*
U.S. Cl. 250—493.1 21 Claims



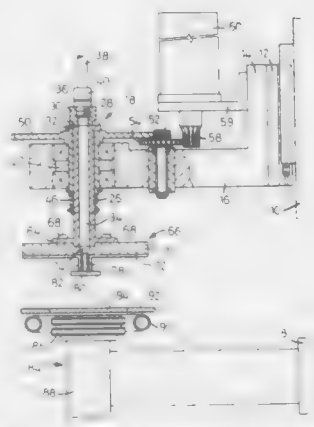
1. An infrared transmitter, which comprises:
a source of direct current;
an energy storage capacitor connected to said source for producing a voltage to power said transmitter;
a voltage-controlled switch means connected to said capacitor for operation by said voltage; and
an infrared emitter connected to said switch means for receiving power therefrom whereby infrared light is produced from said emitter when said switch means is switched to an on state.

5,012,114

RADIATION SHIELD

Fred U. Sisson, Jr., Westfield, Mass., assignor to Charles H. Yanke, River Hills, Wis., a part interest

Filed Jun. 28, 1989, Ser. No. 372,900
Int. Cl.[5] G21F *3/02*
U.S. Cl. 250—519.1 14 Claims



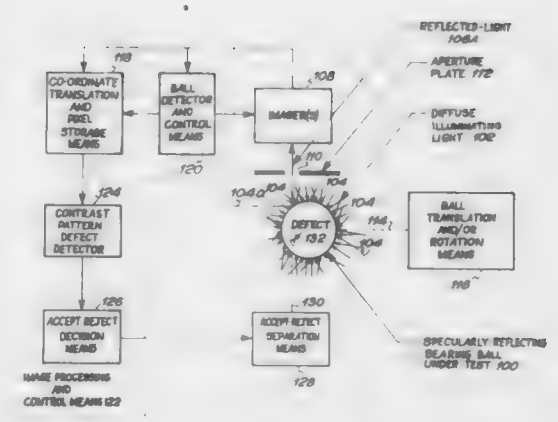
1. A gamma radiation shield comprising;
(a) a wrappable sheet of gamma radiation-shielding material comprising a core sheet containing lead powder, at least one side of the wrappable sheet being faced with a facing sheet of a thermoplastic synthetic organic polymeric material, the wrappable sheet having a first edge and an opposite second edge spaced from the first edge, first segment of the wrappable sheet adjacent the first edge defining a first terminal portion of the wrappable sheet and second segment of the wrappable sheet adjacent the second edge defining a second terminal portion of the wrappable sheet; and
(b) one or more releasable contact-fasteners affixed to the wrappable sheet and having first and second locking portions, the first locking portions being located in the first terminal portion, the second locking portions being located in the second terminal portion and at least some of the contact-fasteners extending in a direction transversely of at least one of the first and second edges whereby the degree of overlap of the first and second terminal portions are adjusted to accommodate radiation-emitting structures of different sizes;
the radiation shield being dimensioned and configured to be wrapped around a gamma radiation-emitting structure in a shielding position in which the first terminal portion contacts the second terminal portion, the radiation shield thereby encircling at least a part of the radiation-emitting structure, the first and second locking portions being dimensioned and configured to engage each other in locking contact when the radiation shield is in its shielding position, to thereby secure the radiation shield to the structure.

5,012,115

DEVICE FOR OPTICALLY DETECTING HOLD POSITION OF ELECTRONIC COMPONENT WITH DUAL EMITTERS

Koichi Asai, Nagoya; Mamoru Tsuda, Okazaki; Yasuo Muto, Chiryu; Sinsuke Suhara, Kariya, and Tousuke Kawada, Chiryu, all of Japan, assignors to Fuji Machine Mfg. Co., Ltd., Aichi, Japan

Filed Feb. 15, 1990, Ser. No. 480,592
Claims priority, application Japan, Feb. 27, 1989, 1-46255
Int. Cl.[5] G01N *21/86*
U.S. Cl. 250—561 16 Claims



1. A detecting device for detecting a position of an electronic component in which the component is held by a holder, comprising:
a first light emitter for emitting a first radiation toward a vicinity of said electronic component;
a second light emitter disposed in the vicinity of said holder, for absorbing said first radiation, and emitting a second radiation having a wavelength different from that of said first radiation, toward said electronic component; and
photoelectric means disposed on one of opposite sides of said electronic component which is remote from said second light emitter, said photoelectric means being insensitive to said first radiation and receiving a projection image of said electronic component formed by said second radiation.

5,012,116

SYSTEM FOR INSPECTING BEARING BALLS FOR DEFECTS

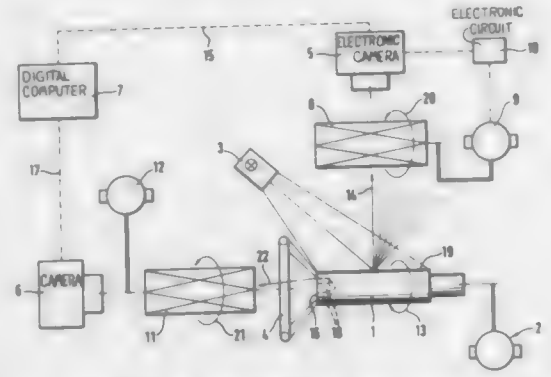
John P. Russell, 107 W. Richland St., Summerville, S.C. 29483

Filed Oct. 12, 1989, Ser. No. 422,102
Int. Cl.[5] G01N *21/88*
U.S. Cl. 250—572 26 Claims

1. In a system for inspecting a bearing ball for the presence of a defect in the normally specularly-reflecting convex surface thereof; wherein said system comprises first means including a diffuser having an aperture therein for illuminating at least a portion of said convex surface with diffuse light, thereby to reflect a light-contrast pattern of a defect, if present, with respect to a diffuse-light background reflected from said normally specularly-reflecting portion of said surface, and second means, including light-imaging means positioned to be responsive to only that light reflected from said portion of said surface which has passed through said aperture, for detecting the presence of a defect-indicating light-contrast pattern; the improvement wherein:
(a) said light-imaging means includes at least one one-dimensional imager positioned in cooperative relationship with said aperture to detect only a linear slice of said specularly-reflected light which has passed through said aperture, said linear slice being oriented substantially parallel to a first direction; and
(b) said second means further includes third means for moving said bearing ball past said aperture by simultaneously rotating said bearing ball at a given angular velocity about an axis which is oriented in a second direction substantially perpendicular to said first direction while linearly translating said bearing ball at a certain translational velocity in a third direction which is oriented substantially perpendicular to both said first and second directions, and wherein said certain translational velocity has a value which is determined in accordance with a given function of the value of said given angular velocity that results in light specularly-reflected from substantially all points on an entire hemispheric surface of said bearing ball being detected by said one one-dimensional imager in response to said bearing ball, in passing by said aperture, rotating through a predetermined angle which is substantially less in value than 360°.

5,012,117

PROCESS AND APPARATUS FOR THE AUTOMATIC NON-CONTACT SURFACE INSPECTION OF CYLINDRICAL PARTS



Nandor Karafa, Wuppertal, and Lutz Liebers, Essen, both of Fed. Rep. of Germany, assignors to Alfred Teves GmbH, Frankfurt Am Main, Fed. Rep. of Germany

Filed Sep. 7, 1989, Ser. No. 404,239

Claims priority, application Fed. Rep. of Germany, Sep. 15, 1988, 3831401

Int. Cl.[5] G01N *21/88*

U.S. Cl. 250—572 21 Claims

1. An apparatus for the automatic non-contact surface inspection of cylindrical parts comprising, in combination:

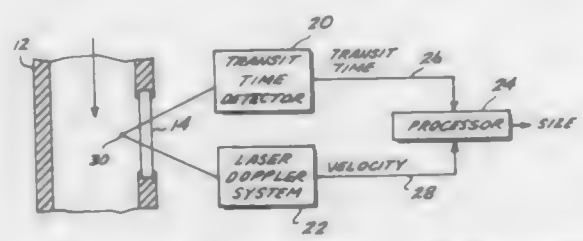
a slewing mechanism (2) driven by an electric motor and accommodating said parts (1) to be inspected;

at least one source of light (3, 4) to illuminate said part (1) to be inspected;

at least one electronic camera (5, 6) scanning the surface of said parts (1) to be inspected one after the other at a time interval; and,

a digital computer (7) succeeding said electronic camera (5, 6) and serving to evaluate the image information transmitted by the latter wherein a first source of light (3) illuminates the barrel surface (19) of said parts to be inspected and a first one of said camera (5) for the relevant scanning and a second said source of light (4) to illuminate the front surface (16) of said part to be inspected and a second one of said camera (6) for the relevant scanning.

5,012,118



APPARATUS AND METHOD FOR PARTICLE ANALYSIS

Fritz K. Preikschat, 16020 Lake Hills Boulevard, Bellevue, Wash. 98008, and Ekhard Preikschat, 9048 41st St., Bellevue, Wash. 98004

Filed Dec. 13, 1989, Ser. No. 450,603

Int. Cl.[5] G01N *15/06*

U.S. Cl. 250—574 14 Claims

1. An apparatus for analyzing particles contained in a fluent medium, the apparatus comprising:

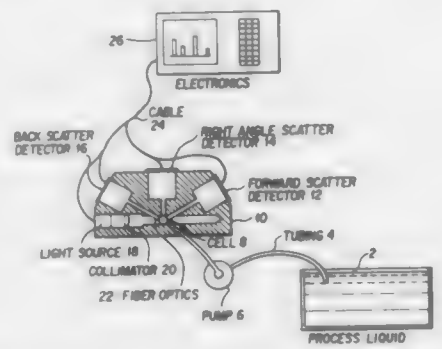
illumination means comprising a laser and an optical system for receiving light from the laser and focusing the light at a focal spot in the fluent medium;

detection means for detecting optical pulses resulting from the backscattering of light by particles in the focal spot, and for producing an electrical transit time signal that comprises a series of electrical pulses, the length of each electrical pulse corresponding to the time required for a particle to pass through the focal spot;

a receiver system for receiving light from a region that includes the focal spot, and for producing an electrical velocity signal corresponding to the velocity of particles within said region; and

processing means for receiving the transit time and velocity signals, and for combining the transit time and velocity signals to produce data representing the sizes of particles passing through the focal spot.

5,012,119



METHOD AND APPARATUS FOR MONITORING PARTICLES USING BACK-SCATTERED LIGHT WITHOUT INTERFERENCE BY BUBBLES

Walter Rhiner, Cupertino, Calif., assignor to Xinix, Inc., Santa Clara, Calif.

Filed May 19, 1989, Ser. No. 353,963

Int. Cl.[5] G01N *15/07, 21/49*

U.S. Cl. 250—574 8 Claims

1. A detecting system for measuring and discriminating between particles and bubbles within a liquid medium comprising:

(a) a source of light for generating a light beam;

(b) a cell containing a sampling volume to be analyzed and positioned so that said sampling volume is illuminated by said light beam and scatters said light;

(c) sensing means to collect said scattered light and to separate said scattered light into its forward and/or right angle scattering, and back scattering components;

(d) separate detectors positioned to separately receive each scattered light component and to convert each said component to electrical signals proportional to the intensity of the light detected;

(e) signal processing means for determining the size and quantity of particles and bubbles within said sampling volume based upon the unique signature generated by bubbles in the back scatter channel.

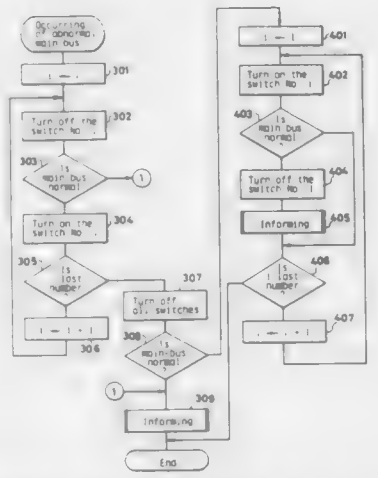
5,012,120

LOAD CONTROL SYSTEM AND METHOD FOR DISCONNECTING SUB-BUS FROM MAIN-BUS

Yoshiji Minagawa; Hiroshi Shirakawa; Hiroshi Yamazaki, and Yoshiaki Ito, all of Kamakura, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 94,649, Sep. 9, 1987, Pat. No. 4,963,763. This application Apr. 30, 1990, Ser. No. 516,581

Claims priority, application Japan, Sep. 9, 1986, 61-212461; Sep. 12, 1986, 1-215450; Nov. 13, 1986, 61-270306



Int. Cl.[5] H04Q *3/00*

U.S. Cl. 307—35 4 Claims

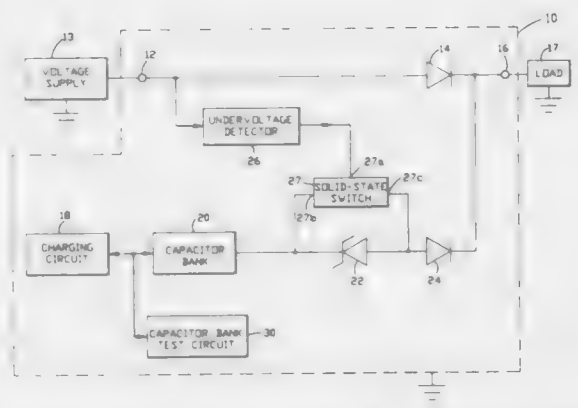
1. A method for detecting and disconnecting an abnormal sub-bus from a main-bus in a data network system comprising:

disconnecting a sub-bus from the main-bus by operating a switching circuit when an abnormal detection signal is issued in a detecting circuit for detecting an abnormal signal sent to the sub-bus,

discriminating whether the sub-bus is abnormal or not by receiving a signal from a controller connected to the sub-bus when the sub-bus is disconnected,

connecting the sub-bus to the main-bus by operating the switching circuit when the sub-bus is not abnormal, and maintaining the switching circuit open when the sub-bus is abnormal.

5,012,121



ELECTRICAL POWER SUPPLY FOR SHORT TERM POWER INTERRUPTIONS

Russell E. Hammond, La Jolla; Robert L. Northup, San Diego, both of Calif.; Alan G. Shimp, and Francis B. Fassnacht, both of Silver Spring, Md., assignors to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Mar. 22, 1990, Ser. No. 497,464

Int. Cl.[5] H02J *9/06;* H02M *3/06*

U.S. Cl. 307—64 23 Claims

1. A direct current power supply for providing electrical energy during momentary power interruptions between a load and an electrical power source having a supply voltage, comprising:

a capacitor having an initial voltage charge at least as great as said supply voltage;

a first zener diode having a cathode operably coupled to said capacitor and an anode;

a first diode having an anode operably coupled to said anode of said first zener diode, and a cathode;

a solid state switch having a power input operably coupled between said capacitor and said cathode of said first zener diode, a power output operably coupled between said anode of said first zener diode and said anode of said first diode, an enabling input which when triggered by an enabling signal, causes said solid state switch to conduct electricity from said power input to said power output;

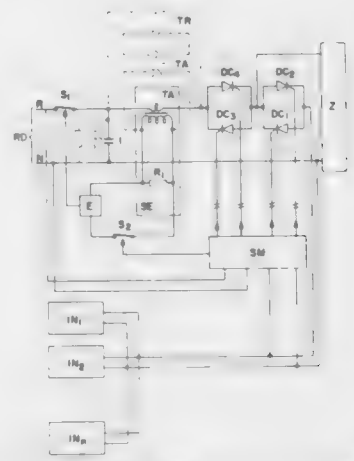
a second diode having an anode and a cathode operably coupled to said cathode of said first diode; and

enabling means operably coupled between said enabling input of said solid state switch and said anode of said second diode for providing said enabling signal to said enabling input of said solid state switch when said supply voltage is below a predetermined supply voltage level.

5,012,122

CIRCUIT TO INHIBIT VOLTAGE AND CURRENT RETURNS TO THE ELECTRIC POWER DISTRIBUTION LINE IN AN INVERTER-TYPE POWER PLANT

Salvatore Lentini, and Giuseppe Patti, both of Palermo, Italy, assignors to Italtel Societa Italiana Telecommunicazioni s.p.a., Milan, Italy



PCT No. PCT/EP88/00327, § 371 Date Oct. 20, 1989, § 102(e) Date Oct. 20, 1989, PCT Pub. No. WO88/09075, PCT Pub. Date Nov. 17, 1988

PCT Filed Apr. 4, 1988, Ser. No. 424,241

Claims priority, application Italy, May 14, 1987, 20511 A/87

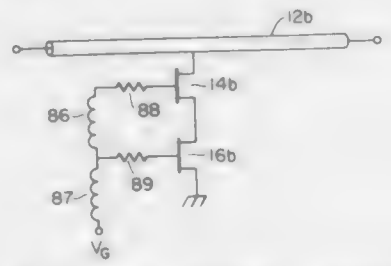
Int. Cl.[5] H02J *9/04*

U.S. Cl. 307—66 8 Claims

1. A circuit for inhibiting voltage and current from returning to the electric distribution line in inverter-type power plants including one or more inverters connected in parallel and feeding a load through a first set of static switches, a first section to connect the load to the electric distribution line through a second set of static switches; a supervisory control circuit for controlling the first set of static switches and the second set of static switches, depending on the condition of the inverters, to connect to the load to be fed and to the electric distribution line, respectively, the circuit comprising:

an electric probe for outputting a voltage or a current when a current return to the electric distribution line is detected;

a ballast impedance for causing a current to flow through said electric probe when the second set of static switches is in a closed condition due to a fault; and



an energizing circuit for activating the first section according to an output from said electric probe, said output being controlled by contacts of a second section operated by the supervisory control circuit.

5,012,123

HIGH-POWER RF SWITCHING SYSTEM

Yalcin Ayasli, Lexington, and Peter J. Katzin, Arlington, both of Mass., assignors to Hittite Microwave, Inc., Woburn, Mass.

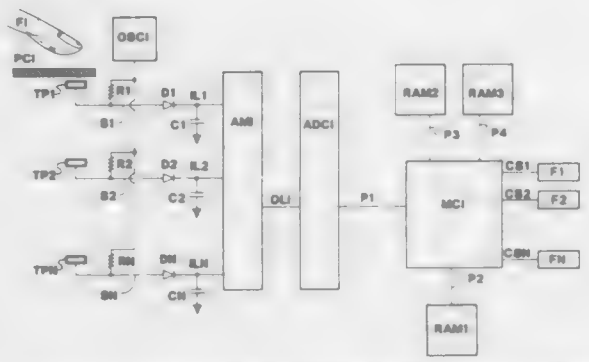
Filed Mar. 29, 1989, Ser. No. 330,114
Int. Cl.[5] H03K *17/10*
U.S. Cl. 307—112 14 Claims

1. A switching system for controlling rf energy through an rf transmission medium, comprising:

a plurality of semiconductor switching devices connected in a series configuration with the primary electrodes connected in series;

means for providing a graduated bias on the control electrodes of said devices to establish an equal control voltage on each device between its control electrode and one of its primary electrodes for increasing the voltage capacity of said switching system and the power capacity of said rf transmission medium;

said means for providing a graduated bias including a voltage divider network connected across the control electrodes of said semiconductor devices; and



said voltage divider network including a plurality of series-connected inductors.

5,012,124

TOUCH SENSITIVE CONTROL PANEL

Jerrell P. Hollaway, 1330 Meadowbrook Rd., NE., Palm Bay, Fla. 32905

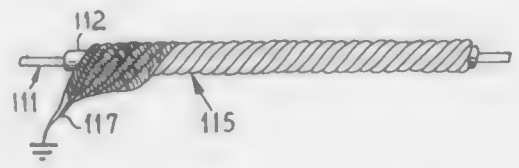
Filed Jul. 24, 1989, Ser. No. 383,427
Int. Cl.[5] H01H *35/00*
U.S. Cl. 307—116 18 Claims

1. A touch sensitive control apparatus comprising, in combination:

an oscillator producing an oscillation output signal;

a plurality of touch-responsive sensors coupled in circuit with said oscillator and producing respective analog signals associated with touch-dependent modifications of the oscillation output signal produced by said oscillator;

an analog-to-digital converter which converts analog signals produced by said sensors into respective digital signals representative thereof; and



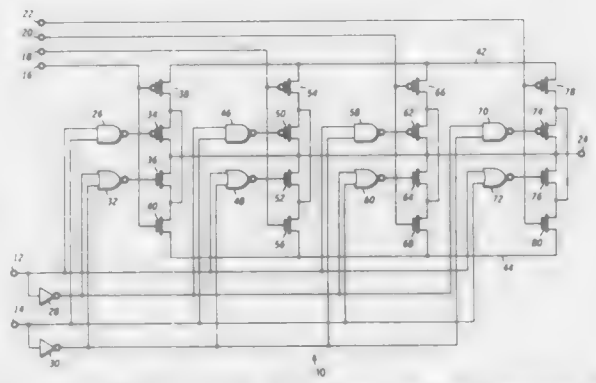
a digital computer which processes said respective digital signals and generates an output associated with a selected one of said sensors on the basis of a prescribed relationship among the analog signals produced by plural ones of said sensors.

5,012,125

SHIELDED ELECTRICAL WIRE CONSTRUCTION, AND TRANSFORMER UTILIZING THE SAME FOR REDUCTION OF CAPACITIVE COUPLING

David W. Conway, Cedar Rapids, Iowa, assignor to Norand Corporation, Cedar Rapids, Iowa

Filed Jun. 3, 1987, Ser. No. 57,956
Int. Cl.[5] H01B *7/18*
U.S. Cl. 307—149 52 Claims



1. A transformer construction comprising magnetic core means with a primary winding linking said magnetic core means, said primary winding having shield means formed of multiple shield wires substantially enclosing the primary winding, each shield wire having electrical insulation means covering the shield wire and electrically insulating such shield wire from the other shield wires of the shield, the shield wires having respective adjacent first ends electrically connected to ground potential and being otherwise in open circuit insulated relationship so as to provide a shield having the properties of a Faraday Shield for said primary winding.

5,012,126

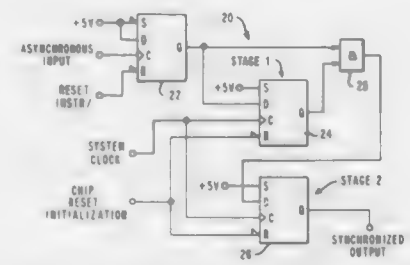
HIGH SPEED CMOS MULTIPLEXER HAVING REDUCED PROPAGATION DELAY

David W. Feldbaumer, Chandler, and Barry B. Heim, Mesa, both of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Jun. 4, 1990, Ser. No. 533,206
Int. Cl.[5] G06F *3/14*
U.S. Cl. 307—243 20 Claims

1. A multiplexer circuit for selecting one of a plurality of input signals under control of a digital select signal and having an output for providing an output signal inverted with respect to the selected input signal, comprising:

a plurality of processing channels each having exactly first, second, third and fourth transistors serially coupled between first and second sources of operating potential, said first transistor being coupled to said first source of operating potential, said second transistor being coupled between said first transistor and the output, said third transistor being coupled to the output, said fourth transistor being coupled between said third transistor and said second source of operating potential, said first and fourth transistors and being alternately enabled by one of the plurality of input signals; and



selector means responsive to the digital select signal and having a plurality of outputs for providing a plurality of output signals which enable said second and third transistors of one of said plurality of processing channels while disabling said second and third transistors of the other ones of said plurality of processing channels.

5,012,127

SYNCHRONIZER CIRCUIT WITH ASYNCHRONOUS CLEARING

Dennis E. Gates, and Bret S. Weber, both of Wichita, Kans., assignors to NCR Corporation, Dayton, Ohio

Filed Sep. 24, 1987, Ser. No. 100,499
Int. Cl.[5] H03K *5/13, 3/01*
U.S. Cl. 307—269 7 Claims

1. A synchronizer circuit with asynchronous clearing comprising:

a latch having a data input for receiving an asynchronous input signal that is to be synchronized to a system clock signal and having an output for providing a latched asynchronous input signal, said latch also having a reset input for receiving a clearing signal which resets the output of said latch;

a first stage synchronizer having inputs for receiving said latched asynchronous input signal and a system clock signal and an output for providing a system clock synchronized version of said asynchronous input signal;

a coincidence gate having one input connected to the output of said latch and another input connected to the output of said first stage synchronizer for providing at its output a signal which is a function of the coincidence of the signals at its inputs; and

a second stage synchronizer having inputs for receiving the output signal from said coincidence gate and the system clock signal and an output for providing a second system clock synchronized version of said asynchronous input signal such that receipt of a reset input signal by said latch clears the output from said first and second stage synchronizers upon receipt of the next system clock signal.

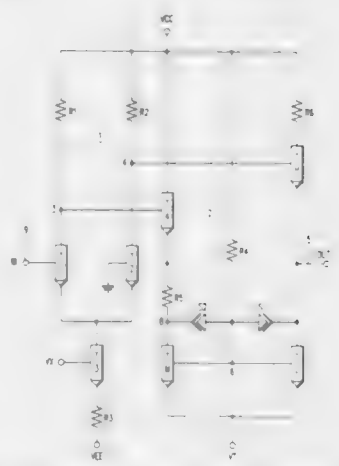
5,012,128

HIGH SPEED PUSH-PULL DRIVER HAVING CURRENT MIRROR PULL-DOWN

Yuen H. Chan, Poughkeepsie, N.Y., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Jan. 24, 1990, Ser. No. 469,116
Int. Cl.[5] H03K *3/01, 19/086*
U.S. Cl. 307—270 9 Claims

1. A driver circuit comprising a source of dual phase switching signals, one of said signal phases providing a relative voltage transition from a low value to a high value while the other of said signal phases provides a relative voltage transition from a high value to a low value,



a first emitter follower transistor connected to receive said one signal phase,

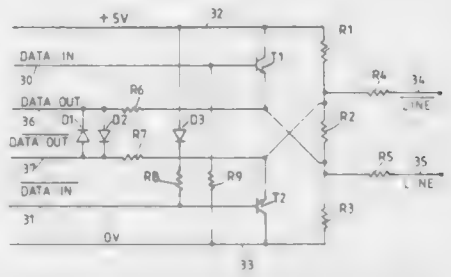
a second emitter follower transistor connected to receive said other signal phase,

a current mirror comprising third and fourth transistors having commonly connected emitters and commonly connected bases,

the emitter of said first emitter follower being connected to the collector of said third transistor,

the emitter of said second emitter follower being connected to the collector of said fourth transistor,

a biasing current source connected to said third and fourth transistors for biasing said third and fourth transistors in conductive states at all times, and



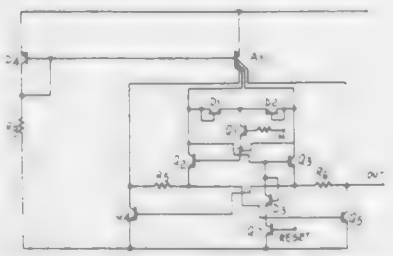
means connected to said third and fourth transistors for preventing saturation therein.

5,012,129

LINE DRIVER

Mark J. Basten, Halesowen, United Kingdom, assignor to Lucas Industries Public Limited Company, Birmingham, England

Filed May 30, 1990, Ser. No. 530,884
Claims priority, application United Kingdom, May 31, 1989, 8912461
Int. Cl.[5] H03K *1/00*
U.S. Cl. 307—270 7 Claims



1. A line driver for driving first and second lines, said line driver comprising first and second emitter followers and a biasing resistor network, said first and second emitter followers having first and second inputs, respectively, for receiving complementary input signals and first and second outputs, respectively, for connection to the first and second lines, respectively, said second emitter follower being complementary to said first emitter follower, said biasing resistor network being connected to said first and second outputs.

5,012,130

SMALL AREA AND LOW CURRENT DRAIN FREQUENCY DIVIDER CELL FOR INTEGRATED CIRCUITS

Paolo Menegoli, Verona; Marco Morelli, Livorno, and Francesco Tricoli, Milano, all of Italy, assignors to SGS-Thomson Microelectronics srl, Milan, Italy

Filed Aug. 15, 1989, Ser. No. 394,226
Claims priority, application Italy, Aug. 31, 1988, 21791 A/88
Int. Cl.[5] H03K *3/289, 3/288, 21/02*
U.S. Cl. 307—272.2 **17 Claims**

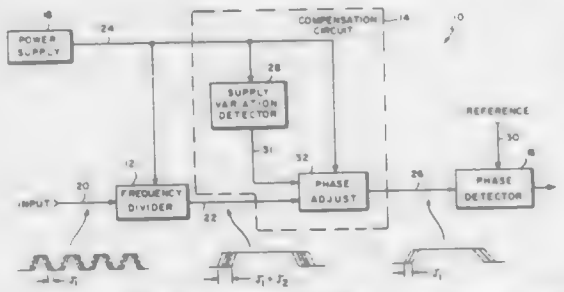
1. A frequency divider cell for integrated circuits, characterized in that it comprises:

a power supply;

a pair of control transistors and a pair of storage transistors, each transistor having a collector, an emitter and a base electrode, all of the collector electrodes being directly coupled to said power supply, the emitter electrodes of the storage transistors being coupled to a reference potential and the emitter electrodes of the control transistors being coupled to the base electrodes of the storage transistors, the control transistor collector and base electrodes being cross-coupled and the strorage transistor collector and base electrodes being also cross-coupled;

respective resistors coupling each the emitter electrode of a control transistor with the collector electrode of a storage transistor;

a first and a second diode coupled back to back in series between the respective collector electrodes of the control transistors;



a command transistor having an emitter electrode coupled to a reference potential, a collector electrode coupled to the common coupling point of the two diodes, and a base electrode operating as an input pin of the frequency divider cell.

5,012,131

POWER SUPPLY NOISE COMPENSATION FOR A HIGH FREQUENCY PHASE DETECTOR

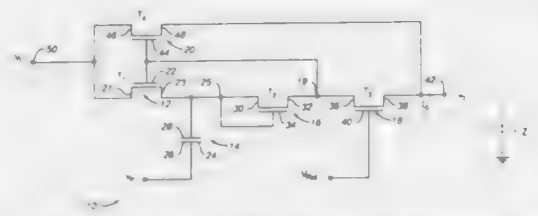
James W. Maben, Brookline, and Raymond G. Brown, Nashua, both of N.H., assignors to Sanders Associates, N.H.

Filed Dec. 19, 1988, Ser. No. 286,597
Int. Cl.[5] H03K *3/01, 5/00*
U.S. Cl. 307—296.4 **16 Claims**

1. An apparatus which compensates for errors in the time position of state transitions which occur in a signal output from a digital frequency divider, the errors in the digital frequency divider originating as variations in a power supply voltage connected to provide power to the digital frequency divider, the apparatus comprising:

A. detecting means, for detecting variations in the power supply voltage, and for providing a detected variations signals;

B. a differential transistor pair, receiving the detected variations signal at a first one of the transistors, and receiving the digital frequency divider output signal at a second one of the transistors, and the differential transistor pair providing a compensated signals corresponding to the digital frequency divider output signal having the detected variation in the power supply voltage removed; and



C. compensation network means, connected between the detecting means and the differential transistor pair, for adjusting the compensated signal for impedance variations as the operating frequency of the frequency divider changes.

DUAL MODE HIGH VOLTAGE COUPLER

Ping Wang, Saratoga, Calif., assignor to Xicor, Inc., Milpitas, Calif.

Filed Oct. 5, 1989, Ser. No. 417,594
Int. Cl.[5] H03K *3/01, 17/56;* **H02M** *3/18*
U.S. Cl. 307—296.1 **16 Claims**

1. A dual mode high voltage coupler responsive to an input voltage having a first mode for developing a predetermined level of metered output current for application to a load having an unknown impedance and a second mode for causing the direct coupling of said input voltage to said load, said coupler comprising:

means responsive to the present voltage across said load for coupling a predetermined metered current to said load independent of the impedance of said load so long as said voltage across said load is equal to or less than a predetermined value; and

means for coupling said input voltage directly to said load whenever said voltage across said load is greater than said predetermined value.

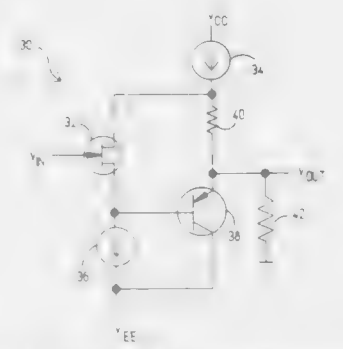
CIRCUIT ARRANGEMENT FOR PROCESSING SAMPLED ANALOG ELECTRICAL SIGNALS

John B. Hughes, Sussex, England, assignor to U. S. Philips Corporation, New York, N.Y.

Filed Feb. 13, 1990, Ser. No. 479,502
Claims priority, application United Kingdom, Feb. 17, 1989, 8903704
Int. Cl.[5] G05F *3/24*
U.S. Cl. 307—352 **10 Claims**

2. A circuit arrangement for processing sampled analogue electrical signals, each sample being in the form of a current, the circuit arrangement comprising; means for combining, in predetermined proportions, an input sample current in a present sample period with current(s) derived from input sample current(s) in one or more preceding sample periods, and means for deriving a processed output signal from a combined current produced by the combining means in successive sample periods; a plurality of circuit modules, each circuit module having a current input for receiving a bi-directional input signal current and a current output for supplying a bi-directional output signal current, means for adding a bias current to the bi-directional input signal current to produce a uni-directional current for processing by the circuit module and means for subtracting a suitably scaled bias current from the processed uni-direc-



tional current to produce a bi-directional signal current at the current output of the circuit module, and in which in at least one of the circuit modules the current input comprises a current conveyor circuit.

5,012,134

DC BOOTSTRAPPED UNITY GAIN BUFFER

Robert B. Kimura, Colorado Springs, Colo., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed Mar. 2, 1990, Ser. No. 487,556
Int. Cl.[5] H03K *19/02, 19/094*
U.S. Cl. 307—446 **9 Claims**

1. A buffer for providing approximately unity gain to a signal applied thereto, comprising:

a field effect transistor, wherein said signal is applied to the gate of said field effect transistor, said field effect transistor having a drain-source voltage;

a first current source, connected to said field effect transistor, said first current source having a first current value;

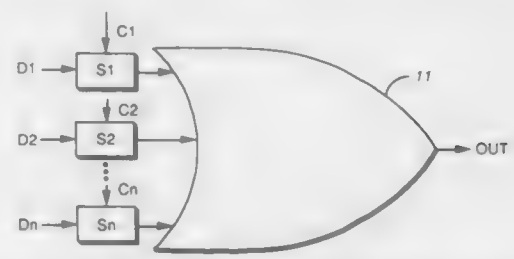
a transistor, having a base connected to said field effect transistor;

a second current source, connected to said field effect transistor, said second current source having a current value greater than said first current value; and

a resistor, connected between said second current source and said transistor for maintaining said drain-source voltage at a relatively constant value and wherein said drain-source voltage is relatively independent of said signal.

5,012,135

LOGIC GATES WITH A PROGRAMMABLE NUMBER OF INPUTS



Cecil H. Kaplinsky, Palo Alto, Calif., assignor to Plus Logic, Inc., Santa Clara, Calif.

Filed May 12, 1989, Ser. No. 351,437
Int. Cl.[5] H03K *19/094*
U.S. Cl. 307—465 **27 Claims**

1. A programmable logic gate that may be programmed to accept all or a selected subset of input signals for signal summation, the gate coprising:

(a) signal summation means having a plurality of input terminals and an output terminal, for receiving a data input signal or a logical zero input signal at each input terminal and for forming the logical sum of the data input signals and the logical zero signals and for issuing this sum as an output signal at the output terminal; and

(b) a plurality of individually programmable switches, each programmable switch having a data input terminal, a control input terminal and an output terminal, with each output terminal being connected to one of the input terminals of the summation means, each data input terminal receiving a data input signal, and each control input terminal receiving a control signal that has a first state and a second state, where receipt of a control signal in the first

state causes the output terminal of that switch to issue the data input signal and receipt of a control signal in the second state causes the output terminal of that switch to issue a logical zero signal,

wherein each said programmable switch comprises:

(1) a first pass transistor of a channel type having an input terminal, a pass terminal and an output terminal, the transistor receiving said data input signal at its input terminal, receiving said control signal at its pass terminal, and having its output terminal connected to one of said input terminals of said summation means; and

(2) a second pass transistor that has the same channel type and the same terminals as the first pass transistor, having its input terminal connected to a logical zero signal, receiving the logical complement of said control signal at its pass terminal, and having its output terminal connected to the output terminal of the first pass transistor.

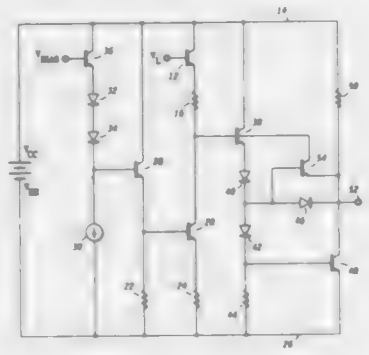
5,012,136

HIGH SPEED ECL TO CMOS TRANSLATOR HAVING REDUCED POWER CONSUMPTION

Robert Dixon, Tempe; Golnaz Kaveh, Chandler, and Walter Seelbach, Fountain Hills, all of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Dec. 4, 1989, Ser. No. 445,529
Int. Cl.[5] H03K *19/092, 19/08*
U.S. Cl. 307—475 **13 Claims**

2. A circuit responsive to an input logic signal for providing an output signal having predetermined logic levels at an output, comprising:



first means coupled between first and second power supply conductors for developing a first potential at a first node, said first potential having first and second states in response to first and second states of the input logic signal and operating substantially independent of variations in the supply voltage of said first and second power supply conductors;

second means coupled to said first node of said first means for conducting a first current between said first and second power supply conductors and developing a second potential at a second node in response to said first state of said first potential;

third means coupled for receiving said second potential developed at said second node of said second means and

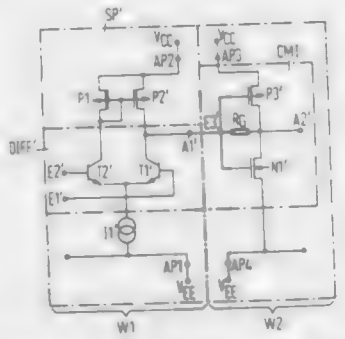
providing the output signal at the output of the circuit; and

fourth means coupled between the output of the circuit and said first node of said first means for developing a feedback signal proportional to the magnitude of said first

current flowing through said second means and applying said feedback signal to said first node for controlling the magnitude of said first state of said first potential to limit the magnitude of said first current flowing through said second means to a predetermined value.

5,012,137

ECL-CMOS CONVERTER



Ernst Muellner, Munich, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Munich, Fed. Rep. of Germany

Filed Jul. 17, 1989, Ser. No. 380,593

Claims priority, application Fed. Rep. of Germany, Jul. 22, 1988, 3825010

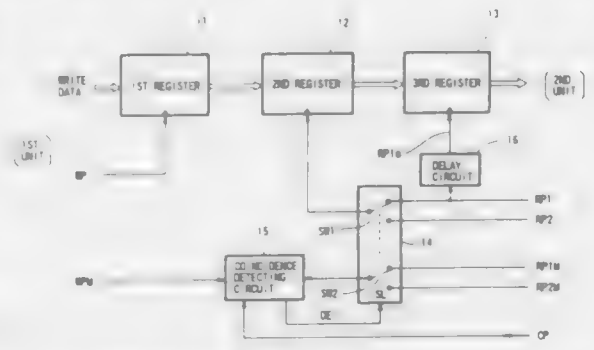
Int. Cl.[5] H03K *19/92, 19/3, 19/86, 17/10*

U.S. Cl. 307—475 **15 Claims**

1. ECL-CMOS converter for converting ECL levels into CMOS levels, comprising a voltage-to-current converter connected in series with a current-to-voltage converter, first and second inputs of the voltage-to-current converter being first and second inputs of the ECL-CMOS converter and an output of the current-to-voltage converter being an output of the ECL-CMOS converter; the current-to-voltage converter containing a feedback CMOS inverter stage; a first input of the feedback CMOS inverter stage forming an input of the current-to-voltage converter and being connected via a feedback element to an output of the CMOS inverter stage; the output of the CMOS inverter stage forming the output of the current-to-voltage converter; a second input of the CMOS inverter stage being connected to a third terminal point and a third input thereof being connected to a fourth terminal point; and the feedback CMOS inverter stage also containing an enhancement p-channel MOS field effect transistor and an enhancement n-channel MOS field effect transistor; a first terminal of the enhancement p-channel field effect transistor being connected to the second input of the CMOS inverter stage; a first terminal of the enhancement n-channel MOS field effect transistor being connected to the third input of the MOS inverter stage; the first input of the CMOS inverter stage being directly connected to a gate terminal of the p-channel enhancement MOS field effect transistor and to a gate terminal of the n-channel enhancement MOS field effect transistor; a second terminal of the p-channel enhancement MOS field effect transistor and a second terminal of the n-channel enhancement MOS field effect transistor each being connected to the output of the CMOS inverter stage; the third terminal point being connected to the second supply voltage and the fourth terminal point being connected to the first supply voltage.

5,012,138

INTERFACE CIRCUIT FOR ASYCHRONOUS DATA TRANSFER



Takashi Suzuki, Hamamatsu, Japan, assignor to Yamaha Corporation, Hamamatsu, Japan

Filed Jul. 25, 1989, Ser. No. 384,637

Claims priority, application Japan, Jul. 26, 1988, 63-186468

Int. Cl.[5] H03K *19/0175, 19/00, 3/01*

U.S. Cl. 307—475 **5 Claims**

1. An interface circuit comprising:

(a) a first register for reading in input data by a first pulse signal;

(b) a second register for reading in an output of said first register by a second pulse signal which is asynchronous with said first pulse signal, wherein said second pulse signal can be arbitrarily generated at any predetermined generation timing;

(c) phase difference detecting means for detecting whether or not a phase difference between phases of said first and second pulse signals is within a predetermined range; and

(d) selecting means for selecting a predetermined generation timing for said second pulse signal when said phase difference detecting means detects that said phase difference is within the predetermined range.

5,012,139

FULL WAVE RECTIFIER/AVERAGING CIRCUIT

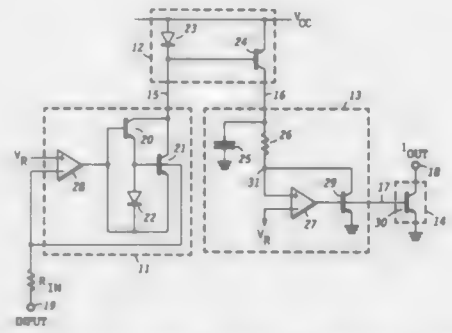
David M. Susak, Chandler, and Scott K. Bader, Mesa, both of Ariz., assignors to Motorola Inc., Schaumburg, Ill.

Filed Oct. 30, 1989, Ser. No. 428,671

Int. Cl.[5] G06G *7/12;* **H03K** *5/00;* **H03F** *3/04*

U.S. Cl. 307—490 **10 Claims**

1. A circuit for providing rectification and average of an applied input signal comprising:



rectification means responsive to the input signal for providing a first signal at an output, said first signal being a full wave rectified version of the input signal;

a current mirror having an input coupled to said rectification means for providing a second signal at an output in response to said first signal;

an operational amplifier having an inverting terminal coupled to a first reference voltage, a non-inverting terminal, and an output terminal;

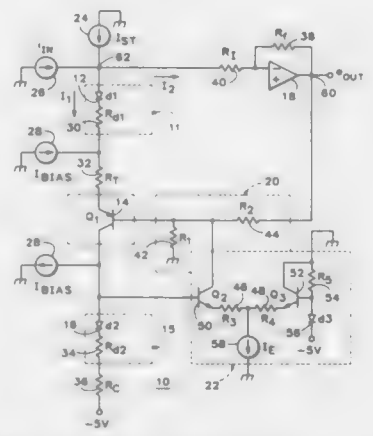
a transistor having a collector coupled to said non-inverting terminal of said operational amplifier, a base coupled to said output terminal of said operational amplifier, and an emitter coupled to a supply voltage terminal;

resistor coupled between said output of said current mirror and said non-inverting terminal of said operational amplifier;

capacitive means coupled between said output of said current mirror and said first supply voltage terminal wherein said operational amplifier, said transistor, said resistive means and said capacitive means comprise an averaging circuit; and

output means coupled to said output terminal of said operational amplifier for providing an output signal at an output terminal of the circuit.

5,012,140



LOGARITHMIC AMPLIFIER WITH GAIN CONTROL

Glenn Bateman, Redmond, Oreg., assignor to Tektronix, Inc., Beaverton, Oreg.

Filed Mar. 19, 1990, Ser. No. 495,191

Int. Cl.[5] G06G *7/10, 7/24, 7/12*

U.S. Cl. 307—491 **17 Claims**

1. A logarithmic amplifier comprising:

(a) a first non-linear element having an input terminal for receiving an input signal current and an output terminal;

(b) a first transistor having a first controlled terminal coupled to the output terminal of the first non-linear element, a second controlled terminal and a control terminal;

(c) a second non-linear element having an input terminal coupled to the second controlled terminal of the first transistor and an output terminal;

(d) a load element having a first terminal coupled to the output terminal of the second non-linear element and a second terminal coupled to a first source of supply voltage;

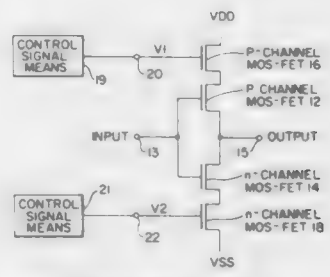
(e) a feedback network having an input terminal coupled to the input terminal of the second non-linear element and an output terminal coupled to the control terminal of the first transistor;

(f) means for amplifying having an input terminal coupled to the input terminal of the first non-linear element and an output terminal for providing a logarithmic output voltage and;

(g) an attenuation network for attenuating the logarithmic output voltage and applying the attenuated output voltage to the control terminal of the first transistor.

5,012,141

SIGNAL DELAY DEVICE USING CMOS SUPPLY VOLTAGE CONTROL



Norio Tomiiwa, Hamamatsu, Japan, assignor to Yamaha Corporation, Hamamatsu, Japan

Continuation of Ser. No. 760,332, Jul. 29, 1985, abandoned. This application Dec. 21, 1988, Ser. No. 289,479

Claims priority, application Japan, Jul. 31, 1984, 59-160784; Jul. 31, 1984, 59-160785; Jul. 31, 1984, 59-160786; Nov. 26, 1984, 59-179551[U]; Dec. 18, 1984, 59-267050; Dec. 21, 1984, 59-270431

Int. Cl.[5] H03R *5/12*

U.S. Cl. 307—594 **9 Claims**

1. A signal delay device comprising:

CMOS gate circuit means having an input terminal to which a binary input signal to be delayed is applied, an output terminal from which a delayed signal is derived and power voltage supply terminals to which operation power voltages from operation power voltage sources are applied; and

voltage control means connected in a power supplying path for said CMOS gate circuit means in association with at least one MOS-FET of said CMOS gate circuit means for controlling voltage applied to said CMOS gate circuit means;

control signal means for providing a user-adjustable control signal corresponding to a desired delay time, said control signal being applied to said voltage control means for the control of the applied voltage;

the voltage applied to said CMOS gate circuit means being controlled in response to the control signal applied to said voltage control means, the amount of delay in the binary input signal between said input and output terminals of said CMOS gate circuit means thereby being controlled.

5,012,142

DIFFERENTIAL CONTROLLED DELAY ELEMENTS AND SKEW CORRECTING DETECTOR FOR DELAY-LOCKED LOOPS AND THE LIKE

Jeffrey L. Sonntag, Muhlenberg Twp., Berks County, Pa., assignor to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Jul. 28, 1989, Ser. No. 387,458

Int. Cl.[5] H03K *5/13*

U.S. Cl. 307—602 **12 Claims**

1. A variable delay element with an input and an output, formed in an integrated circuit, for delaying signals, the delay varying in response to a control signal, having:

a first capacitive means; and

a first variable coupling means, having an output coupling to the output of the variable delay element, for variably

coupling the output of the variable delay element to the first capacitive means in response to the control signal;

wherein the delay element is characterized by: the first capacitive means having first and second capacitors and the first variable coupling means having first and second transistors of opposite conductivity types, connected

between corresponding first and second capacitors and the output of the first variable coupling means;

wherein the delay of the variable delay element is dependent on the control signal and the amount of coupling by the first variable coupling means, such that the amount of coupling varies proportionally with the desired delay of the variable delay element.

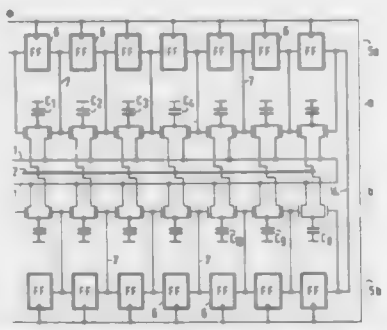
INTEGRATED DELAY LINE



Arnoldus J. J. Boudewijns, Eindhoven, Netherlands, assignor to U.S. Philips Corp., New York, N.Y.

Filed Oct. 4, 1989, Ser. No. 417,976

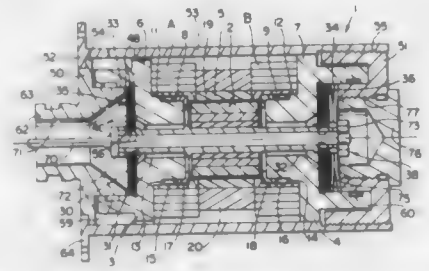
Claims priority, application Netherlands, Feb. 15, 1989, 8900363

Int. Cl.[5] H03K *17/16, 17/693*

U.S. Cl. 307—606 **4 Claims**

1. An integrated circuit having a delay line arranged at a surface of a semiconductor body and comprising a series of signal storage capacitances, an input line for supplying signals and a read-out line for reading out the stored signals, a plurality of pairs of transistors, which are each coupled to a signal storage capacitance and of which a transistor, designated the read-in transistor, comprises a switch between the capacitance and the read-in line, while the other transistor, designated the read-out transistor, comprises a switch between the capacitance and the read-out line, and further comprising a digital shift register having a plurality of outputs which are connected to control electrodes of the transistors, characterized in that the delay line comprises at least two adjacent parts with a common centrally-arranged part of the read-out line therebetween, the signal storage capacitances and the associated pairs of transistors and parts of the shift register being located on both sides of said parts of the read-out line in such a manner that on both sides of said part of the read-out line the signal storage capacitances with their coupled transistors of one of the parts of the delay line are located between the read-out line and the associated part of the shift register.

5,012,144



LINEAR DIRECT DRIVE MOTOR

Thomas W. Huitema, Galesburg; William H. Eiszner, Jr., Portage; Stanley D. Heeres, and Robert D. Vanderlaan, both of Kalamazoo, all of Mich., assignors to Pneumo Abex Corporation, Boston, Mass.

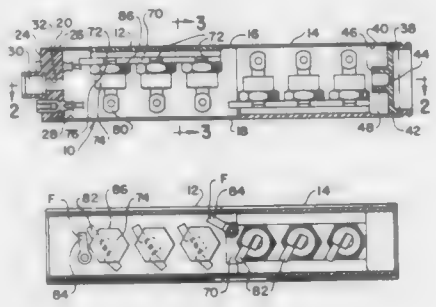
Filed Jan. 27, 1989, Ser. No. 371,936

Int. Cl.[5] H02K *41/00*

U.S. Cl. 310—14 **50 Claims**

1. A linear drive motor comprising a pair of axially spaced relatively fixed stator poles, armature means mounted for axial movement between said stator poles, magnet means surrounding said armature means in radially spaced relation therefrom, coil means surrounding portions of said stator poles, and centering spring means for supporting said armature means for coaxial movement relative to said stator poles.

5,012,145



ROTATING RECTIFIER ASSEMBLY FOR BRUSHLESS GENERATOR

Gary A. Frantz, Belvidere; Mohd A. Aleem, Roscoe; Loren Rademacher, and Lee R. Rateike, both of Rockford, all of Ill., assignors to Sundstrand Corporation, Rockford, Ill.

Filed Oct. 30, 1989, Ser. No. 429,045

Int. Cl.[5] H02K *11/00;* **H02M** *1/00*

U.S. Cl. 310—68 D **8 Claims**

7. A rotary rectifier assembly comprising:

a tubular housing having an interior wall, at least part of which is formed of insulating material;

opposed elongated, inverted T-shaped slots in said wall part;

elongated buses in said slots; and

a plurality of prepackaged diodes mounted on each of said buses by a packaged diode terminal so as to be electrically connected to the corresponding bus and projecting out of the corresponding slot.

BEVELED GENERATOR SHAFT FOR IMPROVED HEAT TRANSFER

John J. Tumpey, Oakhurst, N.J., assignor to Allied-Signal Inc., Morris Township, Morris County, N.J.

Filed Dec. 7, 1989, Ser. No. 447,324

Int. Cl.[5] H02K *9/22;* **F28F** *9/08*

U.S. Cl. 310—68 D **16 Claims**

1. An electric machine which generates an output signal from an exciter signal, comprising:

a shaft having a first section, a second section and a beveled section between said first and second sections, said second section having a smaller outer diameter than said first section;

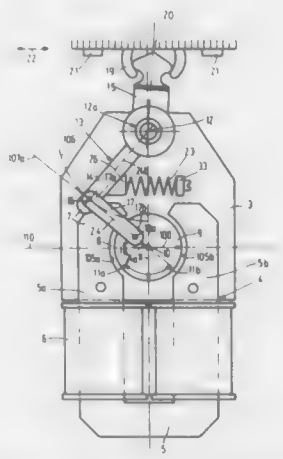
a substrate having an internal radial surface which is angled similarly to said beveled section of said shaft

at least one heat dissipating component mounted on said substrate which generates the exciter signal; and

means secured to said shaft for securing said substrate onto said shaft such that said beveled internal radial surface of said substrate mates with said beveled section of said shaft to provide a heat conduction path for said substrate to said shaft.

5,012,147

DOMESTIC VIBRATION APPARATUS WITH LEVER DRIVE



Leo Bertram, Stolberg, Fed. Rep. of Germany; Hugo Schemmann, Schaesberg, Netherlands, and Romuald L. Bukoschek, Klagenfurt, Austria, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Jun. 28, 1989, Ser. No. 373,367

Claims priority, application Fed. Rep. of Germany, Jul. 1, 1988, 3822332

Int. Cl.[5] B20B *19/02;* **F16D** *3/00;* **F16F** *15/12*

U.S. Cl. 310—80 **40 Claims**

1. A domestic vibration apparatus in which movements of a two-pole permanent magnet (9) forming a rotor is a stator arrangement energized by means of coils produce a vibratory movement of a vibration tool via a lever system (13) coupled to the movements of the rotor (9), a return - sprint force acting on the lever system (13) to preload the drive system comprising the lever system (13) and the rotor (9) in such a way that the rotor (9) can oscillate about a rest position, the lever system (13) comprising a two-arm swing lever and being connected to an eccentrically disposed pin of the rotor (9), characterized in that

the two-pole permanent magnet rotor (9) is without pole-pieces and is arranged in the U-shaped stator of a single-phase synchronous motor, and

a first lever arm (14) of the two-arm swing lever (13) and the rotor (9) are interconnected by a connecting rod (17) which at one end is articulated to the first lever arm (14) by means of a connecting-rod joint (16) and at its other end is eccentrically articulated to the rotor (9) by means of a crank pin (18*a*).

AC MACHINE SYSTEM WITH INDUCED DC FIELD

Joseph Vithayathil, 3217 Johnson Ave., Apt. 2, San Luis Obispo, Calif. 93401

Filed Sep. 14, 1989, Ser. No. 407,211

Int. Cl.[5] H02K *19/02*

U.S. Cl. 310—165 **14 Claims**

1. An AC machine system with induced DC field comprising:

an AC machine, whose rotor has coils and rectifying elements, to provide DC excitation, to create DC excited magnetic poles on the rotor, to enable operation at the synchronous speed, as defined hereinafter,

the said machine having stator circuits, either of single phase, or having a plurality of phases, which when energized as required, create a rotating magnetic field system, which has as constituents, a main rotating field system whose speed is defined herein as the synchronous speed of the machine, and an auxiliary rotating field system whose speed is different from the synchronous speed as defined, and

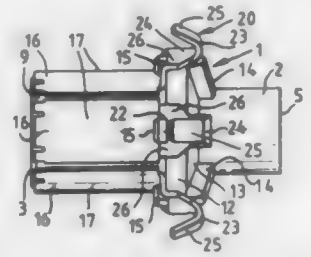
a power supply system to provide the power and control requirements of the said machine.

5,012,149

ASSEMBLED COMMUTATOR FOR AN ELECTRIC MOTOR

Georg Strobl, Repulse Bay, Hong Kong, assignor to Johnson Electric S.A., La Chaux de Fonds, Switzerland

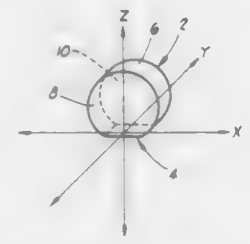
Filed Jan. 18, 1989, Ser. No. 298,028



Claims priority, application United Kingdom, Jan. 19, 1988, 8801093; Feb. 15, 1988, 8803444

Int. Cl.[5] H02K *13/04*

U.S. Cl. 310—234 **6 Claims**



1. An assembled commutator comprising a preformed cylindrical base, the base comprising a cylindrical portion having a collar at one end, a plurality of commutator segments mounted on the base, each segment comprising a brush contacting portion which is supported by the cylindrical portion of the base, and a generally radially extending connector portion for hot connection to an armature coil wire, the connector portion being supported by the collar, wherein an aperture is formed in said connector portion and a projection is provided on the collar, the projection being received in the aperture to locate

the segment on the base in the region of the collar, wherein the projection is provided on a wall of the collar, the wall extending radially away from the cylindrical base portion, and

wherein the projection is spaced from the cylindrical base portion by the thickness of a portion of the segment, with the portion of the segment fitting between the projection on the collar and the cylindrical base portion.

U.S. Cl. 313—509 **1 Claim**

1. A dispersion-type electroluminescence device comprising a back electrode layer and, laminated thereon, an insulator layer, a luminous layer and a transparent electrode layer wherein dented portions present in the upper part of the luminous layer are coated with a resin composition having a dielectric constant which is at least about 5 but lower than that of the dielectric resin composition, which is at least 15, used for formation of the luminous layer and which is, the thickness of coating of the dielectric resin composition formed in the

dented portions of the luminous layer being not greater than about 5μ over a peak of the highest projecting portion of the luminous layer.

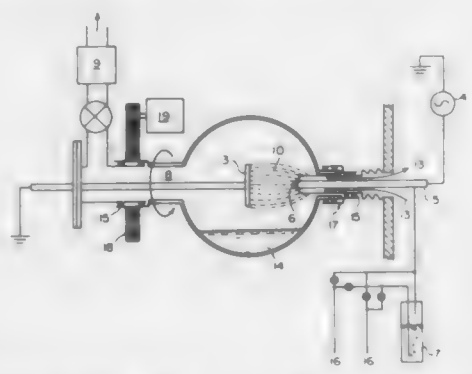
LONG-LIFE LUMINAIRES
John F. Walton, 6853 Strata St., McLean, Va. 22101, and Al R. Roshdieh, 688 College Pkwy., Rockville, Md. 20850
Continuation-in-part of Ser. No. 37,229, Apr. 10, 1987, abandoned. This application Oct. 18, 1988, Ser. No. 259,320
The portion of the term of this patent subsequent to Nov. 1, 2005, has been disclaimed.
Int. Cl.[5] H01J *7/44;* **H05B** *39/10, 41/46*
U.S. Cl. 315—66 **3 Claims**



2. A long-life luminaire for signs powered by power company standard voltages for use in emergencies, comprising:
a first string of individual long-life, low-voltage light bulbs having electrical ends electrically connected in series;
means for connecting said string across a source of electrical energy;
a resistor connected in series with said string of bulbs;
said resistor having a resistance approximately equal to that of one of said bulbs when at incandescent temperature; and
at least one varistor connected across said electrical ends of the entire string of the long-life, low-voltage lamps only.

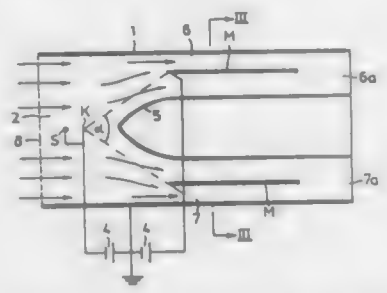
PLASMA CVD APPARATUS
Isao Nakatani, and Takao Furubayashi, both of Funabashi, Japan, assignors to National Research Institute for Metals, Tokyo, Japan
Continuation-in-part of Ser. No. 77,673, Jul. 23, 1987, abandoned. This application Dec. 18, 1989, Ser. No. 451,766
Claims priority, application Japan, Jul. 25, 1986, 61-173833; Jul. 25, 1986, 61-173834; Dec. 20, 1988, 63-319429
Int. Cl.[5] H01J *7/24*
U.S. Cl. 315—111.21 **19 Claims**

1. A plasma CVD apparatus comprising: a rotatable plasma reaction vessel; a starting gas introducing pipe for introducing a starting gas thereinto;

an ambient gas introducing pipe opening into said reaction vessel for introducing an ambient gas thereinto;
an exhaust pipe opening out of said reaction vessel;
means for applying a high frequency electric field to the interior of said reaction vessel;
a starting gas blowing port means on said starting gas introducing pipe within said reaction vessel; and



a cooling means in direct heat exchange relation with said port means for cooling said port means wherein said starting gas introducing pipe and said exhaust pipe are located in opposition to each other on a rotating axis of said reaction vessel.

ACCORDION MOUNT FOR SOLAR CELLS INCLUDING POINT-OF-PURCHASE DISPLAY WITH LEDS

Kathleen D. Dunn Thompson, Colorado Springs, Colo., assignor to Colorado Instruments, Inc., Colorado Springs, Colo.

Filed Apr. 13, 1989, Ser. No. 337,419
Int. Cl.[5] H05B *37/02, 41/36*
U.S. Cl. 315—149 **16 Claims**

1. An energy converting assembly for operative association with a light source mounted in a housing, comprising:
(a) a solar cell,
(b) mounting and spacing means for mounting said solar cell and for occupying space between a light source and a housing for the light source, and having a first portion and a second portion remote from aid first portion;
(c) means for holding said solar cell on said first portion of said mounting means;
(d) means disposed on said mounting means second portion for connecting said mounting means to the housing for the light source, so that the solar cell is positioned by the mounting means in close proximity with the light source, with the mounting and spacing means occupying space between the housing and the light source;
(e) a display electrically connected to said solar cell, and powered thereby when the solar cell receives light rom the light source; and wherein said mounting and spacing means comprises sheet material having first and second faces, and an undulating configuration between first and second opposite side edges thereof, said first portion comprising part of said first face at an undulation substantially centrally between said first and second side edges.

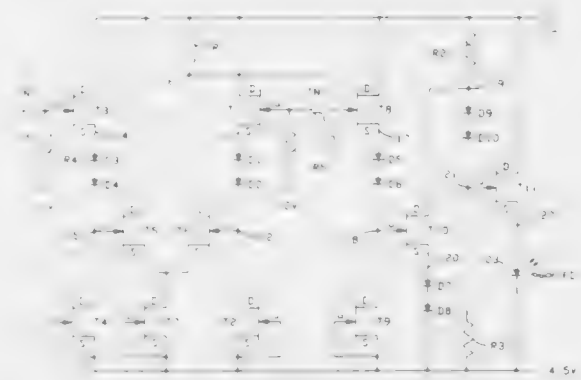
POWER FACTOR CORRECTION CIRCUIT

Joseph C. Borowiec, and Sayed-Amr El-Hamamsy, both of Schenectady, N.Y., assignors to General Electric Company, Schenectady, N.Y.

Filed Jan. 5, 1989, Ser. No. 295,624
Int. Cl.[5] H05B *41/24*
U.S. Cl. 315—247 **10 Claims**

1. A circuit for obtaining a high power factor electronically, comprising:
a filter capacitor;
capacitor pre-charging means, including a varistor electrically connected in series with said filter capacitor, coupled to an alternating current line voltage for precharging said filter capacitor to a pre-selected DC voltage level;
a power factor correction winding coupled to said capacitor for maintaining the DC voltage level across said capacitor above said pre-selected DC voltage level; and

coasting device means for supplying load current from said capacitor to a load alternately with the line voltage, said



coasting device means being conductive when the voltage level across said capacitor exceeds the line voltage.

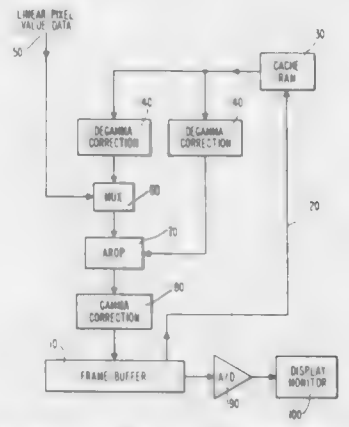
LIGHT EMITTING DIODE TRANSMITTER CIRCUIT WITH TEMPERATURE COMPENSATION

Cornell S. L. Chun, Eagan, Minn., assignor to Unisys Corporation, Blue Bell, Pa.

Filed Apr. 13, 1990, Ser. No. 508,450
Int. Cl.[5] H05B *39/04*
U.S. Cl. 315—309 **11 Claims**



1. A light emitting diode circuit having first, second and third nodes comprising,
first and second terminal means each of which receive a different reference potential thereon comprising,
interface means for receiving an input signal and for providing a drive signal therefrom,
circuit means comprising first field-effect-transistor means which operates in a switching mode and which has its gate coupled to receive said drive signal and its drain-to-source path coupled between a first node, and one of said terminal means,
temperature compensating means coupled across said first and second terminal means comprising,
first resistive means coupled between said first terminal and said first node,
temperature compensating means coupled between said first and second nodes and in series with said first resistive means,
second resistive means coupled between said second node and said second terminal and in series with said temperature compensation means,
second field effect transistor means which has its gate coupled to said second node and its drain-to-source path coupled between said first terminal and said third node, and
light emitting diode means coupled between said third node and said second terminal and in series with said drain-to-source path of said second field effect transistor means.

CONVEYANCE WITH ELECTRONIC CONTROL FOR LEFT AND RIGHT MOTORS

Lloyd L. Lautzenhiser, Box 244, Nobel, Ontario, P0G 1G0, and John L. Lautzenhiser, 4929 Malden Road, Windsor, Ontario, N9E 3T7, both of Canada

Division of Ser. No. 927,273, Nov. 4, 1986. This application Feb. 21, 1990, Ser. No. 482,461

Int. Cl.[5] H02P *7/00*

U.S. Cl. 318—53 **21 Claims**

1. A conveyance (**10**) having first (**12***a*) and second (**12***b*) propulsion elements, and having first (**26***a* or **232***a*) and second (**26***b*, etc.) motors that are operatively connected to said first and second propulsion elements, the improvement which comprises:

motor control means (**332***a*, **334***a*, or **336***a*), being connected to said first and second motors and to a source (**60**) of power, for separately and variably supplying power to said first and second motors;

manual control means (**352**), being operatively connected to said motor control means, for selectively and variably controlling said motor control means; and

change limiting means (**223**), being operatively connected to said motor control means, for limiting the rate of change in differences in power supplied to said first and second motors, while permitting larger rates of change in power supplied to said motors when rates of changes in power supplied to said first and second motors are generally equal.

CONTROL SYSTEM FOR BRUSHLESS DC MOTOR

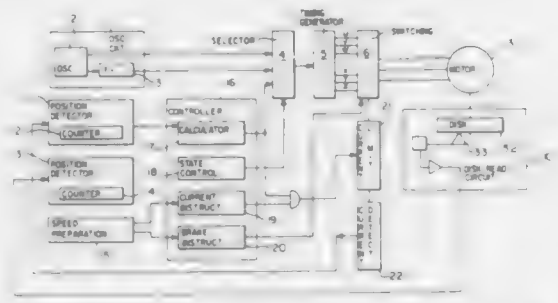
Nobuyoshi Ushijima, Odawara; Hiroshi Masuda, Hiratsuka; Akira Ishibashi, Tokyo; Masahiko Satou, Odawara; Toshiyuki Haruna, Odawara; Norikazu Takayama, Odawara, and Yoshinobu Kudou, Minamiashigara, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Jan. 4, 1990, Ser. No. 460,990

Claims priority, application Japan, Jan. 18, 1989, 1-7822

Int. Cl.[5] H02P *7/00*

U.S. Cl. 318—254 **34 Claims**



1. A control method for brushless DC motor having a rotor, a plurality of magnetic poles and coils of a plurality of phases, wherein current is applied sequentially through said phases so as to rotate said rotor and the method is performed during each portion of one revolution of said motor generally equal to the time of one revolution dividedly by the number of phases, comprising the steps of:

applying a current to only one of said phases;

temporarily stopping said applying of said current of said one phase;

thereafter reapplying said current to only the same phase as in the step of stopping without applying said current to the other coils during said one portion of one revolution;

measuring the state of rise of said current when it begins to flow to said phase during said reapplying;

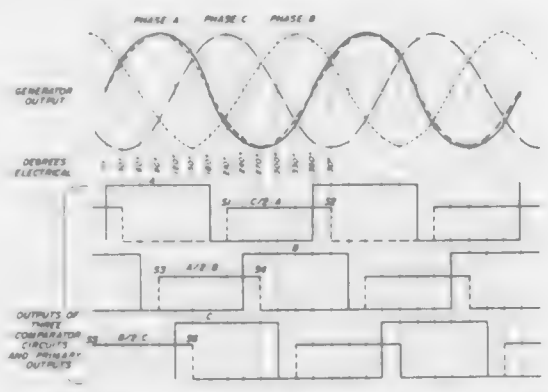
detecting the position of one of said magnetic poles that is located at a position opposite to said one phase, based on said measured state of the rise of said current from said step of measuring;

in response to said detecting the position of said one magnetic pole, determining whether the flow of said current is to be switched over to a next phase or not switched;

thereafter switching said current over to the next phase when said current is determined to be switched over to the next phase; and

repeating said proceeding steps after a prescribed interval.

5,012,167



SINUSOIDAL SIGNAL DECODER FOR 12-STEP MOTOR COMMUTATION

Howard F. Hendricks, Harleysville, Pa., assignor to Penn Engineering & Manufacturing Corp., Danboro, Pa.

Continuation of Ser. No. 116,160, Nov. 3, 1987, abandoned. This application Mar. 30, 1990, Ser. No. 488,478

Int. Cl.[5] H02K *29/12*

U.S. Cl. 318—254 **6 Claims**

1. In an electric motor having a device for decoding sinusoidal signal from a motor shaft generator to derive a 12-step commutation, comprising:

a. means for generating three sinusoidal output signals connected to the motor shaft, said signals being out of phase 120 electrical degrees and producing an output voltage proportional to the angle of said motor shaft;

b. three voltage comparator circuits, each connected to receive a pair of said three sinusoidal output signals;

c. means for combining the outputs of said three voltage comparator circuits with said three sinusoidal output signals to yield six equally spaced and non-overlapping voltage outputs;

d. a PROM, detecting commutation switch points from said six voltage outputs, for producing twelve torque angles per rotor revolution for said 12-step commutation;

e. a drive amp signaled by said PROM; and

f. stator coils energized by said drive amp.

6. A method of producing a 12-step commutation switching signal in an electric motor, comprising the steps of:

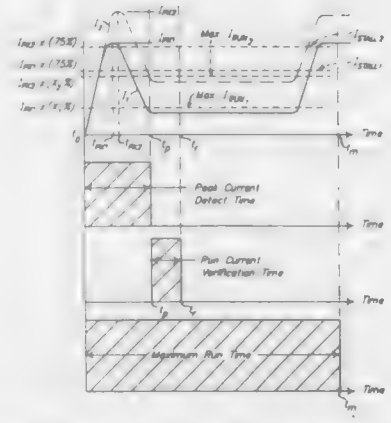
a. generating three sinusoidal output signals with a shaft-mounted generator;

b. combining said three output signals into three pairs;

c. comparing the value of each pair of the output signals using a 2:1 weighing resistor network to achieve three signals from the comparison of each of the three pairs; and

d. combining the three sinusoidal output signals with the three signals resulting from said comparison step by the process of EXCLUSIVE-ORing to yield a total of six output signals for said 12-step commutation.

5,012,168



METHOD AND APPARATUS FOR DETECTING STALL CURRENT IN AN ENERGIZED ELECTRIC MOTOR

Paul C. Dara, Warren; Clair E. Mitchell, Detroit, and David J. Rutkowski, Grosse Ile, all of Mich., assignors to Ford Motor Company, Dearborn, Mich.

Filed Feb. 20, 1990, Ser. No. 481,921

Int. Cl.[5] H02H *3/08*

U.S. Cl. 318—434 **27 Claims**

1. A method of detecting stall current in an energized electric motor, comprising the steps of:

energizing said motor;

periodically sampling the current drawn by said motor during a first predetermined period of time immediately following the commencement of the energizing step;

determining a peak current value from said samplings for said first predetermined period of time;

multiplying said determined peak current value by a first predetermined fraction to derive a stall current reference value;

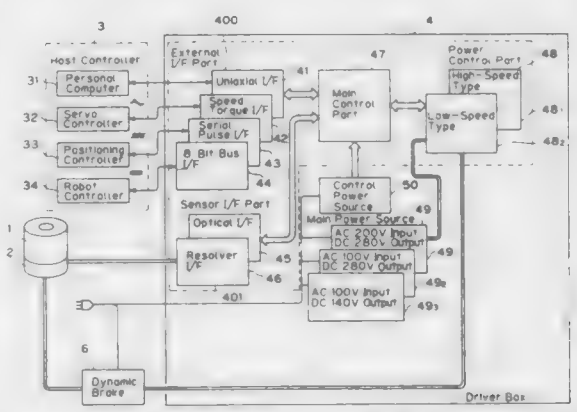
continuing to periodically sample said current drawn by said motor during the time it is energized to determine run current values;

comparing each run current value with said stall current reference value; and

deenergizing said motor when said compared run current values exceed said stall current reference value.

5,012,169

MOTOR DRIVE SYSTEM



Yutaka Ono; Yasuhiko Muramatsu; Hideo Banzai; Yoichi Kikukawa; Shigeru Hashida; Shotaro Shindo; Haruo Higuchi; Hiroyuki Shinomiya; Mitsuhiro Nikaido, and Koichi Sato, all of Tokyo, Japan, assignors to Yokogawa Electric Corporation, Tokyo, Japan

Filed Jul. 6, 1989, Ser. No. 376,323

Claims priority, application Japan, Jul. 20, 1988, 88/96180[U]; Jul. 26, 1988, 88/98879[U]; Aug. 29, 1988, 88/112928[U]; Apr. 4, 1989, 89/84614[U]

Int. Cl.[5] G05B *19/405*

U.S. Cl. 318—568 **23 Claims**

1. In a motor drive system operating for feedback control of a motor having one or more coils, the improvement comprising

a first interface part comprising a plurality of interfaces according to the kind of host controller for generating command signals;

a sensor interface part comprising an interface of a sensor for detecting rotations of said motor and generating a detection signal;

a main control part for generating a control signal to effect feedback control of said motor according to a command signal received from said first interface part and a detection signal received from said sensor interface part; and

a power control part for amplifying a current according to said control signal and for feeding the amplified current to said one or more coils of said motor; wherein

said first interface part, said sensor interface part, said main control part and said power control part are separate and modularized as cards; and wherein

said motor comprises a stator provided with a salient pole with a plurality of teeth formed on a tip thereof; and a rotor with a plurality of teeth formed at positions opposite to said plurality of teeth formed on said salient pole of said stator; and wherein a permanent magnet is provided and wherein said one or more coils and said permanent magnet together generate a magnetic field; and wherein each component of said motor is modularized.

5,012,170

MECHANICAL STABILIZATION SYSTEM WITH COUNTER-ROTATING NESTED ROTORS

Gérard Atlas, Mercey, France, assignor to Societe Europeenne de Propulsion, Suresnes, France

Filed Jan. 26, 1990, Ser. No. 470,826

Claims priority, application France, Jan. 31, 1989, 89 01216

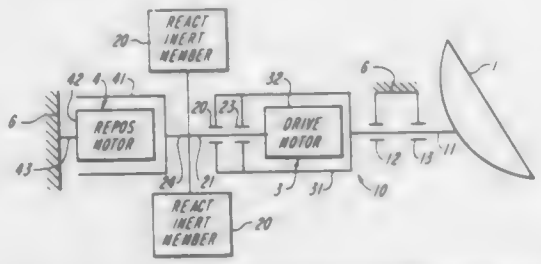
Int. Cl.[5] B64G *1/38*

U.S. Cl. 318—611 **11 Claims**

1. A mechanical stabilization system with counter-rotating nested rotors, the system comprising:

a support to be stabilized;

a working rotor mounted on the support by means of bearings and fixed to a working member for which at least one



parameter defining the rotation of the working rotor is variable as a function of time;

a reaction rotor concentric with the working rotor, mounted on the working rotor by means of bearings and fixed to a reaction inertia member;

a first electric motor interposed between the working rotor and the reaction rotor and rotating the working rotor and the reaction rotor in opposite directions; and

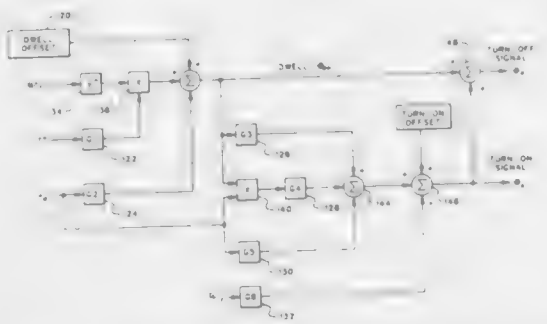
a low power second electric motor interposed between the reaction rotor and the support, wherein the system further comprises,

a detector interposed between the working rotor and the support in order to measure said parameter defining the rotation of the working rotor and on which a predetermined law of motion as a function of time is imposed;

a first servo-control circuit receiving signals from the first detector in order to modify the operating characteristics of the first motor so as to cause said predetermined law of motion to be complied with;

a second detector interposed between the reaction rotor and the support;

a second servo-control circuit synchronous with the first servo-control circuit and receiving signals from the second detector in order to servo-control the low power second electric motor in order to reposition the reaction rotor and correct drift arising in the correcting motion of the reaction rotor in particular due to friction in the bearings; and wherein



an amplitude of rotation of the working rotor about its mean position is greater than several rotations.

5,012,171

CONTROL SYSTEM FOR HIGH SPEED SWITCHED RELUCTANCE MOTOR

James W. Sember, Roanoke, Va., assignor to General Electric Company, Salem, Va.

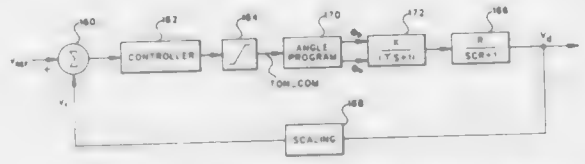
Filed May 9, 1989, Ser. No. 351,505
Int. Cl.[5] H02P 8/00
U.S. Cl. 318—696 6 Claims

1. A method of controlling a switched reluctance motor during high speed operation in response to a torque command T*, the method comprising the steps of:

rendering ineffective any control loop response to a current command;

setting a dwell angle of the desired motor current as a function of the torque command, the motor velocity and the magnitude of source voltage;

computing a turn-on angle for the desired motor current as a function of the dwell angle, the source voltage and the motor velocity; and



generating a turn-off angle for the desired motor current as the sum of the dwell angle and the turn-on angle.

5,012,172

CONTROL SYSTEM FOR SWITCHED RELUCTANCE MOTOR OPERATING AS A POWER GENERATOR

James W. Sember, Roanoke, Va., assignor to General Electric Company, Salem, Va.

Filed May 9, 1989, Ser. No. 351,491
Int. Cl.[5] H02P 8/00
U.S. Cl. 318—696 8 Claims

1. A method for operating a multi-phase switched reluctance motor in a generator mode, the motor having a first plurality of stator poles wound with phase windings and a second plurality of salient rotor poles, the phase windings being connected by selectably controllable switches to a direct current (DC) bus and with each phase winding including commutation means for conducting current when the switches are disabled, the method comprising the steps of:

gating the switches for a selected phase winding into conduction whereby current is caused to flow in the winding and in said DC bus in a first direction;

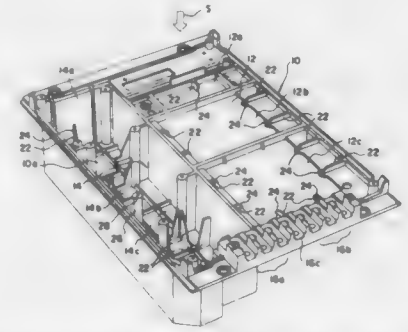
disabling the switches when winding current reaches a preselected magnitude whereby current in the winding is directed, by way of said commutation means, to the DC bus to effect current flow in said bus in a direction opposite to said first direction; and

regulating the voltage at the DC bus, when said motor is operating in the generator mode, by varying the instant at which the switches are gated into conduction as a function of the angular displacement between the associated stator pole and a corresponding rotor pole.

5,012,173

CASING STRUCTURE FOR AN AMPLIFIER UNIT FOR AN AC SPINDLE

Yoshiki Fujioka, and Tatsuo Shinohara, both of Yamanashi, Japan, assignors to Fanuc Ltd., Yamanashi, Japan



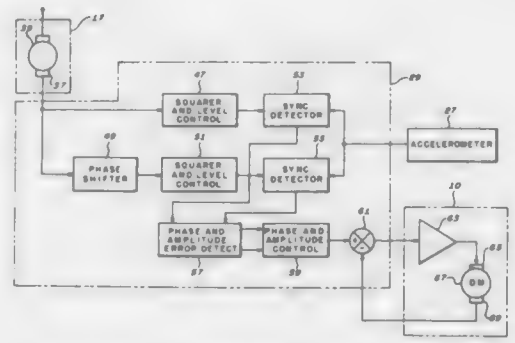
PCT No. PCT/JP88/00589, § 371 Date Dec. 29, 1988, § 102(e) Date Dec. 29, 1988, PCT Pub. No. WO88/10533, PCT Pub. Date Dec. 29, 1988
PCT Filed Jun. 16, 1988, Ser. No. 334,275
Claims priority, application Japan, Jun. 16, 1987, 62-148012
Int. Cl.[5] H02P 7/63; H05K 7/20
U.S. Cl. 318—727 6 Claims

1. An amplifier unit for an AC spindle, formed between an AC spindle motor and a power source, having a plurality of circuit components which make up an electric amplifier and a casing for accommodating therein said circuit components, said casing comprising:

a housing means having an opening at an upper portion thereof for receiving said plurality of circuit components;

fixing seat means formed at predetermined positions on said housing means for respectively receiving attachments of said plurality of circuit components; and

positioning plate means formed at predetermined positions on said housing means for respectively guiding said plurality of circuit components so that said circuit component attachments are aligned with and respectively seated on said fixing seat means, wherein the positioning plate means of said casing is a lengthwise, thin plate-shaped rib having



an inclined surface declining toward said predetermined positions.

5,012,174

METHOD AND APPARATUS FOR COUNTERING VIBRATIONS OF A PLATFORM

Charles M. Adkins; James R. Brazell; Gerard T. Mayer, and Henry C. Stacey, all of Charlottesville, Va., assignors to Sperry Marine Inc., Charlottesville, Va.

Filed Jun. 20, 1988, Ser. No. 209,251
Int. Cl.[5] B64C 17/06
U.S. Cl. 318—649 8 Claims

1. An apparatus for countering vibrations of a platform induced by a mechanically oscillating mass mounted on the platform and driven by a motor comprising:

motor pick-off means at said motor for providing electrical signals representative of said oscillating mass movements;

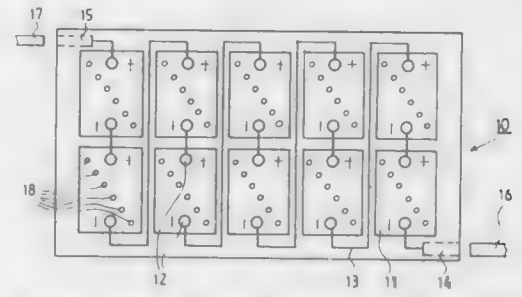
a counter mass mechanically coupled to said platform;

oscillator means for mechanically oscillating said counter mass,

oscillator pick-off means at said oscillator means for providing signals representative of mechanical movements of said counter mass;

drive input means at said oscillator means for receiving electrical signals to mechanically drive said counter mass;

accelerometer means mounted on said platform for providing electrical signals representative of platform vibrations; and



vibration control means coupled to receive signals from said motor pick-off means, signals from said oscillator pick-off means, and signals from said accelerometer means for providing signals to said drive input means that cause said oscillator means to mechanically drive said counter mass in a manner to induce vibrations of said platform that counter vibrations of said platform induced by oscillations of said oscillating mass.

MEANS FOR ACID-FILLING AND FORMING

Toivo Kärnä, Porvoo, and Kalevi Lind, Tampere, both of Finland, assignors to Neste Oy, Finland

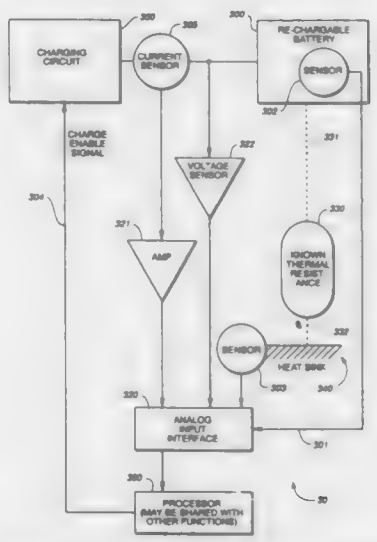
Filed Oct. 13, 1989, Ser. No. 421,275
Int. Cl.[5] H02J 7/00
U.S. Cl. 320—2 8 Claims

1. Apparatus for filling and forming batteries, the apparatus comprising

a frame for holding a plurality of storage batteries simultaneously;

a duct system being formed within the frame and being arranged to contact cells of respective ones of the batteries, said duct system serving to supply acid to each cell simultaneously; and

a battery charging circuit with electrical conductors supported by said frame, the circuit being operative to supply charging current to the batteries; and



wherein the batteries are connected by their respective terminals to the conductors of said circuit upon an installing of the batteries in said frame.

5,012,176

APPARATUS AND METHOD FOR CALORIMETRICALLY DETERMINING BATTERY CHARGE STATE

David H. LaForge, Kensington, Calif., assignor to Baxter International, Inc., Deerfield, Ill.

Filed Apr. 3, 1990, Ser. No. 503,837
Int. Cl.[5] G01N 27/46; H02J 7/00
U.S. Cl. 320—31 19 Claims

1. An apparatus for determining the state of charge of a rechargeable battery comprising:

charging means, coupled to the battery, for charging the battery;

current sensing means, coupled between said charging

means and the battery, for sensing the current entering the battery;

heat detecting means, coupled to the battery, for detecting the heat emanating from the battery during charging; and

processing means, coupled to said current sensing means and to said heat detecting means, including a mathematical charge acceptance model providing the relationship between a charge acceptance percentage and the state of charge of the battery, for calculating the state of charge of the battery from the current entering the battery, the heat detected by said heat detecting means, and said charge acceptance model, wherein said heat is the complement of said charge acceptance percentage.

11. A method for determining the state of charge of a rechargeable battery comprising:

mathematically modeling the relationship between the charge acceptance percentage and the state of charge of the battery;

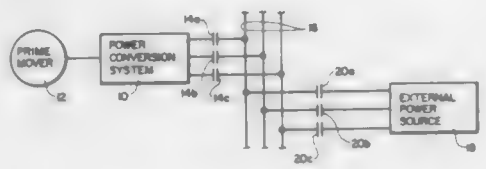
charging the battery;

detecting the current entering the battery;

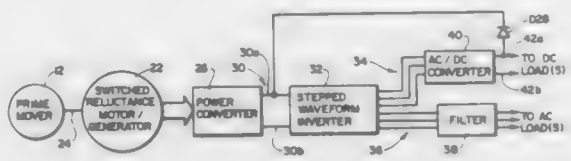
detecting the heat emanating from the battery during charging, said heat flux being the complement of the charge acceptance percentage; and

storing said charge acceptance model in a processor and calculating the state of charge of the battery from the current entering the battery, the heat detected and said charge acceptance model.

5,012,177



POWER CONVERSION SYSTEM USING A SWITCHED RELUCTANCE MOTOR/GENERATOR



P. John Dhyanchand; Sunil Patel; Chai-Nam Ng, and Vietson Nguyen, all of Rockford, Ill., assignors to Sundstrand Corporation, Rockford, Ill.

Filed Dec. 19, 1989, Ser. No. 452,349

Int. Cl.[5] H02P *9/04;* **H02K** *23/52;* **H02M** *5/458, 1/12*

U.S. Cl. 322—10 **11 Claims**

1. A power conversion system operable in a generating mode to convert motive power supplied by a prime mover into electrical power and in a starting mode to convert electrical power supplied by a power source into motive power, comprising:

a switched reluctance motor/generator having a motive power shaft coupled to the prime mover during operation in the generating mode and an electrical winding;

a first electrical power converter coupled to the electrical winding;

a second electrical power converter coupled to the first electrical power converter by a DC link;

means for coupling a load bus to the second power converter during operation in the generating mode, and for coupling the power source to either of the first and second power converters during operation in the starting mode; and

means coupled to the power converters for operating same whereby the motor/generator develops electrical power in the generating mode which is rectified by the first power converter to produce DC power, the DC power being converted by the second power converter into output power and whereby DC power is provided on the DC link during operation in the starting mode which is in turn used by the first power converter to cause the motor/generator to develop motive power.

LOW NOISE DAC CURRENT SOURCE TOPOLOGY

Frederick G. Weiss, Newberg, and Daniel G. Knierim, Beaverton, both of Oreg., assignors to TriQuint Semiconductor, Inc., Beaverton, Oreg.

Filed Mar. 19, 1990, Ser. No. 495,177

Int. Cl.[5] G05F *3/30*

U.S. Cl. 323—269 **7 Claims**

1. An electrical circuit that provides an output current, comprising:

multiple current source means for producing respective multiple currents;

current sensing means for sensing each of the multiple currents and sensing an increase i_δ in the magnitude of one of the multiple currents, the current sensing means producing an indication signal that is indicative of i_δ; and

compensation means responsive to the indication signal for providing to each one of the current source means a compensation signal in response to which the multiple current source means adjusts the multiple currents to substantially offset i_δ and thereby substantially reduce a presence of i_δ in the output current.

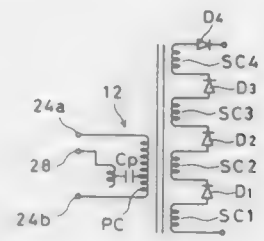
FLYBACK TRANSFORMER WITH INTEGRALLY FORMED RESONANCE CAPACITOR

Mitunso Okumura, Nagaokakyo, Japan, assignor to Murata Manufacturing Co., Ltd., Japan

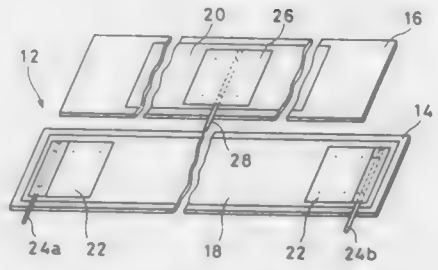
Filed Jun. 14, 1989, Ser. No. 365,773

Claims priority, application Japan, Jun. 15, 1988, 63-147534; Jun. 16, 1988, 63-148585

Int. Cl.[5] H01F *15/14;* **H04N** *3/195*



U.S. Cl. 323—355 **12 Claims**



1. A flyback transformer, comprising:

a first wound unit which comprises a second insulation sheet wound and laminated on a first insulation sheet, said first wound unit including a first conductor which is formed on one surface of said first insulation sheet and extended in a longitudinal direction thereof, two first terminals which are fixed to said first conductor, a second conductor which is formed on one surface of said second insulation sheet, and a second terminal which is fixed to said second conductor;

a first primary coil being formed by said first conductor between said two first terminals and a first resonance capacitor which is connected to said primary coil being formed between said first and second conductors, said first resonance capacitor and said primary coil forming a resonance circuit having a predetermined resonance frequency; and

a secondary coil which is disposed on said first wound unit.

SYSTEM FOR TESTING INTERNAL NODES

Monte J. Dalrymple, Fremont; Lois F. Brubaker, Newark, and Don Smith, Los Gatos, all of Calif., assignors to Zilog, Inc., Campbell, Calif.

Filed May 17, 1988, Ser. No. 194,857

Int. Cl.[5] G01R *31/28*

U.S. Cl. 324—73.1 **16 Claims**

1. In an integrated circuit device having internal data and address buses respectively connectable to external data and address buses, and having normally accessible internal nodes addressable by normal addresses from the external address bus, the improvement comprising a test mode means (**100, 111, 121**) in the integrated circuit device for enabling external access of predetermined and normally inaccessible internal test nodes in the integrated circuit device, said test mode means comprising:

a test mode decode means (**103**) responsive to an address from the external address bus for outputting a control signal to set the integrated circuit device in either a normal state or a test mode state, the normal state resulting from the address being one of the normal addresses and the test mode state resulting from the address being a predetermined address for initiating a test mode;

a test mode control register means (**105**) for storing an address of a predetermined internal test node, said address being obtainable from the external data bus;

a multiplexer means (**101**) responsive to the control signal for connecting the internal address bus (**102**) to the external address bus for receiving the normal addresses when in the normal state, and connecting to the test mode control register means for receiving the address of a predetermined internal test node when in the test mode state; and

test node decoder means (**111, 121**) responsive to the control signal and the address of the predetermined internal test node for enabling the transfer of test data from the predetermined internal test node to the internal data bus, thereby allowing the normally inaccessible test node to be accessible from outside the device.

APPARATUS FOR AND METHOD OF INTERNALLY CALIBRATING AN ELECTRICAL CALIBRATOR

Larry E. Eccleston, Edmonds, Wash., assignor to John Fluke Mfg. Co., Inc., Wash.

Filed Jan. 29, 1987, Ser. No. 8,234

Int. Cl.[5] G01R *35/00, 19/25, 15/12;* **H03M** *1/10*

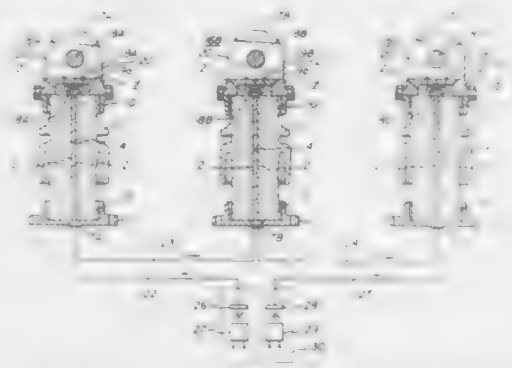
U.S. Cl. 324—74 **37 Claims**

1. A calibrated source for supplying a calibrated electric parameter over plural ranges to a device to be calibrated comprising

internal components for deriving the parameter over the plural ranges, an internal voltage reference, digital-to-analog converter means, a memory, analog comparison means, and analog-to-digital converter means,

first means for connecting the internal components in circuit with the internal voltage reference, analog-to-digital converter means, comparison means and memory for writing data signals into the memory indicative of calibration

correction factors for the internal components as applicable to the internal components, and



second means for connecting the internal components in circuit with the memory and digital-to-analog converter means so the digital-to-analog converter means responds to the stored data signals indicative of the calibration correction factors to modify the value of the parameter supplied to the device by the internal components so the supplied parameter is corrected in accordance with the calibration correction for the parameter.

ELECTRICAL MEASURING DEVICE

Toshisada Fujiki, Kasugai; Taikichi Kondo, Gifu; Yoshinori Furukawa, Tokoname; Kazuaki Kato, Chita; Akimichi Okimoto, and Kenji Tsuge, both of Nagoya, all of Japan, assignors to NGK Insulators, Ltd., Nagoya, Japan

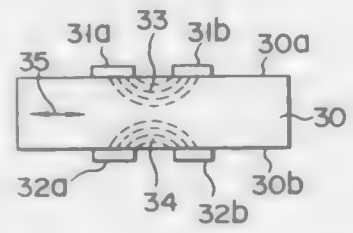
Division of Ser. No. 34,150, Apr. 1, 1987, Pat. No. 4,894,609.
This application Oct. 18, 1989, Ser. No. 423,781
Claims priority, application Japan, Aug. 7, 1985, 60-174554; Aug. 7, 1985, 60-174555; Aug. 7, 1985, 60-174556
Int. Cl.[5] G01R *1/20, 19/00;* H01B *17/00*
U.S. Cl. 324—96 2 Claims

1. An insulator for electric measurement, comprising a porcelain insulator body with a built-in optical transmission medium extending therethrough in an axial direction thereof, a conductor-holding fixture secured to one end of the insulator body, a current transformer mounted on the conductor-holding fixture so as to couple with a conductor carried by the conductor holding fixture, a load resistor connected to output current of the current transformer, an electro-optic sensor mounted on the conductor-holding fixture and coupled to voltage across the load resistor, and metal base secured to the opposite end of the insulator body and carrying an optical fiber cable connector, said optical transmission medium having one end thereof coupled to said electro-optic sensor and the opposite end thereof coupled to said optical fiber cable connector.

5,012,183

ELECTROOPTIC EFFECT ELEMENT AND ELECTRICAL SIGNAL WAVEFORM MEASURING APPARATUS USING THE SAME

Youzo Kawano, Ebina; Tadashi Takahashi, Atsugi; Yasuhiko Shimura, Hatano, and Yukihiro Takahashi, Atsugi, all of Japan, assignors to Anritsu Corporation, Tokyo, Japan



PCT No. PCT/JP89/01071, § 371 Date Jul. 10, 1989, § 102(e) Date Jul. 10, 1989, PCT Pub. No. WO88/12831, PCT Pub. Date Dec. 28, 1989
PCT Filed Oct. 21, 1988, Ser. No. 391,548
Claims priority, application Japan, Jun. 22, 1988, 63-154327
Int. Cl.[5] G01R *19/00, 23/16*
U.S. Cl. 324—96 5 Claims

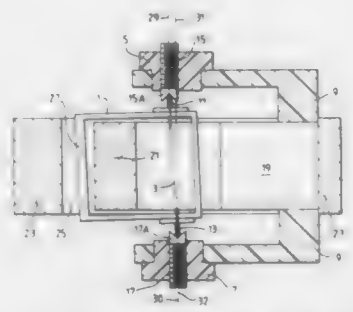
1. A coplanar electrooptic effect element, comprising:

a substrate comprised of a material having an electrooptic effect, said substrate having opposite major surfaces and a Z axis which extends medially of said major surfaces;

a pair of first coplanar strips, formed on one surface of said substrate, for forming a high-frequency electric field in a region between said first coplanar strips near said one surface; and

a pair of second coplanar strips, formed on the other surface of said substrate and sandwiching said substrate together in relation to said first coplanar strips, for forming another electric field in a region between said second coplanar

strips near said other surface, said other field being different from the high-frequency electric field formed by said first coplanar strips near said one surface;



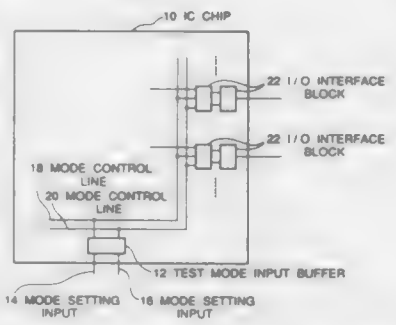
wherein the direction of said high-frequency field and said other field become parallel to the Z axis of said substrate near a center of said first coplanar strips and said second coplanar strips.

5,012,184

ADJUSTMENT OF DISPOSITION OF ROTATION AXIS IN MOVING COIL MEASURING INSTRUMENTS TO CORRECT FOR THEIR NON-IDEAL OPERATION

Alan G. Burgess, Stafford, England, assignor to GEC Alsthom Limited, England

Filed Feb. 21, 1990, Ser. No. 482,524
Claims priority, application United Kingdom, Mar. 3, 1989, 8904886
Int. Cl.[5] G01R *1/02, 1/10*
U.S. Cl. 324—146 5 Claims



1. A moving coil measuring instrument comprising: a moving coil supported for rotation about an axis defined by a pair of spaced support members mounted on a frame member of the instrument, at least one of said support members being controllably movable relative to said frame member while mounted thereon so as to reposition said one support member relative to said frame member and thereby permit adjustment of the position of one end of said axis defined by said one support member in a direction substantially perpendicular to said axis.

5,012,185

SEMICONDUCTOR INTEGRATED CIRCUIT HAVING I/O TERMINALS ALLOWING INDEPENDENT CONNECTION TEST

Kazuyoshi Ohfuji, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Oct. 16, 1989, Ser. No. 421,883
Claims priority, application Japan, Oct. 14, 1988, 63-258414
Int. Cl.[5] G01R *31/28*
U.S. Cl. 324—158 R 10 Claims

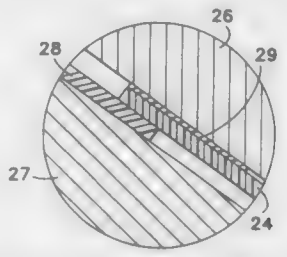
1. A semiconductor integrated circuit comprising a plurality of input/output terminals, at least one mode setting input terminal, a test mode input circuit having at least one mode setting input connected to said at least one mode setting input terminal to receive at least one mode setting signal and for generating at least one mode control signal, a plurality of test buffer circuits provided for said input/output terminals in one-to-one relation and each having a first terminal connected to a corresponding input/output terminal, and a second terminal connected to receive a signal to be supplied from an internal circuit of the integrated circuit to the corresponding input-/output terminal or to output to an internal circuit of the integrated circuit a signal inputted through the corresponding input/output terminal from an external circuit of the integrated circuit, each test buffer circuit also including at least one mode control input connected to receive said at least one mode control signal from the test mode input circuit and operating to supply a predetermined output signal to the corresponding input/output terminal when the mode control signal is in a first condition, so that the predetermined output signal is outputted from all the input/output terminals, each test buffer circuit also operating when the mode control signal is in a second condition different from the first condition to output to the second terminal a signal supplied to the first terminal in the case of said second terminal being connected to output to the internal circuit of the integrated circuit the signal inputted through the corresponding input/output terminal from an external circuit of the integrated circuit, or to output to the first terminal a signal supplied to the second terminal in the case of said second terminal being connected to receive the signal to be supplied to the corresponding input/output terminal from an external circuit of the integrated circuit.

5,012,186

ELECTRICAL PROBE WITH CONTACT FORCE PROTECTION

K. Reed Gleason, Portland, Oreg., assignor to Cascade Microtech, Inc., Beaverton, Oreg.

Filed Jun. 8, 1990, Ser. No. 535,737
Int. Cl.[5] G01R *31/02*
U.S. Cl. 324—158 P 16 Claims



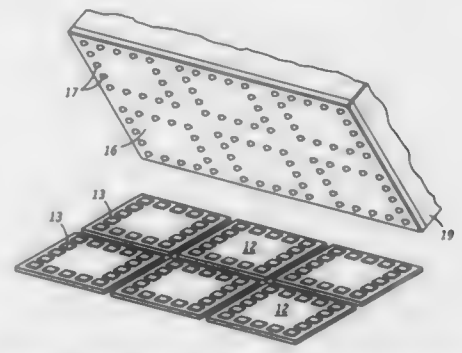
13. A probe for testing an electrical circuit on a device under test, said probe comprising:

(a) a probe mount;

(b) a conductive probe tip attached to said probe mount for electrically contacting said device under test with a contact force by movement of at least one of said probe mount and said device under test toward the other along a direction of advancement, said probe mount and said device under test having a spatial proximity relative to each other along said direction of advancement which increases with said movement;

(c) interconnecting means movably attaching said probe tip to said probe mount for permitting movement of said probe tip relative to said probe mount substantially parallel to said direction of advancement;

(d) said interconnecting means including means automatically responsive to said spatial proximity, along said direction of advancement, between said probe mount and said



device under test for establishing a first rate of increase in said contact force as said spatial proximity increases to a predetermined spatial proximity through a first range of advancement, and thereafter establishing a second rate of increase in said contact force which is less than said first rate of increase as said spatial proximity increases beyond said predetermined spatial proximity through a second range of advancement which is greater than said first range of advancement.

5,012,187

METHOD FOR PARALLEL TESTING OF SEMICONDUCTOR DEVICES

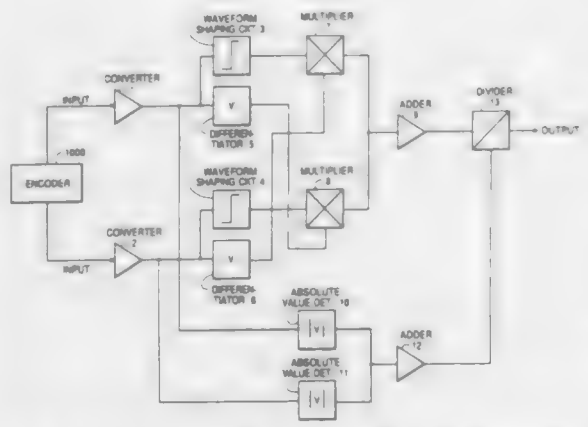
Hugh W. Littlebury, Chandler, Ariz., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Nov. 3, 1989, Ser. No. 431,344
Int. Cl.[5] G01R *1/02, 1/067*
U.S. Cl. 324—158 P 8 Claims

1. A method of testing a plurality of semiconductor memory chips which are separated from a semiconductor wafer in which they were formed in parallel comprising the steps of: providing a tester which is capable of parallel testing memory devices; providing a flexible membrane having a plurality of probe bumps which are coupled to the tester; placing the individual memory chips on a receiver plate, wherein the receiver plate has a plurality of vacuum ports for holding the memory chips; testing access time of the plurality of memory chips in parallel; and storing information relating to location of memory chips which pass the test.

5,012,188

VELOCITY DETECTOR FOR DETECTING VELOCITY FROM POSITION DETECTOR OUTPUTTING A PAIR OF ORTHOGONAL SIGNALS



Keishi Kubo, Moriguchi; Hiroyuki Nagano, and Saburo Kubota, both of Katano, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Nov. 8, 1989, Ser. No. 433,211

Claims priority, application Japan, Nov. 10, 1988, 63-284522

Int. Cl.[5] G01P *3/44, 3/481, 3/50*

U.S. Cl. 324—160 **1 Claim**

1. A velocity detector for obtaining the velocity based on first and second sinusoidal signals output from a position detector, said sinusoidal signals differing in phase by 90° from each other according to position displacement, said velocity detector comprising:

first and second converters for respectively receiving and converting the first and second signals output from the position detector into first and second respective electrical signals;

first and second waveform shaping circuits for respectively receiving and waveform shaping said first and second electrical signals from said first and second converters and for providing respective outputs therefrom;

first and second differentiators for respectively receiving and differentiating said first and second electrical signal output from said first and second converters and for providing respective outputs therefrom;

first and second multipliers for obtaining the product of the signals from said first and second waveform shaping circuits and said first and second differentiators, said first multiplier multiplying said output of said first waveform shaping circuit and said second differentiator and said second multiplier multiplying the output of said first differentiator and second waveform shaping circuit;

a first adder for receiving outputs of said first and second multipliers and for providing an output corresponding to the sum thereof;

first and second absolute value detectors for respectively receiving said two signals output from said first and second converters and for providing respective outputs therefrom which correspond to the absolute value of the signals input thereto;

a second adder for receiving said outputs of said first and second absolute value detectors and for providing an output corresponding to the sum thereof;

a divider for receiving said output signals from said first and second adders and for providing an output corresponding to the quotient of said outputs of said first and second adders, said output corresponding to the detected velocity.

5,012,189

METHOD FOR DERIVING INFORMATION REGARDING STRESS FROM A STRESSED FERROMAGNETIC MATERIAL

David C. Jiles, Ames, Iowa, assignor to Iowa State University Research Foundation, Inc., Ames, Iowa

Filed May 22, 1989, Ser. No. 354,819

Int. Cl.[5] G01B *7/24;* **G01R** *33/18*

U.S. Cl. 324—209 **6 Claims**

1. A method for deriving information regarding stress from a stressed ferromagnetic material comprising:

from an unstressed sample of the ferromagentic material obtaining reference anhysteretic and hysteresis measures for said unstressed sample;

obtaining an anhysteretic magnetization curve for a selected portion of the material;

obtaining a hysteresis magnetization curve for the same portion of the material;

comparing anhysteretic and hysteresis measures from the obtained curves with the reference anhysteretic and hysteresis measures; and

deriving information regarding stress in the stressed ferromagnetic material by the comparison of measures in the stressed and unstressed materials.

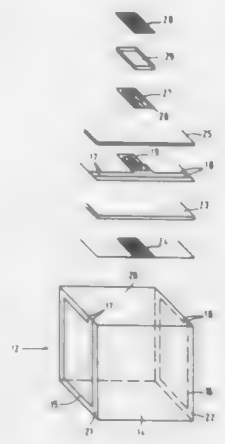
APPARATUS FOR MULTI-CHANNEL MEASUREMENT OF WEAK MAGNETIC FIELDS WITH SQUIDS AND SUPERCONDUCTING GRADIOMETERS ON INDIVIDUAL DETACHABLE ASSEMBLIES, AND METHOD OF MANUFACTURE



Olaf H. Dössel, Tangstedt, Fed. Rep. of Germany, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Oct. 19, 1988, Ser. No. 260,107

Claims priority, application Fed. Rep. of Germany, Oct. 22, 1987, 3735668

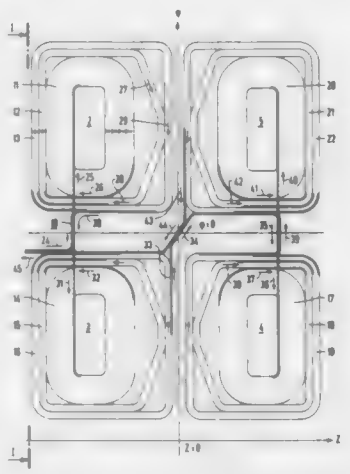
Int. Cl.[5] G01R *33/02;* **H01L** *39/24*

U.S. Cl. 324—248 **14 Claims**

1. Apparatus for multichannel measurement of weak magnetic fields having assigned to each channel an assembly, which is arranged on a base carrier (**30**) and comprises a superconductive quantum interferences device (SQUID) (**6, 27**), a gradiometer of the first or higher order having at least one gradiometer coil (**15, 16, 37**) serving to detect the magnetic field, at least one coupling-in coil (**9, 19, 38**) serving to couple the field into the SQUID, superconductive connecting leads (**10, 17, 18, 41**) between the gradiometer coil and the coupling-in coil, and a modulation coil (**7, 26**), the gradiometer coil, the coupling-in coil and the SQUID being made of thin-film structures, said apparatus further having an evaluation device (**11**) serving to evaluate the signals generated in each channel by the SQUIDs, characterized in that a separate plate (**29**) is provided for each channel, on which the SQUID (**6, 27**) and the modulation coil (**7, 26**) are deposited, in that the assembly provided for each channel comprising the gradiometer coil (**15, 16, 37**), connecting leads (**10, 17, 18, 41**) and coupling-in coil (**9, 19, 38**) is in each case deposited on a separate gradiometer carrier (**12, 32**), and in that an insulating layer is applied to the gradiometer carrier over said coupling-in coil and the separate plate is attached detachably on the insulating layer of the separate gradiometer carrier, and the separate gradiometer carriers are attached detachably to a base carrier (**30**).

5,012,191

GRADIENT COIL SYSTEM FOR A NUCLEAR MAGNETIC RESONANCE TOMOGRAPHY APPARATUS



Horst Siebold, and Konrad Meier, both of Erlangen, Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Filed Nov. 28, 1989, Ser. No. 442,211

Claims priority, application European Pat. Off., Nov. 28, 1988, 88119826

Int. Cl.[5] G01R *33/20*

U.S. Cl. 324—318 **5 Claims**

1. A gradient coil system for use in a nuclear magnetic resonance tomography apparatus having means for generating a fundamental magnetic field in a volume and oriented in the z-direction of an x-y-z coordinate system, said gradient coil system comprising:

a hollow cylindrical carrier disposed in said volume and having a longitudinal axis extending in said z-direction and having two radially spaced cylindrical coil carrying surfaces;

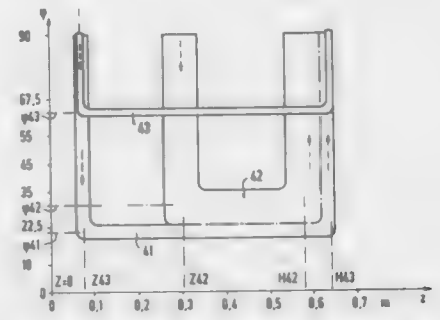
a first set of four saddle coils for generating an x-gradient in said volume wound on one of said coil carrying surfaces of said carrier;

a second set of four saddle coils for generating a y-gradient in said volume wound on the other of said coil carrying surfaces of said carrier; and

each saddle coil in said first and second sets consisting of three sub-coils formed by a cable conductor wound exclusively with convex curvature on said carrier, said three sub-coils including a middle coil and said middle coil having an arced portion facing the plane $z=0$ which approximates an arc of an ellipse.

5,012,192

GRADIENT COIL SYSTEM FOR A NUCLEAR RESONANCE TOMOGRAPHY APPARATUS



Horst Siebold, Erlangen, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Filed Nov. 28, 1989, Ser. No. 442,077

Claims priority, application European Pat. Off., Nov. 28, 1988, 88119828

Int. Cl.[5] G01R *33/20*

U.S. Cl. 324—318 **3 Claims**

1. A gradient coil system for a nuclear magnetic resonance tomography apparatus, said apparatus including means for generating a fundamental magnetic field, in a volume, in the direction of the z-axis of an x-y-z coordinate system, said gradient coil system having a symmetry plane in the x-y plane of said x-y-z coordinate system and comprising:

first saddle coil means for generating an x-gradient field in said volume and second saddle coil means for generating a y-gradient field in said volume;

each of said first and second saddle coil means containing four main coils which are split arc saddle coils arranged on the same imaginary cylindrical surface having a radius p;

each of said main coils of said first and second saddle coil means consisting of two elementary saddle coils one inside the other;

each elementary saddle coil having a front coil arc substantially parallel to said x-y plane and spaced a distance Z therefrom, a rear coil arc substantially parallel to said x-y plane and spaced a distance H therefrom, and two straight coil sections connecting said front and rear coil arcs, said straight coil sections extending in the z-direction and defining an aperture angle α therebetween in the x-y plane and an angle ϕ in the x-y plane relative to the x-axis, and each elementary saddle coil having a predetermined number of ampere turns AT;

said straight coil sections and said rear arcs of the two elementary coils forming each main coil being disposed substantially against each other;

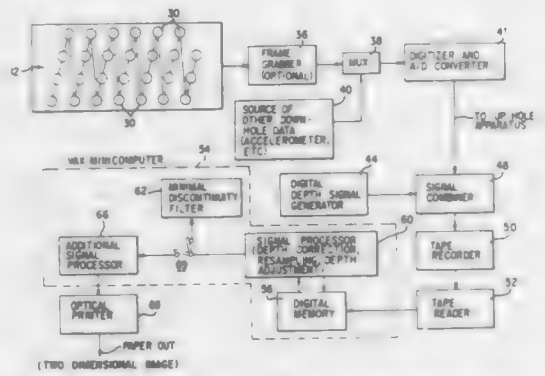
a pair of auxiliary saddle coils allocated to each of the main coils of each of said first and second saddle coil means;

each auxiliary saddle coil having a front auxiliary coil arc substantially parallel to said x-y plane and spaced a respective distance Z_{aux} therefrom, a rear auxiliary coil arc substantially parallel to said x-y plane and spaced a respective distance H_{aux} therefrom, and two straight auxiliary coil sections connecting said front and rear auxiliary coil arcs, said straight auxiliary coil sections extending in the z-direction and defining a respective auxiliary coils aperture angle α_{aux} therebetween and a respective angle ϕ_{aux} in the x-y plane relative to the x-axis, and each auxiliary saddle coil having a respective predetermined number of ampere turns AT_{aux};

said straight auxiliary coil section and said rear auxiliary arcs of the auxiliary saddle coils forming a pair being disposed substantially against each other;

each of said auxiliary coil arcs being disposed on a same further imaginary cylindrical surface having a radius π_{aux}, with $\pi \neq \pi_{aux}$;

each of said auxiliary coils being angularly centered relative to the main coil allocated thereto; and



the quantities AT, Z, H and ϕ which define the gradient field for each of said elementary saddle coils forming said main coils and the respective quantities AT_{aux}, Z_{aux}, H_{aux}, and ϕ_{aux} which define the gradient field for each auxiliary coil being matched to each other so that noise terms C(n,m) of a series development of said gradient fields are substantially eliminated.

5,012,193

METHOD AND APPARATUS FOR FILTERING DATA SIGNALS PRODUCED BY EXPLORATION OF EARTH FORMATIONS

Min-Yi Chen, West Redding, Conn., assignor to Schlumberger Technology Corp., New York, N.Y.

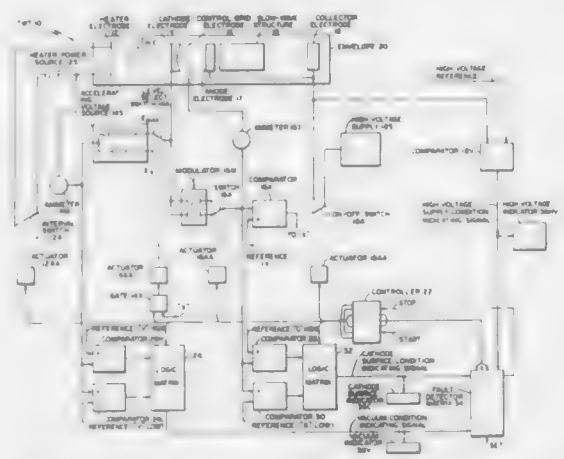
Filed Nov. 1, 1989, Ser. No. 430,207
Int. Cl.[5] G01V *3/20*
U.S. Cl. 324—366 **16 Claims**

1. In a method for producing a two-dimensional image of a characteristic of an area of a wall of an earth formation:

moving along said wall in a first direction a two-dimensional array of sensors responsive to said characteristic to produce a signal level at each sensor representative of the value of said characteristic in the portion of said wall adjacent thereto, wherein said array comprises a plurality of sets of one or more sensors, some of said sets being at different positions in said array as measured along said first direction, and at least one of the sensors of at least one of said sets being differently positioned from all of the sensors in at least one of the other of said sets, as measured along a second direction transverse to said first direction;

sampling said signal levels at all of said sensors of said sets at each of a succession of sampling times, to produce successive original frames of sensor signal samples;

processing said samples and applying said samples to a two-dimensional display device in sets such that said processed samples of each of said original frames control points in said display which are in a geometric pattern corresponding to the geometric pattern of said sets of sensors in said array, whereby noise affecting each of said sensors substantially equally during any of said sampling times produces an artifact in said image having a form corresponding to said pattern of said array of sensors; and



prior to said applying of said processed samples to said image-display device, generating from said samples a correcting signal n, and subtracting it from each of said samples, to reduce any such artifact in said image, wherein the values of n are generated such as to minimize abrupt discontinuites between values of those samples which are produced in different original frames by sensors at the same position along said first direction, and wherein the values of n so subtracted are equal for all samples produced at the same sampling time.

METHOD TESTING ELECTRON DISCHARGE TUBES

Philip L. Licter, Nashua, N.H., and John K. Waterman, Newton Corner, Mass., assignors to Raytheon Company, Lexington, Mass.

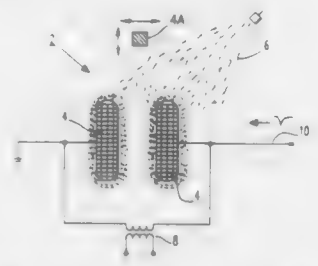
Filed Sep. 5, 1989, Ser. No. 402,732
Int. Cl.[5] H01J *9/42;* **G01R** *31/00*
U.S. Cl. 324—405 **12 Claims**

1. A method of testing an electron discharge device comprising the steps of:

(a) applying an accelerating field between a cathode electrode and a heater electrode in a properly evacuated envelope for a predetermined warm-up period;

(b) measuring current flow between the heater electrode and the cathode electrode at a predetermined time interval after the predetermined warm-up period;

(c) monitoring to ensure the current at the predetermined time interval is between a pair of predetermined values indicative of current in a poor vacuum and current in an extremely poor vacuum, respectively; and



(d) producing a vacuum condition indicating signal indicative of the state of vacuum in the envelope.

5,012,195

METHOD FOR IMPROVING THE ELECTRICAL STRENGTH OF VAPOR-MIST DIELECTRICS

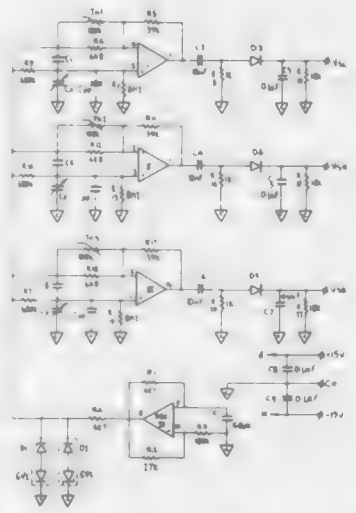
Ronald T. Harrold, Murryville Boro, Pa., assignor to ABB Power T&D Company, Inc., Blue Bell, Pa.

Filed Dec. 28, 1989, Ser. No. 458,264
Int. Cl.[5] B01R *31/12*
U.S. Cl. 324—553 **12 Claims**

1. A method for improving the electrical strength of vapor mist dielectric comprising:

providing electrodes generally parallelly spaced, a mist supply disposed proximate to said electrodes and an ionization means;

generating mist droplets from said mist supply with said electrodes surrounded by a gaseous dielectric;



ionizing the gaseous dielectric, charging the droplets and depositing said mist at regions of high electrical stress; and applying system voltage after ionizing the gaseous dielectic, and charging said droplets.

CAPACITANCE SENSOR ARRANGEMENT

Jan Baranski, Nedlands, Australia, assignor to The University of Western Australia, Australia

Continuation of Ser. No. 126,457, Nov. 30, 1987, abandoned. This application Oct. 20, 1989, Ser. No. 425,385
Claims priority, application Australia, Dec. 5, 1986, PH9363
Int. Cl.[5] G01R *27/26*
U.S. Cl. 324—662 **16 Claims**

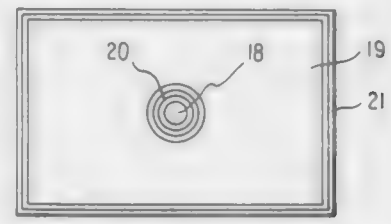
1. A capacitance sensing arrangement for indicating the distance of an object from a surface, including sensing means located in said object and oscillator means for generating an alternating signal Vosc, said sensing means being connected in an electrical circuit including a variable capacitor having a capacitance Cx dependent on said distance, a reference capacitor for providing a reference capacitance CL, circuit means for providing a polarizing voltage Vp, and means connected to said variable capacitor for producing an output voltage V_S responsive to said variable and reference capacitances and to said polarizing voltage in accordance with the equation

$$V_S = KxVosc\frac{C_{xp} + Cx}{C_{xp} + C_x + C_L} - V_P$$

where Kx is the amplifier gain of said output voltage providing means, and C_{xp} is a fixed parasitic capacitance between the circuit and ground, and means for calculating said distance from said sensor output voltage V_S.

5,012,197

APPARATUS AND METHOD FOR DETERMINING THE RELATIVE PERCENTAGES OF COMPONENTS IN A MIXTURE



Volkhard Seiffert; Gerd Ihlenfeld, and Klaus Bienert, all of Krausenstrasse 54A, D-3000 Hannover 1, Fed. Rep. of Germany

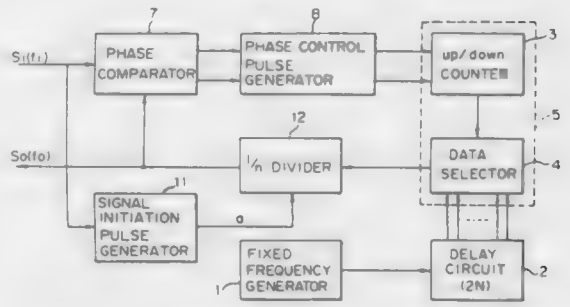
Filed Apr. 12, 1989, Ser. No. 337,051
Claims priority, application Fed. Rep. of Germany, Apr. 19, 1988, 3812959
Int. Cl.[5] G01N *27/02*
U.S. Cl. 324—696 **11 Claims**

1. In an apparatus for determining the percentages of individual components of a mixture having at lest two components of different electrical conductivities, said apparatus including at least two sensors connectable across an a.c. voltage source, and being arranged such that the mixture is introducible therebetween, the improvement wherein each sensor comprises:

a pin electrode having a first sensing surface for electrical contact with said mixture, and

a plate electrode having a second sensing surface, said plate electrode being electrically insulated from said mixture, wherein

the area of said second sensing surface is larger than the area of said first sensing surface;



said pin electrode and said plate electrode of each sensor are each connected to the same potential of said voltage source.

5,012,198

DIGITAL PLL CIRCUIT HAVING REDUCED LEAD-IN TIME

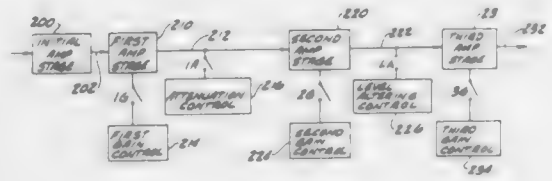
Hiroshi Okada, Tokyo; Noritaka Saitoh, Kawasaki; Hidetomo Akabane, Kawasaki, and Shintaro Tashiro, Kawasaki, all of Japan, assignors to Mitsubishi Rayon Company, Ltd., Tokyo, Japan

Filed Sep. 27, 1989, Ser. No. 413,487
Claims priority, application Japan, Sep. 29, 1988, 63-242472
Int. Cl.[5] H03K *5/00, 5/13, 5/22*
U.S. Cl. 328—155 **5 Claims**

1. A digital PLL circuit for outputting a clock signal phase-synchronized with an input signal comprising:

a fixed frequency generator generating an output signal having a frequency which is n-times as large as a frequency f_0 of the clock signal, a delay circuit generating a plurality of signals formed by giving predetermined and various phase differences to the output signal of said fixed frequency generator, a phase changing circuit successively selecting one of said plurality of signals depending on a control input to output the selected signal, a divider dividing a frequency of the output signal of said phase changing circuit by n to output said clock signal, a phase comparator comparing a phase of said clock signal with a phase of said input signal, and a phase control pulse generator outputting a control signal to said phase changing circuit depending on a result of comparison of said phase comparator, characterized in that

said divider being able to be set to a predetermined state in which said divider raises said clock signal, and that



the digital PLL circuit further comprises a signal initiation pulse generator generating a signal to set said divider to said predetermined state depending on said input signal initiation.

MULTI-STAGE MUSICAL INSTRUMENT AMPLIFIER HAVING DISTORTION MODES

George A. McKale, St. Louis, Mo., assignor to St. Louis Music, Inc., St. Louis, Mo.

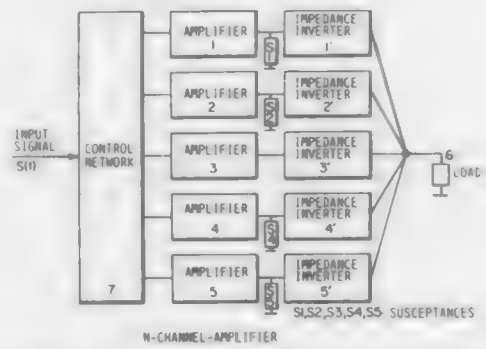
Filed Sep. 8, 1989, Ser. No. 404,595
Int. Cl.[5] H03G *3/08*
U.S. Cl. 330—51 **22 Claims**

22. A preamplifier for audio frequency electrical signals generated by a musical instrument such as a guitar, said preamplifier comprising:

a plurality of cascaded amplifier stages for receiving electrical signals generated by a musical instrument and providing an output signal;

means for selectively attenuating the output of one or more of the stages;

means for selectively modifying the gain of one or more of the stages;



means for selectively activating the attenuating means and modifying means to provide a first mode in which all stages provide an increase in power to supply a substantially linear signal as the output signal and to provide a second mode in which all stages provide an increase in power to supply a substantially nonlinear saturated signal with increased harmonic content as the output signal.

5,012,200

METHOD AND SYSTEM FOR THE LINEAR AMPLIFICATION OF SIGNALS

Karl Meinzer, Marburg, Fed. Rep. of Germany, assignor to Messerschmitt-Boelkow-Blohm GmbH, Munich, Fed. Rep. of Germany

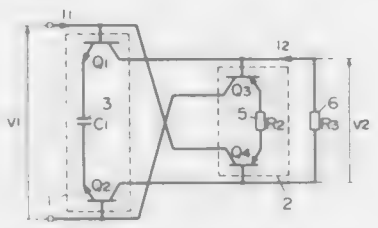
Continuation-in-part of Ser. No. 252,491, Sep. 30, 1988, abandoned. This application Oct. 20, 1989, Ser. No. 424,665
Claims priority, application Fed. Rep. of Germany, Oct. 2, 1987, 3733374
Int. Cl.[5] H03F *3/68*
U.S. Cl. 330—124 R **3 Claims**

1. A method for the linear amplification of signals, comprising the following steps:

(a) forming an uneven number of at least three amplifier impedance inverter units by separately feeding an output signal of each of an uneven number of at least three individual amplifiers to an input of a respective impedance inverter;

(b) connecting outputs of said uneven number of at least three amplifier impedance inverter units to a common load;

(c) controlling said uneven number of at least three individual amplifiers through an input control network; and



(d) connecting shunt susceptances to output terminals of an even number of said at least three individual amplifiers, in order to compensate a reactive loading of said even number of said amplifiers, for improving the amplification efficiency.

5,012,201

VARIABLE IMPEDANCE CIRCUIT

Yoichi Morita, Moriyama; Hiroshi Komori, Takatsuki, and Akio Yokoyama, Nagaokakyo, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Oct. 25, 1989, Ser. No. 426,229
Claims priority, application Japan, Oct. 25, 1988, 63-268430; May 16, 1989, 1-120354
Int. Cl.[5] H03F *3/45;* **H03H** *11/00*
U.S. Cl. 330—252 **13 Claims**

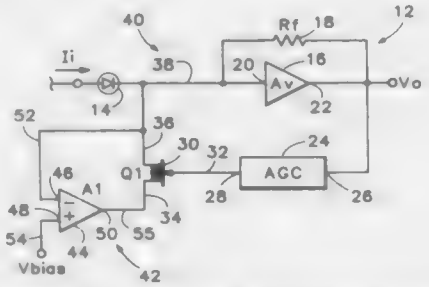
1. A variable impedance circuit comprising:

a first differential amplifier circuit having an input terminal pair, an output terminal pair and impedance element connected between emitters of a transistor pair;

a second differential amplifier circuit having an input terminal pair and an output terminal pair;

means for connecting said output terminal pair of said first differential amplifier circuit to said input terminal pair of said second differential amplifier circuit;

means for connecting said output terminal pair of said second differential amplifier circuit to said input terminal pair of said first differential amplifier circuit; and,



a resistance element connected between said input terminal pair of said second differential amplifier circuit.

5,012,202

LOW IMPEDANCE AUTOMATIC GAIN CONTROL CIRCUIT

Stewart S. Taylor, Beaverton, Oreg., assignor to TriQuint Semiconductor, Inc., Beaverton, Oreg.

Filed Mar. 15, 1990, Ser. No. 494,077
Int. Cl.[5] H03F *3/08;* **H03G** *3/30;* **H01J** *40/14*
U.S. Cl. 330—284 **11 Claims**

9. A method for increasing the dynamic range of a main

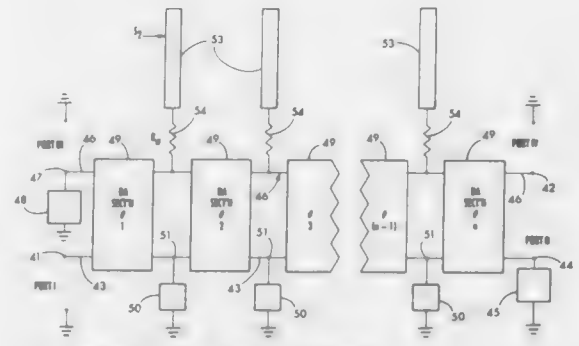
amplifier having an output terminal for providing an output voltage proportional to an input current received at an input terminal, said method comprising the steps of:

generating a control signal which varies in response to the amplifier output voltage;

applying the control signal to a FET having an impedance which varies in response to the control signal;

connecting one side of said FET to the input terminal of the main amplifier to shunt input current therethrough;

driving one side of said FET with a second amplifier; and



using the signal on another side of said FET as a feedback signal for said second amplifier, such that the impedance of said FET is lowered.

5,012,203

DISTRIBUTED AMPLIFIER WITH ATTENUATION COMPENSATION

James B. Beyer, Madison, Wis., and Steven Deibele, Albuquerque, N. Mex., assignors to Wisconsin Alumni Research Foundation, Madison, Wis.

Filed Dec. 27, 1989, Ser. No. 457,270
Int. Cl.[5] H03F *3/60*
U.S. Cl. 330—286 **33 Claims**

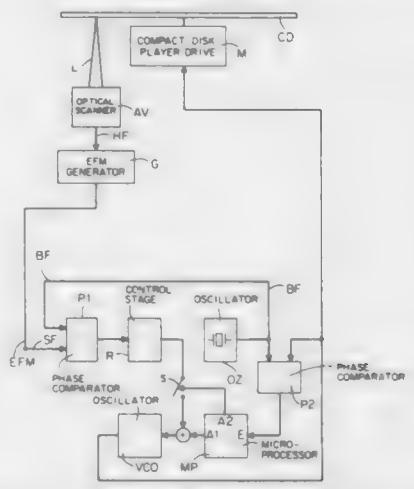
17. A distributed amplifier comprising:

(a) an input line comprising a series of transmission line sections electrically joined at nodes;

(b) an output line comprising a series of transmission line sections electrically joined at nodes;

(c) a plurality of amplifying circuits connected between nodes on the input and output lines to provide an amplified signal from the input line to the output line;

(d) a plurality of input line attenuation compensation circuits each connected to the input line at a node, each attenuation compensation circuit including a FET and means for biasing the FET in a common-gate configuration with the source and drain of the FET being connected electrically from the input line through an impedance to ground.



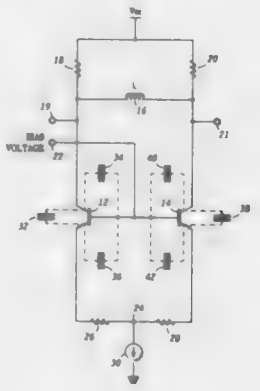
5,012,204

PHASE CONTROL CIRCUIT FOR REGULATING A CD PLAYER DRIVE

Dieter Storz, Lauterbach, and Baas, Dieter, Kehl, both of Fed. Rep. of Germany, assignors to Deutsche Thomson-Brandt GmbH, Villingen-Schwenningen, Fed. Rep. of Germany

PCT No. PCT/EP89/00590, § 371 Date Feb. 12, 1990, § 102(e) Date Feb. 12, 1990, PCT Pub. No. WO89/12932, PCT Pub. Date Dec. 18, 1989
PCT Filed May 26, 1989, Ser. No. 460,930
Claims priority, application Fed. Rep. of Germany, Jun. 16, 1988, 3820477
Int. Cl.[5] H03L *7/087;* **G11B** *19/28*
U.S. Cl. 331—11 **12 Claims**

1. A phase control circuit comprising: a first phase comparator having a first input and a second input; a source of input frequency connected to said first input of said first comparator; a source of reference frequency connected to said second input of said first phase comparator; said first phase comparator having an output comparing said input frequency with said reference frequency; a first control stage with input connected to the output of said first phase comparator; a controlled oscillator with input connected to an output of said first control stage; a second control stage with output connected to the input of said oscillator; a second phase comparator with first input connected to an output of said oscillator; said second phase comparator having a second input connected to said source of reference frequency; said second control stage having an input connected to an output of said second phase comparator, said first control stage being separated from said oscillator to provide automatic compensation for the phase control circuit; said second control stage having an output varying until the frequency at the output of said oscillator equals the reference frequency; said output of said second control stage retaining a level corresponding to when the oscillator output frequency equals the reference frequency subsequent to compensation independent of the output from said second phase comparator and subsequent to reconnecting said first control stage to the input of said oscillator.



5,012,205

BALANCED SPURIOUS FREE OSCILLATOR

William J. Howell, Chandler, Ariz., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Jul. 2, 1990, Ser. No. 547,258
Int. Cl.[5] H03L *7/00*
U.S. Cl. 331—117 R **5 Claims**

1. A balanced oscillator circuit having first and second outputs, comprising:

transistor circuit means for providing first and second output

signals at the first and second outputs, said transistor circuit means including;

a first transistor having a collector, a base, and an emitter, said collector being coupled to a first supply voltage terminal and to the first output said base being coupled to an input terminal to which a bias potential is applied, and said emitter being coupled to a first node;

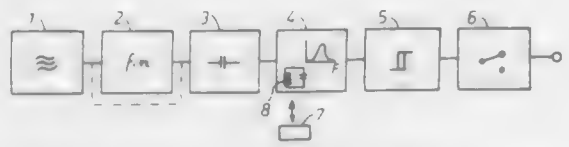
a second transistor having a collector, a base and an emitter, said collector being coupled to said first supply voltage terminal and to the second output, said base being coupled to said base of said first transistor of said transistor circuit means, and said emitter being coupled to said first node, said first and second transistors having parasitic capacitances associated therewith;

a current source coupled between said first node and a second supply voltage terminal: and

inductive means coupled between the first and second outputs, said inductive means and said parasitic capacitances determining the frequency of oscillation of said first and second output signals wherein said parasitic capacitances associated with said first and second transistors are varied in value in response to said bias potential thereby varying said frequency of oscillation of said first and second output signals.

5,012,206

INDUCTIVE PROXIMITY SWITCH



Burkhard Tigges, Sundern, Fed. Rep. of Germany, assignor to Werner Turck GmbH & Co. KG, Halver, Fed. Rep. of Germany

Filed Apr. 20, 1990, Ser. No. 511,767

Claims priority, application Fed. Rep. of Germany, Apr. 20, 1989, 3912946

Int. Cl.[5] H03K *17/95*

U.S. Cl. 331—65 **25 Claims**

1. An inductive proximity switch comprising:

oscillator means for producing an oscillator output signal having a substantially constant frequency and a substantially constant amplitude;

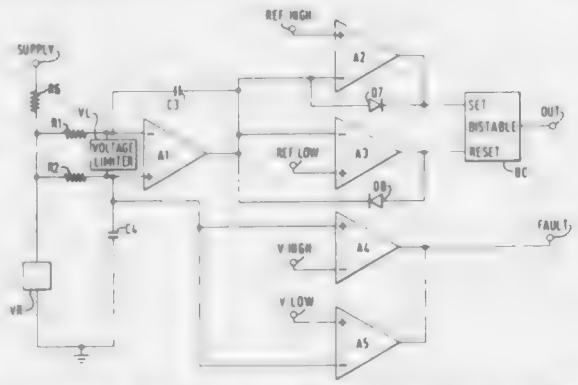
sensor resonant circuit means adapted to be influenced by the approach of electrically conductive nonmagnetic nonferrous (NF) objects and ferromagnetic (FE) objects, and having a natural resonant frequency when it is uninfluenced by the approach of an object; and

coupling means for loosely coupling the oscillator output signal to the sensor resonant circuit means such that there is substantially no interaction between the oscillator means and the sensor resonant circuit means;

wherein the frequency of the oscillator output signal and the natural resonant frequency of the sensor resonant circuit means are set to deviate from each other by a predetermined frequency deviation.

5,012,207

VARIABLE RELUCTANCE TRANSDUCER PROCESSING CIRCUIT FOR PROVIDING AN OUTPUT UNAFFECTED BY LOW FREQUENCY COMPONENTS



Karl Edwards, Birmingham, England, assignor to Lucas Industries Public Limited Company, Birmingham, England

Filed Oct. 4, 1989, Ser. No. 416,775

Claims priority, application United Kingdom, Oct. 6, 1988, 8823501; Feb. 22, 1989, 8903984

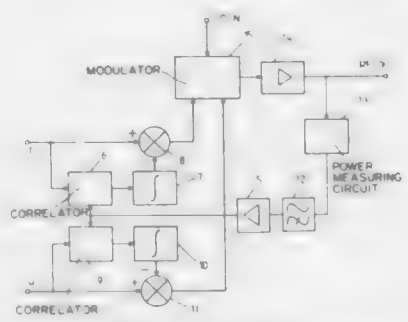
Int. Cl.[5] G01P *3/48, 3/54;* **G01N** *27/72;* **G01B** *7/14*

U.S. Cl. 324—166 **3 Claims**

1. A circuit for processing an output signal from a variable reluctance transducer, the transducer output signal varying at high frequency but possibly including a low frequency component, the circuit comprising an input receiving said transducer output signal from the variable reluctance transducer (VR), and a comparing means having a first input receiving said transducer signal and a second input receiving said transducer signal via a low pass filter so that the comparing means provides an output representing the high frequency transducer signal and substantially unaffected by any said low frequency component therein, in which the comparing means comprises an integrator which integrates the difference between the signals applied to its two inputs.

5,012,208

QUADRATURE MODULATOR HAVING COMPENSATION FOR LOCAL OSCILLATOR LEAK



Jarmo Mäkinen, Espoo, and Reino Talarmo, Riihimäki, both of Finland, assignors to Telenokia Oy, Finland

Filed Apr. 10, 1990, Ser. No. 506,781

Claims priority, application Finland, Apr. 11, 1989, 891717

Int. Cl.[5] H04L *27/36*

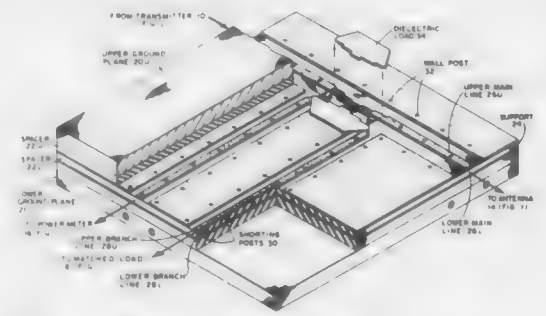
U.S. Cl. 332—103 **5 Claims**

1. A quadrature modulator comprising

means for the compensation of a local oscillator leak signal in an output signal of the modulator, which means add different compensation voltages to two modulation signals, and

regulating means for the regulation of the intensity of the compensation voltages irrespective of each other on the basis of a correlation between the amplitude variation in the output signal and the corresponding modulation signal.

5,012,209



BROADBAND STRIPLINE COUPLER

John A. Lantagne, Salem, N.H.; Edward G. Johnson, Woburn, and Michael J. Virostko, Townsend, both of Mass., assignors to Raytheon Company, Lexington, Mass.

Filed Jan. 12, 1990, Ser. No. 464,066

Int. Cl.[5] H01P *5/18*

U.S. Cl. 333—116 **13 Claims**

3. A directional coupler comprising:

(a) a ground plane;

(b) a dielectric material;

(c) circuitry, such circuitry being separated from the ground plane by the dielectric material, the circuitry comprising:

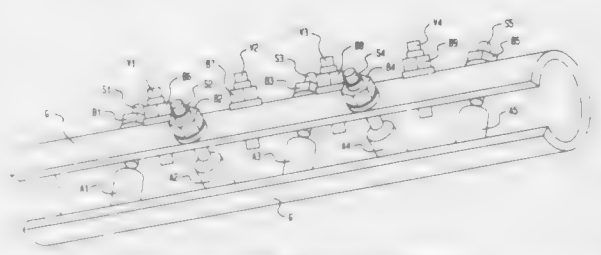
(i) a main line conductor having a coupling edge portion;

(ii) a branch line conductor having a coupling edge portion facing the coupling edge portion of the main line conductor, such coupling edge portions being separated from each other in a coupling region of the coupler, the separation varying in distance over the coupling region; and

(iii) a dielectric load associated with, and disposed adjacent, a portion of each one of the main line and branch line conductors, such dielectric load having an edge portion shaped to conform with the edge portion of the line conductor associated therewith and disposed to partially overlap the edge portion of the associated line conductor.

5,012,210

COMB-LINE BAND-PASS FILTERS IN THE MICROWAVE FIELD



Franco Marconi, Monza, and Nicolo' De Stena, Cernusco S/Naviglio, both of Italy, assignors to Siemens Telecomunicazioni S.p.A., Milan, Italy

Filed Dec. 5, 1989, Ser. No. 446,022

Claims priority, application Italy, Dec. 21, 1988, 23033 A/88

Int. Cl.[5] H01P *1/205, 1/207*

U.S. Cl. 333—209 **7 Claims**

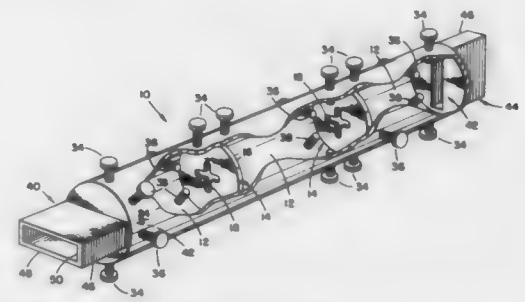
1. A microwave band-pass filter comprising:

a wave guide having a longitudinal axis and a circular cross section;

a plurality of resonators spaced alternatingly with a plurality of coupling means in series along the longitudinal axis of the wave guide, said resonators and coupling means being arranged alternatingly in successive planes transverse to the longitudinal axis, wherein each of said resonators includes a rod and a tuning screw aligned along a common resonator axis which are coupled to and extend into the wave guide; and

said resonators being arranged in said wave guide such that the resonator axis of each resonator is rotated in relation to that of a successive resonator by a constant modulus angle between 0 degrees and 90 degrees.

5,012,211



LOW-LOSS WIDE-BAND MICROWAVE FILTER

Frederick A. Young, Huntington Beach, and Roy K. Rikimaru, Los Angeles, both of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Sep. 2, 1987, Ser. No. 92,347

Int. Cl.[5] H01P *1/208*

U.S. Cl. 333—212 **5 Claims**

1. A microwave filter comprising:

a series of cavities interconnected in a cascade fashion between an input port and an output port of said filter, each of said cavities having a circular cylindrical shape;

a plurality of irises, individual ones of said irises being located at interfaces between successive ones of said cavities, each iris having an aperture configuration for coupling two orthogonal electromagnetic waves between cavities;

a first of said cavities being bounded at one end thereof by an end wall located at said input port and, at a second end thereof, by an iris located at the interface with the next cavity; a last one of said cavities being bounded at a second end thereof by an end wall located at said output port and, at a first end thereof, by an iris located at the interface with the preceding cavity;

an input transition located at said input port and an output transition located at said output port, each of said transitions comprising a section of rectangular waveguide opening into an end wall of a cavity; and wherein

each of said cavities has a length selected to sustain a TE_{113} mode of electromagnetic wave within the cavity, and

in each cavity, the diameter of a cavity is smaller than the length thereof by a factor of 0.26 for increased bandwidth and decreased transmission loss.

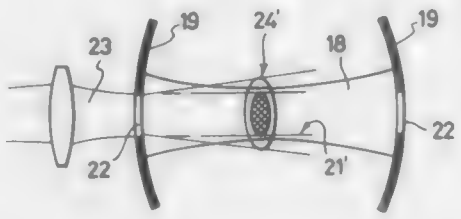
5,012,212

OPEN RESONATOR FOR ELECTROMAGNETIC WAVES HAVING A POLARIZED COUPLING REGION

Toshiaki Matsui, Tokyo, and Kenichi Araki, Nara, both of Japan, assignors to Communications Reseach Laboratory Ministry of Posts and Telecommunications, Koganei, Japan

Filed Oct. 7, 1988, Ser. No. 255,019

Claims priority, application Japan, Oct. 7, 1987, 62-251469



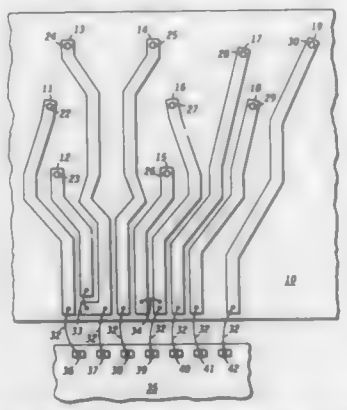
Int. Cl.[5] H01P *7/06*

U.S. Cl. 333—227 **8 Claims**

1. An open resonator for electromagnetic waves comprising:

a pair of reflecting mirrors placed on a common optical axis so as to form a resonant structure, at least one mirror of

said pair of reflecting mirrors being spherical, each mirror of said pair of reflecting mirrors having a center portion provided with a circular coupling region having a diameter substantially the same as or slightly smaller than a diameter of a beam of incident electromagnetic waves propagating in a resonant mode on said reflecting mirrors; and



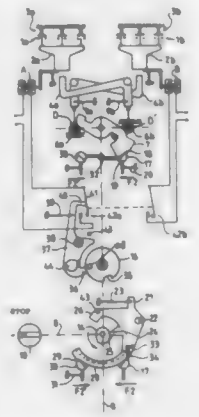
a plurality of conductor stripes disposed in parallel to each other in each of said circular coupling regions, said parallel stripes being arranged at intervals of 1/20 to 1/500 of a wavelength of said incident electromagnetic waves propagating in said open resonator said plurality of conductor stripes in one of said circular coupling regions, which is on an input side mirror of said pair of reflecting mirrors, being disposed in parallel to a plane of polarization of said incident electromagnetic wave.

5,012,213

PROVIDING A PGA PACKAGE WITH A LOW REFLECTION LINE

Chi-Tsou Tsai, Chandler, Ariz., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Dec. 19, 1989, Ser. No. 452,488
Int. Cl.[5] H01P *5/00*
U.S. Cl. 333—247 **6 Claims**



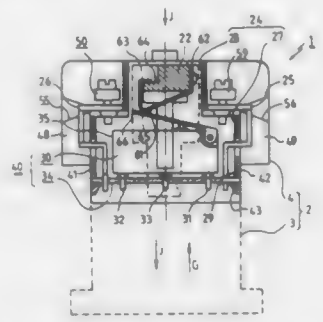
6. A method of converting two adjacent conductive lines of a pin grid array package to a low reflection line, comprising: wire bonding the two adjacent conductive lines together at an end adjacent a semiconductor device mounting area; and using the two wire bonded adjacent conductive lines as a low reflection line for a fast edge rate signal.

5,012,214

LOCK MECHANISM FOR A LIMITING CONTACT MAKER

André Faffart, Nanterre, France, assignor to Telemecanique, France

Filed Nov. 16, 1989, Ser. No. 437,070
Claims priority, application France, Nov. 17, 1988, 88 14919
Int. Cl.[5] H01H *75/00*
U.S. Cl. 335—6 **13 Claims**



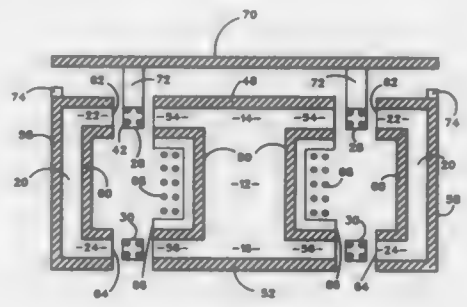
1. A lock mechanism for a limiting contact maker, of the kind comprising at least one set of power switches which may be closed and opened by a control electromagnet, further comprising two levers acting on at least one pusher block for actuating the switches, these two levers being articulated about two respective shafts and each having a bearing surface formed preferably by a roller urges on a profile of a rotary cam by resilient means, means being provided for causing this cam to pass from a locked automatic operational position in which the width of the cam in line with the bearing surface is maximum and the levers are held away from the pusher, towards a tripped position in which this width is minimum and in which the levers act on the pusher block for holding the switches open.

5,012,215

PROTECTED SWITCH CONTACTOR APPARATUS

Noël Floc'h, Val De Reuil Le Vaudreuil, France, assignor to Telemecanique, France

Filed Feb. 20, 1990, Ser. No. 481,536
Claims priority, application France, Feb. 21, 1989, 89 02215
Int. Cl.[5] H01H *67/02*
U.S. Cl. 335—132 **11 Claims**



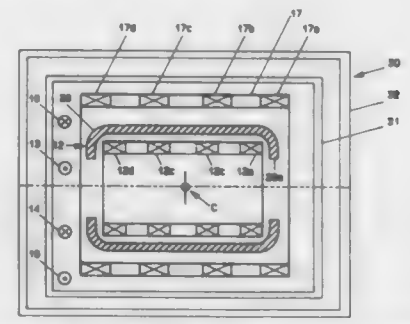
1. A contactor apparatus comprising a body having an upper wall, a lower wall, a front wall, a rear wall and two opposite lateral walls, each comprising a lower part and an upper part which is offset inwardly with respect to the lower part and which is connected to the upper part by means of a transversal portion which extends substantially parallel to the upper wall, said body further comprising two rows of insulating partitions which extend parallel to the front wall from the transversal portion and from the upper parts of the lateral walls, thus forming therebetween a first plurality of cells and a second plurality of cells respectively facing the cells of the first plurality, each cell containing a connecting terminal mounted on a corresponding transversal portion, the lower parts of the lateral walls delimiting an internal volume comprising first and second superimposed chambers partially separated by at least one printed circuit board which is extending parallel to the upper walls, said first chamber containing an electromagnet and said second chamber lodging at least one micro-switch component which is disposed in a zone located between two facing cells, which is mechanically and electrically connected to the printed circuit board and which comprises actuating means oriented towards said upper wall, the upper parts of the lateral walls delimiting with the upper walls a third chamber which communicates with the second chamber and wherein a rack actuated by the electromagnet is mechanically coupled to said actuating means, at least a first terminal of first plurality and a second terminal of the second plurality which is located in front of the first terminal being electrically connected to the printed circuit board.

5,012,216

SUPERCONDUCTIVE GRAVIMETER

Korda K. D. Jin, Brea, Calif., assignor to Rockwell International Corporation, El Segundo, Calif.

Continuation-in-part of Ser. No. 153,740, Feb. 8, 1988, Pat. No. 4,904,971. This application Feb. 23, 1990, Ser. No. 484,143
Int. Cl.[5] H01F *7/22*
U.S. Cl. 335—216 **4 Claims**



1. A superconductive gravimeter comprising:
a first magnetic element having a first surface;
a first layer of superconductive material on said first surface, defining a first region for entering magnetic flux and a first region for ieaving magnetic flux;
a second magnetic element having a second surface;
a second layer of superconductive material on said second surface, defining a second region for entering magnetic flux and a second region for leaving magnetic flux, said second entering region lying proximate said first leaving region, and said second leaving region lying proximate said first entering region;
means for carrying a current between said second entering region and said first leaving region, or means for carrying a current between said first entering region and said second leaving region, in a direction perpendicular to the direction from said entering region to said leaving region;
a third layer of superconductive material, supported by said current carrying means, proximate said second layer of superconductive material;
means for mesauring variations in magnetic flux between said second layer of superconductive material and said third layer of superconductive material.

5,012,217

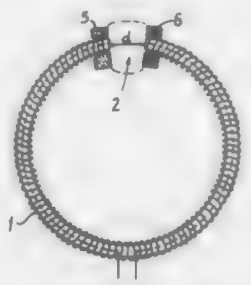
INTGRATED ACTIVE SHIELDED MAGNET SYSTEM

Alex Palkovich, Oxford; John M. Bird, Oxon, both of England, and Ratson Morad, Zichron Yakov, Israel, assignors to Elscint Ltd., Haifa, Israel

Filed Apr. 23, 1990, Ser. No. 512,358
Claims priority, application Israel, Apr. 23, 1989, 090050
Int. Cl.[5] H01F *7/00*
U.S. Cl. 335—301 **17 Claims**

1. An integrated shielding arrangement for solenoid type cryogenic super conducting magnets such as used in magnetic resonance (MR) systems to reduce the fringe magnetic fields generated by the solenoid magnet, said arrangement comprising:
a dewar having an inner wall and outer wall,
a first solenoid coil within said dewar for generating a first large static magnet field in a central bore of said magnet of the MR system, said field having a first lines of force extending in a first direction,
a second solenoid coil within said dewar for generating an opposite going second magnetic field with second lines of force extending in an opposite direction to the first lines of force to cancel at least some of the first lines force external to the first solenoid to decrease fringe field effects, said second magnetic field also tending to decrease the lines of force in the central bore,
first means for reducing the reluctance to flux lines located between the first and second solenoid coil to enable energizing the second coil with a lower current to assure less of a decrease in the central bore compared to the reduction of the magnetic field at the central bore when the first means for reducing the reluctance is absent, and
second means for reducing the reluctance to flux lines located external to the second solenoid coil.

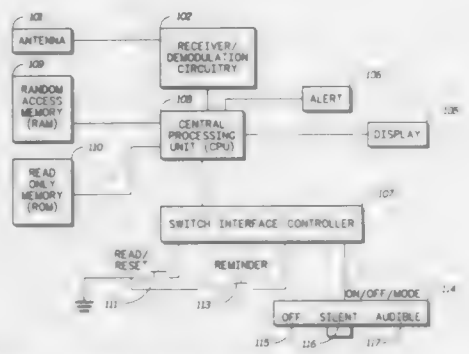
5,012,218



DEVICE FOR MEASURING AN ELECTRIC CURRENT USING A SOLENOID WITH REGULAR PITCH IN THE FORM OF A TORUS

Robert Haug, Orsay; Zhong-Jun He, Massy, and Roger Hahn, Gif-sur-Yvette, all of France, assignors to Centre National de la Recherche Scientifique, Paris, France

Continuation of Ser. No. 275,702, Nov. 25, 1988, abandoned, which is a continuation of Ser. No. 4,247, Jan. 5, 1987, abandoned, which is a continuation of Ser. No. 698,378, Feb. 5, 1985, abandoned. This application Sep. 25, 1989, Ser. No. 411,259
Claims priority, application France, Feb. 6, 1984, 84 01754
Int. Cl.[5] H01F *27/30, 40/06*
U.S. Cl. 336—174 **3 Claims**

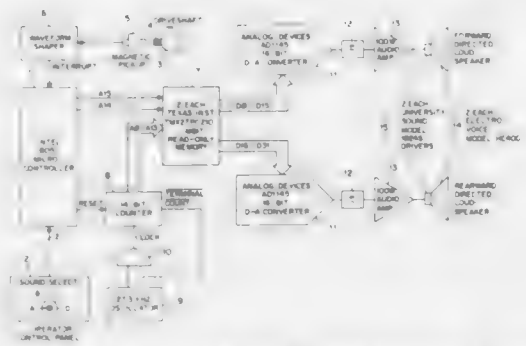


1. A device for measuring electric current comprising:
(a) a toric core having a gap that establishes a pair of opposed end faces;
(b) a continuous conductor having terminal ends and wound around said core in contiguous turns forming a toric solenoid interrupted by said gap, and said solenoid having first and second ends adjacent the respective end faces of the core;
(c) the conductor at each end of the solenoid passing

through the core and extending along the axis thereof from the opposed end faces of the core such that the terminal ends of the conductor are located diametrically opposite the gap; and

(d) a first compensation coil serially connected to said first end of the solenoid, said first coil overlying the first end of the solenoid to which the first coil is connected.

5,012,219
MESSAGE REMINDER ALERT FOR SELECTIVE CALL RECEIVER
Courtney S. Henry, Coconut Creek, Fla., assignor to Motorola, Inc., Schaumburg, Ill.
Filed Oct. 13, 1989, Ser. No. 421,035
Int. Cl.[5] H04Q *1/30*
U.S. Cl. 340—311.1 **31 Claims**



16. An electronic device comprising:
storage means for storing a message;
output means for presenting said stored message;
alert means for providing a periodic alert for said stored message; and
user selectable control means for activating and deactivating said alert means, said periodic alert continuing if said user selectable control means has been activated even after said stored message has been presented by said output means.

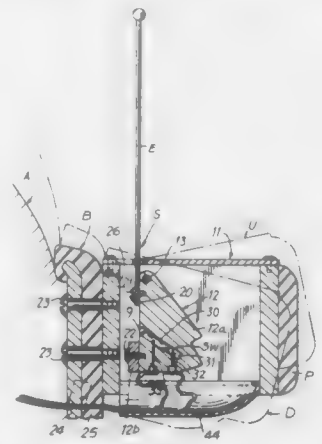
SOLAR POWERED PAGING DEVICE
Moses Miller, c/o Ralph Hutchinson, 26400 Southfield Rd., Lathrup Village, Mich. 48076
Filed Oct. 4, 1989, Ser. No. 416,957
Int. Cl.[5] H04Q *1/30*
U.S. Cl. 340—311.1 **7 Claims**

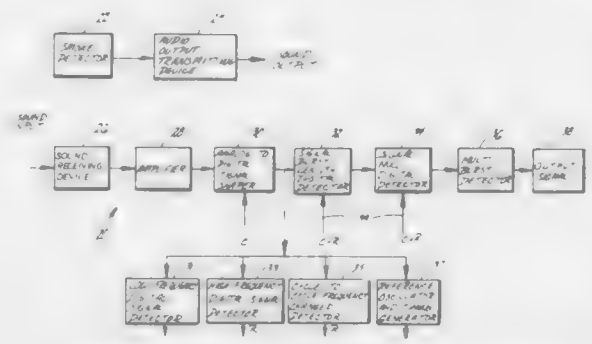
1. A solar powered paging device having at least one battery, said paging device comprising:
a pager;
a module having at least one strip of solar cells, a pair of electrical contacts and means for electrically connecting said at least one strip to said pair of electrical contacts, said means for electrically connecting comprising at least two springs;
means for demountably attaching said module to said pager, said means for attaching having a second means for electrically connecting said pair of electrical contacts to said at least one battery, said second means for electrically connecting including a pair of electrically conductive posts extending outwardly from said pager and means for receiving said posts, said means for receiving mounted to said module: and
a tray for supporting said at least one solar module, said tray having means for receiving said at least one strip of solar cells;
each of said at least two springs extending through a respective opening in said tray, said at least two springs extending between said electrical contacts and said at least one strip of solar cells.

5,012,221
EMERGENCY VEHICLE AUDIBLE WARNING SYSTEM AND METHOD
Max Neuhaus, New York, and Frederick G. Reinagel, Buffalo, both of N.Y., assignors to Siren Sounds, Inc., Englewood Cliffs, N.J.
Filed Mar. 24, 1989, Ser. No. 328,407
Int. Cl.[5] G08B *3/00*
U.S. Cl. 340—384 E **46 Claims**



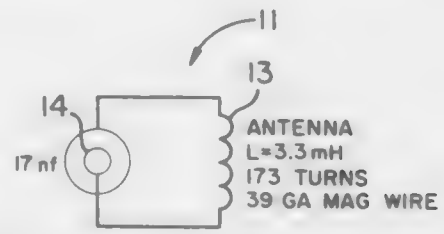
1. An audible warning system for an emergency vehicle, having sound projection means for emitting warning sound externally of the vehicle to persons in the vicinity of the vehicle, and means for defining a plurality of sound phrases to be projected, the means for defining comprising means for automatically interspersing a period of silence between said sound phrases, whereby vehicle personnel are enabled to hear warning sounds from exterior of the vehicle.

5,012,222
PROXIMITY WARNING DEVICE FOR PROTECTION OF A PARKED VEHICLE
Steve Gavrilis, 1720 65th St., Brooklyn, N.Y. 11204
Filed Apr. 6, 1990, Ser. No. 506,417
Int. Cl.[5] B60Q *5/00*
U.S. Cl. 340—436 **2 Claims**



1. A proximity warning device for protection of a parked vehicle comprising a sensor assembly, the sensor assembly comprising a relatively heavy body having a lighter elongated feeler element affixed to and projecting from the body, a housing for the sensor assembly, means for affixing the housing to a vehicle bumper, pivot means for pivotally supporting the sensor assembly in the housing for pivotal oscillation about a horizontal pivotal axis which is substantially perpendicular to the lengthwise dimension of the vehicle, the location of the pivotal axis being so selected that, when the housing is affixed to a bumper of a parked vehicle and the sensor assembly influenced only by gravity, the sensor assembly assumes a neutral orientation in which the feeler element is substantially vertical in the direction of its elongation regardless of whether the surface on which the vehicle is parked is horizontal or inclined in the lengthwise direction of the vehicle, ht e housing having an upper opening through which the feeler element upwardly projects with a substantial portion of the feeler element being above the housing and which permits the feeler element to

oscillate in either direction from the neutral, substantially vertical orientation, the sensor assembly further comprising a liquid metal electrical switch integral with the rest of the sensor assembly, liquid metal switch comprising a channel which is downwardly inclined away from the vehicle in the direction of the lengthwise dimension of the vehicle when the sensor assembly is in said neutral orientation, a pair of electrical contact means received in the channel at respective locations spaced from each other in the lengthwise dimension of



the channel, and a quantity of liquid metal received in the channel sufficient to contact only one of the electrical contact means when the sensor assembly is in said neutral orientation and sufficient to contact both of said electrical contact means when the feeler element is pushed toward the vehicle by external means sufficiently to substan tially decrease the inclination of the channel, and respective electrically conductive wires electrically connected to each of the contact means and adapted to comprise an electrical circuit including alarm means responsive to closing of the liquid metal switch.

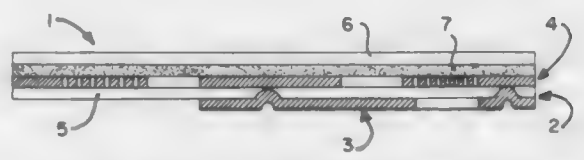
SOUND ACTIVATED DEVICE & METHOD
Charles A. Griebell, Trumbull, and Christie Petrides, Monroe, both of Conn., assignors to Black & Decker, Inc., Newark, Del.
Filed Feb. 23, 1990, Ser. No. 483,700
Int. Cl.[5] G08B *1/00*; H04Q *1/30*; G10K *11/00*
U.S. Cl. 340—531 **11 Claims**

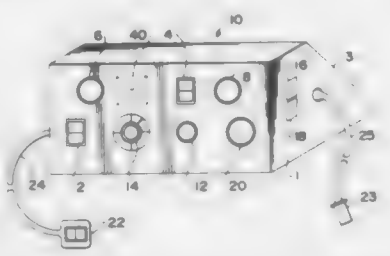


1. A method of activating a device in response to detecting the emission of a sound wave having predetermined characteristics comprising the steps of:
generating an analog electrical signal having informational characteristics indicative of the emitted sound;
converting the analog signal into a digital signal containing the informational characteristics contained within the emitted sound;
detecting the presence of the digital signal in a first time period, which first time period is identical to the time period in which the detected sound wave is generated;
detecting the absence of the digital signal in a second time period, which second time period is identical to the time period in which the detected sound wave is absent;
repeating the two detecting steps to ensure that the emitted sound wave has the predetermined characteristic; and
activating a device in response to transmission of the digital signal containing informational characteristics contained within the emitted signal.

5,012,224
AUDIBLE TAG FOR MAGNETIC ELECTRONIC ARTICLE SURVEILLANCE SYSTEMS
Frank Drucker, Tamarac, Fla., assignor to Sensormatic Electronics Corporation, Deerfield Beach, Fla.
Continuation of Ser. No. 446,322, Dec. 5, 1989, abandoned. This application Aug. 3, 1990, Ser. No. 563,828
Int. Cl.[5] G08B *13/18*
U.S. Cl. 340—551 **15 Claims**

9. An electronic article surveillance system comprising:
means for transmitting a magnetic field;
and a tag comprising:
antenna means responsive to said magnetic field; and piezoelectric means responsive to said antenna means for generating an audible acoustic signal.

5,012,225
SYSTEM FOR DEACTIVATING A FIELD-SENSITIVE TAG OR LABEL
Peter Gill, Long Valley, N.J., assignor to Checkpoint Systems, Inc., Thorofare, N.J.
Filed Dec. 15, 1989, Ser. No. 451,294
Int. Cl.[5] G08B *13/18*
U.S. Cl. 340—572 **20 Claims**



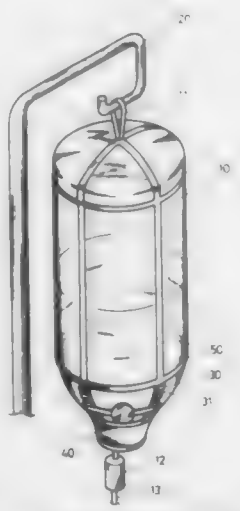
15. A method for protecting an article using an electronic security system, comprising:
providing a field-sensitive tag including a resonant circuit, and a deactivating layer in contact with at least portions of said resonant circuit and incorporating means for physically opening a portion of said resonant circuit in contact with said deactivating layer;
positioning said field-sensitive tag within portions of said article to be protected; and
deactivating said field-sensitive tag following a purchase of said article by physically opening said portion of the resonant circuit in contact with the deactivating layer.

5,012,226

SAFETY ALERTNESS MONITORING SYSTEM

Samuel D. Love, 13510 Old Indian Head Rd., Brandywine, Md. 20613

Filed Feb. 23, 1990, Ser. No. 483,635
Int. Cl.[5] G08B *23/00;* **B60Q** *1/00;* **H01H** *47/00*
U.S. Cl. 340—576 **42 Claims**



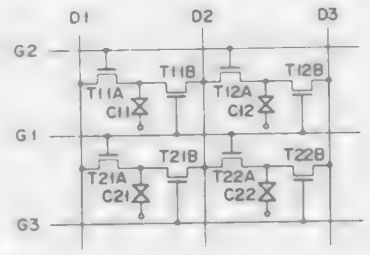
1. A safety alertness monitoring system comprising:
a housing;
timer means located in said housing, for counting a first predetermined time period and a second predetermined time period after counting said first predetermined time period;
first alarm means, located in said housing, for sounding a first alarm after said first predetermined time period is counted by said timer means;
second alarm means, located in said housing, for sounding a second alarm after said second predetermined time period is counted by said timer means;
resetting means for resetting said timer means, said resetting means causing said timer means to begin counting said first predetermined time period when actuated; and
attaching means for removably attaching said system to a power supply whereby said system is portable.

5,012,227

WARNING DEVICE FOR LIQUID LEVEL IN DRIPPING BOTTLE

Chou K. Jung, No. 16-2, Alley 12, Lane 106, Pao Chien Road, Chung Ho City Taipei Hsien, Taiwan

Filed Oct. 23, 1989, Ser. No. 425,671
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—618 **2 Claims**



1. In combination, a liquid-containment bottle (**10**) adapted to be hung in a vertical position for intravenous injection of a contained liquid into a patient, said bottle including a lower liquid discharge neck portion that converges toward the bottle axis in the downward direction;
a frame structure encircling the neck portion of the bottle, said frame structure including two downwardly-extending strips (**30**) lying against the bottle surface in spaced-apart relation, each said strip having a plural number of transverse grooves (**31**) spaced therealong;
a liquid level detecting alarm unit that includes a sensor body adapted for removable attachment, and also positioned flat against the outer surface of the bottle, and a flexible belt structure connected to said sensor body;
said belt structure comprising two oppositely-extending flat belt sections, each belt section having a first end thereof connected to the sensor body and a second free end thereof spaced from the sensor body;
each belt section having a width dimension such that the width dimension of the belt section is the same as the width dimension of each said groove (**31**); whereby the sensor body can be positioned against the bottle surface with one of the flat belt sections snapped into a groove in one of the strips, and with the other flat belt section snapped into a groove in the other strip;
said belt sections being detachably connected to the strips so that belt sections are in a taut condition supporting the sensor body against the bottle surface.

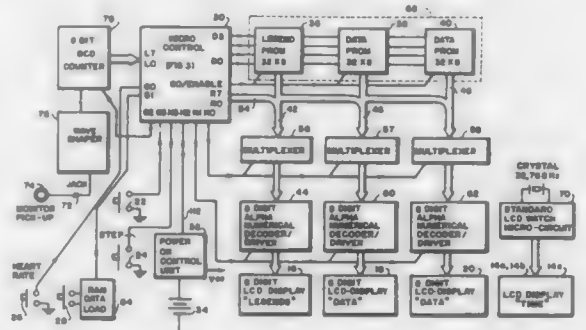
METHOD OF OPERATION FOR AN ACTIVE MATRIX TYPE DISPLAY DEVICE

Kiyoshi Masuda, Tokorozawa; Shigeto Kobda; Shigenobu Sakai, both of Tokyo; Kazuo Kimura, Tokorozawa, and Tomoyoshi Nomura, Tokyo, all of Japan, assignors to Nippon Telegraph and Telephone, Tokyo, Japan

Continuation of Ser. No. 224,080, Jul. 25, 1988, abandoned. This application Jul. 10, 1990, Ser. No. 551,034
Claims priority, application Japan, Aug. 4, 1987, 62-193763
Int. Cl.[5] G09G *3/36*
U.S. Cl. 340—702 **1 Claim**



1. A method of operation for an active matrix type display device including:
an m number ($m \geq 2$) of pixel array blocks arranged in a row direction, each pixel array block having a plurality of display elements (Cij; $i = 1,2, \ldots k$; $j = 1 \ldots n$) arranged as a K rows × n columns ($K \geq 2$, $n \geq 1$) array;
a $K+1$ number of scanning lines ($G1, \ldots, GK+1$) arranged in said row direction in each pixel array block to supply scanning signals for selectively scanning the corresponding display elements;
a $j+1$ number of data lines ($D1 \ldots Dj+1$) arranged in a column direction in each pixel array block to supply data signals to the corresponding display elements and located in an intersecting fashion to said scanning lines; and
first and second switching elements (TKnA, TKnB) connected between the data lines and the corresponding display element and independently connected to two adjacent scanning lines, respectively, between which the respective display element for the first and second switching elements is located, whereby different display data input routes are established relative to the display elements via two adjacent data lines in a $j+1$ number of data lines, said method comprising the step of enabling the display elements on a respective row which are included into said plurality of display elements in the matrix array constituted by the pixel array block to display back-up and normal display data for respective odd-and-even-numbered frames, and including the steps of:
(a) sequentially writing normal red, green and blue display data into the corresponding display elements on one row, while at the same time sequentially writing back-up red, green and blue display data into diagonally adjacent corresponding display elements, in accordance with scanning signals selected by a common scanning line, relative to display elements, located between one row and another adjacent row; and
(b) writing the normal red, green and blue display data into said diagonally adjacent display elements, in place of said back-up red, green and blue display data, in accordance with scanning signals selected by another scanning line adjacent to said scanning line.

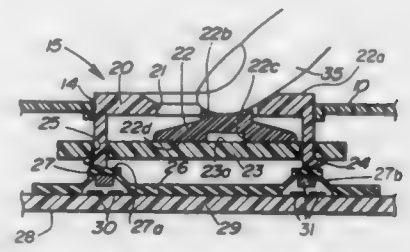
USER WEARABLE PERSONAL/MEDICAL INFORMATION DEVICE

Charles A. Lennon, 37 Park Ave., New York, N.Y. 10016, and George Lowe, Bergenfield, N.J., assignors to Charles A. Lennon, New York, N.Y.

Continuation of Ser. No. 44,010, Apr. 29, 1987, abandoned. This application Oct. 11, 1988, Ser. No. 256,231
Int. Cl.[5] G09F *9/00*
U.S. Cl. 340—706 **7 Claims**



1. A personal/medical information device capable of being carried on a person, comprising:
display means including
information display means for providing a display of items of vital personal or medical information pertaining to the person, and
legend display means for displaying items of identifying legends in association with the items of vital information displayed by said information display means;
operate switch means for initiating displays of said items of vital information and said items of identifying legends by said display means;
storing means including
detachably mountable read only memory means for storing at certain first address locations preset items of vital personal or medical information data and preset items of associated legend data, wherein items of items of vital information data and associated legend data can be read out for display from the first address locations of the read only memory means, and read/write memory means for storing at certain address locations different from said first address locations, items of other information data and associated items of identifying legend data that can be set and updated by the person, and including data input means coupled to the read/write memory means for enabling the person to set and update only the other information and associated legend data, wherein said items of other information and associated legend data can be read out for display from the second address locations of the read/-write memory means; and
processor means responsive to said operate switch means for reading out said items of vital information data, other information data and associated identifying legend data, selectively from one of said first address locations of the read only memory means and said second address locations of the read/write memory means, and for enabling the display of the selected information data and legend data by said display means.

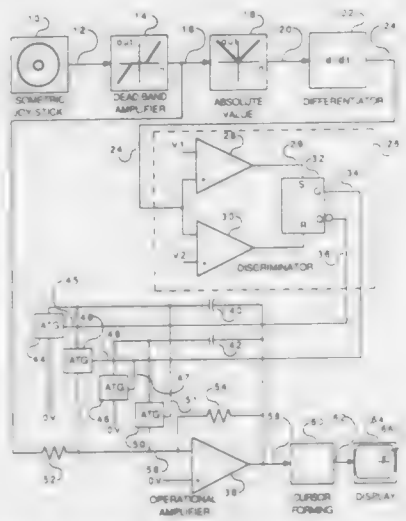
INPUT DEVICE FOR DIGITAL PROCESSOR BASED APPARATUS

Shiro Yasuda, Kanagawa, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Apr. 5, 1988, Ser. No. 177,940
Claims priority, application Japan, Apr. 7, 1987, 62-85211
Int. Cl.[5] G09G *5/08*
U.S. Cl. 340—706 **21 Claims**

1. A data input device comprising:
a controller assembly including a manually accessible movable member having a manually accessible section and a slider section integrally formed with said manually accessible section and slidably supported on a supporting base, said slider section being in a form of a disk, said manually accessible section being formed on said slider section and having a finger-receiving portion for receiving at least a portion of a finger of a user, said supporting base having a plane surface at an upper side thereof for contacting a plane surface of a lower side of said slider section, said supporting base permitting manual movement of said movable member in a direction generally perpendicular to the direction of the slide on said supporting base in response to a manual depression force for inputting data, said controller assembly also including a guide means defining an area of unbiased sliding motion of said movable member on said supporting base;
a resilient means for resiliently supporting said controller assembly at a plurality of supporting points, said resilient means being deformable in response to the depression force; and
electric means, responsive to deformation of said resilient means, for generation an output signal indicative of input data corresponding to the position of said movable member, at which position said inputting force is exerted.

5,012,231



METHOD AND APPARAUS FOR CURSOR MOTION HAVING VARIABLE RESPONSE

Lee Felsenstein, Berkeley, Calif., assignor to Golemics, Inc., Berkeley, Calif.

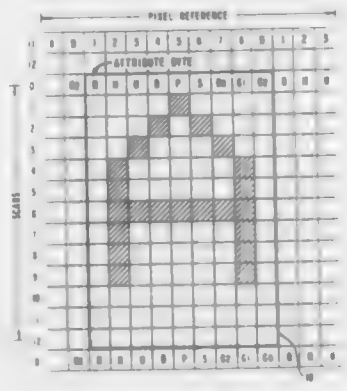
Filed Dec. 20, 1988, Ser. No. 287,102
Int. Cl.[5] G09G *5/08*
U.S. Cl. 340—709 **8 Claims**

1. A graphic cursor positioning device comprising:
input means responsive to operator actuation to generate a first cursor movement signal,
signal processing means acting upon said first cursor movement signal to produce a corresponding second cursro movement signal,
display means capable of presenting a variably positioned cursor indicia display,

cursor generating means connected to said display means so as to cause movement of said cursor indicia in correspondence to said second cursor movement signal,

said signal processing means including means for providing differing time response characteristics of said cursor indicia movement in correspondence to an increase or decrease of said first cursor movement signal.

5,012,232



BIT MAPPED MEMORY PLANE WITH CHARACTER ATTRIBUTES FOR VIDEO DISPLAY

Richard J. Fadem, Roslyn Heights, N.Y., assignor to NCR Corporation, Dayton, Ohio

Continuation-in-part of Ser. No. 938,474, Dec. 5, 1986, abandoned. This application Jul. 28, 1988, Ser. No. 225,430

Int. Cl.[5] G06F *3/14*

U.S. Cl. 340—750 **15 Claims**

1. A video display controller for controlling the display of characters stored in a bit plane memory, each character being arranged in a set number of scan lines with a set number of data bits in each scan line, one scan line of data bits in each character being attribute bits of its character, the characters to be displayed being arranged in rows, with a set number of characters per row, said video display controller comprising:

data bus means for receiving data bytes from the bit plane memory, each of said data bytes including the data bits of a single scan line of a character to be displayed;

shifting means having an input connected to said data bus means and an output, said shifting means for sequentially placing each data bit of a data byte on its output;

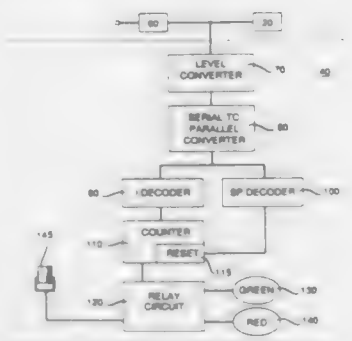
selecting means connected to said data bus means for selecting attribute bytes from said data bus means, each of said attribute bytes having the attribute bits of its corresponding character to be displayed, said selecting means comprising:

register means for storing the attribute bytes of an entire row of characters to be displayed, said register means having an input for receiving an attribute byte and an output for outputting an attribute byte; and

a multiplexer having a first input connected to said data bus means, a second input connected to the output of said register means and an output connected to the input of said register means, said multiplexer for multiplexing the attribute bytes of an entire row of characters to be displayed to said register means, and for sequentially multiplexing the attribute byte on the output of said register means back to its input after each scan line of a character to be displayed; and

attribute logic means having a first input connected to the output of said shifting means and a second input connected to said selecting means, said attribute logic means for applying the attribute bits of an attribute byte to the data bits of a scan line of a corresponding character to be displayed.

5,012,233



COMMUNICATION SYSTEM COMPRISING A REMOTELY ACTIVATED SWITCH

Stephen D. Poulsen Jr., Basking Ridge, N.J., assignor to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Sep. 7, 1989, Ser. No. 404,299

Int. Cl.[5] G05B *23/02*

U.S. Cl. 340—825.18 **14 Claims**

1. A communication system, comprising:

means for producing digital signals;

means for receiving digital signals;

a communication medium for conveying signals from the producing to the receiving means;

activating means capable of opening or closing an external circuit when said activating means are energized;

control means adapted to receive signals from the communication medium, the control means being further adapted to energize the activating means in response to signals received from said communication medium, such that when the control means receive a sequence of digital bits having predetermined properties, the activating means are energized; and

means for electrically powering the control means such that the activating means can be energized independently of whether the receiving means are powered ON or OFF,

Characterized in that

the control means comprise:

(a) means for receiving, from the producing means via the communication medium, signals representing alphanumeric characters;

(b) a converter for converting received signals to parallel binary representations of alphanumeric characters, whereby characters encoded in the received signals may be converted, the converter having output terminals;

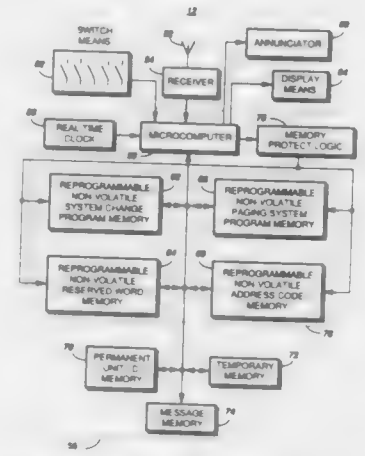
(c) a first decoder for producing an output pulse in response to the appearance, at the output terminals of the converter, of a converted activating character;

(d) a counter for producing an output pulse after a designated number of output pulses from the first decoder;

(e) a second decoder for resetting the counter whenever a converted resetting character appears at the output terminals of the converter; and

(f) means for energizing the activating means whenever an output pulse is produced by the counter.

5,012,234



USER ACTIVATED MEMORY PROGRAMMING AUTHORIZATION IN A SELECTIVE CALL RECEIVER

Randi L. Dulaney, Boca Raton, and Pamela A. Rakolta, Lake Worth, both of Fla., assignors to Motorola, Inc., Schaumburg, Ill.

Filed May 4, 1989, Ser. No. 347,549

Int. Cl.[5] G08B *5/22*

U.S. Cl. 340—825.44 **19 Claims**

2. A method for user initiated alteration of a memory in a selective call receiver, using reconfiguration information corresponding to the memory alteration selected by the user and transmitted from an external source, said method comprising the steps of:

generating, for a predetermined programming time interval, a programming authorization signal activated by the user;

receiving the transmitted reconfiguration information; and

altering the memory in response to the received reconfiguration information only in the presence of the programming authorization signal.

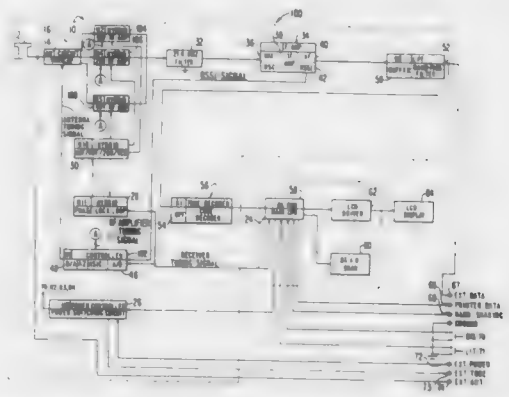
5,012,235

PAGING RECEIVER WITH CONTINUOUSLY TUNABLE ANTENNA AND RF AMPLIFIER

Andrew A. Andros, Spring, Tex., and Thomas J. Campana, Jr., Chicago, Ill., assignors to Telefind Corporation, Coral Gables, Fla.

Continuation-in-part of Ser. No. 110,514, Oct. 20, 1987, Pat. No. 4,851,830. This application Mar. 28, 1989, Ser. No. 329,543

Int. Cl.[5] H04Q *1/00*



U.S. Cl. 340—825.44 **33 Claims**

1. A RF paging receiver which is tunable to channels to receive pages comprising characters to be displayed with the pages being transmitted in at least one licensed frequency band with each frequency band containing a plurality of FM channels in which signal strength of the pages on received channels in the at least one frequency band varies as a result of variable antenna gain comprising:

(a) a tunable antenna having a reception bandwidth spanning the at least one frequency band with the antenna being tunable in response to an antenna tuning signal to achieve maximum antenna gain for a received channel in the at least one licensed frequency band;

(b) a RF tuner, coupled to the tunable antenna, which is tunable for receiving individual channels from the at least one frequency band in response to varying a receiver tuning signal specifying reception of one of the channels within the at least one frequency band, the RF tuner comprising at least one RF amplifier with each RF amplifier for amplifying a page received on any channel within at least one frequency band, each RF amplifier having an operating bandwidth which is narrower in frequency than the at least one frequency band of channels applied to the RF amplifier and which is shiftable to center the operating bandwidth within the at least one frequency band of channels applied to the RF amplifier on the specified channel in response to an RF amplifier tuning signal;

(c) an IF signal processing means, coupled to the RF tuner

and to the receiver tuning signal, for producing an intermediate frequency signal, for providing the antenna tuning signal which is a function of the intermediate frequency signal during operation of the RF tuner to tune the antenna to achieve maximum antenna gain in response to receiving a specified channel from one of the channels within the at least one frequency band, and for producing the RF amplifier tuning signal by a summation of a signal which is a function of a magnitude of the intermediate frequency signal and a signal which is a function of a magnitude of the receiver tuning signal;

(d) a display for displaying the characters within the received page; and

(e) a controller, coupled to the intermediate frequency signal, for controlling generation of the receiver tuning signal to cause the RF tuner to receive a specified channel from the at least one frequency band and display of received characters in pages on the channel on the display.

5,012,236

ELECTROMAGNETIC ENERGY TRANSMISSION AND DETECTION APPARATUS

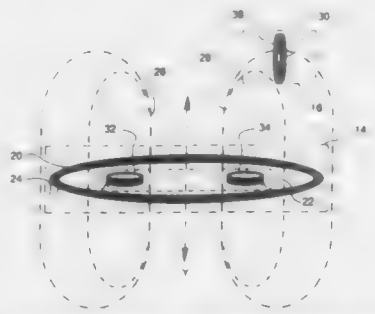
Philip R. Troyk, Morton Grove, and Glenn A. DeMichele, Chicago, both of Ill., assignors to Trovan Limited, Isle of Man, United Kingdom

Filed May 26, 1989, Ser. No. 358,310

Int. Cl.[5] H04Q *1/00*; **H01F** *5/00*

U.S. Cl. 340—825.54 **32 Claims**

1. An electromagnetic transmission and detection apparatus for transmitting a high intensity electromagnetic field and detecting the presence of a low intensity electromagnetic field emanating from an external source despite the presence of said high intensity electromagnetic field, comprising:



a support means;

means for generating a first electrical signal for use in creating said high intensity electromagnetic field;

a transmitter coil affixed to said support means for receiving said first electrical signal and transmitting said high inten-

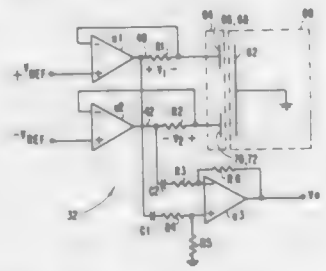
sity electromagnetic field, said transmitter coil including one or more conductive windings circumscribing a substantially polygonal volume of space having a central axis, said transmitter coil being adapted to generate a magnetic flux field within said volume;

first and second receiver coils disposed within said volume of space at significantly separated points and adapted to have linking relationships with portions of said flux field, said first and second receiver coils being electrically connected to each other in a differential circuit relationship such that the magnitude of electrical signals induced in said first and second receiver coils by electromagnetic

energy transmitted by said transmitter coil are substantially equal and opposite to each other, whereby electromagnetic energy generated by said external source and passing through at least one of said first and second receiver coils will induce an electrical signal of greater magnitude in one receiver coil than will be induced in the other receiver coil and cause a current to flow in said differential circuit which corresponds to the energy generated by said external source; and

means responsive to said current flowing in said differential circuit and operative to indicate a measure of the energy generated by said external source.

5,012,237



REFLECTED ELECTROSTATIC FIELD ANGLE RESOLVER

Mark A. Rosswurm, Columbus, Ind., assignor to Cummins Electronics Company, Inc., Columbus, Ind.

Filed May 26, 1989, Ser. No. 358,651

Int. Cl.[5] G08C *19/10*

U.S. Cl. 340—870.37 **17 Claims**

1. An electrostatic angle resolver comprising:

(a) a DC charge source means;

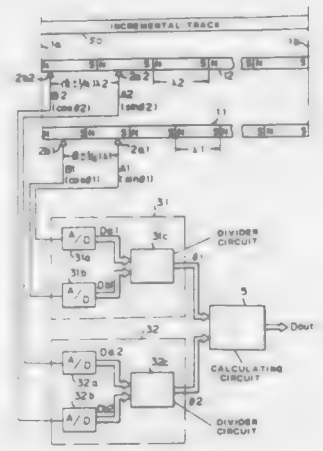
(b) stator means for producing a patterned electrostatic field, said stator means connected directly to said DC charge source means;

(c) rotor means within the field of said stator means, said rotor means connected to a potential reference; and

(d) circuit means for measuring current flow from said DC charge source means to said stator means and producing a dQ/dt signal indicative of rotor movement within the patterned electrostatic field emanating from said stator.

5,012,238

ABSOLUTE ENCODER



Yoshinori Hayashi, and Kenzaburou Iijima, both of Shizuoka, Japan, assignors to Yamaha Corporation, Japan

Filed Sep. 1, 1989, Ser. No. 402,218

Claims priority, application Japan, Sep. 2, 1988, 63-220035

Int. Cl.[5] H03M *1/22*

U.S. Cl. 341—15 **5 Claims**

1. An absolute encoder comprising:

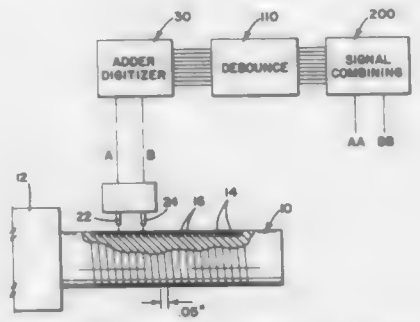
at least a first and a second signal track, said first and second signal tracks having associated therewith, respectively, a first and second periodic signal, each of said first and second periodic signals having a respective repetition number associated therewith and the repetition number of said first periodic signal having no common factor with the repetition number of said second periodic signal;

a first and a second group of sensors, each group including at least two respective sensors, ech group of sensors arranged facing a respective one of said signal tracks for detecting said periodic signal thereof,

at least two respective A/D converters connected to each said sensor group for outputting signal level data corresponding to said periodic signal; and

an absolute position data producing means connected to said A/D converters for producing, on the basis of said signal level data, an absolute position data indicative of the absolute position of said sensors relative to a starting position of said signal tracks.

5,012,239



HIGH RESOLUTION POSITION SENSOR CIRCUIT

Elmer L. Griebeler, Chester Township, Geauga County, Ohio, assignor to Visa-Trak Corporation, Cleveland, Ohio

Filed Aug. 21, 1989, Ser. No. 396,356

Int. Cl.[5] H03M *1/30*

U.S. Cl. 341—15 **13 Claims**

1. An object position signal creation apparatus for use with an object having a surface having regularly alternating strips of material disposed over a portion of said object comprising:

at least one transducer pair positioned proximate said surface, said transducer pair producing a pair of input position signals in quadrature varying cyclically, with one cycle of said signals corresponding to one strip alternation width indicative of the position of said object, said input position signals being placed on a first input position signal line and a second input position signal line;

an adder means connected between said first and second input position signal lines and comprising a plurality of terminals, each terminal carrying an adder output signal;

reference signal means producing a reference signal on a reference signal line;

a plurality of comparator means receiving said adder output signals and said reference signal, comparing each of said adder output signals to said reference signal and having a digital output indicative of the results of each said comparison whereby a plurality of digital comparison signals having two states are created, the change of state of each such digital comparison signal corresponding to a discrete object position wherein movement of said object causes singly ordered successive digital comparison signal state changes between logically adjacent digital comparison signals;

debounce circuit means for receiving said plurality of digital comparison signals and for masking all digital comparison signal state changes between digital comparison signals not logically adjacent, to generate a plurality of debounce digital comparison signals; and,

output logic means combining said plurality of debounce digital comparison signals into new digital position signals.

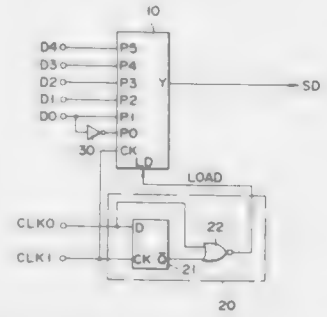
PARALLEL TO SERIAL CONVERTER WITH COMPLEMENTARY BIT INSERTION FOR DISPARITY REDUCTION



Shoichi Takahashi; Sayohiko Ichiki; Masatoshi Yorozu; Seiji Kunishige; Taro Shibagaki, all of Tokyo; Fumihiko Shimizu, Yokohama; Fumio Fujioka, and Toshinori Kondo, both of Tokyo, all of Japan, assignors to Nippon Hoso Kyokai, Tokyo and Kabushiki Kaisha Toshiba, Kawasaki, both of, Japan

Filed Jun. 26, 1990, Ser. No. 544,259

Claims priority, application Japan, Dec. 28, 1988, 63-333611; Dec. 28, 1988, 63-333612

Int. Cl.[5] H03M *9/00*

U.S. Cl. 341—101 **10 Claims**

1. A signal conversion circuit comprising:

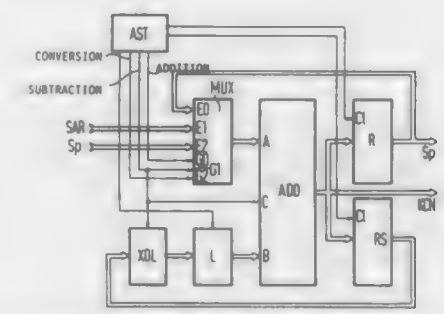
parallel input/serial output type of shift register means supplied with an input signal having a first number (n) of bits for converting a parallel signal to a serial signal the parallel signal containing the input data and constituted by a second predetermined number (n+k) of bits which is at least one (k) bit more than the first predetermined number (n), said shift register means having at least the second predetermined number of input terminals (n+k), and the first predetermined number (n) of successive input terminals of said shift register means being supplied with the input signal;

inverting circuit means for inverting at least one bit of the input signal to apply an inverted bit signal to at least one of the input terminals of the shift register means; and

timing circuit means for providing to the shift register means a first timing signal for permitting the input signal and the inverted signal to be loaded into the shift register means and a second timing signal for permitting the loaded signal to be read out of the shift register means at a predetermined rate.

5,012,241

METHOD FOR DETERMINING AND PROCESSING CORRECTION VALUES FOR SELF-CALIBRATING A/D AND D/A CONVERTERS, AND CALCULATING REGISTER FOR PERFORMING THE METHOD



Franz Kuttner, Villach, Austria, assignor to Siemens Aktiengesellschaft, Munich, Fed. Rep. of Germany

Filed Sep. 29, 1989, Ser. No. 415,059

Claims priority, application European Pat. Off., Sep. 30, 1988, 88116235.8

Int. Cl.[5] H03M *1/10*

U.S. Cl. 341—120 **9 Claims**

1. Method for determining and processing correction values according to the principle of successive approximation for self-calibrating A/D and D/A converters, which comprises:

(A) in a calibration phase, beginning with the most significant network element,

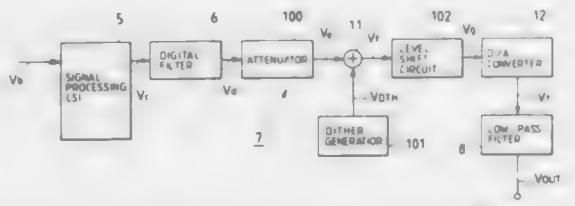
(Aa) measuring error terms with a calibration and correction network controlled by a successive approximation register in combination with a calculating register for each weighted network element of a binary weighted converter network controlled by the successive approximation register, by comparison with the sum of all of the lower-weighted network elements;

(Ab) calculating a correction value for each weighted network element of the converter network as one-half the difference of the associated error term and the sum of all of the correction values for higher-weighted network elements, with the calculating register having a sum register; and

(Ac) storing each calculated correction value in a memory; and

(B) in a conversion phase, beginning with the most significant network element,

(Ba) retrieving the associated correction value from the memory and adding the correction value to the contents of the sum register upon setting of a weighted network element,



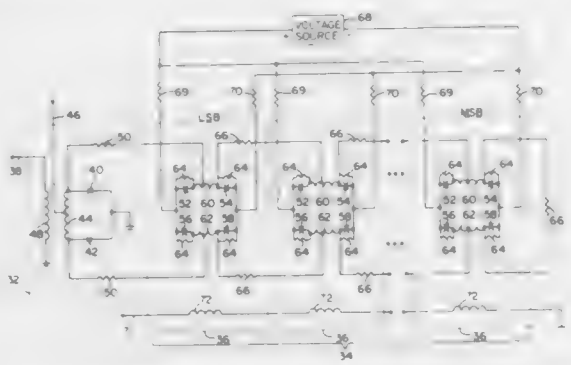
(Bb) outputting the correction value at the calibration and correction network; and

(Bc) adding the correction value to the contents of the sum register or discarding the correction value as a function of a comparator decision.

5,012,242
INPUT DATA PROCESSOR FOR D/A CONVERTER UTILIZING DITHERING

Junichi Yoshio, and Masami Suzuki, both of Tokorozawa, Japan, assignors to Pioneer Electronic Corporation, Tokyo, Japan

Filed Mar. 12, 1990, Ser. No. 491,992
Claims priority, application Japan, Jul. 10, 1989, 1-177624
Int. Cl.[5] H03M *1/00*
U.S. Cl. 341—131 5 Claims

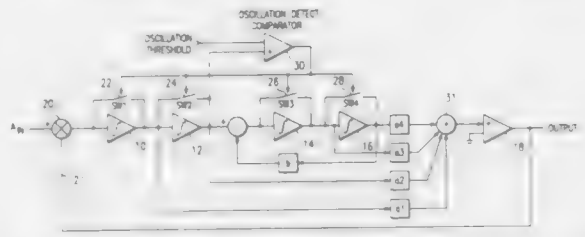


1. An input data processor for a D/A converter for processing digital data which is input to a D/A converter, said digital data corresponding to an alternating signal of the type which crosses a zero level, said processor comprising:
a dither signal adder for adding a dither signal to said digital signal, and to provide a dithered digital signal; and
a level shift circuit for shifting a level of said dithered digital signal, by an amount sufficient to prevent said dithered digital signal from crossing said zero level.

5,012,243
SUPERCONDUCTING ANALOG-TO-DIGITAL CONVERTER WITH FLOATING FOUR-JUNCTION SQUID BIDIRECTIONAL COUNTER

Gregory S. Lee, Los Angeles, Calif., assignor to TRW Inc., Redondo Beach, Calif.

Filed Aug. 24, 1989, Ser. No. 397,932
Int. Cl.[5] H03M *1/00, 1/20;* H03K *3/00*
U.S. Cl. 341—133 24 Claims

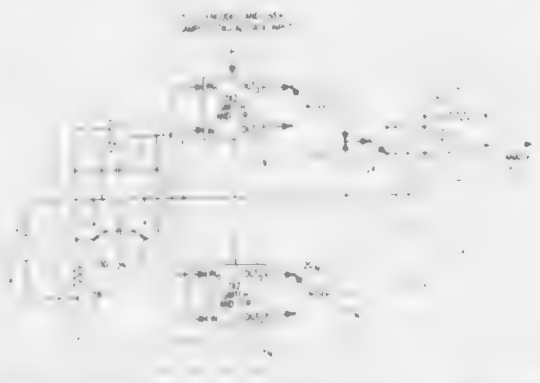


1. A superconducting counting analog-to-digital converter, comprising:
a superconducting quantum interference device (SQUID) quantizer;
means for applying a varying analog signal to the SQUID quantizer; and
a bidirectional binary counter having a plurality of stages of floating four-junction SQUID flip-flops connected together in a cascade arrangement from the least significant bit (LSB) to the most significant bit (MSB);
wherein the quantizer generates up-count and down-count voltage pulses for increasing and decreasing values of the analog signal and the bidirectional binary counter algebraically counts the voltage pulses, increasing the binary count when up-count pulses are received and decreasing the binary count when down-count pulses are received.

5,012,244
DELTA-SIGMA MODULATOR WITH OSCILLATION DETECT AND RESET CIRCUIT

David R. Wellard, Limerick, Ireland; Donald A. Kerth; Bruce P. Del Signore, both of Austin, Tex., and Eric J. Swanson, Buda, all of Tex., assignors to Crystal Semiconductor Corporation, Austin, Tex.

Filed Oct. 27, 1989, Ser. No. 429,214
Int. Cl.[5] H03M *3/00*
U.S. Cl. 341—143 28 Claims

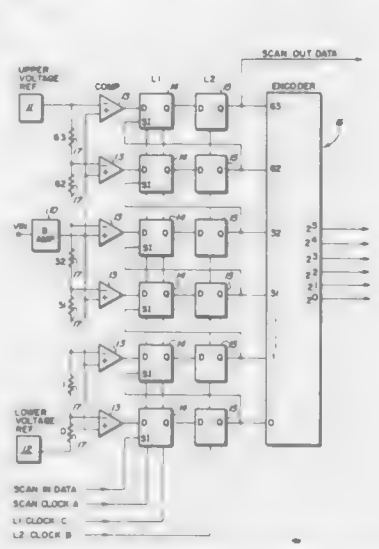


1. An instability detect/correction circuit for an analog modulator in an analog-to-digital converter, the analog modulator having at least two cascaded filter sections, the detect/correction circuit comprising:
a comparator circuit for comparing the operating characteristics of the modulator with a predetermined reference to determine if the analog modulator is operating at or near an unstable condition;
at least one zeroing circuit disposed on at least one of the filter sections and operable to substantially zero the associated filter section to remove accumulated information therefrom, said zeroing circuit operating in response to generation of an instability detection signal; and
a control circuit for generating said instability detection signal for a predetermined amount of time in response to said comparator circuit determining that the modulator is operating at or near an unstable condition.

5,012,245
INTEGRAL SWITCHED CAPACITOR FIR FILTER/DIGITAL-TO-ANALOG CONVERTER FOR SIGMA-DELTA ENCODED DIGITAL AUDIO

Jeffrey W. Scott, Temple, and Thayamkulangara R. Viswanathan, Wyomissing, both of Pa., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Oct. 4, 1989, Ser. No. 417,219
Int. Cl.[5] H03M *1/66*
U.S. Cl. 341—150 9 Claims

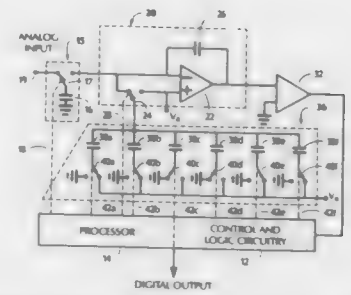


1. In an integrated circuit, a circuit for converting single bit digital input data into analog form, characterized by:
a shift register, having N-taps, for shifting the digital input data;
a plurality of signal capacitors, corresponding to the taps on the shift register, each signal capacitor having a predetermined capacitance and one end coupling to a summing node; and,
a 2×2 switch, responsive to the corresponding tap on the shift register, having two inputs for selectively coupling one of two voltage references to the other end of the signal capacitors depending on the state of the corresponding tap of the shift register and two outputs;
a 2:1 switch for coupling the corresponding one of the plurality of signal capacitors to either of the outputs of the 2×2 switch in response to the state of a clock signal;
wherein signals on the summing node are analog signals corresponding to the digital input data and the capacitances of the signal capacitors represent corresponding tap weight coefficients of a finite impulse response filter.

5,012,246
BICMOS ANALOG-TO-DIGITAL CONVERTER WITH MINIMIZED METASTABILITY

Paul W. Chung, San Jose; Karl R. Hense, Los Altos, both of Calif., and Kim Y. Nguyen, Williston, Vt., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jan. 31, 1990, Ser. No. 472,974
Int. Cl.[5] H03M *1/36*
U.S. Cl. 341—160 9 Claims



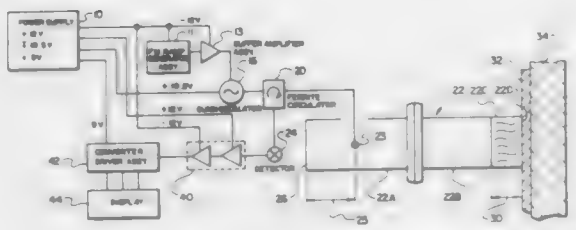
1. An analog-to-digital converter with minimized metastability, comprising:
a plurality of bipolar comparators, each providing from an analog input signal a differential output signal;
a plurality of latch means, providing from the output signal of a corresponding comparator a respective one of a plurality of preselected equal-step binary levels, each latch means comprising,
an edge-triggered dynamic latch for sensing and amplifying a respective one of said output signals to CMOS level;
a static latch; and
transfer gate means responsive solely to the output of the dynamic latch for transferring the respective one of said output signals from the dynamic latch to said static latch only if such output signal is not metastable; and
a plurality of AND gates for receiving the data from the latch means in the form of a thermometer code based on the binary levels and translating the thermometer code into a one hot code.

5,012,247
SWITCHED-CAPACITOR ANALOG-TO-DIGITAL CONVERTER WITH AUTOCALIBRATION

Norman G. Dillman, El Paso, Tex., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed Nov. 21, 1988, Ser. No. 274,104
Int. Cl.[5] H03M *1/50, 1/10*
U.S. Cl. 341—172 26 Claims

1. An apparatus for providing an analog-to-digital conversion, comprising:
sampling circuit means for receiving an analog signal;
integrator means communicating with said sampling circuit means for integrating said analog signal;
comparator means communicating with said integrator means for comparing an output signal from said integrator means with a reference signal;
discharge circuit means including a plurality of capacitors communicating with said integrator means for receiving and transferring charge from and to said integrator means;
power means communicating with said discharge circuit means; and
processing means communicating with said discharge circuit means for processing information generated by charging and discharging at least a first capacitor of said plurality of capacitors with an amount of charge to determine a digital representation having a number of digital bits of said analog signal, wherein a total absolute amount of charge transferred relative to said plurality of capacitors including said first capacitor remains substantially the same during each cycle in the determination of digital bits using at least said first capacitor.



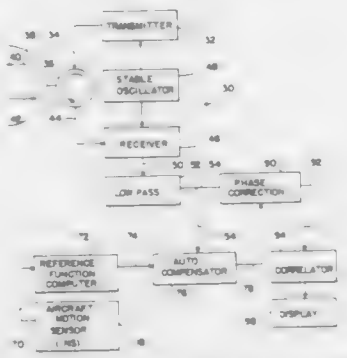
5,012,248
RADAR ABSORPTION MATERIAL THICKNESS TESTING DEVICE

John R. Munro; William R. Jost, both of Simi Valley, and Francis M. Ash, Jr., Burbank, all of Calif., assignors to Lockheed Corporation, Calabasas, Calif.

Continuation of Ser. No. 566,260, Dec. 28, 1988, abandoned. This application Apr. 3, 1987, Ser. No. 35,280
Int. Cl.[5] G01S *13/34*
U.S. Cl. 342—22 5 Claims

1. A device for determining radar absorption material coating thickness comprising:
a radiating element assembly for transmitting RF energy to and receiving reflected RF energy from said material;
detector means coupled to said radiating element adapted to sense said reflected RF energy from said coating and provide a visual display in the form of a voltage representative of the amount of said reflected RF energy said detector means having a time constant;
a source of frequency modulated RF signal said frequency modulated RF signal at a frequency significantly higher than said time constant of said detector means;
circulating means coupled to said radiating element, detector means, and said source of frequency modulated RF signal, said circulating means adapted to direct said source of RF modulated RF signal to said radiating element

assembly and said reflected RF energy to said detector means; and



power means coupled to said detector means and said source of frequency modulated RF signal.

5,012,249

SYNTHETIC APERTURE RADAR SYSTEM HAVING A THIRD ORDER TUNED AUTO COMPENSATOR FOR RESIDUAL ANTENNA MOTION AND METHOD FOR ITS USE

Yuen-Kwok Chan, Scarsdale, N.Y., assignor to The Boeing Company, Seattle, Wash.

Filed Nov. 28, 1989, Ser. No. 442,242
Int. Cl.[5] G01S *13/90*
U.S. Cl. 342—25 **15 Claims**

1. In a SAR system that receives reflections of radar signals from a target region, wherein such signals are combined with position signals from a motion sensor indicating antenna position, with the reflected signals and the position signals being integrated into range lines that may be combined to form a radar image, and wherein there may be residual motion between the antenna and the motion sensor, a method of correcting the position signals from the motion sensor to compensate for the amplitude and phase of antenna residual motion that may cause phase corruption in the radar image, the method comprising the steps of:

a. transforming a received radar signal into a range line having a plurality of azimuth positions,

b. transforming said received signal into a frequency spectrum f indicating the reflectivity of point reflectors at said azimuth positions, wherein one point reflector is located at each azimuth position, and wherein each point reflector is represented by a complex number having a certain magnitude and phase angle;

c. sampling the range line for substantially symmetric sets of point reflectors separated consecutively from each other by a distance corresponding to a frequency θ, wherein said frequency corresponds to a mode of residual vibration of the antenna, and wherein said substantially symmetric set includes a main lobe point reflector, a pair of first order point reflectors, and a pair of second order point reflectors, each of said point reflectors being represented by a complex number, with said main lobe point reflector being centrally positioned between said pairs of first and second order point reflectors,

d. calculating a product of a predetermined threshold with the greater magnitude of the two complex numbers $f(x-\theta)$ and $f(x+\theta)$, representing the pair of first order point reflectors,

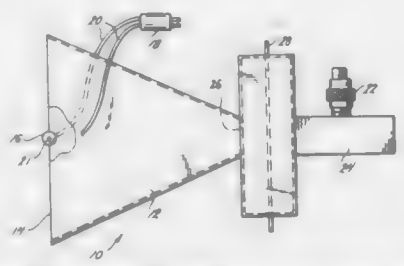
e. comparing the product with the magnitude of the complex number $f(x)$ representing the main lobe point reflector,

f. establishing first and second criteria of a symmetry relation, depending upon whether the magnitude of the complex number representing the main lobe point reflector is greater or less than the product of the predetermined threshold with the greater magnitude of the two complex numbers representing the pair of first order point reflectors,

g. determining whether the complex numbers representing the main lobe point reflector, the pair of first order point reflectors, and the pair of second order point reflectors meet the first or second symmetry relation, depending upon the result of the comparison of step e,

h. calculating estimates of the amplitude and phase of the antenna residual motion, depending upon the result of the comparison of step e,

i. generating an antenna residual motion signal therefrom, and



j. combining the antenna residual motion signal with the position signals from the motion sensor, to correct for antenna residual motion between the motion sensor and the antenna.

5,012,250

RADIATOR OF MICROWAVE AND INFRARED ENERGY TO SIMULATE TARGET

Kenny B. Foley, Ridgecrest, Calif., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Apr. 30, 1990, Ser. No. 516,374
Int. Cl.[5] G01S *7/50, 7/40*
U.S. Cl. 342—53 **20 Claims**

1. A test device for simulating the infrared and microwave signatures of a dual spectrum target comprising:

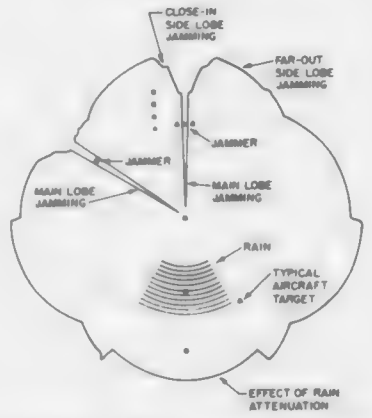
an electromagnetic horn having throat and flare portions,

a source of infrared radiation,

means for mounting said source at the intersection of the horizontal and vertical axes of the mouth end of the flare portion of said horn,

means for heating said source

means for absorbing infrared energy and transmitting microwave energy juxtaposed the throat of said horn, and



means for exciting said horn, so that the infrared and microwave signatures coincide.

5,012,251

RADAR CAPABILITY DISPLAY APPARATUS

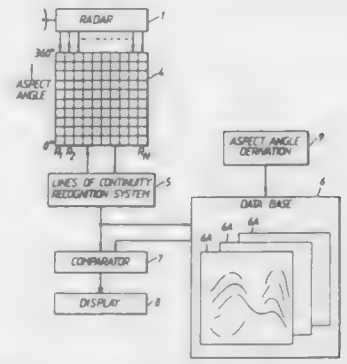
Peter D. Kennedy, Mesa, and Wayne M. Blasi, Phoenix, both of Ariz., assignors to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.

Filed May 31, 1990, Ser. No. 533,239
Int. Cl.[5] G01S *7/04, 7/22, 7/40*
U.S. Cl. 342—176 **9 Claims**

1. A radar capability display apparatus comprising in combination:

a scanning radar system transmitting search beams in a surveillance region, said scanning radar system receiving return echoes for each beam angle, range and time, said scanning radar system quantitatively measuring the characteristics of said return echoes, said scanning radar system includes a sidelobe blanking arrangement which utilizes an auxiliary wide beam antenna, an auxiliary receiver, and a controllable video signal inhibitor, said video signal inhibitor including a means for substituting an estimated signal for each echo signal that is deleted by blanking so that the remaining signals in the dwell can be processed and then indicating the fraction of range cells that is blanked in each beam dwell and,

a signal processing computer operatively connected to said scanning radar system to receive and process the characteristics of said return echoes for each beam angle, range and time, said signal processing computer having stored therein programs derived from radar theory equations, said signal processing computer processing and relating said radar theory equations with the characteristics of said return echoes to determine the nature of the interference signal, said signal processing computer processing said interference signal to determine the degree of degradation of said radar system performance, said signal processing computer providing to said radar system a capability signal which establishes the range at which a given type of target can be detected as a function of beam angle around said radar system, said signal processing computer providing a capability signal for each beam angle and thereby providing a radar capability display which depicts the range at which a specified type of target can be detected in each direction within said surveillance region.



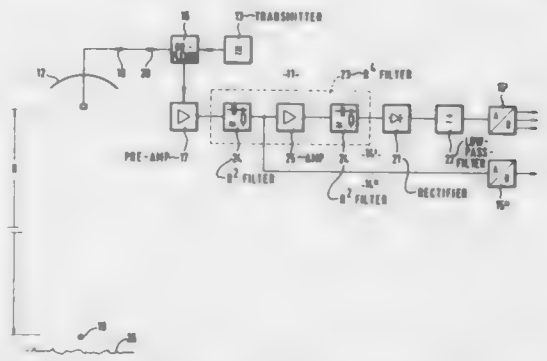
5,012,252

METHODS OF RECOGNIZING TARGETS

Alistair R. Faulkner, Harold Wood, United Kingdom, assignor to GEC Avionics Limited, Rochester, United Kingdom

Filed Jun. 18, 1986, Ser. No. 895,004
Claims priority, application United Kingdom, Jun. 28, 1985, 8516426
Int. Cl.[5] G01S *13/88, 13/10*
U.S. Cl. 342—192 **2 Claims**

1. Apparatus for recognizing a target comprising: a data base containing a respective record, for each of different known types of object; means for recording peaks of amplitude at different ranges obtained from radar returns representing successive range sweeps across a known object as seen from different angles; a processing means for identifying, from said recorded amplitude peaks, lines of continuity in the peaks of amplitude extending through successive range sweeps, with said lines of continuity being representative of major reflection points on the known object; means for comparing the said lines of continuity to derive first spatial information, for each known object, representative of the relative positions of the respective



major reflection points, and for storing in said data base the said first spatial information in the said respective record; a pulse radar for producing signals representing range sweeps across an unidentified object; and comparator means for comparing corresponding second spatial information from at least one range sweep received from an unidentified object with the first spatial information recorded for each type of object in the data base to ascertain whether the unidentified object belongs to one of the known types.

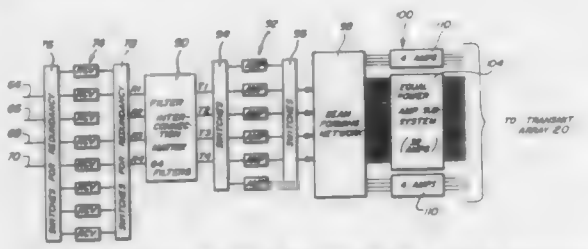
RADAR RECEIVER

Manfred Schuster, Eckental, and Harald Wich, Rothenbach, both of Fed. Rep. of Germany, assignors to Diehl GmbH & Co., Fed. Rep. of Germany

Filed Oct. 13, 1989, Ser. No. 420,956
Claims priority, application Fed. Rep. of Germany, Nov. 3, 1988, 3837348
Int. Cl.[5] G01S *13/32*
U.S. Cl. 342—203 **4 Claims**



1. A radar receiver having a receiving channel; comprising a high pass filter of the second order which is operated only in a linear characteristics curve range so as to act as an R^4-filter, said filter comprising a series circuit of two R^2-filters, with each R^2-filter including a high pass filter of the first order, and wherein a clutter receiving channel is coupled to and branched off intermediate said two R^2-filters and the output of said high pass filter of the second order being coupled to a demodulating rectifier.

5,012,254

PLURAL LEVEL BEAM-FORMING NETOWRK

James D. Thompson, Manhattan Beach, Calif., assignor to Hughes Aircraft Company, Los Angeles, Calif.

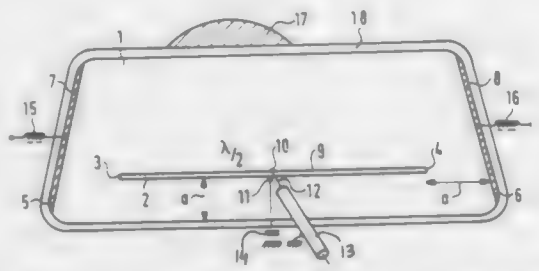
Continuation of Ser. No. 34,460, Mar. 26, 1987, Pat. No. 4,924,234. This application Sep. 25, 1989, Ser. No. 411,810
The portion of the term of this patent subsequent to May 8, 2007, has been disclaimed.
Int. Cl.[5] H01Q *3/22*
U.S. Cl. 342—373 10 Claims

1. A beam-forming network for producing, from at least one transmit signal, a plurality of output signals having a predetermined relationship with respect to one another for providing a predetermined excitation pattern to an array of radiating elements in an antenna system, comprising:

a first line for carrying the transmit signal; and,

a set of second lines spaced from one another and operatively disposed at an angle to and crossing the first line so as to define cross-over points therewith, each of the second lines being coupled to the first line at the cross-over points such that a portion of the electromagnetic energy of the transmit signal carried by the first line is transferable to each of the second lines, each of the second lines having an output adapted to be placed in electromagnetic communication with the array,

the first line having first and second portions spaced apart from one another and respectively defining first and second levels displaced from one another, and



the set of second lines having first and second subsets of second line overlying each other and respectively arranged adjacent to said first and second level, the first and second subsets of second lines being respectively associated with the first and second portions of the first line, such that the first subset of second lines is coupled to the first portion of the first line, and the second subset of second lines is coupled to the second portion of the first line.

5,012,255

COMBINATION ANTENNA AND WINDSHIELD HEATER

Hubert Becker, Hildesheim, Fed. Rep. of Germany, assignor to Blaupunkt-Werke GmbH, Hildesheim, Fed. Rep. of Germany

Filed Mar. 7, 1989, Ser. No. 319,978
Claims priority, application Fed. Rep. of Germany, Mar. 12, 1988, 3808401
Int. Cl.[5] H01Q *1/02*
U.S. Cl. 343—704 9 Claims

1. Tinted motor vehicle windshield having a pair of current supply busses and a tinting vapor-deposited transparent metal coating extending between said supply busses, applied to a glass or plastic substrate,

wherein said supply busses (7,8) are arranged along parallel opposing edges of a vapor-coated region of said windshield;

said metal coating is formed with an essentially rectangular slot (2) therein, having a width and a length between a pair of ends (3,4) said slot extending substantially perpendicular to said supply busses, thereby defining a slot antenna,

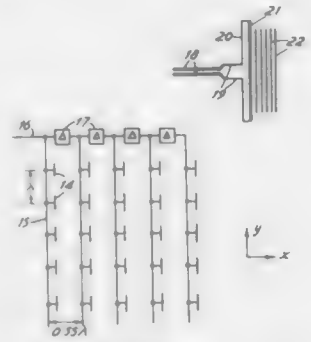
a middle point (10) of a first side of the slot is connected to an inner conductor (12) of a coaxial cable;

a middle point (11) of a second side of the slot is coupled to the outer conductor (13) of the coaxial cable;

the slot length and width are so dimensioned, in dependence upon the dielectric constant of the glass or plastic substrate,

that the antenna formed by the slot has an electrical value in an FM reception band on the order of $\lambda/2$,

while the slot has a width, between said first and second sides, which width is kept very small with respect to the value $\lambda/2$, and



the slot ends (3,4) approach said supply busses no closer than a spacing a which is small with respect to the half-wavelength $\lambda/2$.

5,012,256

ARRAY ANTENNA

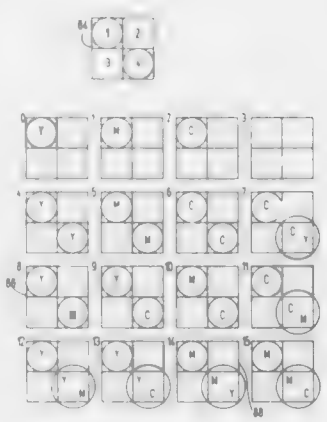
Mark C. D. Maddocks, Reigate, United Kingdom, assignor to British Broadcasting Corporation, London, England

PCT No. PCT/GB87/00329, § 371 Date Jan. 26, 1988, § 102(e) Date Jan. 26, 1988, PCT Pub. No. WO87/07772, PCT Pub. Date Dec. 17, 1987
PCT Filed May 13, 1987, Ser. No. 146,373
Claims priority, application United Kingdom, Jun. 2, 1986, 8613322
Int. Cl.[5] H01Q *21/06, 19/30, 3/30*
U.S. Cl. 343—754 26 Claims

1. An array antenna, comprising

a microstrip structure, comprising a groundplane, a front plane parallel to the groundplane and a dielectric layer sandwiched between said groundplane and said front plane;

an array of dipoles lying on the front plane; and



means for squinting the main beam of the array away from a broadside direction at an acute angle relative to the normal to said front plane, said squinting means comprising said groundplane and a plurality of parasitic elements arranged substantially parallel to one another adjacent to each dipole of the dipole array, in an asymmetric pattern with respect to each dipole, said groundplane extending beneath the dipole array and the parasitic elements, said dipole array and said plurality of parasitic elements defining a radiating conductive pattern and said parasitic elements lying with said dipole array in said front plane.

INK JET COLOR GRAPHICS PRINTING

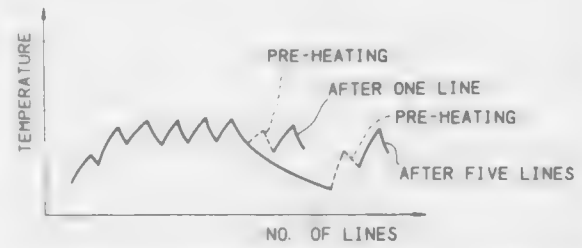
David J. Lowe, and Thomas B. Pritchard, both of Vancouver, Wash., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Mar. 16, 1990, Ser. No. 495,011
Int. Cl.[5] B41J *2/21*
U.S. Cl. 346—1.1 20 Claims

1. In a color liquid ink printing system wherein units of liquid ink are deposited on a substrate, a method of printing a pixel of graphics data so as to prevent bleeding of the liquid ink across color field boundaries, the method comprising:

defining as an image superpixel an area of the substrate corresponding to the pixel and consisting of a 2 by 2 array of cells;

within the superpixel, selecting a diagonally adjacent pair of the cells; and



depositing first and second respective units of ink on two diagonally adjacent areas of the substrate corresponding to the selected pair of cells, while leaving white two diagonally adjacent areas of the substrate in positions corresponding to the nonselected pair of cells in the superpixel.

10. A focal plane shutter for a photogrammetric camera, the shutter comprising:

a frame;

slit means movably mounted in said frame and defining a slit;

belt drive means for driving said slit means to move said slit, said belt drive including:

a belt having a plurality of perforations formed therein;

a drive pulley having a plurality of radially extending projections formed thereon for engaging said perforations;

drive means for rotatively driving said drive pulley so as to enable said drive pulley to impart movement to said belt at said perforations;

said belt having an inside surface facing toward said drive pulley;

a member mounted on said drive means and defining a supporting surface means for supporting said belt at said inside surface laterally of said projections;

rotating decoupling means interposed between said supporting surface means and said drive means so as to permit said supporting surface means to rotate independently of said drive pulley; and,

said member having a first diameter defined by said supporting surface means; said pulley having a second diameter measured between said projections; and, said first diameter being greater than said second diameter.

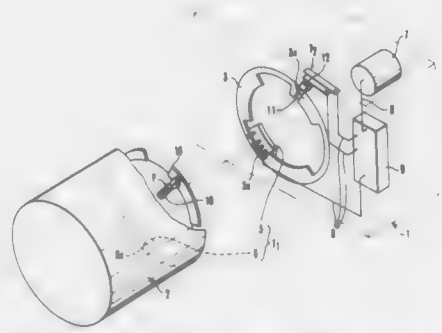
COUPLING DEVICE AND POWER DEVICE FOR SUPPLYING ELECTRICAL POWER AS THE COUPLING IS ESTABLISHED



Masatoshi Nagano, and Kenichi Kawamoto, both of Tokyo, Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 234,513, Aug. 22, 1988, abandoned, which is a division of Ser. No. 175,591, Mar. 28, 1988, abandoned, which is a continuation of Ser. No. 51,042, May 15, 1987, abandoned. This application Jan. 26, 1990, Ser. No. 471,698

Claims priority, application Japan, May 16, 1986, 61-110849; May 21, 1986, 61-076741

Int. Cl.[5] G03B *17/12*

U.S. Cl. 354—286 **25 Claims**

1. A system for connecting a first functional body with a second functional body which is releasably attachable to said first functional body, comprising:

(1) said first functional body including:

(a) a mount portion to be connected with said second functional body; and

(b) a lock member supported movably relative to said first functional body for locking said second functional body; and

(2) said second functional body including:

(a) a mount portion to be connected with said first functional body, said mount portion having a mount pawl for mounting;

(b) an engaging portion formed on said mount pawl to engage with said lock member; and

(c) detecting means for detecting that said lock member is engaged with said engaging portion, said detecting means issuing an output by which the connection between said first functional body and said second functional body is judged.

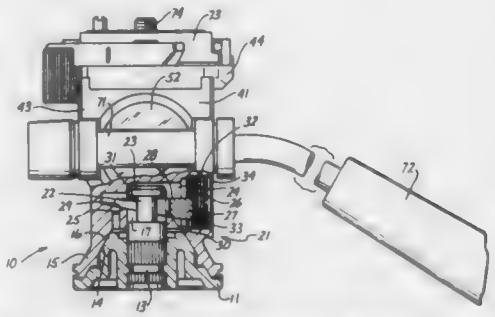
PANHEAD



Koichiro Nakatani, Tokyo, Japan, assignor to Velbon International Corporation, Torrance, Calif.

Filed Jan. 26, 1989, Ser. No. 302,011

Claims priority, application Japan, Feb. 22, 1988, 63-6890

Int. Cl.[5] G03B *17/00*

U.S. Cl. 354—293 **7 Claims**

1. In a panning head for a photographic tripod having a base and a panning body with first and second opposing bearing surfaces respectively for relative rotation about a pan axis, the improvement comprising:

a male element on one of said base and panning body extending along said axis into a cavity in the other of said base and panning body, said male element having a third bearing surface and said other having an opening transverse to said axis including a fourth bearing surface; and

wedge means interposed between said third and fourth bearing surfaces and displaceable transversely to said pan axis for adjusting the frictional engagement between said bearing surfaces to a degree determined by the position of said wedge means, thereby setting the degree of effort required to turn said panning body on said base.

FOCUS ADJUSTING APPARATUS

Masaki Higashihara, Yokohama, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 259,783, Oct. 19, 1988, abandoned.
This application May 2, 1990, Ser. No. 519,251
Claims priority, application Japan, Oct. 21, 1987, 62-263728
Int. Cl.[5] G03B *13/36*
U.S. Cl. 354—402 14 Claims

1. A focus adjusting apparatus in which a detection of a defocus amount by a focus detection circuit and lens driving according to said defocus amount are repeatedly effected, said apparatus, comprising:

(a) a data introducing circuit for introducing (1) at least a first defocus amount obtained in a latest focus detection operation and second and third defocus amounts obtained in focus detection operations effected one and two times previous to said latest focus detection operation, and (2) time data representing the actual time at which the focus detection operations were performed;

(b) a calculation circuit or (1) performing a first calculation to determine coefficients of a functional equation having a power greater than one wherein said equation represents movement of the imaging plane, said coefficients being determined on the basis of said first, second, and third defocus amounts and time data corresponding thereto, and for (2) performing a second calculation in which the imaging plane position or a lens driving amount corresponding to said imaging plane position is determined on the basis of the functional equation, coefficients of which have been determined by said first calculation; and

(c) a lens driving circuit for driving the lens on the basis of the result of said second calculation.

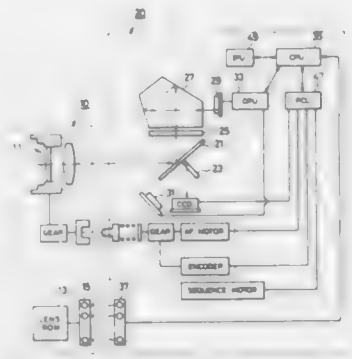
EXPOSURE CONTROL DEVICE FOR INTERCHANGEABLE LENS CAMERA

Isamu Hirai, Tokyo, Japan, assignor to Asaha Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 394,287, Aug. 11, 1989, abandoned, which is a continuation of Ser. No. 309,896, Feb. 8, 1989, abandoned, which is a continuation of Ser. No. 129,205, Dec. 7, 1987, abandoned. This application Jun. 5, 1990, Ser. No. 534,327
Claims priority, application Japan, Dec. 5, 1986, 61-288903
Int. Cl.[5] G03B *7/091, 7/20*
U.S. Cl. 354—410 17 Claims

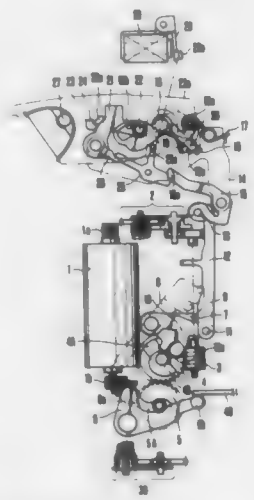


1. In an exposure control device in which, in determining a correct amount of exposure for an interchangeable-lens camera using a photometric output ip obtained through a photographing lens, correction is effected such that said photometric output ip and an open-aperture F number A_{vmin} of said photographing lens system satisfy the proportional relation:

$$2A_{vmin} \propto 1/ip$$

the improvement comprising:

means for obtaining an amount of correction mv_1 to correct a deviation from said proportional relation attributed to a difference in optical characteristics between different camera bodies and a difference in focal length between different photographing lenses, wherein said amount of correction is determined according to a characteristic equation in which said amount of correction is inversely proportional to focal length and in which there is a coefficient of proportionality, said coefficient being predetermined such that said deviation from said proportional relation is substantially zero for one of said different camera bodies with each one of said different photographing lens, said obtaining means further comprising means for storing said coefficient in said one camera body, and means for storing said focal length in said one lens; and



means for correcting said deviation from said proportional relation according to said amount of correction.

1. In a lens shutter type of camera having a flexible printed circuit board (FPC) for conducting camera operational signals from a camera body to a shutter block attached to an axially movable lens barrel, a guide plate for said FPC, said guide plate comprising means for guiding movement of said FPC as said lens barrel moves axially.

5,012,274

ACTIVE MATRIX LCD IMAGE PROJECTION SYSTEM

Eugene Dolgoff, 936 Roxbury Dr., Westbury, N.Y. 11590

Continuation-in-part of Ser. No. 140,233, Dec. 31, 1987, abandoned. This application Dec. 23, 1988, Ser. No. 290,040
Int. Cl.[5] G09G *3/36*
U.S. Cl. 340—702 All Claims

1. A video display system, comprising:
a liquid crystal display (LCD) device having a plurality of pixels arranged in a matrix for forming an image;
a solid state storage element associated with each pixel for storing a respective pixel control signal;
control means associated with said solid state storage elements for controlling the operation thereof, said control means, storage elements and LCD forming an active matrix LCD, said active matrix including dead spaces;
means for maintaining color registration of pixel images; and
means for directly projecting the image formed by said LCD onto a viewing area while maintaining color registration such that registered pixel images are caused to eliminate dead spaces between pixels.

5,012,275

RIGHT-TO-LEFT SCANNING SYSTEM FOR COPYING DOCUMENTS OR BOUND BOOKS

Edward C. Bock, Webster, N.Y., assignor to Xerox Corporation, Stamford, Conn.

Filed Mar. 19, 1990, Ser. No. 495,193
Int. Cl.[5] G03B *27/32, 27/52*
U.S. Cl. 355—25 4 Claims

1. An optical scanning and imaging system for scan/illuminating a document placed on a document platen and for projecting an image along an optical path onto a photosensitive image medium to form a latent image of the document thereon, said optical scanning and imaging system comprising, in combination an illumination and imaging assembly including:
a document illumination lamp, and a scan mirror, said assembly adapted to move beneath said platen in a scanning mode in a right-to-left scan operation beginning at a start of scan position S_0 coinciding with the right edge of the document,
said illumination and imaging assembly further including a photosensor means adapted to detect the right edge of the document to be scanned and to generate a signal indicating such detection, and
control means adapted to enable a right-to-left scanning operation beginning at the start of scan position S_0 upon receipt of the detection signal from the photosensor means.

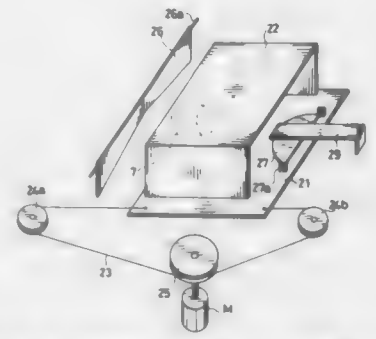
IMAGE RECORDING APPARATUS

Yoshinori Endo, Toyota, and Kenji Sakakibara, Ichinomiya, both of Japan, assignors to Brother Kogyo Kabushiki Kaisha, Japan

Filed Aug. 17, 1989, Ser. No. 395,359
Claims priority, application Japan, Aug. 19, 1988, 63-206875
Int. Cl.[5] G03B *27/32*
U.S. Cl. 355—27 5 Claims

1. An image recording apparatus for producing an output color image on an image recording medium, the output image corresponding to an image of an original, the apparatus comprising:
an exposure unit having a light source and providing an exposure zone, the exposure unit irradiating light from the light source toward the original and applying the light from the original toward the image recording medium positioned at the exposure zone for producing a latent image thereon, an optical path being defined from the light source to the exposure zone;

an optical system provided between the light source and the exposure zone and at the optical path, the optical system having a color tone controlling member comprising optical filters, each of the filters being insertable and retractable with respect to the optical path, the filters defining a color tone of the output image in the image recording medium;



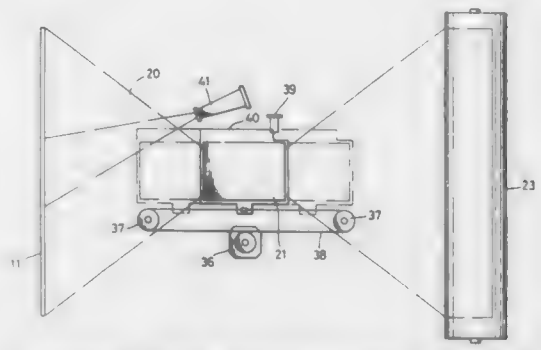
a developer unit positioned downstream of the exposure zone for developing the latent image; and
color tone compensation means for compensating the color tone defined by the filters, the compensating means being connected to the filters and controlling one of light irradiation amount of the light source and an exposure speed in accordance with an insertion amount of the optical filters with respect to the optical path.

5,012,277

IMAGE EXPOSURE DEVICE

Haruhiro Hyodo, and Hideyuki Kurahashi, both of Osaka, Japan, assignors to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed Dec. 18, 1989, Ser. No. 453,397
Claims priority, application Japan, Dec. 20, 1988, 63-322993
Int. Cl.[5] G03B *27/52, 27/72*
U.S. Cl. 355—55 20 Claims



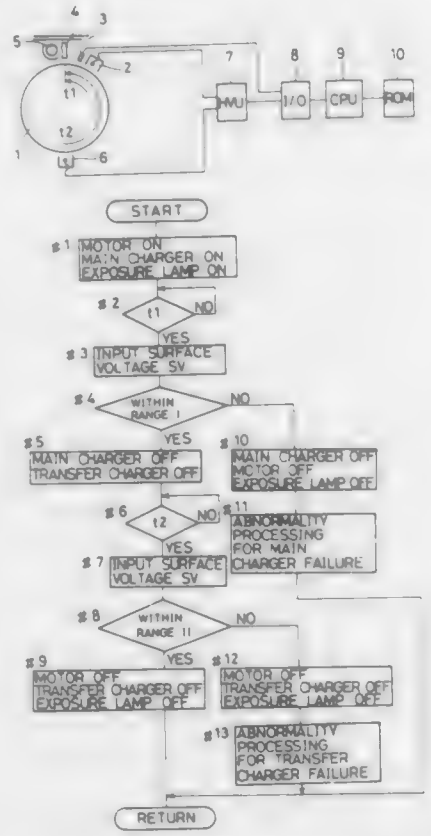
1. A device for exposing a document image and projecting a reflected light therefrom to a projection surface through a lens, comprising:
supporting means for supporting a document;
irradiating means for irradiating a light on a document image of the document supported by said supporting means;
a projection surface on which the document image is to be projected;
a lens for receiving a reflected light from the document image and passing the reflected light onto said projection surface;
lens driving means for moving said lens to change a size ratio of a projected image on said projection surface relative to the document image; and,
first and second shielding members for compensating a non-uniformity of a light amount irradiated on said projection surface, said first shielding member being disposed on an optical path between said supporting means and said lens when the size ratio is less than a predetermined first ratio, and said second shielding member being disposed on an optical path between said lens and said projection surface when the size ratio is greater than a predetermined second ratio.

5,012,278

DOCUMENT DENSITY DETECTOR APPARATUS

Shuji Yamada, Hyogo, and Hironori Ando, Osaka, both of Japan, assignors to Mita Industrial Co., Ltd., Osaka, Japan

Filed Jun. 22, 1989, Ser. No. 369,946
Claims priority, application Japan, Jun. 25, 1988, 63-157710; Aug. 31, 1988, 63-217855
Int. Cl.[5] G03B *27/52*
U.S. Cl. 355—55 14 Claims



1. A document density detector apparatus to be used for an image forming apparatus in which a focal lens is disposed in an optical pass for guiding light reflected from the surface of a document, to the surface of a light receiving body, and a light sensor for detecting the density of the document is fixed outside of an area through which the light reflected from the surface of the document passes before illuminating a predetermined surface of said light receiving body, and in which an image of the document formed on said light receiving body may be enlarged or reduced at the desired magnification by moving said focal lens along the optical pass in the direction toward the document or toward said light receiving body, comprising:
reference position setting means for setting a reference position of said focal lens such that said light sensor receives the light reflected from the document without light interception by said focal lens;
first judging means for supplying a first judging signal when there is set copying magnification which causes said focal lens to be moved from said reference position toward a position nearer to the document;
second judging means for supplying a second judging signal when, before image forming, there is set a mode for executing automatic detection of the density of a document; and
lens moving means for receiving said signals and for moving said focal lens to said reference position when said lens moving means receives said first and second judging signals from said first and second judging means, said light sensor being operable to sense the density of a document when said focal lens is at said reference position.

ABNORMALITY-DETECTING METHOD FOR AN ELECTROSTATIC IMAGE-RECORDING MACHINE

Yoshihiro Nakajima, Osaka, and Akihiro Takada, Neyagawa, both of Japan, assignors to Mita Industrial Co., Ltd., Osaka, Japan

Filed Jun. 14, 1989, Ser. No. 365,617
Claims priority, application Japan, Jun. 30, 1988, 63-163142; Jun. 30, 1988, 63-163143; Jun. 30, 1988, 63-163144; Jun. 30, 1988, 63-163145; Jun. 30, 1988, 63-163146
Int. Cl.[5] G03G *15/00, 15/06, 15/16, 15/052*
U.S. Cl. 355—205 3 Claims

1. A method for detecting an abnormality of a developing roller of a photostatic image-recording machine which includes a photoreceptor drum, a charging system for charging the photoreceptor drum, a developing roller for transferring toner power from the developing roller to the drum by a voltage difference between a bias voltage of the developing roller and a charger voltage of the photoreceptor drum, and a potentiometer means for controlling the charging voltage of the photoreceptor drum, the method comprising the steps of:

rotating the photoreceptor drum;

charging the photoreceptor drum using the charging system;

activating the developing roller with a bias voltage;

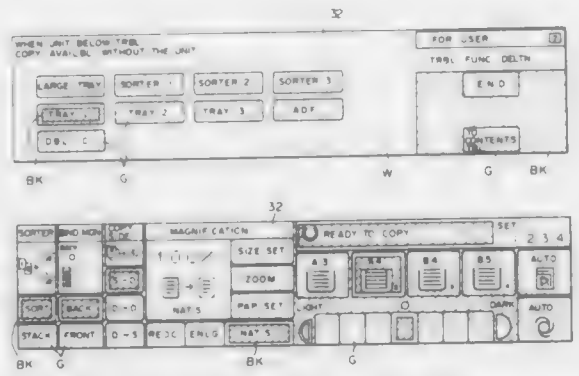
detecting the surface voltage of the photoreceptor drum using the potentiometer means when the part of the photoreceptor drum that has been charged by the charging system and has transferred the toner powder from the developing roller with the bias voltage comes to the potentiometer means;

comparing the detected surface voltage with a reference voltage range, the reference voltage range being a predetermined range for a normally operating charging system and developing roller; and

judging that the developing roller is abnormal when the detected surface voltage is out of the reference voltage range;

wherein the surface voltage of the photoreceptor drum is detected three times, the first time being after the photoreceptor drum is charged by the charging system, the second time being after the photoreceptor drum has transferred the toner powder from the developing roller with the minimum value of the bias voltage, and the third time being after the photoreceptor drum has transferred the toner powder from the developing roller with the maximum value of the bias voltage;

a reference voltage range is predetermined for each of the three times; and



the developing roller is judged abnormal when any one of the detected surface voltage values is out of the corresponding reference voltage range.

COPIER WHICH DELETES INOPERATIVE FUNCTIONS FROM CONTROL PANEL

Takashi Tsutsumi, Tokyo; Shozo Miyawaki, Urawa, and Kouichi Kanaya, Yokohama, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

Filed Nov. 1, 1989, Ser. No. 430,588
Claims priority, application Japan, Nov. 9, 1988, 63-283375
Int. Cl.[5] G03G *21/00*
U.S. Cl. 355—206 12 Claims

1. A function selectable operating panel of a copying apparatus having an operation mode for setting a function selected from a plurality of functions of the copying apparatus, the operating panel comprising;

a display surface provided with a touch panel sensor means for designating a function from said plurality of functions;

the designated function being deleted from the display surface for prohibiting use of the designated function when the designated function is determined to be inoperative.

5,012,281

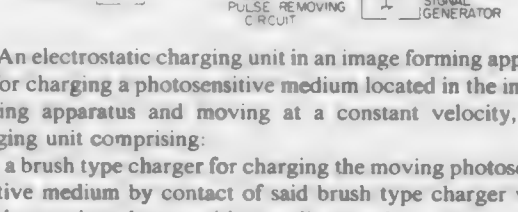
IMAGE FORMING APPARATUS HAVING A JAM COUNTER ADAPTED TO BE DISABLED UNTIL A READY FOR COPY STATE IS CONFIRMED

Keiji Kusumoto; Hirokazu Yamada, and Hiroyuki Ideyama, all of Osaka, Japan, assignors to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed Jul. 26, 1988, Ser. No. 224,142
Claims priority, application Japan, Jul. 27, 1987, 62-188494; Jul. 27, 1987, 62-1888495; Jul. 27, 1987, 62-188496; Sep. 14, 1987, 62-230456
Int. Cl.[5] G03G *21/00*
U.S. Cl. 355—206 16 Claims

1. An image forming apparatus comprising:

(a) image producing means for producing an image on a sheet medium, the image producing means comprising



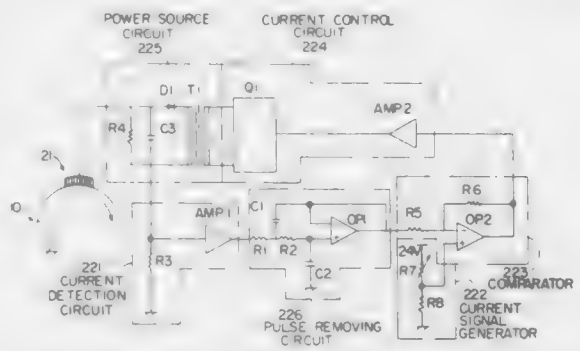
sheet supply means capable of successively supplying sheet media,

an image producing stage for producing an image on each of the sheet media supplied from said sheet supply means,

sheet discharge means for discharging from said image producing stage each of the sheet media each having an image produced thereon,

(b) detecting means for detecting an occurrence of jamming of a sheet medium between said sheet supply means and said sheet discharge means,

(c) a jam counter operative to count the number of occurrences of jamming of said sheet medium, said jam counter being activated to increment a counter value each time an occurrence of jamming is detected by said detecting means, and



(d) control means for monitoring the operational conditions of said image producing means to confirm a ready to copy state responsive to a sheet medium supplied from said sheet supply means after an occurrence of jamming of a sheet medium has been detected by said detecting means, and prohibiting said jam counter from incrementing the counter value until the ready for copy state is confirmed, thereby preventing the jam counter from dual counting.

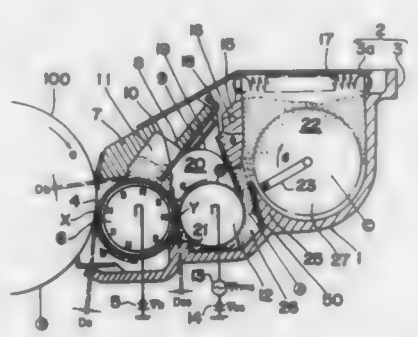
DEVELOPING APPARATUS INCLUDING A PARTITIONING ARRANGEMENT FOR PARTITIONING THE TONER ACCOMMODATING TANK



Tateki Oka; Naoki Toyoshi; Tomoaki Yokoyama; Hiroshi Mizuno; Hiroshi Murasaki; Akihito Ikegawa; Kouichi Etou, and Shuichi Nakagawa, all of Osaka, Japan, assignors to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed May 6, 1988, Ser. No. 191,122

Claims priority, application Japan, May 8, 1987, 62-113185; Nov. 19, 1987, 62-292464; Dec. 29, 1987, 62-334029; Apr. 30, 1988, 63-109870

Int. Cl.[5] G03G *15/06*

U.S. Cl. 355—245 **16 Claims**

1. A developing apparatus comprising: a toner hopper in which is positioned an agitating member, a rotatably driven toner holding member arranged at an opening of said toner hopper, a regulating member contacting said toner holding member under pressure, toner held in said toner hopper being transported by rotation of said toner holding member while said regulating member regulates the transport of said toner by removing excess toner from said toner holding member, said toner hopper including a small chamber positioned near said toner holding member and a supplementary chamber in which is located said agitating member, said supplementary chamber supplying toner to said small chamber, and partition means positioned between said small chamber and said supplementary chamber for permitting toner to be supplied from the supplementary chamber to the small chamber and for substantially preventing the excess toner removed by the regulating member from being returned from the small chamber to the supplementary chamber.

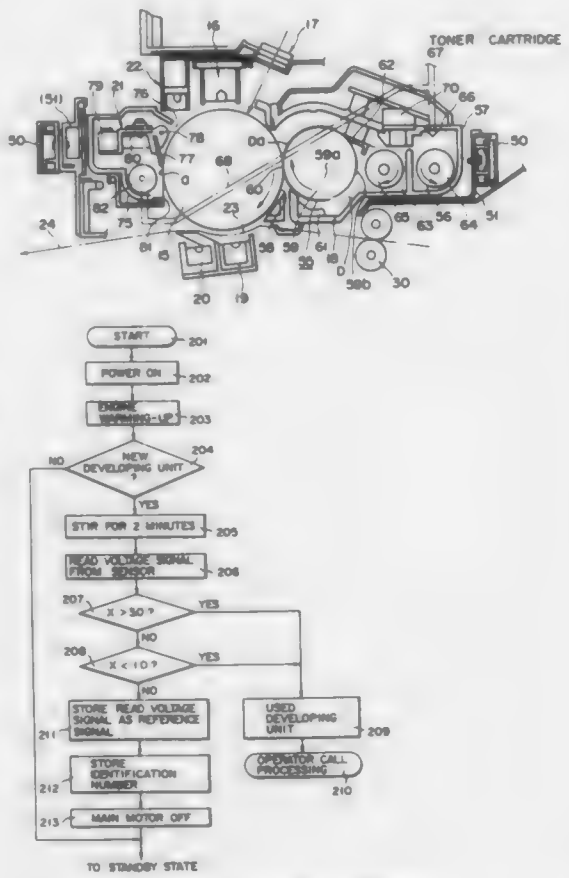
IMAGE FORMING APPARATUS HAVING DEVICE FOR DETECTING CONCENTRATION OF DEVELOPING AGENT



Hisaaki Kawano, Kawasaki; Yasufumi Tanimoto, Fujisawa, and Kouji Ishida, Kawasaki, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jul. 29, 1988, Ser. No. 226,195

Claims priority, application Japan, Jul. 31, 1987, 62-191613

Int. Cl.[5] G03G *21/00, 15/06*

U.S. Cl. 355—246 **16 Claims**

1. An image forming apparatus comprising:

means for forming a latent image;

means for developing the latent image with a developing agent, which is detachably mounted in said image forming apparatus and has an identification data unique to said developing means, the developing agent being preset to a predetermined initial toner concentration before said developing means is mounted in said apparatus and the toner concentration being varied from the initial toner concentration in a developing process;

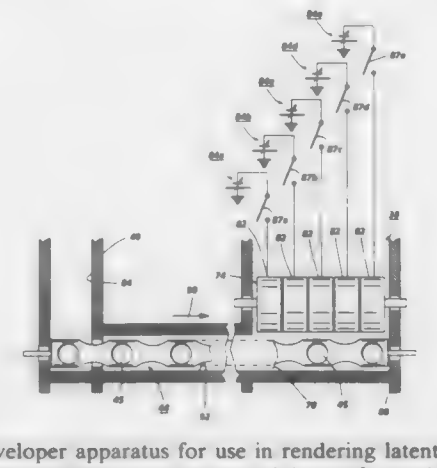
means for detecting the toner concentration of the developing agent to generate first and second concentration signals which correspond to the initial and varied toner concentrations, respectively;

means for transferring the identification data and the concentration signal;

means for storing reference data, and for receiving and comparing the transferred identification data and concentration signals to the reference data, the identification data and the first concentration signal being stored as the reference data in said storing means when the identification data is different from the reference data; and

means for comparing the second concentration signal with the first concentration signal, to supply the toner to said developing mans and maintain the developing agent within a predetermined toner concentration range.

5,012,287



COMPACT TWO-COMPONENT DEVELOPMENT SYSTEM WITH ZONAL TONER DISPENSER CONTROL

John F. Knapp, Fairport, N.Y., assignor to Xerox Corporation, Stamford, Conn.

Filed Feb. 26, 1990, Ser. No. 484,297

Int. Cl.[5] G03G *15/09*

U.S. Cl. 355—253 **18 Claims**

1. Developer apparatus for use in rendering latent electrostatic images visible on an image receiving surface, said apparatus comprising:

a supply of toner;

a developer member supported remotely from said supply of toner;

means for conveying toner from said supply for deposition on said developer member;

a toner feed roll structure supported adjacent said developer member in the path of movement of said toner being conveyed from said supply of toner; and

means for effecting transfer of toner from said toner feed roll structure to said developer member only in those areas thereof where toner has been depleted during a development interval.

5,012,288

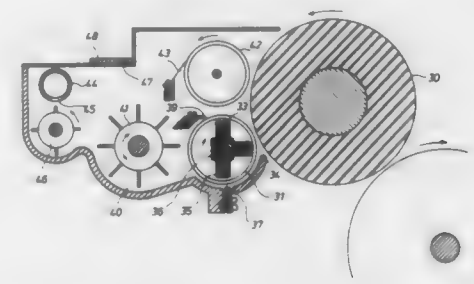
DRY TONER DEVELOPMENT

Serge M. Tavernier, Lint; Robert F. Janssens, Geel, and Jan A. Zwijsen, Wilrijk, all of Belgium, assignors to AGFA-Gevaert, N.V., Mortsel, Belgium

Filed Nov. 29, 1988, Ser. No. 277,641

Claims priority, application European Pat. Off., Dec. 7, 1987, 8702422.9

Int. Cl.[5] G03G *15/06*



U.S. Cl. 355—259 **20 Claims**

1. A method for touchdown development of an electrostatic image present on a recording surface with dry toner particles, which comprises the following steps:

(1) providing a mixture of magnetic carrier particles and separate triboelectrical chargeable toner particles that adhere electrostatically to said carrier particles, said carrier particles having a specific resistance higher than about 10^{12} ohm cm;

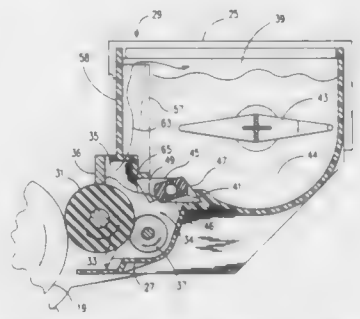
(2) applying a layer of said mixture onto the surface of a rotating electrically conductive member while attracting said carrier particles to said electrically conductive member by magnetic force, said layer constituting a magnetic brush of magnetic carrier particles carrying electrostatically adhering toner particles;

(3) selectively transferring by electrostatic attraction toner particles from said conductive member onto the surface of a separate donor member separated from the conductive member surface by an air gap by applying a DC voltage across said gap to create an electric field between the member surfaces, to thereby form a toner particle layere free of carrier particles on said donor member surface, said donor member surface having a surface resistivity not

higher than 10^{13} ohm/square and such rotating conductive member comprises at least a surface layer directed towards the donor member of a material having a specific resistance lower than 10^{2} ohm.cm.; and

(4) advancing said donor member surface with the transferred toner particle layer thereon to bring the toner layer into touchdown contact with said recording surface to develop thereon said electrostatic charge image, said donor member surface being so advanced with respect to said recording surface that there is no substantial relative movement between the donor member surface and said recording surface at the point of touchdown contact.

5,012,289



TONER METERING APPARATUS

Charles S. Aldrich; Steven L. Applegate; James A. Craft; James J. Molloy, all of Lexington, and Michael L. Pawley, Nicholasville, all of Ky., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Aug. 11, 1989, Ser. No. 392,680

Int. Cl.[5] G03G *00/00*

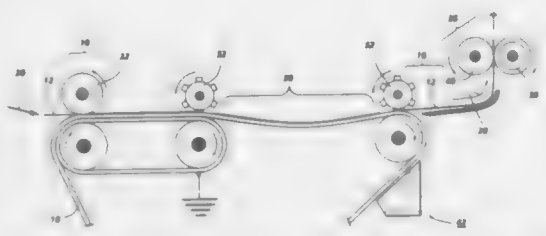
U.S. Cl. 355—260 **12 Claims**

1. A developer apparatus for supplying toner to an electrostatically charged imaging surface comprising:

a supply chamber for containing a supply of toner;

a developer chamber;

developer means for removing toner from the developer chamber to the electrostatically charged surface, the developer means including a rotatable developer roller and a doctor blade for metering the amount of toner removed from the developer chamber to the charged imaging surface;



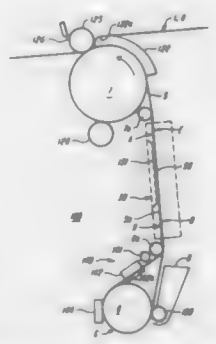
metering means for supplying toner from the supply chamber to the developer chamber and for removing toner from the developer chamber back to the supply chamber when the level of the toner in the developer chamber exceeds an equilibrium level.

5,012,290

INCREASED TRANSFERENCE OF A TONER IMAGE ON TO A COPY SHEET BY USING A ZERO TENSION LOOP APPLIED AFTER COROTRON TRANSFER

John S. Berkes, Webster, and Frank J. Bonsignore, Rochester, both of N.Y., assignors to Xerox Corporation, Stamford, Conn.

Filed Aug. 1, 1990, Ser. No. 561,395
Int. Cl.[5] G03G *15/14*
U.S. Cl. 355—271 **27 Claims**



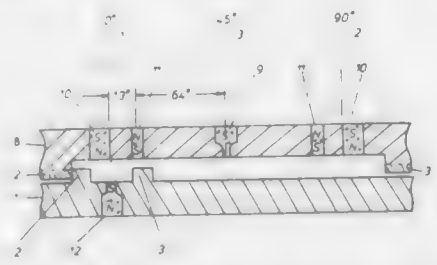
1. A printing machine of a type having a toner image interposed between a flexible member and a sheet, including:
means for transferring the toner image from the flexible member to the sheet;
means for separating the sheet from the flexible member; and
means, located intermediate the transferring means and the separating means, for providing relative motion between the sheet and the flexible member for improving transfer efficiency.

5,012,291

POWDER TRANSPORT, FUSING AND IMAGING APPARATUS

William R. Buchan, Pocasset; Robert A. Moore, Waquoit; Wendell J. Caley, Jr., Quincy; Mark A. Gilmore, Allston, and David M. Hudson, Chelmsford, all of Mass., assignors to Delphax Systems, Randolph, Mass.

Filed May 23, 1989, Ser. No. 355,994
Int. Cl.[5] G03G *15/00*
U.S. Cl. 355—271 **40 Claims**



1. An improved printing system of the type wherein a support member moves between first and second stations within the system, to transfer a toner image, wherein the improvement resides in that
said support member includes a dielectric surface for receiving said electrostatic latent image and said toner, and wherein said dielectric surface includes a subsurface layer of an elastomeric softness effective to conform to an image-receiving print medium having a characteristic surface roughness, and a non-tacky surface layer of low surface free energy which coats said first subsurface layer.

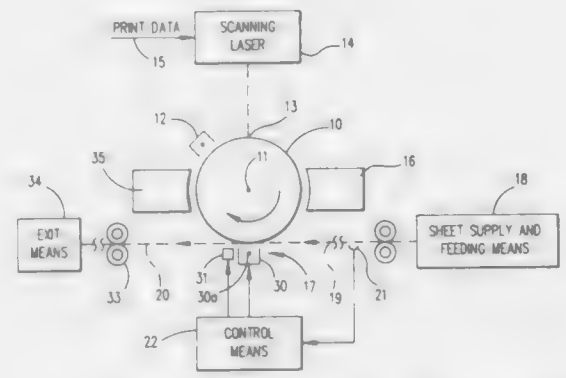
5,012,292

DEVICE FOR SETTING THE ROTOR OF A ROTARY SWITCH

Gerd Ruff, Heidelberg, Fed. Rep. of Germany, assignor to Teldix GmbH, Heidelberg, Fed. Rep. of Germany

PCT No. PCT/EP87/00165, § 371 Date Sep. 26, 1988, § 102(e) Date Sep. 26, 1988, PCT Pub. No. WO87/06063, PCT Pub. Date Oct. 8, 1987
PCT Filed Mar. 25, 1987, Ser. No. 249,372
Claims priority, application Fed. Rep. of Germany, Mar. 26, 1986, 3610228
Int. Cl.[5] H01F *7/08*
U.S. Cl. 335—253 **8 Claims**

1. In a device for setting the rotor of a rotary switch into three possible positions, namely first and second end positions and a center position wherein: drive systems equipped with windings disposed at the stator are actuated to effect this setting, with each drive system being provided with two series-connected windings of which a first winding, if the respective drive system is actuated, rotates the rotor from a momentary one of said end positions into an auxiliary position associated with the center position; a magnetic detent moment curve is active in the auxiliary position and, after the respective drive system has been switched off, centers the rotor in the center position (Pos. 3); and, a respective second winding of each drive system, if the respective drive system is actuated, moves the rotor into the other end position; the improvement wherein: each drive system is actuatable by way of only one conductor pair; the auxiliary position lies closer to the first end position than to the center position; the detent moment curve is configured, by employing an additional permanent magnet on the stator side, so that, in this auxiliary position, after the respective drive system has been switched off, a moment driving in the direction of the center position rotates the rotor into the center position and said rotor is centered there; and each second winding is configured such that it becomes effective if the respective drive system is actuated again and rotates the rotor at least into the vicinity of its second end position.



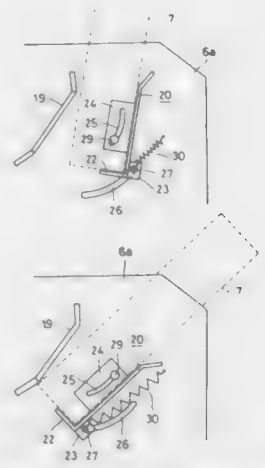
5,012,293

TRANSFER STATION CONTROL IN AN ELECTROPHOTOGRAPHIC REPRODUCTION DEVICE

Charles S. Aldrich; Stanley Dyer, and Gregory L. Ream, all of Lexington, Ky., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Aug. 24, 1989, Ser. No. 398,855
Int. Cl.[5] G03G *15/00, 15/16*
U.S. Cl. 355—274 **10 Claims**

1. In an electrophotographic reproduction device having an imaging station, a developer station, and a transfer station including transfer corona means and illumination means that is spaced from a moving photoconductor, at which transfer station a toner image is transferred from the surface of said photoconductor to the adjacent surface of a sheet of moving transfer material that is in a position intermediate said transfer station and said photoconductor, a method for controlling said transfer station, comprising; electrically charging said moving photoconductor prior to passing to the imaging station,
selectively discharging the photoconductor at the imaging station to form a latent image thereon,
applying toner to said latent image on the photoconductor at the developer station,
providing a supply of transfer sheets,
feeding sheets from said supply of sheets to said transfer station, one sheet at a time, and in synchronism with the arrival of a toner image at said transfer station,
determining the position of said fed sheet of transfer material as the fed sheet moves from said supply of sheets toward said transfer station,
controlling said transfer station in a first manner to produce the transfer of toner from said photoconductor to a surface of said transfer material so long as a fed sheet is in a position intermediate said photoconductor and said transfer station, said transfer station in said first manner of control being effective to provide a first level of energization of said transfer corona means to produce an electrical effect on said photoconductor,
controlling said transfer station in a second manner so long as a fed sheet is not in a position intermediate said photoconductor and said transfer station, said transfer station in said second manner of control being effective to provide a second level, lower than said first level, of energization of



said transfer corona means to produce said electrical effect on said photoconductor,
to thereby produce a substantially similar electrical effect on said photoconductor both when a sheet of transfer material is in a position intermediate the photoconductor and the transfer station, and when no sheet of transfer material is intermediate the photoconductor and the transfer station,
emitting discharging illumination to which said photoconductor is sensitive from the illumination means at the transfer station,
controlling said illumination means to produce a substantially similar discharging effect on said photoconductor both when a sheet of transfer material is in a position intermediate the photoconductor and the transfer station, and when no sheet of transfer material is intermediate the photoconductor and the transfer station,
reusing said photoconductor to sequentially carry a plurality of toner images to said transfer station,
feeding a like plurality of sheets from said supply of sheets to said transfer station, one sheet at a time, and in synchronism with the arrival of said plurality of toner images at said transfer station, and
sequentially controlling said transfer station in said first and said second manner as said plurality of sheets are fed to said transfer station.

5,012,294

MOVABLE GUIDE MEMBER IN A RECEIVING DEVICE OF AN IMAGE FORMING APPARATUS

Junya Sasabe, Kobe, and Masao Sugimori, Hirakata, both of Japan, assignors to Mita Industrial Co., Ltd., Osaka, Japan

Filed Oct. 31, 1989, Ser. No. 429,418
Claims priority, application Japan, Nov. 11, 1988, 63-286309
Int. Cl.[5] G03G *21/00*
U.S. Cl. 355—309 **11 Claims**

1. An image forming apparatus comprising:
a body for performing an image forming operation; and
a receiving device provided on the rear part of the body for receiving a paper feeding member, the receiving device comprising
a guide member which supports a received paper feeding member as the guide member shifts between a first position wherein the paper feeding member is brought into a sharply inclined position, and a second position wherein the paper feeding member is held in a lowered position, and
spring means for biasing the guide member to the first position when the guide member is not supporting a received paper feeding member and for biasing the guide member against the weight of a received paper feeding member when the guide member is brought into the second position due to the weight of the paper feeding member.

5,012,295

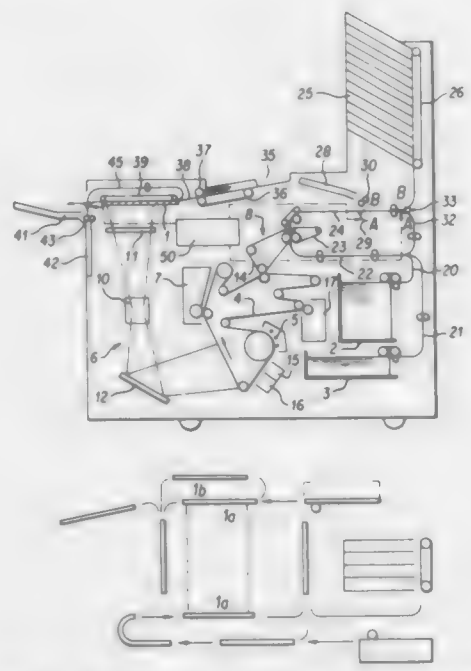
SHEET PROCESSING DEVICE AND IMAGE RECORDING APPARATUS USING THE SAME

Masatoshi Ikkatai, Kawasaki; Atsutomo Yoshizawa, Tokyo, and Toshio Honma, Kawasaki, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 216,425, Jul. 8, 1988, abandoned. This application May 14, 1990, Ser. No. 522,454
Claims priority, application Japan, Jul. 13, 1987, 62-106373[U]; Jul. 13, 1987, 62-106374[U]; Jul. 13, 1987, 62-173046
Int. Cl.[5] G03G *15/00*
U.S. Cl. 355—311 **29 Claims**

1. An image recording apparatus for recording an image on a recording sheet, comprising:
roll-like recording sheet holding means for holding a roll of recording sheet material;
cut recording sheet holding means for holding a pre-cut first recording sheet;
cutting means for cutting a second recording sheet from the roll of recording sheet material;
recording means for recording an image on a selected one of the first recording sheet and the second recording sheet;
first size recording sheet receiving means for receiving the selected recording sheet after recording by said recording mans when the selected recording sheet has a first size;

second size recording sheet receiving means for receiving the selected recording sheet after recording by said recording means when the selected recording sheet has a second size different from the first size; and



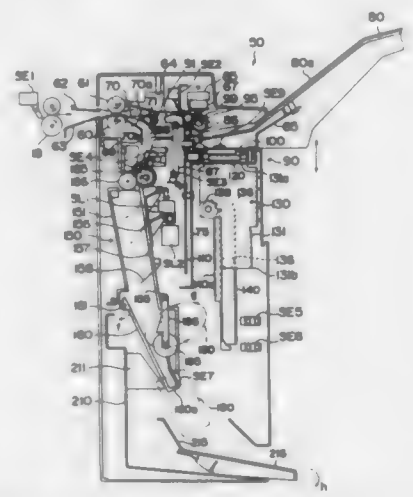
guide means for guiding the selected recording sheet selectively to either said first or second size sheet receiving means in accordance with the size of the selected recording sheet.

5,012,296

METHOD OF AND COPYING MACHINE FOR COPYING ORIGINALS IN ORDER ON BOTH SIDES OF RECEIVING SHEETS

Johannes H. T. Dinnissen, and Augustinus W. M. Lambregts, both of Venlo, Netherlands, assignors to OCE-Nederland B.V., Netherlands

Filed Mar. 9, 1989, Ser. No. 321,191
Int. Cl.[5] G03G *21/00*
U.S. Cl. 355—320 **4 Claims**



1. Method of copying at least one group of four originals in order on both sides of receiving sheets, in which, in a first cycle, images are successively applied to one side of a number of blank receiving sheets at a fixed location, the resulting single-sided copies are placed in a circulating path, turned over, and returned to the fixed location where, in a second cycle, images are successively applied to the other side of the receiving sheets, the improvement comprising in said first cycle an image of first original is applied at least twice and the same number of times, an image of said third original is applied to separate blank receiving sheets, and said second cycle for the same number of times an image of the second original and then the same number of times an image of the fourth original are applied to the blank side of the returned single-sided copies, the two cycles being repeated as necessary to make subsequent copies of that group of originals.

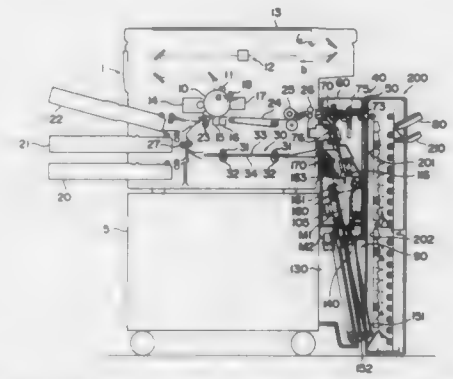
SHEET STORING APPARATUS PROVIDED FOR A COPYING MACHINE

Hiroki Yamashita; Keichi Kinoshita; Toshio Matsui; Wataru Kurahashi, and Katsuya Yasuda, all of Osaka, Japan, assignors to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Division of Ser. No. 311,065, Feb. 16, 1989. This application Jul. 2, 1990, Ser. No. 547,242
Claims priority, application Japan, Feb. 18, 1988, 63-35895; Feb. 18, 1988, 63-35897; May 21, 1988, 63-124666; May 21, 1988, 63-124667; May 21, 1988, 63-124668
Int. Cl.[5] G03G *15/00*
U.S. Cl. 355—321 **7 Claims**

1 A sheet storing apparatus, comprising:
an image forming means for forming a visible image on a sheet;
a tray for receiving sheets having visible images thereon;
shift means for reciprocating said tray in the direction perpendicular to the ejection of sheets;
detecting means for detecting the amount of the sheets received on said tray;
drive means for driving said shift means, every time a predetermined number of image formations are executed;
control means for stopping the image formation when said detecting means detects that the amount of the sheets is more than a predetermined amount; and
inhibiting means for inhibiting the operation of said control means until the predetermined number of image formations has been executed.



5,012,298

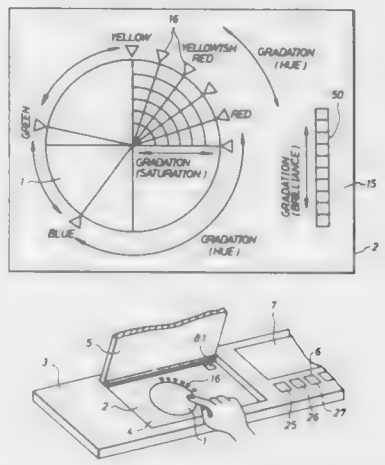
SHEET TRANSPORTING APPARATUS PROVIDED FOR A COPYING MACHINE

Akiyoshi Johdai, Osaka; Kazuhito Ozawa, Kani, and Toshio Matsui, Osaka, all of Japan, assignors to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed Aug. 30, 1989, Ser. No. 400,727
Claims priority, application Japan, Aug. 31, 1988, 63-217304; Aug. 31, 1988, 63-217305
Int. Cl.[5] G03G *15/02*
U.S. Cl. 355—323 **10 Claims**

1. A sheet transporting apparatus for receiving sheets ejected from an image forming apparatus and transporting the sheets, comprising:
an outlet for sheets, at which a sheet handling apparatus can be attached;
first transporting means which can transport sheets ejected from said image forming apparatus in a first direction, to said outlet, and reverse the sheets, in a second direction, from said outlet;
means for diverting the travel of sheets, which is disposed in the vicinity of said outlet and movable between a first position where sheets transported in the first direction by said first transporting means are guided to said sheet handling apparatus attached at said outlet and a second position where the sheets are guided to a space other than said sheet handling apparatus;
second transporting means for receiving sheets transported in the second direction by said first transporting means and transporting the sheets;

a sheet storing unit wherein sheets transported by said second transporting means are collected and stored;
refeeding means for feeding sheets stored in said sheet storing unit to said image forming apparatus; and
control means of said first transporting means and said diverting means, having a first mode wherein said diverting means is set to the first position in order to transport sheets ejected from said image forming apparatus in the first direction by said first transporting means to said sheet handling apparatus through said outlet and a second mode wherein said diverting means is set to the second position in order to transport sheets ejected from said image forming apparatus in the first direction and then in the second direction by said first transporting means and further transport the sheets to said sheet storing unit by said second transporting means.



5,012,299

COLOR ADJUSTMENT APPARATUS FOR COLOR COPYING MACHINE

Tadahide Sawamura, Tokyo; Yoko Nakamura, Kawasaki, and Fumiyo Kojima, Mitaka, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

Filed Oct. 12, 1988, Ser. No. 256,861
Claims priority, application Japan, Oct. 16, 1987, 62-261357; Mar. 7, 1988, 63-52981; Mar. 8, 1988, 63-54663; Jun. 1, 1988, 63-134721
Int. Cl.[5] G03G *15/01*
U.S. Cl. 355—326 **31 Claims**

11. A color adjustment apparatus for a color picture image reproducing machine, comprising:
(a) a color chart for visually representing all real colors in terms of color elements of saturations and hue,
(b) a key structure adjacent said color chart for detecting a color pressed on color chart;
(c) a storage means for storing reference data of each of exposure data, charging data and development bias data all of which relate to one of said colors on said color chart;
(d) a retrieving means connected to said touch-key structure and said storage means for retrieving from said storage means reference data relating to two colors corresponding to two pressed points on said color chart;
(e) a calculating means for receiving difference data between said inputted reference data for two pressed points on said color chart and for calculating at least one of exposure data, charge data, and development bias data on the basis of said reference data,

(f) an instruction means for instructing an execution of a copying operation to said reproducing machine on the basis of said calculation of at least one of said exposure data, said charge data and said development bias data, and
(g) a substituting means for substituting said calculation of at least one of said exposure data, said charge data and said development bias data for said reference data of said storage means, on every completion of said copying operation.

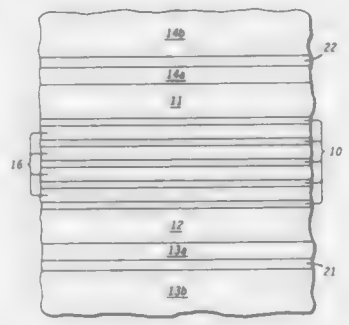
THREE TERMINAL SEMICONDUCTOR DEVICE

Jingming Xu, Etobicoke, Canada; Mark A. Sweeney, St. Paul, Minn., and Derek J. Day, Los Gatos, Calif., assignors to Northern Telecom Limited, Montreal, Canada

Filed Feb. 22, 1990, Ser. No. 484,040
Int. Cl.[5] H01L *27/12, 29/00, 33/00, 27/14*
U.S. Cl. 357—4 **8 Claims**



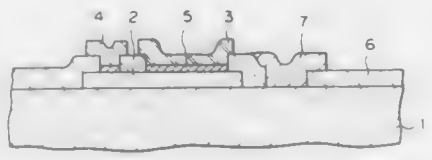
1. A semiconductor device, comprising:
a semiconductor body comprising:
a first layer of a narrow bandgap semiconductor;
a second layer of a narrow bandgap semiconductor; and
a substantially two-dimensional quantum well resonator between the first layer of a narrow bandgap semiconductor and the second layer of a narrow bandgap semiconductor, the quantum well resonator comprising a first layer of a wide bandgap semiconductor, a second layer of a wide bandgap semiconductor, and a third layer of a narrow bandgap semiconductor between the first layer of a wide bandgap semiconductor and the second layer of a wide bandgap semiconductor;
all of said layers having a common conductivity polarity;
an electrical contact to the first layer of a narrow bandgap semiconductor;
an electrical contact to the second layer of a narrow bandgap semiconductor; and
a field plate for applying a non-uniform electric field to the quantum well resonator, the field plate being disposed on one of the first layer of a narrow bandgap semiconductor and the second layer of a narrow bandgap semiconductor, being located adjacent to the electrical contact to that layer, and being substantially parallel to the quantum well resonator.

5,012,302

ENHANCED CONDUCTIVITY QUANTUM WELL HAVING RESONANT CHARGE COUPLING

Herb Goronkin, Scottsdale, Ariz., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Mar. 30, 1990, Ser. No. 501,590
Int. Cl.[5] H01L *27/12, 45/00, 29/00, 33/00*
U.S. Cl. 357—4 **10 Claims**



1. A resonant superlattice conductor comprising:
a barrier layer;
a first layer of material positioned on the barrier layer and having a first and second energy level;
at least one monoatomic layer positioned over the first layer having optical phonons at an energy level substantially equal to the difference between the first and second energy levels of the first layer of material; and
a second layer of material positioned on the monoatomic layers having the same energy levels as the first layer of material.

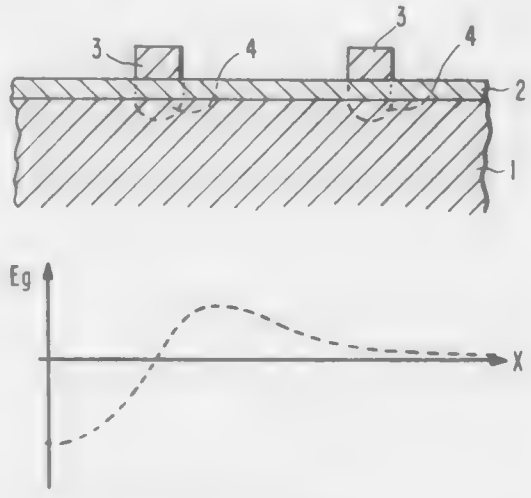
5,012,303

SUPERCONDUCTING DEVICE

Hirotaka Tamura, Atsugi, Japan, assignor to Fujitsu Limited, Kawasaki, Japan

Continuation of Ser. No. 364,316, Jun. 9, 1989, abandoned, which is a continuation of Ser. No. 937,455, Dec. 2, 1986, abandoned, which is a continuation of Ser. No. 676,826, Nov. 30, 1984, abandoned. This application Feb. 9, 1990, Ser. No. 478,030
Claims priority, application Japan, Nov. 30, 1983, 58-224311
Int. Cl.[5] H01L *27/12, 39/22, 49/02, 29/72*
U.S. Cl. 357—5 **1 Claim**

1. A superconducting device comprising:
an insulating substrate;
an active semiconductor layer formed on said insulating substrate and having a window formed therein;



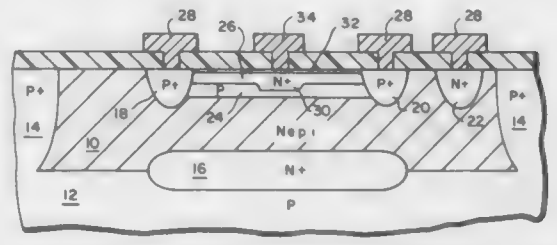
a base region formed of a superconductor in said window in said active semiconductor layer;
a tunnel oxide layer formed on said superconductor at the top of said window;
a superconductor electrode formed on said tunnel oxide layer;
means, in contact with said base region, for injecting quasiparticles into said superconductor, including an emitter region formed of a first portion of said active semiconductor layer;
a collector region, formed of a second portion of said active semiconductor layer, in contact with said base region and including a barrier layer formed on said superconductor for providing a barrier, said collector region capturing quasiparticles from said base region, and having a barrier height higher than the Fermi level of said base region for substantially blocking Cooper pairs from said base region and lower than the energy of the quasiparticles injected into said base region by said means for injecting quasiparticles, so that the injected quasiparticles pass over said barrier in said collector region, a normally conducting electrode being formed on said barrier layer, said barrier height of said barrier layer being substantially the same height as the energy gap of said superconductor.

5,012,304

SEMICONDUCTOR DEVICES HAVING STRAIN-INDUCED LATERAL CONFINEMENT OF CHARGE CARRIERS

Kathleen Kash, Freehold, and John M. Worlock, Fair Haven, both of N.J., assignors to Bell Communications Research, Inc., Livingston, N.J.

Filed Mar. 16, 1989, Ser. No. 324,311
Int. Cl.[5] H01L *29/000, 49/000, 29/240, 29/960*
U.S. Cl. 357—007 **1 Claim**



1. A semiconductor device comprising
a semiconductor base layer,
a confinement layer formed on said semiconductor base layer for vertically confining charge carriers in said base layer, said confinement layer having a top planar surface,
and means for creating in said base layer a permanent strain field for providing permanent lateral spatial confinement of charge carriers in said base layer, said means consisting only of a strained semiconductor layer having a patterned shape formed directly on the top planar surface of said confinement layer for creating in said base layer a permanent strain field corresponding to said patterned shape for providing permanent lateral spatial confinement of charge carriers in said base layer as determined by said permanent strain field, said strained semiconductor layer having a patterned shape consisting of spaced-apart elements that cover only some portions of the top surface of said confinement layer, with spaces between said elements to leave the remaining portions of the top surface of said confinement layer uncovered by said strained semiconductor layer.

5,012,305

HIGH SPEED JUNCTION FIELD EFFECT TRANSISTOR FOR USE IN BIPOLAR INTEGRATED CIRCUITS

Wadie N. Khadder; James P. Vokac, and Robert C. Dobkin, all of Santa Clara County, Calif., assignors to Linear Technology Corporation, Milpitas, Calif.

Continuation-in-part of Ser. No. 931,263, Nov. 17, 1986, abandoned. This application Jul. 13, 1990, Ser. No. 553,181
Int. Cl.[5] H01L *29/80, 29/04, 23/48*

1. A high speed junction field effect transistor comprising
a silicon semiconductor body region of one conductivity type,
first and second regions of opposite conductivity type formed in a surface of said body region extending into said body of one conductivity type and spaced from each other, said first and second regions forming a source and a drain of said transistor,
a thin channel region of said opposite conductivity type in said body region and interconnecting said first and second regions,
a thin surface gate layer of said one conductivity type overlying said channel region and extending from said first region to said second region, and
a surface contact on said surface gate layer extending between said first and second regions and electrically isolated from said body region, said surface contact comprising a polycrystalline silicon layer of said one conductivity type and extending over the entire surface of the surface gate layer and having a conductivity greater than the conductivity of said thin surface gate layer, said body region beneath said channel region and said surface contact comprising electrically separate gates for said transistor, and
an aluminum metal contact on said polycrystalline silicon layer.

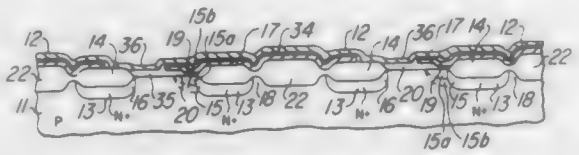
HOT-CARRIER SUPPRESSED SUB-MICRON MISFET DEVICE

Aloysious F. Tasch, Jr.; Hyungsoon Shin, and Christine M. Maziar, all of Austin, Tex., assignors to Board or Regents, The University of Texas System, Austin, Tex.

Filed Sep. 22, 1989, Ser. No. 410,979
Int. Cl.[5] H01L *29/10, 29/68*
U.S. Cl. 357—23.4 **44 Claims**

1. A sub-micron MISFET structure comprising a doped semiconductor body, doped source and drain regions formed in a major surface of said semiconductor body with a channel region therebetween, a gate overlying said channel region and spaced therefrom by a layer of insulative material, and a first additional doped region abutting said drain region away from said channel region and forming part of the drain element of

the MISFET structure, said additional doped region being of the same conductivity type as said drain region, and the dopant



concentration in said additional region being less than the dopant concentration in said drain region.

ELECTRICALLY-ERASABLE, ELECTRICALLY-PROGRAMMABLE READ-ONLY MEMORY

Manzur Gill, Rosharon; Sebastiano D'Arrigo, and Sung-Wei Lin, both of Houston, all of Tex., assignors to Texas Instruments Incoprorated, Dallas, Tex.

Continuation of Ser. No. 219,530, Jul. 15, 1988, abandoned. This application Mar. 15, 1990, Ser. No. 494,060
Int. Cl.[5] H01L *29/68, 29/34;* **G11C** *11/34*
U.S. Cl. 357—23.5 **10 Claims**

1. An electrically programmable read-only memory cell formed at a face of a semiconductor layer of a first conductivity type, comprising:

first and second source/drain regions formed at said face to be of a second conductivity type opposite said first conductivity type, a channel region of said semiconductor layer spacing apart said source/drain regions;

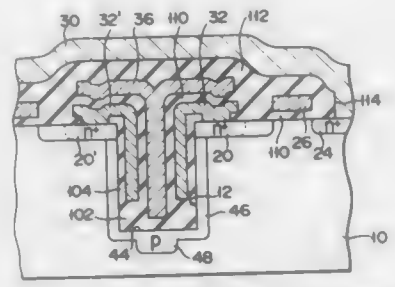
a differentially grown source/drain insulator region formed over at least said first source/drain region;

a thin tunnel insulator layer formed on said face to be adjacent said first source/drain region;

a laterally isolating thick insulator region formed on said face adjacent each of said first and second source/drain regions, each said laterally isolating insulator region isolating a respective one of said source/drain regions from a source/drain region of a next adjacent cell;

said channel region, said first source-drain insulator region and said thick insulator regions being linearly arranged in one direction, a floating gate conductor insulatively disposed over at least a portion of said channel region, over said first source/drain insulator region, to adjoin said thin tunnel insulator layer, and completely over, in said one direction, said laterally isolating insulator region;

a control gate conductor insulatively disposed adjacent said floating gate conductor and capacitively coupled thereto at least over said isolating insulator region; and



channel isolating thick insulator regions formed at said face adjacent said channel region and adapted to isolate said channel region from channel regions of adjacent cells.

5,012,308

SEMICONDUCTOR MEMORY DEVICE

Katsuhiko Hieda, Yokohama, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Continuation of Ser. No. 767,848, Aug. 21, 1985, abandoned. This application Jul. 11, 1988, Ser. No. 220,369
Claims priority, application Japan, Aug. 27, 1984, 59-178071
Int. Cl.[5] H01L *29/78, 29/92, 27/02*
U.S. Cl. 357—23.6 **8 Claims**

3. A semiconductor memory device comprising:

(a) a semiconductive substrate of a first conductivity type, having grooves each of which has side walls and a bottom portion; and

(b) memory cells formed on said substrate, each of said memory cells comprising;

a transistor formed on said substrate and having a semiconductive source region of a second conductivity type, and

a capacitor buried in said groove, said capacitor having,

a first conductive layer connected to said source region and having a layer portion extending in said groove along the side wall of said groove;

a second conductive layer insulatively provided in said groove to oppose said first layer to allow said first layer to store charge carriers in response to a voltage applied therebetween, said second layer serving as a common electrode for memory capacitors formed on said substrate, and

a semiconductive diffusion layer of the first conductivity type, formed in said substrate to surround said groove and having an impurity concentration which is so changed as to define a heavily-doped region which is partially positioned at the bottom portion of said groove, wherein said diffusion layer comprises:

a lightly-doped diffusion layer of the first conductivity type formed in said substrate to contain therein said groove; and

a heavily-doped diffusion layer formed in said substrate to be positioned at a substantially central position of the bottom portion of said groove, wherein two first conductive layers of capacitors of two neighboring memory cells are provided together in said groove in such a manner that said second layer is insulatively sandwiched therebetween in said groove, and wherein said heavily-doped diffusion layer has a width which substantially corresponds to a distance between said two first conductive layers.

5,012,309

SEMICONDUCTOR MEMORY DEVICE COMPRISING CAPACITOR PORTIONS HAVING STACKED STRUCTURES

Akio Nakayama, Hyogo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

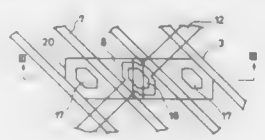
Filed Apr. 20, 1990, Ser. No. 512,230
Claims priority, application Japan, Aug. 30, 1989, 1-223417
Int. Cl.[5] H01L *29/68, 27/10, 23/48*
U.S. Cl. 357—23.6 **8 Claims**

1. A semiconductor memory device including a field effect transistor having one and the other impurity regions formed on a semiconductor substrate, an interconnection layer connected to one of the impurity regions of the field effect transistor, and

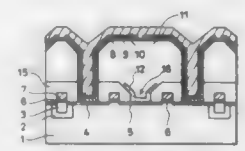
a capacitor portion connected to the other impurity region and having a stacked structure, comprising:

a semiconductor substrate of a first conductivity type having a major surface,

a plurality of word lines formed on said major surface and extending in a first direction,



a plurality of bit lines formed on said word lines and extending in a second direction intersecting with said first direction,



a plurality of active regions formed on said major surface of the semiconductor substrate and aligned at least at a predetermined interval in a third direction intersecting with said first and second directions, each of said active regions substantially forming a plane rectangle, and

a plurality of memory cells arranged at intersection points of said word lines and said bit lines,

each of said memory cells comprising,

one and the other impurity regions of a second conductivity type formed spaced apart from each other in said active regions so as to define a channel region with a

part of said major surface of said active region being a channel surface,

a gate electrode formed through a gate insulating film on said channel surface so as to be connected with said word lines,

said bit line being electrically in contact with said one impurity region and being formed insulated above said gate electrode,

an insulation layer formed on said bit lines and said word lines and having a concave opening comprising a bottom surface exposing a surface of said other impurity region and a side surface extending approximately perpendicular to said major surface of the semiconductor substrate,

a storage node is formed on said bottom surface of the concave opening and having a bottom wall portion electrically in contact with said other impurity region and a sidewall portion formed on said side surface of the concave opening,

a dielectric film on said storage node, and

a cell plate formed on said storage node through said dielectric film.

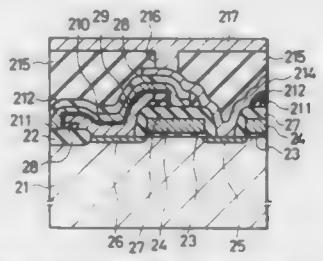
5,012,310

SEMICONDUCTOR MEMORY HAVING STACKED CAPACITOR

Shinichiro Kimura, Hachioji; Yoshifumi Kawamoto, Kanagawa; Toru Kaga, Urawa, and Hideo Sunami, Tokyo, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Continuation of Ser. No. 133,475, Dec. 15, 1987, abandoned. This application Aug. 13, 1990, Ser. No. 566,315
Claims priority, application Japan, Feb. 6, 1987, 62-24529
Int. Cl.[5] H01L *29/68, 27/02, 23/48*
U.S. Cl. 357—23.6 **20 Claims**

1. A semiconductor memory comprising:



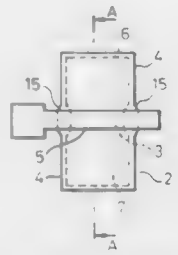
a semiconductor substrate;

a plurality of word lines;

a plurality of data lines intersecting said word lines;

an insulated gate field effect transistor connected at a gate electrode thereof to a respective one of said word lines and at one of a source and a drain region thereof is connected to one of the data lines intersecting said word line; and

a capacitor connected at a first electrode thereof to the other one of said source and drain regions of said insulated gate field effect transistor, said capacitor having a first insulating film interposed between said first electrode and a second electrode thereof to form a capacitance, the second electrode of said capacitor being defined by a conductive layer provided on said semiconductor substrate, said conductive layer having an upper surface which has formed thereon a second insulating film and has a side



wall which has formed thereon a third insulating film, said second and third insulation films being interposed between said conductive layer and said data line, wherein said data line and said one of the source and drain regions are connected together through a contact hole in an interlayer insulating film which interlayer insulating film is interposed between said second and third insulating films and said data line, said contact hole being disposed above said gate electrode, and wherein the second electrode of said capacitor is insulated from and extends over the gate electrode.

5,012,311

SEMICONDUCTOR THIN FILM DEVICE WITH THICK INSULATOR AT GATE EDGE

Takehide Shirato, Hiratsuka, Japan, assignor to Fujitsu Limited, Kawasaki, Japan

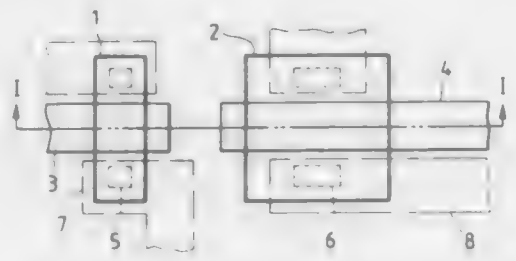
Continuation of Ser. No. 11,814, Feb. 6, 1987, abandoned. This application Oct. 10, 1989, Ser. No. 418,965
Claims priority, application Japan, Feb. 7, 1986, 61-025022
Int. Cl.[5] H01L *29/78, 27/12*
U.S. Cl. 357—23.7 **5 Claims**

1. A semiconductor device comprising:

an insulating substrate;

an island-shaped single-crystalline semiconductor layer provided on the insulating substrate;

an insulating layer provided on an exposed surface of the single-crystalline semiconductor layer; and



a conductor pattern provided on the single-crystalline semiconductor layer, with the insulating layer therebetween, and said conductor pattern extending to said insulating substrate, said insulating layer which is provided at an edge and a side region of the single-crystalline semiconductor layer below the conductor pattern, being selectively formed with a larger thickness than at a top and remaining side portions of the single-crystalline semiconductor layer.

5,012,312

SEMICONDUCTOR INTEGRATED CIRCUIT AND A PROCESS FOR PRODUCING THE SAME

Yoshifumi Kawamoto, Kanagawa, Japan, assignor to Hitachi, Ltd., Tokyo, Japan

Filed Oct. 25, 1988, Ser. No. 261,843
Claims priority, application Japan, Nov. 2, 1987, 62-275819
Int. Cl.[5] H01L *29/06, 29/68, 27/04*
U.S. Cl. 357—23.11 **18 Claims**

1. A semiconductor integrated circuit device comprising:

a first active area in a principal surface region of a semiconductor substrate of a predetermined conductivity type including at least one first MOS semiconductor device, said first MOS semiconductor device having a channel region of a first dimensional width;

a second active area adjacent to said first active area, in said principal surface region of said semiconductor substrate, including at least one second MOS semiconductor device formed therein, said second MOS semiconductor device having a channel region of a second dimensional width narrower than said first dimensional width;

an isolation area formed on said semiconductor substrate between at least said first and second MOS semiconductor devices which are adjacently disposed;

an insulating film formed in said isolation area, wherein said insulating film has formed first and second sidewalls on opposing sides thereof, said first sidewall contacting the channel region of said first MOS semiconductor device and said second sidewall contacting the channel region of said second MOS semiconductor device thereby effecting isolation therebetween; and

first and second channel stoppers, formed in said principal surface region of said semiconductor substrate, including first and second semiconductor regions, respectively, of the same conductivity type as that of said semiconductor substrate and both being disposed so as to be in contact with and at least underlie different portions of a lower surface of said insulating film so that said insulating film lower surface is substantially completely covered thereby, wherein said first channel stopper underlies said insulating film and extends along said first sidewall of said insulating film, in contact therewith, so as to effect an impurity concentration by that part of said channel stopper on the sidewall which is greater than the concentration of impurities effected with respect to said second channel stopper in the channel region on said second sidewall of said insulating film.

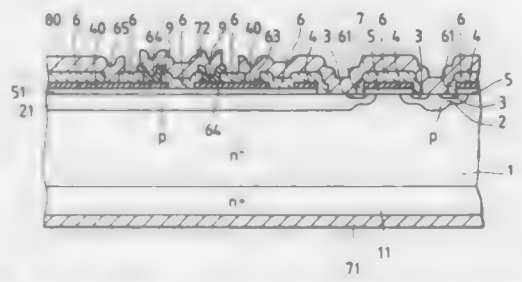
5,012,313

INSULATED GATE SEMICONDUCTOR DEVICE

Tatsuhiko Fujihira, Kanagawa, Japan, assignor to Fuji Electric Co., Ltd., Kanagawa, Japan

Filed Dec. 28, 1988, Ser. No. 291,463
Claims priority, application Japan, Dec. 28, 1987, 62-199984[U]; May 6, 1988, 63-110105
Int. Cl.[5] H01L *29/78*
U.S. Cl. 357—23.13 **19 Claims**

1. An insulated gate semiconductor device having a gate protection circuit comprising:



a substrate of a first conductivity type having upper and lower surfaces;

a first region of a second conductivity type formed in the upper surface of the substrate;

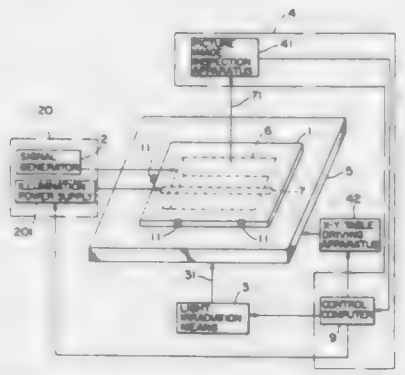
a source region of the first conductivity type formed in the upper surface of the substrate and surround by said first

a gate insulating layer overlying an end portion of said source region, a portion of said first region adjoining said source region and said upper surface of said substrate adjoining said portion;

a gate layer overlying said gate insulating layer, a channel being formed in said portion of said first region;

first layer means overlying the gate insulation layer and being laterally spaced from the gate layer, said first layer means having a first plurality of spaced polysilicon layers with a first predetermined resistance;

second layer means having a second plurality of spaced polysilicon layers with a second predetermined resistance higher than said first predetermined resistance, each one of the second plurality of polysilicon layers overlying a respective one of the first plurality of polysilicon layers to form a corresponding pair of diodes therewith; and



means for connecting the pair of diodes back to back in series for protecting the gate insulating layer from electrostatic destruction caused by a sudden voltage surge supplied to the gate layer.

5,012,314

LIQUID CRYSTAL DISPLAY RESTORING APPARATUS

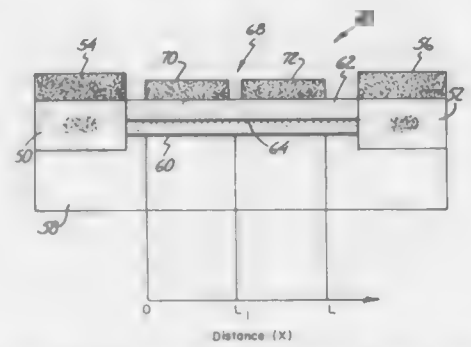
Toshio Tobita; Shigeru Yachi, and Eishi Gofuku, all of Amagasaki, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Japan

Filed Mar. 30, 1990, Ser. No. 501,858
Claims priority, application Japan, Mar. 31, 1989, 1-83275
Int. Cl.[5] H01L *29/78, 21/265;* **G09G** *3/20;* **G02F** *1/13*
U.S. Cl. 357—23.12 **10 Claims**

1. An apparatus for adjusting threshold voltages of thin film transistors in a liquid crystal display including a plurality of liquid crystal display elements, each element having a corresponding thin film transistor, comprising:

display driving means for driving a liquid crystal display element, the element including a thin film transistor having a threshold voltage and controlling the brightness of the element;

a picture element inspection apparatus for comparing the brightness of said liquid crystal display element relative to a reference brightness; and



threshold voltage adjusting means including a light source for adjusting the threshold voltage of said thin film transistor when the brightness of the corresponding display element differs from the reference brightness by irradiating the thin film transistor with a quantity of light from said light source in response to the brightness comparison by said picture element inspection apparatus.

5,012,315

SPLIT-GATE FIELD EFFECT TRANSISTOR

Michael Shur, Golden Valley, Minn., assignor to Regents of University of Minnesota, St. Paul, Minn.

Filed Jan. 9, 1989, Ser. No. 295,083
Int. Cl.[5] H01L *29/78, 29/86*
U.S. Cl. 357—23.14 **3 Claims**

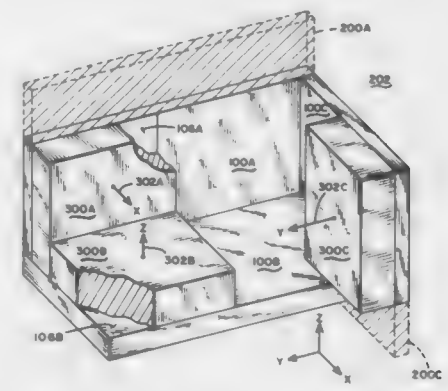
1. A method of decreasing carrier transit time in a transistor including a drain region, a single conducting channel region, a source region, and first and second gate contacts overlying the channel region, comprising the steps of:

applying an electric field to the single conducting channel region by applying voltages to the gate contacts which overlie the channel region in a single plane; and

varying a vector component of the electric field in the channel region in a direction from the source region to the drain region as a function of position in the direction from the source region to the drain region by applying a first voltage to the first gate contact overlying the channel region and separated from the channel region by an insulator which has an insulator thickness and applying a second voltage to the second gate contact overlying the channel region and separated from the channel region by the insulator, wherein the first voltage is different from the second voltage and the first and second gate contacts are separated from each other by a distance generally less than the insulator thickness.

5,012,316

MULTIAXIAL TRANSDUCER INTERCONNECTION APPARATUS



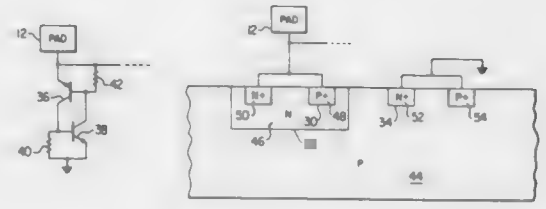
Emanuel H. Silvermint, Shoreview, Minn., assignor to Cardiac Pacemakers, Inc., St. Paul, Minn.

Filed Mar. 28, 1989, Ser. No. 329,533
Int. Cl.[5] H01L *29/84*
U.S. Cl. 357—26 **10 Claims**

1. A mounting apparatus for multiaxial transducer including at least two transducer die elements having bonding pads comprising:

(a) a base having at least two orthogonal mounting surfaces; and

(b) at least two identical substrate modules electrically interconnected to each other, each having a plurality of identical tracks, and each of which is mounted to a respective



one of the mounting surfaces each including a mounting region for mounting respective one of the die elements.

5,012,317

ELECTROSTATIC DISCHARGE PROTECTION CIRCUIT

Robert N. Rountre, Plano, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Continuation of Ser. No. 27,103, Mar. 13, 1987, abandoned, which is a continuation of Ser. No. 851,179, Apr. 14, 1986, abandoned. This application Jun. 27, 1988, Ser. No. 213,499
Int. Cl.[5] H01L *29/740, 29/900, 27/20;* **H02H** *9/00*
U.S. Cl. 357—[illegible] **9 Claims**

1. An electrostatic discharge protection device formed at a face of a semiconductor body, for conducting electrostatic discharge current from a terminal to a reference potential, comprising:

a first region of semiconductor material of a first conductivity type formed at said face of said semiconductor body, and in conductive interface with said terminal;

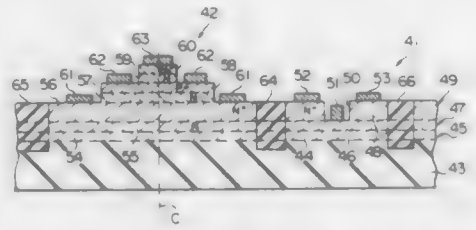
a second region of semiconductor material of a second conductivity type within which said first region is disposed;

a third region of semiconductor material of the first conductivity type disposed adjacent said second region;

a fourth region of semiconductor material of the second conductivity type disposed within said third region, said fourth region formed at said face of said semiconductor body, and in conductive interface with said reference potential; and

a first ohmic connection between said terminal and said second region;

wherein, responsive to a voltage applied to said terminal of a polarity relative to said reference potential so as to forward bias the junction between said first and second regions, and of sufficient magnitude to break down the junction between said second and third regions, current is conducted between said terminal and said reference po-



tential substantially in a direction parallel to said face through said third region.

5,012,318

HYBRID SEMICONDUCTOR DEVICE IMPLEMENTED BY COMBINATION OF HETEROJUNCTION BIPOLAR TRANSISTOR AND FIELD EFFECT TRANSISTOR

Kazuhiko Honjo, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Sep. 1, 1989, Ser. No. 401,161
Claims priority, application Japan, Sep. 5, 1988, 63-222833; Sep. 5, 1988, 63-222834
Int. Cl.[5] H01L *29/205, 27/07*
U.S. Cl. 357—43 24 Claims

1. A hybrid semiconductor device fabricated on a semi-insulating substrate of a first compound semiconductor material, comprising:

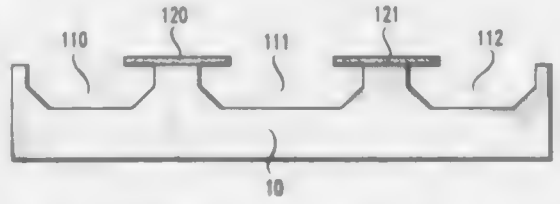
a first multiple-level structure formed of a first group of compound semiconductor materials and providing a Schottky gate type field effect unipolar transistor together with a gate electrode and source and drain electrodes, a first section of said first multiple-level structure having the upper-most level provided by a first portion of a common layer, said first multiple-level structure including a first multiple-level structure including a first layer of n-type gallium arsenide formed on said semi-insulating substrate and the first portion of said common layer of heavily doped n-type gallium arsenide formed on the first layer;

a second multiple-level structure formed of a second group of compound semiconductor materials and providing a bipolar transistor together with emitter, base and collector electrodes, said second multiple-level structure having the lowest level provided by a second portion of said common layer; and

isolating means penetrating said common layer and said first multiple-level structure for providing an electrical isolation between said unipolar transistor and said bipolar transistor, in which said first portion is substantially coextensive with said second portion, and in which a second section of said first multiple-level structure is overlain by said second multiple-level structure.

5,012,319

INTEGRATED ELECTRONIC ASSEMBLY COMPRISING A TRANSMISSION LINE



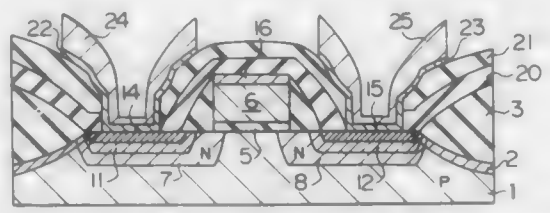
Douglas R. Dykaar, Gillette, and Anthony F. J. Levi, Summit, both of N.J., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed May 14, 1990, Ser. No. 523,093
Int. Cl.[5] H01L *29/06, 23/48, 29/80, 39/12*
U.S. Cl. 357—55 8 Claims

1. Integrated electronic assembly comprising (i) a semiconductor substrate having a first major surface and a second major surface that is substantially parallel to the first major surface; (ii) insulating material; and (iii) conductive means that signal-transmissively connect a first and second region of the assembly, the first region being spaced apart from the second region; wherein the conductive means comprise an elongate conductive body that is in contact with the insulating material, the insulating material is disposed such that the elongate conductive body is spaced apart from the semiconductor substrate, and associated with the conductive means are an effective dielectric constant and a length;

characterized in that

the semiconductor substrate comprises a recess or recesses configured such that at least a portion of the insulating material is spaced apart from the semiconductor substrate, such that the effective dielectric constant associated with



at least a major portion of the length of the conductive means is substantially uniform and substantially lower than an effective dielectric constant associated with the conductive means of a comparison electronic assembly that is identical to said integrated electronic assembly except that the comparison assembly's semiconductor substrate does not comprise any recesses.

5,012,320

SEMICONDUCTOR DEVICE HAVING HIGH-RELIABLE INTERCONNECTIONS WITH TITANIUM SILICIDE FILM

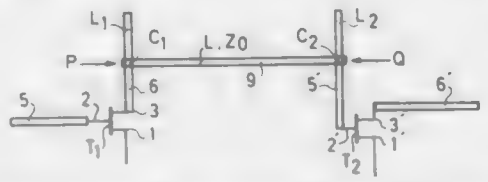
Kouji Yamazaki, Tokyo, Japan, assignor to NEC Corporation, Japan

Filed Aug. 21, 1989, Ser. No. 397,015
Claims priority, application Japan, Aug. 24, 1988, 63-211219
Int. Cl.[5] H01L *23/48*
U.S. Cl. 357—67 11 Claims

1. A semiconductor device fabricated on a silicon substrate, comprising:

(a) a transistor having impurity regions formed in a surface portion of said semiconductor substrate,

(b) a control electrode provided over that area which is between said impurity regions for causing carriers to travel from one of the impurity regions to another impurity region, and



(c) an interconnection coupled at one end thereof to one of said impurity regions of said transistor for providing a conduction path, in which said control electrode is formed by a titanium silicide film containing oxygen atoms in the form of a titanium oxide throughout said titanium silicide film.

5,012,321

INTERCONNECTION DEVICE BETWEEN THE CELLS OF A PRE-IMPLANTED HYPERFREQUENCY INTEGRATED CIRCUIT

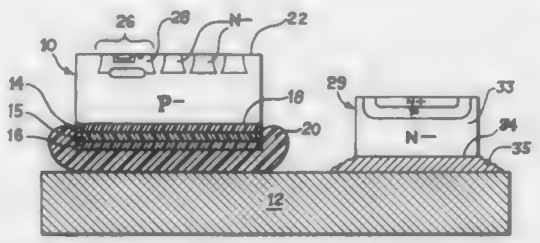
John Magarshack, Rueil Malmaison, France, assignor to Thomson-CSF, Paris, France

Filed Jul. 26, 1984, Ser. No. 634,435
Claims priority, application France, Jul. 29, 1983, 83 12540
Int. Cl.[5] H01L *27/095*
U.S. Cl. 357—71 10 Claims

1. Interconnection device between the cells of a hyperfrequency integrated circuit pre-implanted in a semiconductor material, the cells being formed of active and passive components which comprise metallizations on the upper surface of the chip of semiconductor material, wherein the coupling between the component of a first cell and a component of a second cell is capacitive, said device comprising:

at least one microstrip in ohmic contact with a metallization of said first cell component and at least one microstrip in ohmic contact with a metallization of said second cell component, said microstrips being supported by the upper surface of said semiconductor material;

at least one insulating layer, deposited on the upper surface of the semiconductor material and said microstrips which supports said material;



at least one microstrip line supported by said insulating layer, said microstrip line partially covering the said microstrips supported by said semiconductor material in order to form a capacitive linking.

5,012,322

SEMICONDUCTOR DIE AND MOUNTING ASSEMBLY

Paul A. Guillotte, Worcester; Paul Panaccione, Barre; Thomas J. Martiska, Shrewsbury, and Jay J. Gagnon, Holden, all of Mass., assignors to Allegro Microsystems, Inc., Worcester, Mass.

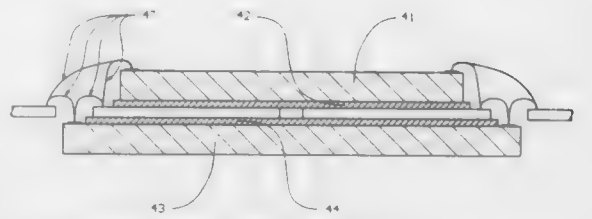
Filed May 18, 1987, Ser. No. 50,662
Int. Cl.[5] H01L *23/28*
U.S. Cl. 357—72 6 Claims

1. A semiconductor die and mounting assembly comprising:

(a) a semiconductor die having an electronic device formed in one major face thereof;

(b) at least one uniform cured-liquid dielectric-resin coating self adhered directly to the other major face of said die;

(c) a solid mounting support; and



(d) a bonding agent disposed directly between said at least one dielectric coating and said support.

5,012,323

DOUBLE-DIE SEMICONDUCTOR PACKAGE HAVING A BACK-BONDED DIE AND A FACE-BONDED DIE INTERCONNECTED ON A SINGLE LEADFRAME

Warren M. Farnworth, Nampa, Id., assignor to Micron Technology, Inc., Boise, Id.

Filed Nov. 20, 1989, Ser. No. 439,243
Int. Cl.[5] H01L *23/16, 39/02, 23/48, 29/44*
U.S. Cl. 357—75 1 Claim

1. A semiconductor package comprising:

a first rectangular, wafer-like semiconductor die, and a second rectangular, wafer-like semiconductor die that is rectangularly smaller than said first die in at least one dimension, each die having two pair of substantially planarly parallel edges, each pair of parallel edges being perpendicular to the other pair, a lower surface consisting of a substrate, and an upper surface with integrated circuitry constructed thereon, said circuitry being electrically accessible via die wire bonding pads which, on each die, are arranged in a pair of columns, each of which is located on the die's upper surface, adjacent one of a single pair of planarly parallel edges;

a leadframe having a plurality of leads, each lead having an extension that is continuous therewith, each extension lying in a plane common to all other extensions and having both an upper and lower surface, the lower surfaces of at least some of said extensions providing a lower die attach region for said first die, and the upper surfaces of at least some of said extensions providing an upper die attach region for said second die, said extensions being routed such that they neither touch nor overlap one another, and so that they terminate in only one of a pair of wire bonding zones, each of said wire bonding zones consisting of a plurality of lead extension ends located on the perimeter of a aperture with said leadframe, said upper die attach region spanning the distance between said pair of wire bonding zones, said lower die attach region extending into, but not beyond, each wire bonding zone, the upper surface of said first die being insulatedly and adhesively attached to said lower die-attach region such that each column of wire bonding pads on said first die is located within a single aperture, the lower surface of said second die being insulatedly and adhesively attached to said upper die-attach region such that each column of wire bonding pads on said second die is located adjacent to a single aperture, each aperture being associated with only one column of wire bonding pads of each die;

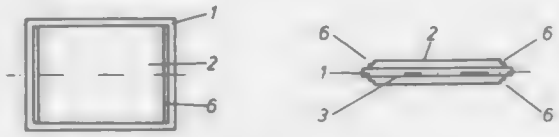
a plurality of bonding wires, each of which interconnects one lead extension end with at least one die wire bonding pad which pertains to a column of bonding pads that is either within the aperture (for said first die) or adjacent to the aperture (for said second die) to which that extension pertains, bonding wires which interconnect die wire bonding pads on said first die passing through that aperture; and

a plastic body which encapsulates said first and second dice, said lead extensions and said bonding wires, but not said leads.

5,012,324

FLAT BODY, PARTICULARLY FOR USE AS A HEAT SINK FOR ELECTRONIC POWER COMPONENTS

Woifram Martin, Birkenfeld, and Brigitte Waibel, Pforzheim, both of Fed. Rep. of Germany, assignors to Doduco GmbH and Co. Dr. Eugen Durrwachter, Pforzheim, Fed. Rep. of Germany



PCT No. PCT/EP88/00564, § 371 Date Feb. 24, 1989, § 102(e) Date Feb. 24, 1989, PCT Pub. No. WO89/00339, PCT Pub. Date Jan. 12, 1989

PCT Filed Jun. 27, 1988, Ser. No. 328,154

Claims priority, application Fed. Rep. of Germany, Jul. 3, 1987, 3721958

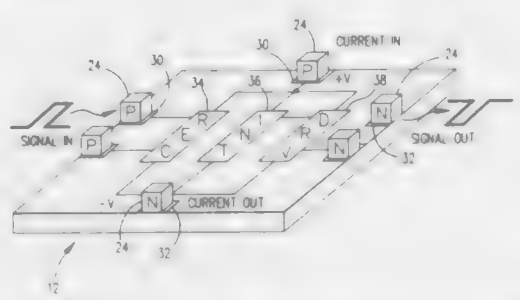
Int. Cl.[5] H01L *23/36*

U.S. Cl. 357—81 **17 Claims**

1. A flat body, particularly for use as a heat sink for electronic power components, consisting of a ceramic slab, which is covered on both sides by metal plates which are firmly joined to the ceramic slab throughout their contact surface,

characterized in that the metal plates have provided on at least two edges of the peripheral margins, a strip reduced in thickness to improve resistance to thermal shock.

5,012,325



THEROMELECTRIC COOLING VIA ELECTRICAL CONNECTIONS

Mohanlal S. Mansuria, Coral Springs; Joseph M. Mosley, Boca Raton; Richard D. Musa, Boca Raton, and Vito J. Tuozzolo, Boca Raton, all of Fla., assignors to International Business Machines Corp., Armonk, N.Y.

Filed Apr. 24, 1990, Ser. No. 513,655

Int. Cl.[5] H01L *23/02*

U.S. Cl. 357—81 **20 Claims**

1. A thermoelectrically cooled integrated circuit package comprising

a thermally conductive dielectric substrate,

an input connecting portion supported by said dielectric substrate,

an output connecting portion supported by said dielectric substrate, and

an integrated circuit chip including an input terminal and an output terminal,

said input terminal being electrically connected to said input connecting portion via a first conductive material, and

said output terminal being electrically connected to said output connecting portion via a second conductive material

said first conductive material and said second conductive material thermoelectrically cooling said integrated circuit chip when a signal passes through said first conductive material and said second conductive material.

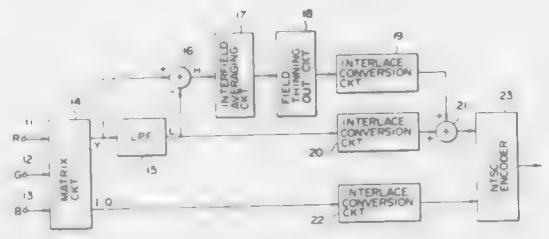
TELEVISION SIGNAL TRANSMITTING AND RECEIVING SYSTEM



Noriya Sakamoto, Yokohama; Kiyoyuki Kawai, Yokosuka, and Seijiro Yasuki, Yokohama, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Aug. 1, 1989, Ser. No. 387,998

Claims priority, application Japan, Aug. 23, 1988, 63-207443

Int. Cl.[5] H04N *7/12*

U.S. Cl. 358—11 **11 Claims**

3. A television signal transmitting device comprising:

a signal separating means for separating a luminance signal of a noninterlaced format into a horizontal high frequency component having frequencies not lower than a predetermined horizontal frequency and a horizontal low frequency component below the predetermined horizontal frequency;

first interlace conversion means, including at least a field thinning out means and a field delaying means, for converting the horizontal high frequency component separated by said signal separating means to an interlaced signal, said field thinning out means thinning out alternate fields of the horizontal high frequency component and said delaying means delaying an output signal of said field thinning out means on alternate horizontal scanning lines by a time equal to one field interval to thereby distribute a signal of one field to two fields;

second interlace conversion means for converting the horizontal low frequency component separated by said signal separating means to an interlaced signal by a line thinning out process; and

transmitting means for combining and transmitting output signals of said first and second interlace conversion means.

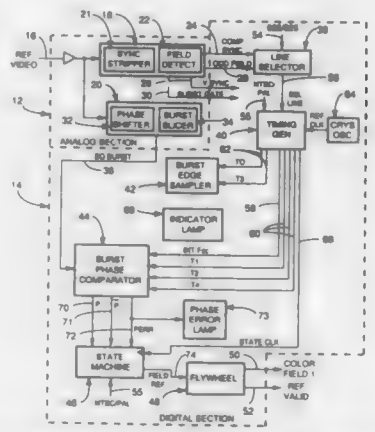
5,012,327

CIRCUIT FOR AND METHOD OF DETECTING A COLOR FIELD SEQUENCE OF A COLOR VIDEO SIGNAL

Thomas S. Bishop, Golden, Colo., assignor to Ampex Corporation, Redwood City, Calif.

Filed Sep. 9, 1988, Ser. No. 242,946

Int. Cl.[5] H04N *9/44*



U.S. Cl. 358—17 **23 Claims**

1. A method for digitally detecting a color field in a color field sequence of a color video signal having a horizontal sync and a color burst which have a given phase relationship with a color subcarrier, comprising:

determining the location in time of at least one cycle within the color burst of a video line relative to the leading edge of the same video line's horizontal sync;

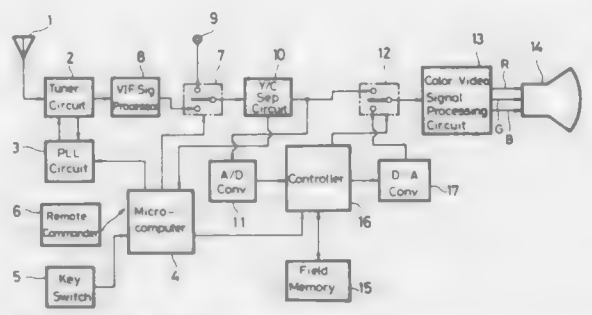
supplying at least one sample pulse during said at least one cycle;

generating in response to said at least one sample pulse at least one selected value within said cycle of the color burst which value is indicative of the phase relationship of the color burst relative to the horizontal sync in the same video line; and

detecting the sequence of occurrence of successive selected values to determine said color field in the color field sequence.

5,012,328

TELEVISION RECEIVER WHICH INCLUDES A MEMORY FOR STORING A FIELD IMAGE WHICH CAN BE PERIODICALLY DISPLAYED AS A STILL PICTURE



Satoshi Ishiguro, Kanagawa, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed May 18, 1989, Ser. No. 353,768

Claims priority, application Japan, May 24, 1988, 63-126608; May 25, 1988, 63-127889

Int. Cl.[5] H04N *9/74, 5/14, 5/262*

U.S. Cl. 358—22 **7 Claims**

1. Television apparatus comprising:

(a) switching means for selecting a plurality of input video signals;

(b) memory means comprising a Random Access Memory for storing one of said plurality of input video signals selected by said switching means at a first speed;

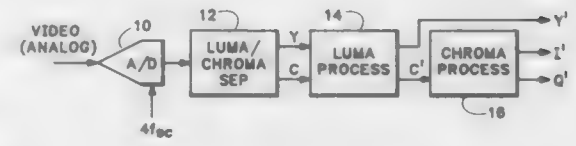
(c) first control means for controlling reading and writing timings of said video signal at said memory means, said first control means generating control signals composed of; a first control singal for writing at said first speed a still image of said video signal in said memory means within a first period of time during a predetermined period;

a second control signal for stopping the writing of said still image of said video signal in said memory means; and a third control signal for repeatedly reading at said first speed said still image from said memory means during a second period of time which is longer than said first period of time;

(d) second control means for controlling said switching means so as to generate a switching motion within said second period of time when said switching means receives a signal for selecting said video signal; and

(e) displaying said output of said memory means at said first speed and wherein said apparatus operates in a single mode without a floppy disc.

5,012,329



METHOD OF ENCODED VIDEO DECODING

Stuart E. Lang, Montville, N.J., and Jon Fairhurst, Grass Valley, Calif., assignors to Dubner Computer Systems, Inc., Paramus, N.J. and The Grass Valley Group, Inc., Nevada City, Calif.

Filed Feb. 21, 1989, Ser. No. 300,453

Int. Cl.[5] H04N *9/64*

U.S. Cl. 358—31 **58 Claims**

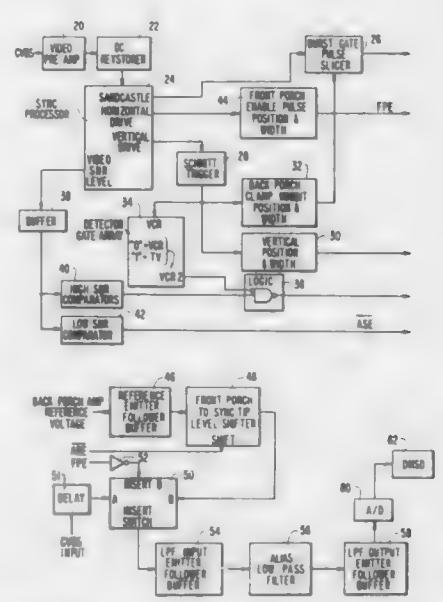
1. A decoder for an encoded video signal comprising:

means for filtering the encoded video signal in at least two dimensions to separate the encoded video signal into a luminance signal and a chrominance signal, the chrominance signal having two components;

means for filtering the luminance signal to produce a corrected luminance signal as a function of edges and peaks in the chrominance signal; and

means for filtering the chrominance signal to produce a corrected chrominance signal having enhanced chrominance edges as a function of edges in the chrominance signal.

5,012,330



ARTIFICIAL FRONT PORCH INSERTION CIRCUIT

Anthony R. Bugni, Knoxville, Tenn., assignor to North American Philips Corporation, New York, N.Y.

Filed Aug. 14, 1989, Ser. No. 393,[illegible]

Int. Cl.[5] H04N *5/16, 9/72*

U.S. Cl. 35[illegible]—34 **6 Claims**

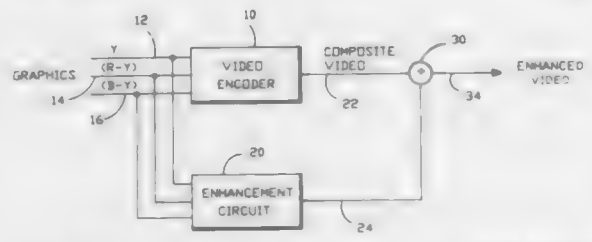
1. A circuit for ensuring that the level of a front porch in each line of a color video signal is at a predetermined proper level, said circuit comprising:

means for detecting the beginning of a front porch in a line of said color video signal and for providing a first control

signal for a predetermined period of time in response thereto;

means for detecting whether said color video signal is missing or is very noisy and for generating a second control signal in response thereto;

means for generating an artificial front porch signal having a signal level at said predetermined proper level and, in response to said second control signal, at a second predetermined level substantially similar to the signal level of a horizontal synchronizing pulse in said color video signal; and



switching means coupled to receive said color video signal and said artificial front porch signal, said switching means applying said color video signal or, alternatively, in response to said first control signal, said artificial front porch signal to a color decoder circuit, whereby the front porch in each line of said color video signal is replaced by said artificial front porch signal.

5,012,331

GRAPHICS ENCODER VIDEO ENHANCEMENT

Daniel L. Schuster, Portland, Oreg., assignor to Magni Systems, Inc., Beaverton, Oreg.

Filed Jun. 23, 1989, Ser. No. 370,915
Int. Cl.[5] H04N *9/64*
U.S. Cl. 358—37 **8 Claims**

7. A video graphics signal enhancement circuit for forming an enhanced signal to be added to a composite signal to form an enhanced video signal for a video standard wherein said video standard has a certain legal chroma bandwidth and luminance bandwidth, said circuit comprising

means for receiving a first luminance signal, a first chrominance difference signal and a second chrominance difference signal, and

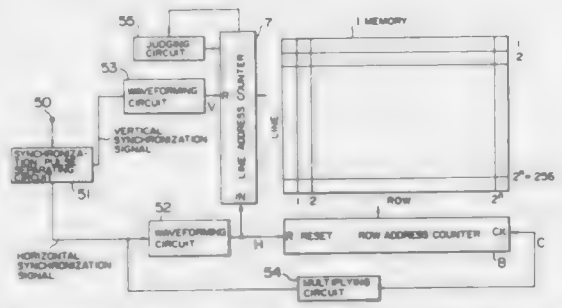
means for forming said enhanced signal which contains color differences that exceed said video standard legal chroma bandwidth and which is within said video standard legal luminance bandwidth.

5,012,332

CORRECTING DATA READING DEVICE IN A DIGITAL CONVERGENCE CORRECTING DEVICE

Makoto Shiomi; Kosuke Ozeki, both of Yokohama; Michitaka Ohsawa; Kuninori Matsumi, both of Fujisawa, and Tadahiro Kawagishi, Yokohama, all of Japan, assignors to Hitachi, Ltd., Tokyo and Hitachi Video Engineering, Inc., Kanagawa, both of, Japan

Filed Jan. 26, 1989, Ser. No. 301,954
Claims priority, application Japan, Jan. 28, 1988, 63-15998
Int. Cl.[5] H04N *9/16*
U.S. Cl. 358—64 **7 Claims**



1. A correcting data reading device in a digital convergence correcting device comprising:

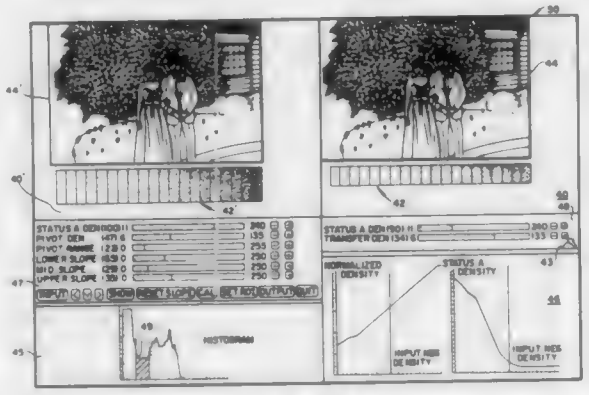
an image screen for displaying an image;

a correcting data storing memory for storing convergence correcting data corresponding to a plurality of points on said image screen as digital correction data to be used for effecting convergence correction, said convergence correcting data further corresponding to a position on horizontal and vertical scanning lines of said image screen;

first address signal forming means for generating a first address signal for reading out convergence correcting data from said correcting data storing memory which corresponds to a horizontal scanning direction of said image screen, and for supplying said generated first address signal to said correcting data storing memory;

second address signal forming means for generating a second address signal for reading out convergence correcting data from said correcting data storing memory which corresponds to a vertical scanning direction of said image screen, and for supplying said generated second address signal to said correcting data storing memory;

last address signal fixing means for determining that the second generated address signal supplied to said correcting data storing memory by said second address signal forming means is a last address signal and for repeatedly supplying said last address signal to said correcting data storing memory after having determined that the second generated address signal supplied to said correcting data storing memory is the last address signal; and



reset means for supplying a reset signal for resetting said second address signal forming means when vertical scanning on said image screen is terminated.

5,012,333

INTERACTIVE DYNAMIC RANGE ADJUSTMENT SYSTEM FOR PRINTING DIGITAL IMAGES

Hsien-Che Lee, Penfield; Martin C. Kaplan, and Robert M. Goodwin, both of Rochester, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Jan. 5, 1989, Ser. No. 293,838
Int. Cl.[5] G03F *3/08;* **H04N** *1/46*
U.S. Cl. 358—80 **7 Claims**

1. An interactive dynamic range adjustment method for digital images comprising the steps of:

(a) converting an R,G,B digital image signal into luminance image signals;

(b) low pass filtering the luminance image signals to provide low frequency component luminance image signals;

(c) subtracting the low frequency component luminance image signals from the luminance image signals to provide high frequency component luminance image signals;

(d) modifying, interactively, the low frequency components of the luminance image signals by mapping through a mapping curve to a density space;

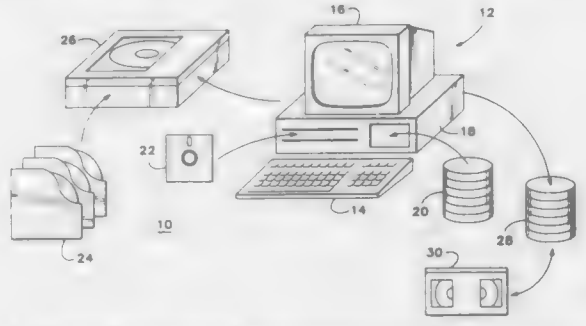
(e) recombining the modified low frequency and high frequency components of the luminance image signals of steps (c) and (d);

(f) mapping the recombined modified low and high frequency components of the luminance image signals of (e) through a paper shape curve;

(g) mapping an R,G,B digital image signals of step (a) through a paper shape curve;

(h) transforming the mapped R,G,B signals of step (g) into chrominance image signals;

(i) combining the luminance image signals of step (f) and the chrominance image signals of step (h); and



(j) transforming the combined signals from (i) to R,G,B image signals to provide an interactively adjusted digital image.

5,012,334

VIDEO IMAGE BANK FOR STORING AND RETRIEVING VIDEO IMAGE SEQUENCES

William Etra, Fort Lee, N.J., assignor to Dubner Computer Systems, Inc., Paramus, N.J.

Filed Jan. 29, 1990, Ser. No. 471,335
Int. Cl.[5] H04N *7/18*
U.S. Cl. 358—102 **12 Claims**

1. A video image bank for storing a plurality of video motion picture image sequences and automatically accessing one of the stored image sequences, said video image bank comprising:

video storage means containing a library of video motion picture image sequences;

library index means containing an index of the video storage means;

means for accessing the library index to automatically identify an initial set of image sequences;

display means for displaying a still frame for each video motion picture image sequence of the initial set; and

means for selecting one of the image sequences from the initial set.

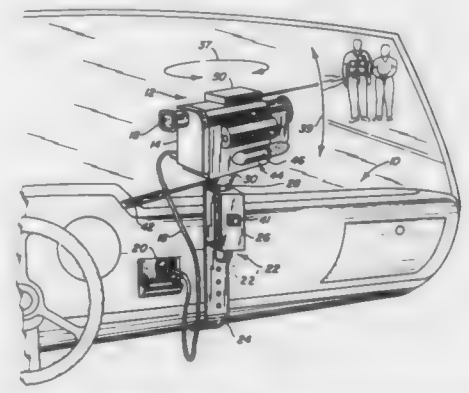
5,012,335

OBSERVATION AND RECORDING SYSTEM FOR A POLICE VEHICLE

Alija Cohodar, P.O. Box 380074, Miami, Fla. 33138

Filed Jun. 27, 1988, Ser. No. 211,996
Int. Cl.[5] H04N *7/18, 5/30*
U.S. Cl. 358—108 **11 Claims**

1. A recording system to be used in combination with a police automobile or like vehicle, said system comprising:



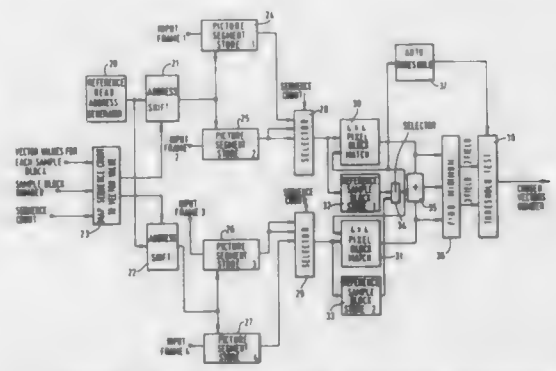
a video camera disposed on the vehicle in an operative position sufficient to view surrounding exterior areas about the vehicle,

mounting means secured to an interior of the vehicle and connected in supporting engagement to said video camera for mounting thereof in said operative position,

said mounting means including a universal coupling movably connected to said video camera and structured for both substantially horizontal and vertical travel of the video camera and selective disposition relative to a preferred field of view exteriorly of the vehicle,

said universal coupling further structured for removable attachment and support of said video camera on the vehicle,

a power supply connected at least in part to said camera for the electrically powering thereof, and



a positioning means mounted on selective personnel to be observed and on said video camera in connection with said mounting means and structured for automatically positioning said video camera for continuous viewing of the selected personnel while moving or stationary on the exterior of the vehicle.

5,012,336

MOTION DEPENDENT VIDEO SIGNAL PROCESSING

Clive H. Gillard, Cheneham, United Kingdom, assignor to Sony Corporation, Tokyo, Japan

Filed Apr. 20, 1990, Ser. No. 513,087
Claims priority, application United Kingdom, Apr. 27, 1989, 8909646
Int. Cl.[5] H04N *7/01*
U.S. Cl. 358—140 **8 Claims**

1. A motion compensated video standards converter for converting a video signal conforming with a first video standard to a converted video signal conforming with a second video standard, said video signal being provided as a sequence of intervals selected from fields and frames, each of said interval being arranged in a plurality of blocks each representing a portion of an image represented by said video signal and each including a plurality of pixels, comprising:

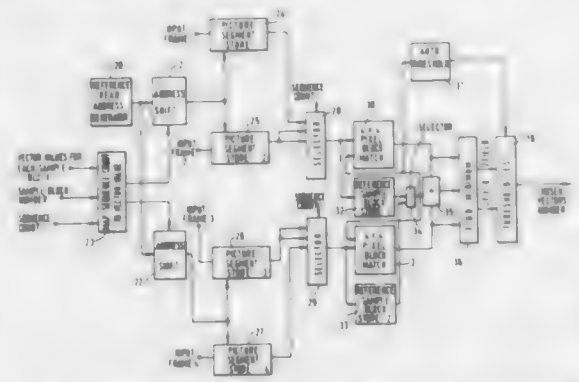
means for deriving a corresponding plurality of motion vectors for each of a plurality of blocks in respective first and second intervals of said video signal representing motion of the image portion represented by said each of said plurality of blocks by comparing said each of said plurality of blocks in said first and second intervals with a plurality of blocks in respective intervals of said video signal adjacent thereto;

means for deriving a respective motion vector for each pixel in said each of said plurality of blocks by selecting said respective motion vector from said corresponding plurality of motion vectors based upon a luminance match of said each pixel with pixels in previous and following intervals of said video signal relative to the interval including said each pixel, pointed to by respective ones of said corresponding plurality of motion vectors; and

means for deriving a respective motion vector for each of a plurality of pixels in an interval of said converted video signal which is temporally nearest to said respective first and second intervals by comparing motion vectors derived for said respective first and second intervals.

5,012,337

MOTION DEPENDENT VIDEO SIGNAL PROCESSING



Clive H. Gillard, Basing Stoke, United Kingdom, assignor to Sony Corporation, Tokyo, Japan

Filed Apr. 20, 1990, Ser. No. 513,086

Claims priority, application United Kingdom, Apr. 27, 1989, 8909644

Int. Cl.[5] H04N *7/01*

U.S. Cl. 358—140 **12 Claims**

1. In a motion compensated video standards converter for converting a video signal conforming with a first video standard to a converted video signal conforming with a second video standard, said video signal being provided as a sequence of intervals selected from fields and frames, each of said intervals being arranged in a plurality of blocks each representing a portion of an image represented by said video signal and comprising a plurality of pixels, comprising:

means for deriving a plurality of motion vectors for each of a plurality of blocks in a first interval of said video signal representing motion of the image portion represented by said each of said plurality of blocks between said first interval and an adjacent interval of said video signal by comparing said each of said plurality of blocks with a plurality of blocks in said adjacent interval;

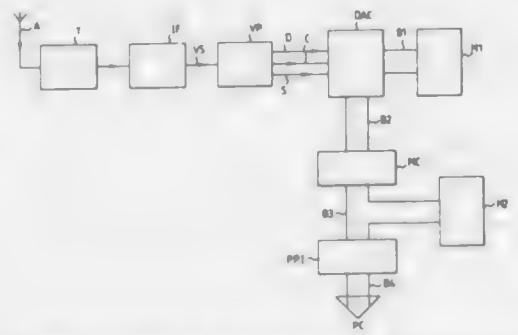
means for deriving a respective motion vector from said plurality of motion vectors for each pixel in said each of said plurality of blocks in said first interval by luminance matching said each pixel with the pixels having respective positions in previous and following intervals of said video signal pointed to by said plurality of motion vectors from the position of said each pixel in said first interval;

means for detecting the occurrence of a luminance mismatch between a pixel in said first interval and all of the pixels in the respective previous and following intervals pointed to by respective ones of said plurality of motion vectors from the position of said each pixel in said first interval; and

means responsive to the detection of a luminance mismatch for deriving said respective motion vector by luminance matching said pixel in said first interval for which a luminance mis-match has occurred with the pixels in only one of said previous and following intervals having respective positions therein pointed to by said plurality of motion vectors from the position of said pixel in said first interval.

5,012,338

TELETEXT DECODERS



Andrew K. Davies, Purley, England, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Jun. 7, 1990, Ser. No. 534,775

Claims priority, application United Kingdom, Jun. 16, 1989, 8913903

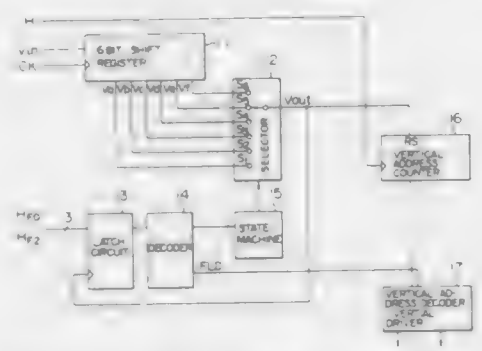
Int. Cl.[5] H04N *7/87, 7/04*

U.S. Cl. 358—147 **10 Claims**

1. A teletext decoder for use in a receiver which is suitable for receiving teletext transmissions of a type in which coded data pulses in the form of teletext data packets are transmitted in a television signal in television lines where no picture signals representing normal picture information are present, said teletext decoder comprising first memory means for storing received data packets in a given numerical sequence order and characterised by means for indicating whether each data packet has been received in the correct given numerical sequence order, further means being provided for overwriting a data packet which is indicated as having been received out of its given numerical sequence order with a data packet having the same packet address which has been received in its correct given numerical sequence order.

5,012,339

FIELD DISCRIMINATION CIRCUIT



Takatsugu Kurata, Ibaraki, and Takuya Nishide, Osaka, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Oct. 23, 1989, Ser. No. 425,107

Claims priority, application Japan, Oct. 28, 1988, 63-273549

Int. Cl.[5] H04N *5/04*

U.S. Cl. 358—148 **3 Claims**

1. A field discrimination circuit comprising:

a shift register of at least six bits for shifting a vertical synchronizing signal Vin by at least six pulses within one horizontal scanning period;

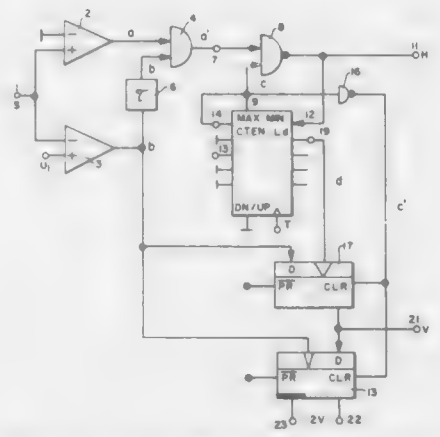
a selector for selecting one vertical synchronizing signal from at least six vertical synchronizing signals shifted by said shift register;

a phase detector for detecting the phase of the vertical synchronizing signal selected by said selector; and

a decoder and a state machine for performing field discrimination and further altering the selection of the vertical synchronizing signal by said selector in accordance with the phase of the vertical synchronizing signal selected by said selector.

5,012,340

METHOD AND CIRCUIT FOR DERIVING H AND V SYNCHRONIZING PULSES FROM A TRI-LEVEL HDTV SYNCHRONIZING SIGNAL



Reinhard Kirschenstein, Rossdorf, Fed. Rep. of Germany, assignor to BTS Broadcast Television Systems GmbH, Darmstadt, Fed. Rep. of Germany

Filed Oct. 6, 1989, Ser. No. 418,136

Claims priority, application Fed. Rep. of Germany, Oct. 13, 1988, 3834865

Int. Cl.[5] H04N *5/06*

U.S. Cl. 358—150 **5 Claims**

1. A method of deriving H and V frequency synchronizing pulses from a tri-level HDTV synchronizing pulse signal, comprising the steps of:

comparing a tri-level HDTV synchronizing pulse signal with a first reference voltage and thereby obtaining a first pulse signal (a, a') containing the positive pulses of said tri-level synchronizing signal;

producing a second pulse signal (c) from said tri-level synchronizing signal by suppressing all negative pulses and all but the line-beginning positive pulses of said tri-level signal and causing the negative state of said second pulse signal (c) to have a duration of at least half of a television line interval;

producing H frequency synchronizing pulses by logically correlating said first pulse signal (a, a') with said second pulse signal (c) and causing each of said H frequency pulses to time the beginning of a negative state of said second pulse signal (c);

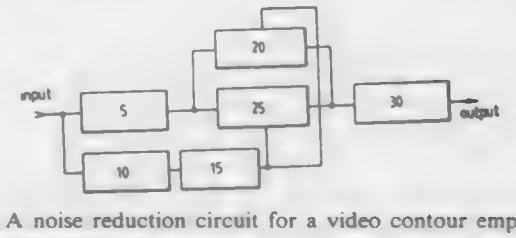
comparing said tri-level synchronizing signal with a second reference voltage (U_1) lying between said first reference voltage and the negative peak value of said synchronizing signal to produce a third pulse signal (b) containing only the negative pulses of said tri-level synchronizing signal;

producing a fourth pulse signal (d) for deriving picture field synchronizing pulses of V frequency by logical correlation of said second and third pulse signals (c, b), and logically correlating them and said fourth pulse signal (d) so that upon coincidence of positive pulse values of said third (b) and fourth (d) pulse signals the leading edges of said picture field synchronizing pulses are produced and the trailing edges of said picture field synchronizing signals are produced upon coincidence of negative pulse values of said second (c) and third (b) pulse signals, and

producing a picture frame synchronizing signals (2V) by logical correlation of said picture field synchronizing signal (V) with said third pulse signal (b) and said second pulse signal (c) so that the leading edges of said frame synchronizing signal (2V) are produced by coincidence of a positive pulse of said field synchronizing signal (V) and a positive-going edge of said third pulse signal (b) and the trailing edges of pulses of said frame synchronizing signal (2V) are produced by inverting one of said second and third pulse signals and thereby detecting coincidence of a negative pulse of said third pulse signal (b) and a positive-going edge of said second pulse signal (c).

5,012,341

NOISE REDUCTION CIRCUIT FOR VIDEO CONTROL EMPHASIS SIGNAL



Hae-Yong Choi, Suwon, Rep. of Korea, assignor to SamSung Electronics Co., Ltd., Suwon, Rep. of Korea

Filed Jun. 9, 1989, Ser. No. 363,972

Claims priority, application Rep. of Korea, Jun. 11, 1988, 1988-7064

Int. Cl.[5] H04N *5/213*

U.S. Cl. 358—167 **30 Claims**

1. A noise reduction circuit for a video contour emphasis signal, comprising:

means for amplifying a video input signal;

means for detecting the mean voltage value of a contour signal within said video input signal;

first means for controlling noise reduction level by changing the mean voltage value detected by said detecting means;

positive and negative noise reduction means for eliminating positive and negative noise signals, respectively, from the contour signal, after the contour signal, positive noise signal and negative noise signal have been amplified by said amplifying means to a level controlled by said first controlling means; and

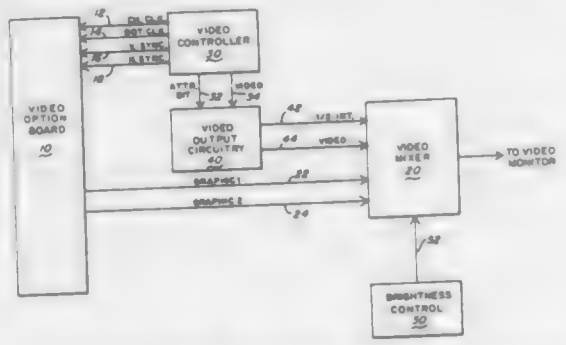
second means for controlling the output level of the contour signal by eliminating the positive and negative noise signals from signals supplied by said positive and negative noise reduction means, respectively.

5,012,342

VIDEO PRIORITIZER AND MIXER

Richard Olsen, Littleton, and William Gross, Northborough, both of Mass., assignors to Prime Computer, Inc., Natick, Mass.

Continuation of Ser. No. 131,927, Dec. 11, 1987, abandoned, which is a continuation of Ser. No. 835,998, Mar. 4, 1986, abandoned. This application Jun. 30, 1988, Ser. No. 374,650



Int. Cl.[5] H04N *5/272*

U.S. Cl. 358—181 **5 Claims**

1. A control circuit for a video monitor having a plurality of pixels comprising:

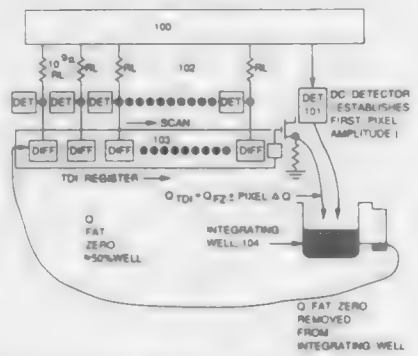
means for applying digital signals from a video source and a graphic source to said circuit, the digital signals being applied to the circuit from the graphic source at a given instant being a coded graphic intensity level indication for a given pixel of the monitor and the digital signals from the video source being at least indicative of the presence of a video signal for such pixel;

decoder means responsive to a signal from said video source being present for inhibiting the display of graphics at said pixel, permitting video to be displayed, and to a signal from the video source not being present for providing a decoded intensity indication for a graphics display, said decoder means having first and second decoders, said first

decoder processing digital signals from the video source and said second decoder processing digital signals from the graphics source; and

means responsive to a decoded intensity level indication for generating an analog signal to control the intensity level of the given pixel.

5,012,343



CCD DELTA-MODULATION FOCAL PLANE

William E. Jensen, San Pedro, Calif., assignor to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.

Filed Dec. 29, 1989, Ser. No. 461,516

Int. Cl.[5] H04N *3/14, 5/335*

U.S. Cl. 358—213.11 **3 Claims**

1. A focal plane array for use with a scanned imaging system which has a source of video signals and a display system, said focal plane array comprising:

a means for establishing a first pixel amplitude of said video signals, said establishing means receiving said video signals from said source, and outputting a first charge which is a measure of said first pixel amplitude, wherein said establishing means comprises a DC detector which establishes said first pixel amplitude by performing DC detection and measurement on said video signals received from said source;

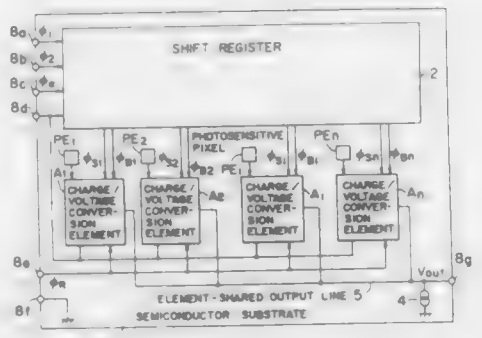
a means for detecting scene pixel amplitudes of the video signals from said source, said detecting means receiving said video signals from said source and outputting a plurality of second charges representing the scene pixel amplitudes of the video signals, wherein said detecting means comprises an array of scanning detectors which receives said video signals from said source, each of said scanning detectors outputting one of the plurality of second charges which represents a scene pixel amplitude of said video signals;

a means for producing a third charge which represents a fat zero by integrating said first charge from said establishing means said fat zero being a quantity of charge which, when subtracted from the plurality of second charges, leaves a plurality of fourth charges which represent analog differences between scene pixel amplitudes; and

a means for subtracting the fat zero from the plurality of second charges, said subtracting means subtracting the third charge, received from the producing means, from the plurality of second charges, received from the detecting means, to produce said plurality of fourth charges, said subtracting means outputting said plurality of fourth charges to said display system, said fourth charges representing said video signals with expanded dynamic range since they depict encoded analog differences between scene pixel amplitudes.

5,012,344

SOLID-STATE IMAGE PICKUP DEVICE HAVING SHARED OUTPUT LINE FOR PHOTOELECTRIC CONVERSION VOLTAGE



Hiroshige Goto, Yokohama, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jul. 26, 1989, Ser. No. 385,159

Claims priority, application Japan, Jul. 26, 1988, 63-186366; Nov. 4, 1988, 63-279105

Int. Cl.[5] H04N *3/14*

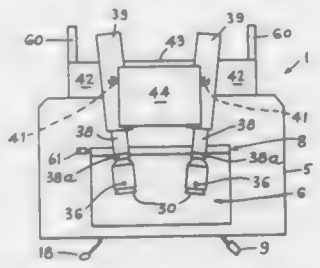
U.S. Cl. 358—213.11 **8 Claims**

1. A solid-state image pickup device in which a plurality of photosensitive pixels produce signal charges corresponding to a quantity of an incident light, a shift register responsive to an external pulse input to generate a predetermined control pulse, a plurality of charge/voltage conversion elements provided in correspondence with said plurality of photosensitive pixels, respectively, and an element-shared output line for the external output of said plurality of charge/voltage conversion elements, are integrated on a semiconductor substrate,

wherein said charge/voltage conversion elements respond to the predetermined control pulse generated from said shift register to detect quantities of integration of signal charges generated from corresponding photosensitive pixels and reference levels of the quantity of integration to convert these values detected to voltages, to therefore sequentially output them onto said element-shared output line.

5,012,345

FILM REGISTRATION APPARATUS AND METHOD



Trevor P. Elworthy, Buckinghamshire, England, assignor to Protocol Engineering PLC, Hertfordshire, England

Continuation of Ser. No. 300,524, Jan. 23, 1989, abandoned. This application Jul. 31, 1990, Ser. No. 563,739

Claims priority, application United Kingdom, Jan. 26, 1988, 8801691

Int. Cl.[5] H04N *3/36*

U.S. Cl. 358—214 **30 Claims**

1. Apparatus for registering exposed films having cooperating image areas, comprising in combination:

(a) platform means for supporting said films to be registered,

(b) punch means cooperating with said platform means and adapted to punch registration holes in a first one of said films disposed on said platform means at locations outside an image area of said first film, and

(c) electronic means for producing an image of at least one selected part of said first film, said electronic means including:

(1) at least one imaging means for producing video signals representing said image of said at least one selected part of said first film,

(ii) means mounting said imaging means for movement with respect to said platform means for positioning said imaging means opposite said at least one selected part of said first film for viewing said part,

(iii) at least one video display unit for displaying said image, and

(iv) means connecting said imaging means to said visual display unit for transmitting said video signals to said visual display unit for display of said image.

5,012,346

ILLUMINATION SYSTEM FOR A FILM SCANNER

Donald DeJager; Andrew F. Kurtz; David Kessler, all of Rochester, and Leslie G. Moore, Jr., Webster, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Oct. 16, 1989, Ser. No. 421,894

Int. Cl.[5] H04N *3/36, 5/253, 9/11;* **G03B** *27/58*

U.S. Cl. 358—214 **13 Claims**

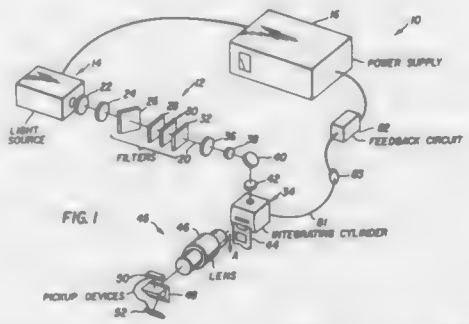


FIG. 1

1. An illumination system for a film scanner, said system being adapted to provide a line of illumination on a film which is supported for movement in a film gate of the scanner, said system comprising:

a light source which is adapted to provide a light beam along an optical path in said system;

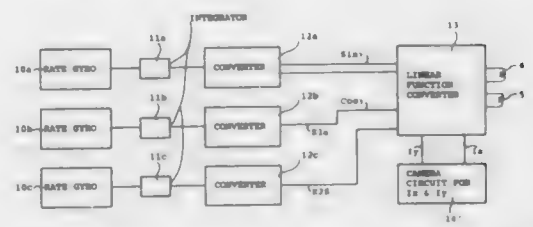
filter means for receiving said light beam from said source and for controlling the spectral content of light issuing therefrom for different types of film, said filter means including shaping filter means selectively insertable in said light path for substantially conforming at least one spectral region to the peak spectral density of a corresponding film dye in a particular type of film; and

an integrating cylinder for receiving said light beam from said filter means and for producing a line of diffuse illumination on said film.

5,012,347

IMAGE STABILIZING APPARATUS FOR A PORTABLE VIDEO CAMERA

Antoine Fournier, 218 rue Félix-Faure, F-76620 Le Havre, France



PCT No. PCT/EP88/00045, § 371 Date Aug. 28, 1989, § 102(e) Date Aug. 28, 1989, PCT Pub. No. WO88/05623, PCT Pub. Date Jul. 28, 1988

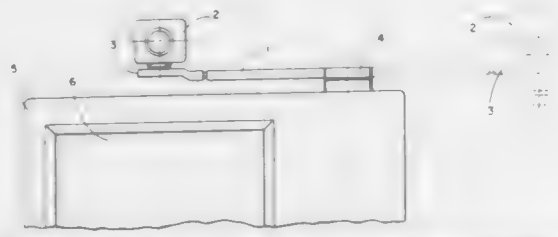
TERMINAL DEVICE FOR PICTURE COMMUNICATION

Günther Witzel, Rödermark; Bruno Widmann, Stadecken-Elsheim, and Franz Müller, Eppertshausen, all of Fed. Rep. of Germany, assignors to Telenorma GmbH, Frankfurt, Fed. Rep. of Germany

Filed Feb. 13, 1990, Ser. No. 479,538



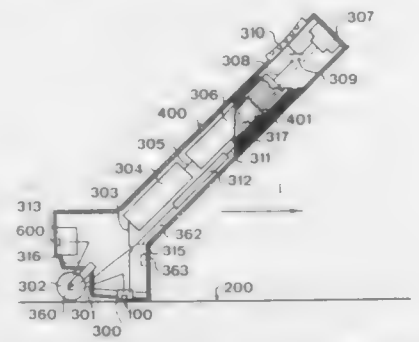
Claims priority, application Fed. Rep. of Germany, Feb. 27, 1989, 8902287[U]

Int. Cl.[5] H04N *5/30*

U.S. Cl. 358—229 **8 Claims**

1. Terminal device for picture communication, having a vertical picture screen enclosed in a housing having a horizontal top and bottom and vertical sidewalls and a video camera for image transmission of the participant and for photographing of objects and documents comprising:

an elongated pivot arm;
swivel means mounted on the top of the housing above the picture screen and attached to one end of said pivot arm for horizontally adjustably swinging said pivot arm in a 180 degree arc about a vertical axis;
a flat camera plate;



means rotatably mounting said camera plate to the other end of said pivot arm for adjustably swinging said camera plate in a vertical arc about a horizontal axes; and
means rotatably mounting the camera on said camera plate for adjustably rotating the camera in an arc parallel to the plane of the camera plate about a third axis.

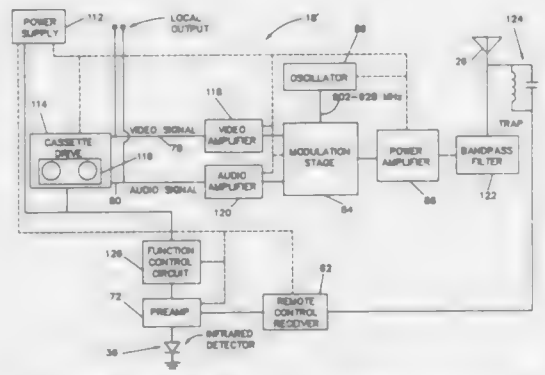
METHOD AND PORTABLE DEVICE FOR DETECTION, STORAGE AND FOR EVENTUAL PROCESSING AND REPRODUCTION OF GRAPHIC SYMBOLS APPEARING ON ANY TYPE OF CARRIER

Stefan G. de Fay, 60 Rue Fondary, Paris 15 eme, France

PCT No. PCT/FR87/00251, § 371 Date Aug. 8, 1988, § 102(e) Date Aug. 8, 1988, PCT Pub. No. WO88/02586, PCT Pub. Date Apr. 7, 1988
PCT Filed Jun. 26, 1987, Ser. No. 210,494
Claims priority, application France, Oct. 6, 1986, 86 13896
Int. Cl.[5] H04N *1/04, 1/23;* **G06K** *9/22*
U.S. Cl. 358—296 **29 Claims**



1. A process of manually displaying a movable and independently portable assembly without material guidance for the purpose of reading and storing visual data appearing on a first unspecified carrier and reproducing said visual data on a second unspecified carrier, the process being of the type wherein said assembly comprises a reading head and a printing head and according to which, furthermore:
the assembly is placed to confront the first carrier,
the assembly is moved along a selected linear path on said first carrier,
graphic symbols in said path are read by the reading head,
the graphic symbols read by the reading head are transcoded into electrical data signals,
the data signals are introduced into a memory, characterized in that the assembly is portable and independent and contains a memory and its own energy source, and:
the assembly is moved along said path in one direction only at an unspecified speed,
the graphic symbols read by said reading head extend over a width the minimum value of which is of the order of the smallest dimension of a standard line of words or ideograms,
the transcoded data signals are fed from the reading head into the memory as a function of the extent of the displacement of the assembly,
subsequently, the assembly is placed to confront the said second carrier,
the assembly is then moved along a linear path on said second carrier in only one direction at an unspecified speed,
the stored data signals are then extracted at a speed correlated with the extent of displacement of the assembly,
the extracted data signals are transcoded into electrical signals and fed to the printing head,
printing on said second carrier with said printing head symbols by depositing ink on the said second carrier with said printing head in response to the received electrical signals at a speed correlated with the extent of displacement of the assembly relative to said second carrier,
the operation in progress, whether reading or printing, is interrupted when the assembly is stopped,
the operation in progress, whether reading or printing is interrupted when the assembly is displaced in the direction opposite to that originally selected.

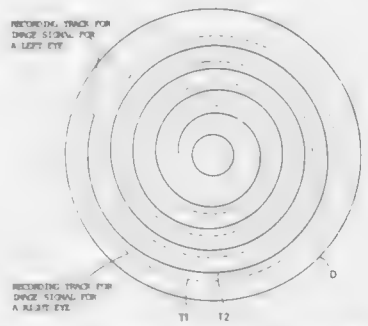
TELEVISION LOCAL WIRELESS TRANSMISSION AND CONTROL

Donald A. Streck, [illegible]32 Country Dr., Ojai, Calif. 93023, and Jerry R. Iggulden, 21600 Cleardale St., Newhall, Calif. 91321, assignors to Jerry R. Iggulden, Santa Clarita and Donald A. Streck, Ojai, both of, Calif., a part interest

Division of Ser. No. 96,929, Sep. 15, 1987, Pat. No. 4,916,532.
This application Dec. 27, 1989, Ser. No. 457,574
Int. Cl.[5] H04N *5/76*
U.S. Cl. 358—335 **10 Claims**



1. A wirelessly broadcasting video cassette recorder comprising:
a) video cassette drive means for playing a video cassette to produce a pure audio signal and a pure video signal therefrom;
b) video amplifier means for receiving and amplifying said pure video signal to produce an amplified video signal therefrom;
c) audio amplifier means for receiving and amplifying said pure audio signal to produce an amplified audio signal therefrom;
d) oscillator means for producing a carrier frequency in the 902–928 MHz band;
e) modulation means connected to said video amplifier means, said audio amplifier means and said oscillator means for modulating said carrier frequency with said amplified video and audio signals to produce a broadcast signal;
f) power amplifier means connected to said modulation means for amplifying said broadcast signal to a power level sufficient for local broadcasting;
g) transmitting antenna means connected to said power amplifier means for transmitting said amplified broadcast signal; and,
h) power supply means operably connected for supplying power to said video cassette drive means, said video amplifier means, said audio amplifier means, said oscillator means, said modulation means and said power amplifier means.

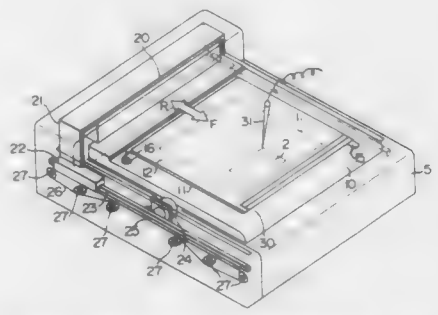
DIGITAL SIGNAL RECORDING APPARATUS TIME-DIVISION MULTIPLEXING VIDEO AND AUDIO SIGNALS

Katsuji Yoshimura, Hamamatsu; Kenichi Nagasawa, Kawasaki; Motokazu Kashida, Musashino, and Akihiro Shikakura, Yokohama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 5, 1988, Ser. No. 228,594
Claims priority, application Japan, Aug. 10, 1987, 62-199533; Aug. 10, 1987, 62-199534; Aug. 21, 1987, 62-208613; Dec. 18, 1987, 62-320587
Int. Cl.[5] H04N *5/82*
U.S. Cl. 358—343 **4 Claims**

1. A digital signal recording apparatus, comprising:
(a) first means for forming digital video data;
(b) second means for forming digital audio data;
(c) third means for forming (a) video synchronizing blocks each of which comprises a predetermined number of digital video data and synchronizing data, and (b) audio synchronizing blocks each of which comprises a predetermined number of digital audio data and synchronizing data; and
(d) recording means for recording said video synchronizing blocks and said audio synchronizing blocks in tracks formed on a recording medium, said tracks being aligned in a direction of travel of said recording medium, said recording means including time-division multiplexing means for time-division multiplexing a predetermined



number of said video synchronizing blocks and a predetermined number of said audio synchronizing blocks to produce a data sequence for each of said tracks, said time-division multiplexing means producing different data sequences for neighboring tracks.

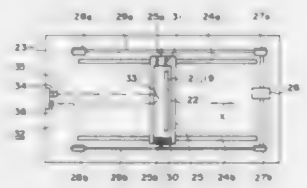
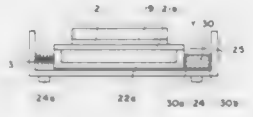
TRAVELLING CARRIAGE DRIVING APPARATUS



Keishin Tsuchiya, Yokohama, Japan, assignor to Ricoh Company, Ltd., Tokyo, Japan



Filed Apr. 20, 1989, Ser. No. 340,789

Claims priority, application Japan, Apr. 27, 1988, 63-56893[U]; Jun. 8, 1988, 63-76263[U]

Int. Cl.[5] H04N *1/04*

U.S. Cl. 358—474 26 Claims

1. A travelling carriage driving apparatus comprising.

a unit controlled so as to be always located in a predetermined position;

a travelling carriage accommodating said unit;

guide means for allowing said travelling carriage to be freely reciprocated;

deviation detecting means for detecting a deviation of said unit from said predetermined position during the movement of said travelling carriage, said deviation of said unit occurring when said travelling carriage is being moved;

unit position adjusting means, coupled to said unit and said travelling carriage, for moving, in a predetermined direction, said unit accommodated in said travelling carriage; and

controlling means for controlling said unit position adjusting means in accordance with said detected deviation of said unit which is moving along with said travelling carriage so that said unit is located in said predetermined position.

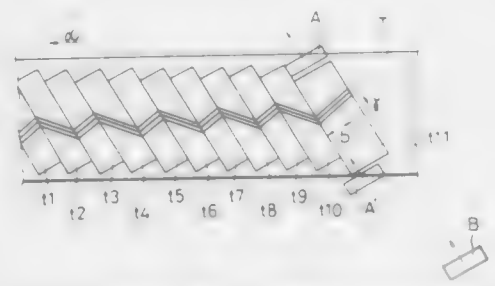
ROTARY HEAD TYPE MAGNETIC RECORDING/REPRODUCING APPARATUS WITH READ-AFTER-WRITE FEATURE



Yuji Taga, and Masashi Katoh, both of Kakuda, Japan, assignors to Alps Electric Co., Ltd., Tokyo, Japan

Filed Aug. 31, 1989, Ser. No. 401,322

Claims priority, application Japan, Nov. 25, 1988, 63-153250[U]

Int. Cl.[5] G11B *27/36, 15/14, 5/27*

U.S. Cl. 360—31 5 Claims

1. A rotary head device for recording on a tape comprising:

a rotary drum which rotates in at least one direction;

a first recording/reproducing head mounted on a surface of the rotary drum;

a second recording/reproducing head mounted on the surface of the rotary drum at a position opposing the first recording/reproducing head;

a first playback head for playing back data recorded on the tape by the first recording/reproducing head and mounted on the surface of the drum at a position between the first recording/reproducing head and the second recording/reproducing head; and

a second playback head for playing back data recorded on the tape by the second recording/reproducing head and mounted on the surface of the drum at a position opposing the first playback head;

wherein when the rotary drum rotates in a direction for recording on the tape, on each rotation of the drum, the first playback head scans the tape prior to the second recording/reproducing head scanning the tape.

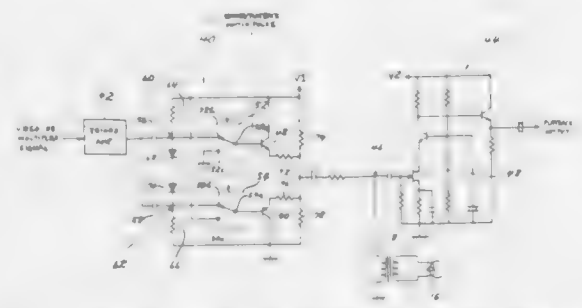
SWITCHING CIRCUIT



Yositeru Kosaka, Zushi, Japan, assignor to Victor Company of Japan, Limited, Kanagawa, Japan

Filed Feb. 22, 1990, Ser. No. 483,470

Claims priority, application Japan, Feb. 28, 1989, 1-47882

Int. Cl.[5] G11B *15/12, 27/02;* H04N *9/79*

U.S. Cl. 360—61 5 Claims

1. A switching circuit for interrupting a signal path to a recording head comprising:

complementary emitter-follower means comprising first and second transistors;

a power source terminal to which a DC bias voltage for linearly driving said first and second transistors is applied;

signal inputting means connected to said power source terminal and comprising first and second input connecting points to which said DC bias voltages is applied; and

switching means comprising first and second switches each having a single movable contact which is operated by a switching pulse signal and two stationary contacts, said movable contact of said first switch and said movable contact of said second switch being respectively connected to a base of said first transistor and a base of said second transistor, one of said stationary contacts of said first switch and one of said stationary contacts of said second switch being respectively connected to said first and second input connecting points of said signal inputting means, the other stationary contact of said first switch and the other stationary contact of said second switch being connected such that said first and second transistors are inversely biased upon interruption of the signal path.

CT COMPATIBLE INTRACAVITY RADIATION APPLICATOR WITH AFTERLOADING SHIELDING

Sonja L. Schoeppel, Whitmore Lake, Mich.; Kenneth J. Weeks, Chapel Hill, N.C., and Kent R. Pruss, Ann Arbor, Mich., assignors to University of Michigan, Ann Arbor, Mich.

Filed Mar. 20, 1989, Ser. No. 325,604

Int. Cl.[5] A61N *5/10*

U.S. Cl. 378—65 18 Claims

1. An arrangement for applying a therapeutic radiation emitted from a radiation source to a predetermined region of tissue within a cavity in the body of a living being, the arrangement comprising:

applicator means formed of an imaging-transparent material and having a hollow handle portion having an opening for obtaining access to the interior thereof, said opening being arranged at a first end of said applicator means, and being coupled at a second end thereof to a hollow head portion, said hollow head portion being arranged at a predetermined angle with respect to a longitudinal axis of said hollow handle portion;

dummy source carrier means having a body formed of imaging-transparent material, said dummy source carrier means being provided with dummy central core means formed on an imaging-transparent material and having a bore therein for accommodating a dummy substitute of the radiation source;

dummy source carrier handle means pivotally coupled to said dummy source carrier means for facilitating insertion of said dummy source carrier means through said opening of said hollow handle portion of said applicator means and through to said hollow head portion thereof; and

source carrier means having a body provided with a central core means having a bore therein for accommodating the radiation source, and a respectively associated shield means affixed to said central core means for blocking the radiation emitted by the radiation source, said shield means having a predetermined configuration which corresponds to a predetermined radiation pattern.

5,012,358

TRACKING CONTROL APPARATUS FOR USE WITH MAGNETIC TAPE HAVING VIDEO TRACK AND CONTROL TRACK

Yoshiaki Kohsaka, Fukaya, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Mar. 29, 1989, Ser. No. 330,285

Claims priority, application Japan, Mar. 31, 1988, 63-76050

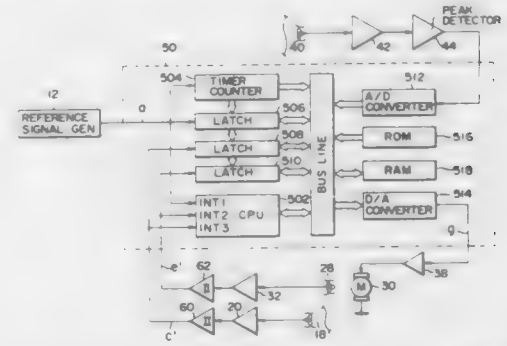
Int. Cl.[5] G11B *5/52, 15/467*

U.S. Cl. 360—70 11 Claims

7. A tracking control apparatus for use with magnetic tape having a video tack and a control track, comprising:

a capstan motor adapted to be rotated at a predetermined speed to transport the magnetic tape at a constant speed;

speed signal generating means for generating a speed signal corresponding to the rotating speed of said capstan motor;



timer means for providing time data;

frequency calculating means for calculating the rotation frequency of said capstan motor in accordance with an interval of time of generation of the speed signal based on the time data provided from said timer means when the speed signal is generated;

reference signal generating means for generating a predetermined reference signal in association with the time data;

control signal reproducing means for reproducing a control signal from the control track in association with the time data;

phase error calculating means for calculating a rotation

phase error of said capstan motor on the basis of the difference between time data provided from said timer means when the reference signal is generated by said reference signal generating means and time data provided from said timer means when the control signal is reproduced by said control signal reproducing means;

control data calculating means for calculating control data for said capstan motor from the rotation frequency and the rotation phase error of said capstan motor;

video-signal reproducing means for reproducing a video signal from the video track of the magnetic tape;

level detecting means for detecting a predetermined level of the video signal reproduced by said video-signal reproducing means; and

means for providing to said capstan motor the control data so that the level of the video signal detected by said level detecting means becomes maximum.

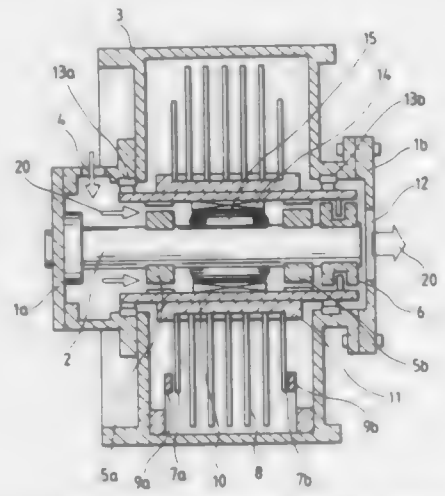
MAGNETIC DISK APPARATUS

Takashi Kohno; Osami Matsushita, both of Ibaraki; Michiaki Ida; Katsuaki Kikuchi, both of Tsuchiura; Taro Sonoda, Ibaraki, and Yuzo Yamaguchi, Tsuchiura, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Dec. 5, 1989, Ser. No. 446,281



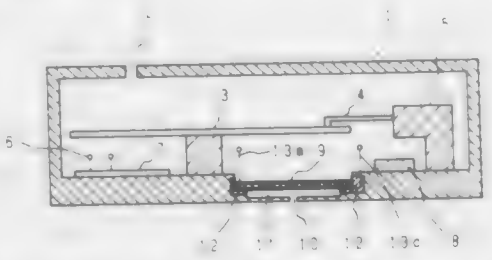
Claims priority, application Japan, Dec. 14, 1988, 63-313871

Int. Cl.[5] G11B *17/02, 17/32*

U.S. Cl. 360—71 9 Claims

1. In a magnetic disk apparatus equipped with a plurality of magnetic disks that are laminated, a spindle for said magnetic

disks and bearings for supporting said spindle, the improvement characterized in that said bearings are magnetic bearings



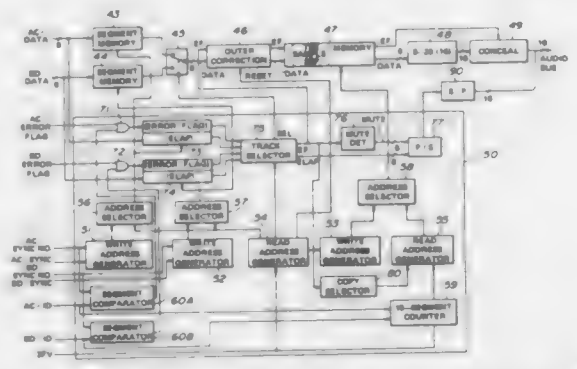
for supporting said spindle without contact by magnetic attracting or repulsing force.

5,012,360

DEHUMIDIFIER FOR MAGNETIC DISC APPARATUS

Shiro Yamauchi, and Naotake Rito, both of Amagasaki, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 7, 1988, Ser. No. 268,235
Claims priority, application Japan, Jan. 19, 1988, 63-009968
Int. Cl.[5] G11B *33/14*
U.S. Cl. 360—97.02 20 Claims



1. In a magnetic disc apparatus comprising housing providing an enclosure for a magnetic disc, a disc drive means for rotating said magnetic disc, a magnetic transducer head, and an actuator for positioning the magnetic transducer head over the magnetic disc, said housing having at least one vent aperture extending therethrough, dehumidifying means disposed within the enclosure, for removing excess moisture that passes through the vent into the enclosure, said dehumidifying means comprising a hydrogen ion conductor disposed intermediate a pair of porous electrodes located adjacent said at least one vent aperture and a reversible moisture absorbent capable of carrying out respiration of moisture absorption and evolution, and which cooperates with said hydrogen ion conductor disposed intermediate said pair of porous electrodes to insure that the enclosure of the magnetic disc apparatus maintains a dehumidified atmosphere.

5,012,361

DATA SIGNAL REPRODUCING APPARATUS FOR HELICAL SCAN RECORDING

Nobuhiro Chiba, and Yoshihiro Murakami, both of Kanagawa, Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Apr. 7, 1989, Ser. No. 334,556
Claims priority, application Japan, Apr. 8, 1988, 63-86675
Int. Cl.[5] H04N *5/78*
U.S. Cl. 360—38.1 5 Claims

1. Apparatus for reproducing data signals recorded on helical tracks in accordance with a format in which each track forms part of a segment and contains a plurality of sectors of data, and a plurality of segments form a field, one of said plurality of sectors having sector data that is identical with another of said plurality of sectors within the same segment, one of said plurality of segments having segment data that is identical with another of said segments within the same field, said apparatus comprising;

first detection means for detecting changes in said identical sector data during reproduction,

second detection means for detecting changes in said identical segment data during reproduction,

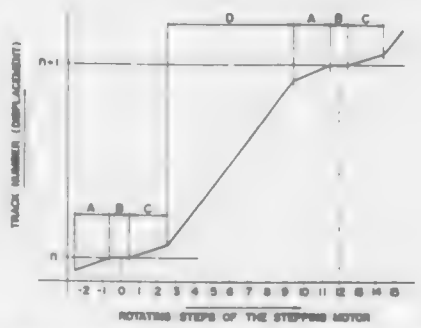
error detection means connected to said first detection means and to said second detection means for detecting that said identical segment data has changed without said identical sector data being changed and for generating an error signal, and

means for forming a corrected or concealed replica of said identical sector data and said identical segment data in response to said error signal.

5,012,362

APPARATUS FOR POSITIONING A TRANSDUCER FOR RECORDING, REPRODUCING OR ERASING INFORMATION ON A MEDIUM

Masatoshi Ida, Hachioji, Japan, assignor to Olympus Optical Co., Ltd., Tokyo, Japan



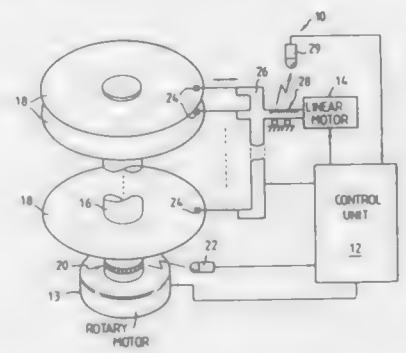
Filed Jun. 10, 1988, Ser. No. 205,165
Claims priority, application Japan, Jun. 19, 1987, 62-152967; Jun. 27, 1987, 62-160144; Jul. 6, 1987, 62-168032
Int. Cl.[5] G11B *5/596*
U.S. Cl. 360—77.04 21 Claims

1. An apparatus for positioning a transducer for recording, reproducing or erasing information on a medium comprising:

a transducer support carriage for advancing said transducer in a predetermined direction;

driving force generating means for generating driving force to bring about a displacement of said transducer support carriage; and

motion converting means operatively connected to said driving force generating means and to said transducer support carriage for converting a primary input motion from said driving force generating means to a secondary output motion transmitted by said motion converting means to said transducer support carriage, said motion converting means having a motion conversion characteristic including sluggish characteristic regions where a zero or minute secondary output motion corresponds linearly to a rated primary input motion; first characteristic regions adjacent to said sluggish characteristic regions, where a relatively small secondary output motion corresponds linearly to the rated primary input motion; and second characteristic regions linking up said first characteristic regions, where a relatively large secondary output motion corresponds to the rated primary input motion.



5,012,363

SERVO PATTERN WRITING METHOD FOR A DISK STORAGE DEVICE

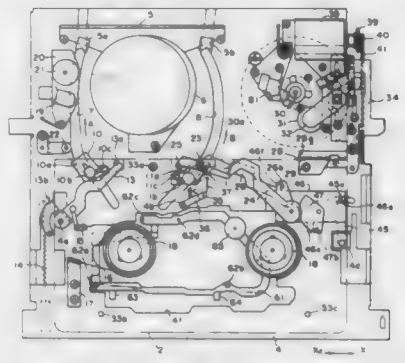
Shingi Mine, Yokohama; Yoichi Miwa, Machida, and Hiroyuki Ono, Fujisawa, all of Japan, assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Feb. 1, 1989, Ser. No. 305,268
Claims priority, application Japan, Feb. 3, 1988, 63-14288
Int. Cl.[5] G11B *5/596*
U.S. Cl. 360—77.05 11 Claims

1. A method for writing a servo pattern onto a data surface in a disk storage device, said disk storage device including disks having radials, said servo pattern providing a track and a sector positions information, said method including the steps of:

writing first and second base patterns onto a data surface of a base patterns written disk, said first base pattern being arranged along at least one radial of the disk and written at intervals along the radial, and having the same radial interval as the radial interval of the tracks to be written, said second base pattern being arranged at each position of the sector to be written along the radius direction continuously;

assembling said base patterns written disk with other unwritten disks into a disk device; and



writing the servo pattern onto the data surface of the other un-written disks, based on the first and second base patterns on the base patterns written disk.

5,012,364

TAPE-LOADING MECHANISM FOR A MAGNETIC RECORDING/REPRODUCING APPARATUS FOR SELECTIVE USE OF TAPE CASSETTES OF TWO DIFFERENT SIZES

Hiromichi Hirayama, Yokohama; Masato Mihara, Hiratsuka, and Mitsuo Harumatsu, Ota, all of Japan, assignors to Victor Company of Japan, Ltd., Yokohama, Japan

Filed Aug. 23, 1989, Ser. No. 397,686
Claims priority, application Japan, Aug. 23, 1988, 63-208781
Int. Cl.[5] G11B *5/008, 5/027*
U.S. Cl. 360—94 5 Claims

1. In a recording/reproducing apparatus for selective use with a relatively large-size tape cassette and a relatively small-size tape cassette which is smaller than the large-size tape cassette, in combination:

(a) a main chassis which lies substantially in a principal plane;

(b) first positioning means on the main chassis for positioning the large-size tape cassette thereon;

(c) a floating chassis mounted to the main chassis for displacement in a direction at right angles with the principal plane of the main chassis;

(d) second positioning means on the floating chassis for positioning the small-size tape cassette thereon;

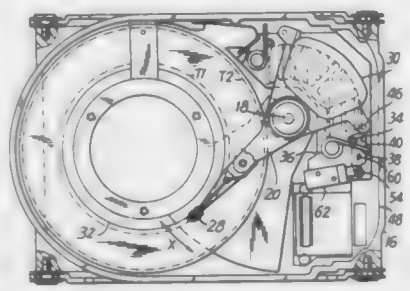
(e) head means provided on the main chassis;

(f) tape loader means movably mounted to the main chassis for pulling out a tape from the large-size tape cassette positioned on the first positioning means, or from the small-size tape cassette positioned on the second positioning means, and for holding the tape against the head means;

(g) drive means;

(h) a floating-chassis drive linkage connecting the drive means to the floating chassis for moving the latter relative to the main chassis between a working position, where the floating chassis has the small-size tape cassette positioned on the second positioning means thereon, and a retracted position where the floating chassis is out of contact with the large-size tape cassette positioned on the first positioning means on the main chassis, the floating chassis being held in the working position; and

(i) a tape loader drive linkage connecting the drive means to the tape loader means for moving the latter from a first tape-unloading position where the tape loader means engages the tape of the large-size tape cassette positioned on the first positioning means or second tape-unloading position where the tape loader means engages the tape of the small-size tape cassette positioned on the second positioning means to a tape-loading position where the tape loader means loads the tape, taken out from the large-or small-size tape cassette, against the head means, the tape loader drive linkage being partly in the path of the movement of the floating chassis between the working and the retracted positions only when holding the tape loader means in the second tape-unloading position, the tape



ally relative to said axis in response to movement of said head arm, and an elongated member extending between said head carriage and said head arm for cooperating with said sliding member for allowing said head arm to gently move toward said lower position.

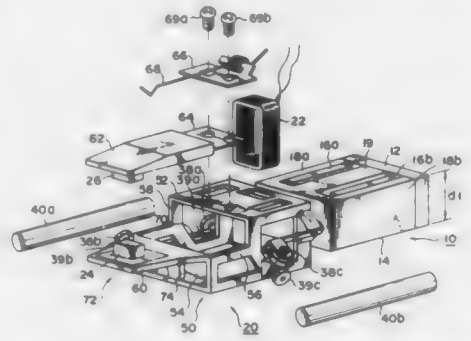
5,012,371

DISK DRIVE CRASH STOP/ACTUATOR LATCH

Christopher A. Pollard, Monument, and James W. Boeckner, Jr., Broomfield, both of Colo., assignors to MiniScribe Corporation, Longmont, Colo.

Filed Feb. 22, 1989, Ser. No. 314,408
Int. Cl.[5] G11B *5/54, 21/22*
U.S. Cl. 360—105 22 Claims

1. A limit stop/latching assembly in a disk storage system having a movable actuator carriage, said assembly comprising:
crash stop means for limiting travel of said actuator carriage at a fixed stop position and having a first abutment surface defining said stop position;
a stop member movable with said actuator carriage in a path of travel of said actuator carriage to abut said first abutment surface at said stop position;
latch means having a second abutment surface for selectively latching said stop member at said stop position, said latch means including first and second mounting pins and a latch member; and
means for moving said latch means between a free position out of said path of said stop member and a latched position with said second abutment surface abutting said stop member and facing said first abutment surface across said path to latch said stop member at said stop position, said moving means moving said latch member about said first mounting pin in rotary travel such that movement of said latch means is confined by said second mounting pin.



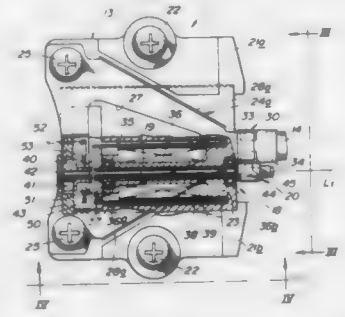
5,012,372

HEAD ACCESS MECHANISM FOR MOVING HEADS

Akihiro Isomura and Toshihiro Sugaya, both of Tokyo, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Oct. 19, 1988, Ser. No. 259,824
Claims priority, application Japan, Oct. 20, 1987, 62-264185
Int. Cl.[5] G11B *21/08*
U.S. Cl. 360—106 18 Claims

1. A head access mechanism for accessing at least one head to a destination track on a disk, comprising:
first generating means fixedly arranged, for generating a first magnetic field, including:
a single E-shaped yoke member having two side extending portions and a central extending portion;
a single I-shaped yoke member which is coupled to distal ends of said two side extending portions and said central extending portion so as to form a magnetic circuit; and
magnetic field generating means for generating the first magnetic field in said magnetic circuit; and
carriage means for carrying a first head, including:
second generating means for generating a second magnetic field and receiving a propulsive force;
a casing which is fixed to said second magnetic field generating means and is capable of housing said first generating means; and
head supporting means arranged to said casing means at a position opposite to said generating means, for supporting said first head, said carriage means moving together with



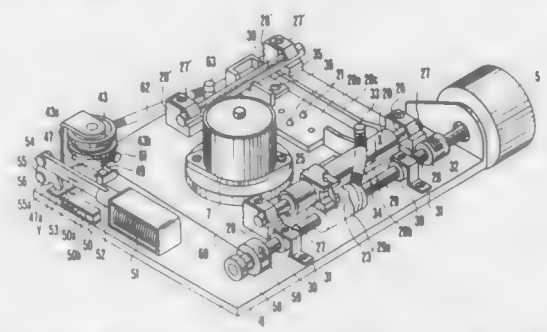
said first head in accordance with the propulsive force generated by interaction between the first and second magnetic fields, a center of gravity of said carriage means being present substantially on a line along which the propulsive force acts.

5,012,373

APPARATUS FOR POSITIONING A MAGNETIC HEAD ON A HEAD DRUM

Etsuro Saito, Kanagawa, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Dec. 20, 1988, Ser. No. 287,393
Claims priority, application Japan, Dec. 24, 1987, 62-327782
Int. Cl.[5] G11B *5/52*
U.S. Cl. 360—107 10 Claims



1. On a head drum rotatable about a central axis thereof, a rotary head device comprising:
magnetic head means for recording and/or reproducing signals on a magnetic tape adjacent a peripheral surface of said head drum;
head support means attached to said drum for supporting said magnetic head means for movement therewith in directions substantially parallel with said central axis;
rotary motor means including a drive element rotatable about an axis of rotation extending radially outward with respect to said central axis of the drum, and means for rotating said drive element in response to a control signal applied to said rotary motor means;
thrust bearing means for absorbing an axial thrust of said drive element resulting from rotation of said drum; and
rotation converting means coupled with said drive element of said rotary motor means and with said head support means for converting rotation of said drive element into movement of said head support means and said magnetic head means therewith in said direction substantially parallel with said central axis of said head drum.

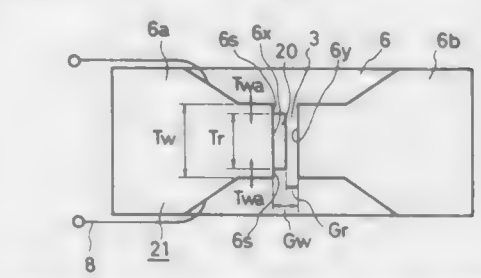
RECORDING AND/OR REPRODUCING APPARATUS IN WHICH THE POSITION OF HEAD MEANS RELATIVE TO THE RECORD BEARING MEDIUM IS CONTROLLED BETWEEN TWO POSITIONS

Masaya Maeda, Kanagawa, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 245,997, Sep. 14, 1988. This application Dec. 5, 1989, Ser. No. 446,435
Claims priority, application Japan, Jul. 20, 1983, 58-132536; Jul. 20, 1983, 58-132537; Jul. 20, 1983, 58-132538; Jul. 20, 1983, 58-132539; Jul. 20, 1983, 58-132540; Jul. 20, 1983, 58-132541
Int. Cl.[5] G11 *5/55, 5/56, 21/08, 21/12*
U.S. Cl. 360—109 16 Claims

1. A recording and/or reproducing apparatus using a disc-shaped record bearing medium, comprising:
(a) recording and/or reproducing head means for recording and/or reproducing signals on the record bearing medium, said head means being positionable in a protruding position in which said head means protrudes toward the record bearing medium, and a retracted position in which said head means is retracted from the record bearing medium;
(b) head carrying means, mounting said head means thereon, for moving said head means in a radial direction of the record bearing medium for changing a recording track on the record bearing medium;
(c) guide means, including a guide shaft disposed in said radial direction, for linearly guiding the movement of said head carrying means along said radial direction, said head carrying means being rotatable about a rotating axis formed by said guide shaft; and
(d) control means for controlling the position of said head means between said protruding position of said head means protruding toward the record bearing medium and said retracted position of said head means retracting from the record bearing medium, by the rotating of said head carrying means around said guide shaft.



5,012,375

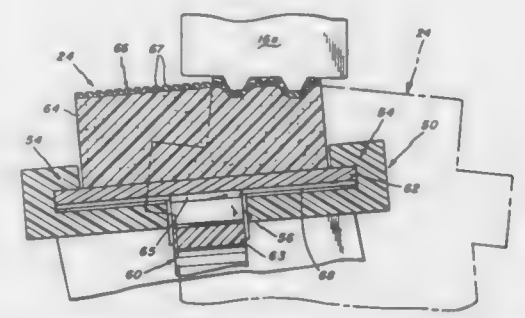
WIDE-WRITE, NARROW-READ, SINGLE-GAP MAGNETIC HEAD

Masaru Nishimura, Hyogo, Japan, assignor to Mitsubishi Denki K.K., Tokyo, Japan

Filed Sep. 1, 1989, Ser. No. 401,762
Claims priority, application Japan, Sep. 2, 1988, 63-220062
Int. Cl.[5] G11B *5/23, 5/147*
U.S. Cl. 360—119 5 Claims

1. A wide-write, narrow-read, single-gap magnetic head comprising:
a substantially U-shaped magnetic core with opposed end faces of a pair of legs having a substantially equal width; and
a magnetic material attached to one of said end faces to form a read gap with the other end face,

said magnetic material having a saturated flux density lower than that of said magnetic core, and



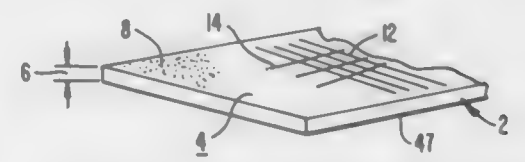
said read gap having a read track width smaller than a write track width made by said opposed end faces.

5,012,376

TAPE HEAD CLEANER CARTRIDGE HAVING A MESH CLEANING LAYER

Kyriacos Joannou, Wayland; Kenneth Wilson, Lexington, and Alan B. Lowry, Canton, all of Mass., assignors to Pericomp Corporation, Natick, Mass.

Division of Ser. No. 108,062, Oct. 14, 1987, Pat. No. 4,875,125. This application Sep. 21, 1989, Ser. No. 410,288
Int. Cl.[5] G11B *5/41*
U.S. Cl. 360—128 9 Claims



1. A cleaning pad for cleaning a magnetic tape head and supported in a tape head cleaner cartridge, said cleaning pad comprising, a support base, a resilient layer of a soft compressible material, means securing the resilient layer on the support base, a mesh layer and means securing the mesh layer on the resilient layer on the side thereof remote from said support base, said mesh layer providing the contact surface for the head and said resilient layer providing a small pressure to urge the mesh layer into such contact.

5,012,377

HOMOGENEOUS MAGNETIC HEAD CLEANING MATERIAL

Mohammed Siddiq, and I-Huan Lo, both of San Jose, Calif., assignors to Tandy Corporation, Fort Worth, Tex.

Continuation of Ser. No. 182,829, Apr. 18, 1988, abandoned. This application Dec. 15, 1989, Ser. No. 453,148
Int. Cl.[5] G11B *5/41*
U.S. Cl. 360—128 31 Claims

1. A magnetic head cleaner, for removing contaminant from a magnetic head, comprising:
a strip of homogeneous polymeric material having a length,

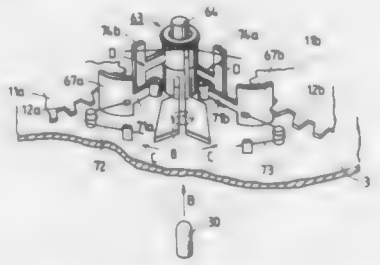
a cleaning surface and at least one of the following cleaning attributes:

(a) the cleaning surface having a matte finish with an average roughness of about 0.1 μm to about 1.0 μm; and

(b) the cleaning surface having grooves formed therein transverse to the length.

5,012,378

MAGNETIC TAPE CASSETTE HAVING REEL BRAKE STRUCTURE PROVIDING IMPROVED DUST PROOFING



Shozo Onmori; Daisuke Takahashi, and Kengo Oishi, all of Kanagawa, Japan, assignors to Fuji Photo Film Co. Ltd., Kanagawa, Japan

Division of Ser. No. 318,866, Mar. 6, 1989. This application Jul. 5, 1990, Ser. No. 549,571

Claims priority, application Japan, Mar. 11, 1988, 63-31697[U]; Mar. 25, 1988, 63-69850; Mar. 30, 1988, 63-40982[U]

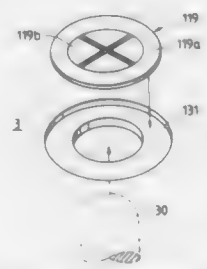
Int. Cl.[5] G11B *23/087*

U.S. Cl. 360—132 3 Claims

1. A magnetic tape cassette housing a pair of tape winding bodies around which a magnetic tape is wound, the magnetic tape being pulled exteriorly of the cassette for recording the playback, comprising: a reel brake for preventing rotation of said tape winding bodies, said reel brake comprising a pair of engaging pawl members each pivotally supported at one end thereof and having a free means for urging said free ends of said panel members in a direction to cause said free ends to engage a gear portion formed on a flange of respective one of said tape winding bodies, and a pair of rotatable body portions each having an abutment portion and an operating portion, both of which extend from said rotatable body portion radially of said body portion, said abutment potions being engageable with a respective one of said engaging pawl member intermediate the length of said pawl members so as to move said free ends said pawl members out of engagement with said gear portions, each said abutment portion having generally a T shape with a base end joined to a respective body portion, and a distal bar-like portion extending in a direction of thickness of said cassette, a first end of said distal bar-like portion being engageable with the corresponding one of said engaging pawl members, a brake release insertion member being insertable into said cassette through a hole extending through a wall of said cassette so as to engage each of said operating portions to move said abutment portions, means for urging said rotatable body portions in such directions as to hold said operating portions in contact with each other to close said hole, each of said abutment portions urging a respective one of said engaging pawl members to move said free ends of said engaging pawl members out of engagement with said gear portions when said operating portions are moved away from each other, said operating portions not moving with movement of said engaging pawls.

5,012,379

MAGNETIC TAPE CASSETTE HAVING DUST BLOCKING MEMBER FOR PREVENTING ENTRY OR DUST THROUGH BRAKE RELEASE LEVER HOLE



Shozo Onmori; Daisuke Takahashi, and Kengo Oishi, all of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Division of Ser. No. 318,866, Mar. 6, 1989. This application Jul. 5, 1990, Ser. No. 549,321

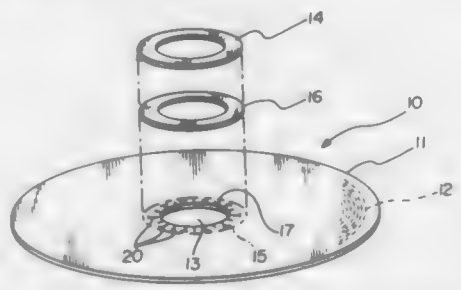
Claims priority, application Japan, Mar. 11, 1988, 63-31697[U]; Mar. 25, 1988, 63-69850; Mar. 30, 1988, 63-40982[U]

Int. Cl.[5] G11B *23/087*

U.S. Cl. 360—132 6 Claims

1. A magnetic tape cassette housing a pair of tape winding bodies around which a magnetic tape is wound, comprising: reel brake means for preventing angular movement of said tape winding bodies, said reel brake means being rotatable between a first position wherein said brake means is engaged with at least one of said tape winding bodies and a second position wherein said reel brake means is disengaged from said tape winding bodies, a hole being formed through a wall of the cassette so that a brake release lever can pass through the hole and engage said reel brake means to rotate said reel brake means from said first position to said second position; and a flexible dust-blocking member disposed over said hole, said dust-blocking member being divided into separable segments in such a manner as to allow the brake release lever to pass through said dust blocking member.

5,012,380



ARTICLE SURVEILLANCE PROTECTION OF FLEXIBLE MAGNETIC COMPUTER DATA STORAGE DISKS

Peter J. Harissis, Rush, and Jeffrey P. Serbicki, Rochester, both of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Aug. 24, 1989, Ser. No. 398,021

Int. Cl.[5] G11B *5/82, 23/03, 15/04*

U.S. Cl. 360—135 8 Claims

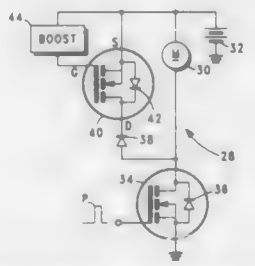
1. A computer disk having article surveillance protection comprising:

a flexible disk substrate having a central aperture and having a series of slits formed in the substrate around the periphery of the central aperture;

a magnetic recording material formed on the surface of the disk on at least one side thereof for recording of data on the disk;

and a surveillance marker comprised of an extended length of ferromagnetic material formed around at least a substantial portion of the periphery of the central aperture and integrally bonded to said disk substrate overlying the slits formed in the substrate, said slits being adapted to provide tear-initiation sites which operate to induce tearing of said flexible substrate in the event of an attempt to remove said marker from said substrate after said marker has been integrally bonded to said substrate.

5,012,381



MOTOR DRIVE CIRCUIT WITH REVERSE-BATTERY PROTECTION

Robert S. Elliott, Barrington, Ill., and Kim R. Gauen, Tempe, Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Sep. 13, 1989, Ser. No. 406,627

Int. Cl.[5] H02H *3/18;* H02J *7/00*

U.S. Cl. 361—84 8 Claims

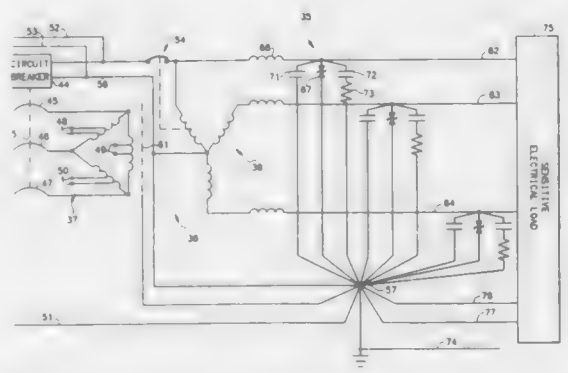
1. In a system having an inductive load that is powered by a battery, a load drive circuit with reverse-battery protection, comprising

a first switch coupling the battery to the load so as to establish a path for current through the load;

means defining a path for recirculating current around the load, including a recirculating diode and a transistor switch coupled in series with the recirculating diode and the load such that substantially all the recirculating current flows through the recirculating diode and the transistor switch; and

bias means coupled to the transistor switch for turning the transistor switch on when the battery is coupled to the load with its nominal polarity, and for holding the transistor switch off in response to the battery being coupled to the load with a reverse polarity.

5,012,382



LOW IMPEDANCE POWER CONDITIONER APPARATUS AND METHOD

William D. Carpenter, Del Mar; Randy J. Redding, and Robert C. McLoughlin, both of San Diego, all of Calif., assignors to Teal Electronics Corporation, San Diego, Calif.

Filed Jun. 14, 1990, Ser. No. 537,579

Int. Cl.[5] H02H *7/20*

U.S. Cl. 361—93 39 Claims

1. Power conditioning apparatus comprising:

electrical power input connection means;

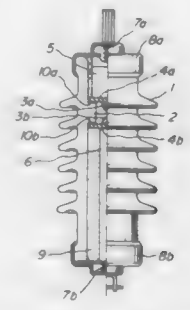
low impedance transformer means having input means coupled to said power input means and having output means; and

power output connection means coupled to said transformer output means and adapted to be coupled to a load having a duty cycle of less than fifty percent;

said transformer being sized based on impedance, independent of thermal characteristics for high current, low duty cycle applications where instantaneous power requirements are greater than 10KVA, the steady state power rating of said transformer being no more than one-half of the maximum instantaneous power requirement of the load.

5,012,383

LIGHTNING ARRESTOR INSULATOR AND METHOD OF PRODUCING THE SAME



Shoji Seike; Toshiyuki Mima, both of Nagoya, and Masayuki Nozaki, Aichi, all of Japan, assignors to NGK Insulators, Ltd., Nagoya, Japan

Continuation of Ser. No. 327,610, Mar. 23, 1989, abandoned. This application Jul. 27, 1990, Ser. No. 561,234

Claims priority, application Japan, Mar. 23, 1988, 63-67311; Jun. 14, 1988, 63-144583

Int. Cl.[5] H02H *9/06*

U.S. Cl. 361—120 9 Claims

1. A lightning arrestor insulator having a discharge gap portion and an arrestor ZnO element device both within a body of the insulator, comprising: projected discharge electrodes arranged in the inside of the insulator body, the discharge gap portion being formed of a heat resistant protrusion arranged in the inside of the insulator body and surrounding the discharge electrodes, the protrusion being a separate or integral part of the insulator body;

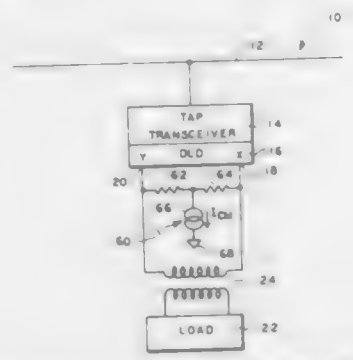
a pair of metal plates and/or electrically conductive ceramic plates sandwiching the protrusion from both sides thereof and electrically connected to the discharge electrodes, the pair of plates being joined and airtightly sealed to the protrusion with an inorganic glass; and

a ceramic cylinder surrounding the projected electrodes between the pair of plates for firmly supporting the pair of plates.

5,012,384

LOAD CIRCUIT FOR A DIFFERENTIAL DRIVER

Thomas Chew, San Francisco, Calif., assignor to Advanced Micro Device, Inc., Sunnyvale, Calif.



Filed Feb. 20, 1990, Ser. No. 482,284

Int. Cl.[5] H01H *47/00*

U.S. Cl. 361—159 22 Claims

1. An improved output circuit for use with a differential driver of the type adapted to drive a load including a parallel inductance and resistance coupled across a pair of output terminals of said driver, said driver being arranged to provide first and second equal currents at said terminals for deriving a zero volt output across said load when in a first state, and for providing a third current to one said terminal for deriving a voltage magnitude across said load when in a second state, said

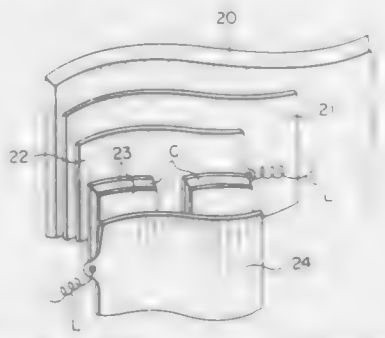
third current causing a residual magnetizing current in said inductance which produces an undesired kickback voltage to be produced across load resistance during the transition from said second state to said first stage, said output circuit being arranged to substantially reduce said kickback voltage and comprising:

impedance means coupled across said output terminals; and common mode current source means coupled to said impedance means for sinking a portion of said residual magnetizing current during said transition to reduce the amount of said residual magnetizing current flowing through said load resistance during said transition

---

5,012,385

STRUCTURE FOR ARRANGING ELECTRICAL DOUBLE-LAYER CAPACITOR CELLS



Ken Kurabayashi, Chigasaki; Yoshinobu Tsuchiya, Fujisawa, and Yoriaki Niida, Yamato, all of Japan, assignors to Isuzu Motors Limited, Tokyo, Japan

Filed May 7, 1990, Ser. No. 519,597

Claims priority, application Japan, Jul. 29, 1989, 1-197826

Int. Cl.[5] H01G *4/38, 9/00*

U.S. Cl. 361—328 **6 Claims**

1. A structure for arranging an electrical double-layer capacitor cell comprising:

a first electrode plate adhered to a surface of a tabular member in an electrically nonconductive manner;

an electrical double-layer capacitor cell adhered to said first electrode plate in an electrically conductive manner; and

a second electrode plate adhered to said electrical double-layer capacitor cell in an electrically conductive manner.

5,012,386

HIGH PERFORMANCE OVERMOLDED ELECTRONIC PACKAGE

Michael B. McShane, and Paul Lin, both of Austin, Tex., assignors to Motorola, Inc., Schaumburg, Ill.

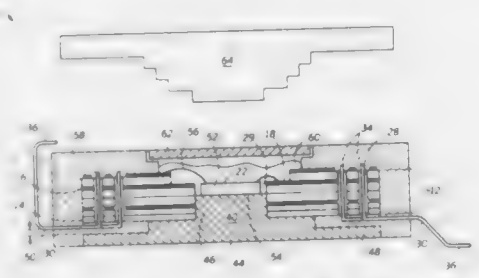
Filed Oct. 27, 1989, Ser. No. 4[illegible],089

Int. Cl.[5] H05K *7/20*

U.S. Cl. 361—386 **24 Claims**

1. An electronic package comprising:

a substrate having:



a plurality of planar layers, where at least one layer is a dielectric layer and where at least one layer is an electrically conductive layer;

at least one hole through the plurality of layers; and

a cavity within the layers;

a lead having a proximal end and a distal end, where the proximal end pierces the hole through the plurality of layers, where the proximal end is additionally electrically connected to the electrically conductive layer;

a thermally conductive insert adjacent to the dielectric layer, where the insert has a first side and a second side,

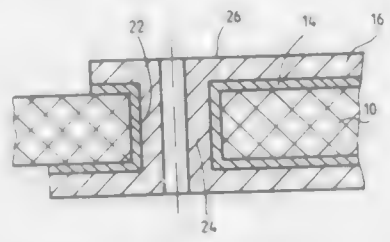
where a die area is present on the first side which is exposed through the cavity within the layers;

an electronic component having a front surface and a back surface, where its back surface is mounted on the die area of the thermally conductive insert and where the front surface is electrically connected to the electrically conductive layer; and

a body of dielectric material surrounding the substrate and the electronic component, where the distal end of the lead and at least a portion of the second side of the thermally conductive insert are not surrounded by the body.

5,012,387

PRINTED CIRCUIT BOARD WITH HEAT DISSIPATING DEVICE



Hans Ohlenburger, Uberlingen/Bodensee, Fed. Rep. of Germany, assignor to Bodenseewerk Geratetechnik GmbH, Fed. Rep. of Germany

Filed Apr. 18, 1989, Ser. No. 339,680

Claims priority, application Fed. Rep. of Germany, Apr. 21, 1988, 3813364

Int. Cl.[5] H05K *7/20*

U.S. Cl. 361—388 **6 Claims**

1. A printed circuit board comprising:

a printed circuit board core having two opposite sides;

a copper layer located on said two opposite sides of said printed circuit board core;

a pure aluminum layer covering said copper layer in direct contact therewith on both said opposite sides of said printed circuit board core;

a predetermined number of circuit components mounted on said pure aluminum layer on one of said two opposite sides of said printed circuit board core;

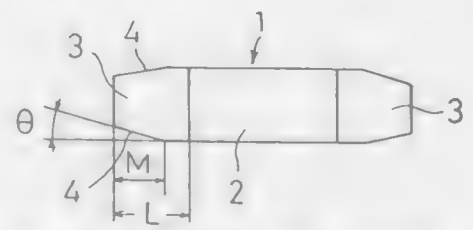
said printed circuit board core containing a predetermined number of throughbores extending between said two opposite sides;

said copper layer located on said two opposite sides and said pure aluminum layer covering said copper layer on said two opposite sides of said printed circuit board core, extending through said predetermined number of throughbores; and

selected ones of said circuit components physically contacting the pure aluminum layer and covering selected ones of said thoughbores.

5,012,388

ELECTRODE STRUCTURE OF A CHIP TYPE ELECTRONIC COMPONENT



Akira Kabeshita, Hirakata; Tokuhito Hamane, Nara, and Yoshifumi Kitayama, Hirakata, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Oct. 20, 1989, Ser. No. 425,840

Claims priority, application Japan, Oct. 20, 1988, 63-264525

Int. Cl.[5] H05K *7/02*

U.S. Cl. 361—400 **10 Claims**

1. A chip type electronic component comprising:

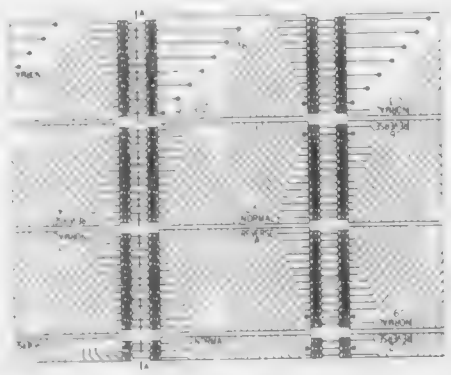
a main body having opposite first and second end surfaces and a lower surface, said lower surface of said main body defining a first plane; and,

first and second electrode portions respectively connected to said first and second end surfaces of said main body;

wherein each of said first and second electrode portions comprises a lower surface;

wherein each lower surface of said first and second electrode portions comprises a first planar face extending adjacent said main body in a second plane which is substantially parallel to the first plane defined by said main body, and a second planar face extending adjacent said first planar face in a third plane which extends upwardly at an angle relative the second plane away from said main body.

5,012,389



BOARD WIRING PATTERN FOR A HIGH DENSITY MEMORY MODULE

Richard A. Perry, Charlotte, N.C., assignor to Hand Held Products, Inc., Charlotte, N.C.

Filed Dec. 14, 1988, Ser. No. 284,238

Int. Cl.[5] H05K *7/02*

U.S. Cl. 361—409 **34 Claims**

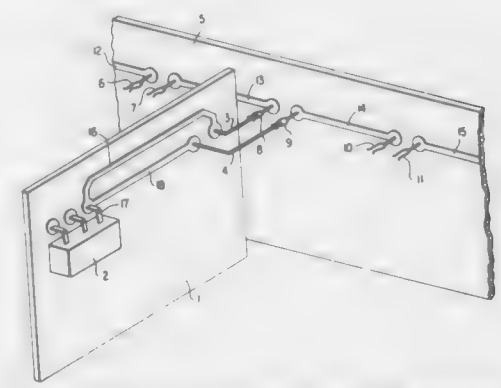
9. A memory module comprising:

a plurality of memory chips and a mounting surface therefor, each chip including a plurality of signal pins for power, ground, control, address and data signals and at least one enable pin for selecting said chip, said memory chips being mounted on said mounting surface in an array of rows and columns;

said mounting surface including a first serpentine pattern of parallel conductors which connect corresponding ones of said signal pins on one end of a first chip to the opposite end of a second chip in the same row and previous column as said first chip, to the opposite end of a third chip in the next row and same column as said second chip, to the one end of a fourth chip in the same row and next column as said third chip, to the one end of a fifth chip in the same column and next row as said fourth chip, and to the opposite end of a sixth chip in the same row and previous column as said fifth chip.

5,012,390

MOUNTING AND CONNECTION SYSTEM FOR ELECTRICAL COMMUNICATIONS EQUIPMENT



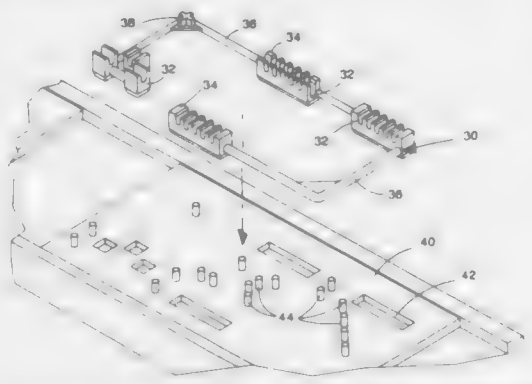
Kurt Erbele, Weissach im Tal, Fed. Rep. of Germany, assignor to ANT Nachrichtentechnik GmbH, Backnang, Fed. Rep. of Germany

Filed Jan. 9, 1989, Ser. No. 295,131

Claims priority, application Fed. Rep. of Germany, Jan. 15, 1988, 3800978

Int. Cl.[5] H05K *1/14*

U.S. Cl. 361—413 **3 Claims**



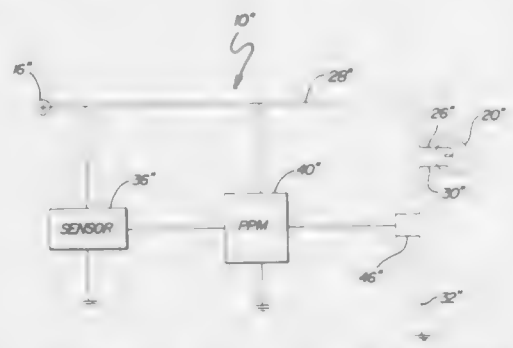
1. In a mounting and connection system for electrical communications equipment comprising: a plurality of plug-in modules, each provided with electrical components and with at least one pin connector having a plurality of contact pins for providing connections to said components; a circuit board which is provided with a plurality of adjacent socket connectors, each including a plurality of socket contacts, matingly engaging a respective said pin connector of a respective said plug-in modules; a plurality of bus bar conductor sections disposed on said circuit board and extending between adjacent ones of said socket connectors, with each said bus bar conductor section connecting only one socket contact of a respective one of said socket connectors with only one said socket contact of an adjacent said socket connector; and a respective conductive connection between the respective two of said contact pins of each of said pin connectors which engage in the two contact sockets of the associated said socket connector which are connected to the respective associated ones of said bus bar conductor sections; the improvement wherein each of said conductive connections includes a first conductor extending from a first of said two contact pins of the respective said pin connector to a terminal pin of an electrical component of the respective plug-in module, and a second conductor extending from said terminal pin to a second of said two contact pins of the respective said pin connector.

5,012,391

MOLDED ELECTRICAL INTERCONNECTION SYSTEM

Albert N. Schultz, Jr., Hiddenite, and Paul D. Zakary, Winston-Salem, both of N.C., assignors to AMP Incorporated, Harrisburg, Pa.

Filed Aug. 17, 1989, Ser. No. 395,382
Int. Cl.[5] H02B 1/20; H01R 9/09
U.S. Cl. 361—428 1 Claim



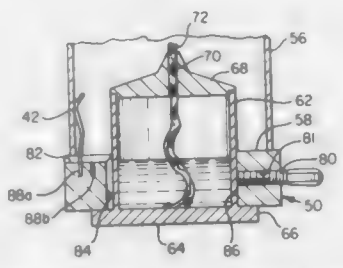
1. A molded electrical interconnection system comprising:
a template having mounted thereon pins and a separable wire organizing frame which includes wire retaining blocks with grooves,
a wire harness having a plurality of bare conductors laced to said frame and pins to form electrical grids, said conductors being either in a common plane or parallel to said common plane said conductors contacting said grooves and pins;
free ends of said conductors being bent normal to said common plane with terminals attached thereto; and
an encapsulant formed from reaction injection molded material encapsulating said template, and wire harness but not the free ends said free ends interconnecting electrical components mounted to said system.

5,012,392

AUTOMATIC BATTERY POWERED VIDEO LIGHT

Peter A. Hochstein, 2966 River Valley Dr., Troy, Mich. 48098

Continuation-in-part of Ser. No. 310,307, Feb. 13, 1989, Pat. No. 4,959,755. This application May 22, 1990, Ser. No. 527,039
Int. Cl.[5] G03B 15/02; H05B 39/04; G05F 1/00
U.S. Cl. 362—4 15 Claims



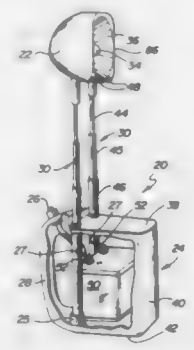
1. A portable light assembly adapted to be connected to a device and directed toward an object, said assembly comprising: battery power means for supplying d.c. power; radiant means connected to said battery power means for producing radiant energy to illuminate an object; control means connected between said battery power means and said radiant means for receiving a control signal and for switching d.c. power to said radiant means controlling the intensity of illumination by said radiant means; said control means including sensor means for sensing ambient light and reflected radiant energy from the scene indicative of brightness of the object and for producing said control signal, pulse modulator means for receiving said d.c. power and connected to and responsive to the sensed brightness by said sensor means for producing said control signal comprising pulses and for con-trolling the duty cycle of said pulses to control the intensity of illumination by said radiant means, and switching means connected to said power means and said radiant means for receiving said control signal and for switching power to said radiant means controlling the brightness, said switching means including a transistor operating in switch mode for switching the d.c. power to said radiant means.

5,012,393

BASE FOR BOTTLE LAMP

Earl A. Knipe, R.R. Box 58, Warsaw, Ill. 62379, and Jan B. Knipe, Box 131A, Fowler, Ill. 62338

Filed Aug. 2, 1990, Ser. No. 562,012
Int. Cl.[5] F21L 19/00
U.S. Cl. 362—163 17 Claims



3. In a base for supporting glass chimney means:
glass cutting means projecting from said base for cutting a glass chimney means;
a row of angularly spaced openings in said base; and,
plural spring members each having one end portion reversibly mountable in said openings and an opposite end portion projecting from said base for supporting engagement with said chimney means.

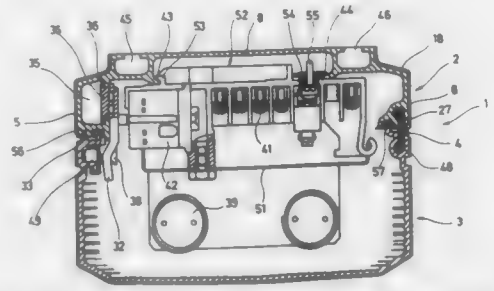
5,012,394

HAND PORTABLE LIGHT WITH EXTENDABLE LAMP HOUSING

John G. Woodward, 5736 Cobb Creek Rd., Rochester, Mich. 48064

Filed Nov. 15, 1988, Ser. No. 271,429
Int. Cl.[5] F21L 7/00; F21S 1/12
U.S. Cl. 362—198 20 Claims

1. A free-standing hand portable light of the electric flashlight or electric lantern type with an extendable lamp housing comprising:
a free-standing lightweight, portable, readily movable base housing easily lifted by one hand;
a lightweight electrical lamp housing coupled to said base housing and easily movable by hand with respect to said base housing;



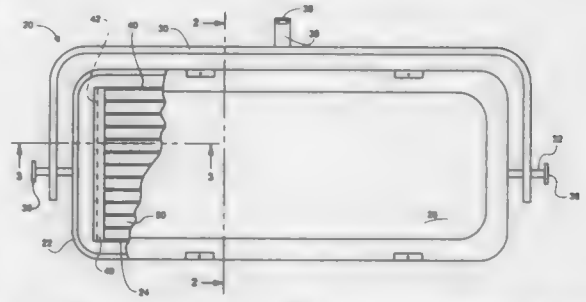
first and second telescopically collapsible arms spaced apart from one another, each said arm having a first end and a second end, the first end of each said arm being rigidly attached to said base housing, said telescopically collapsible arms allowing said electrical lamp housing to be telescopically positioned at any one of several user settable distances away from the base housing when said light is in use; and
pivot means for permitting said lamp housing to be swiveled with respect to the second ends of said first and second collapsible arms said pivot means allowing said lamp housing to be rotatably positioned at any one of several user-settable positions to direct illumination from said lamp housing in a desired direction.

5,012,395

MODULAR EXPLOSION PROTECTED LAMP FIXTURE MEETING "INCREASED SAFETY" STANDARDS

Lothar Wettengel, Künzelsau, and Eberhard Langer, Ingelfingen-Criesbach, both of Fed. Rep. of Germany, assignors to Rstahl Schaltgeräte GmbH, Kunzelsau, Fed. Rep. of Germany

Filed Mar. 26, 1990, Ser. No. 498,991
Claims priority, application Fed. Rep. of Germany, Apr. 12, 1989, 3911900
Int. Cl.[5] F21V 21/00
U.S. Cl. 362—222 23 Claims



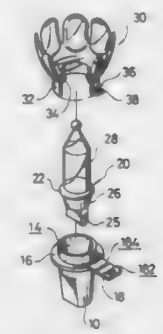
1. Modular, environmentally protected lamp fixture meeting "increased safety" standards, having
a housing (1) including a unitary, elongated trough-like body portion (2) formed with side walls (5, 6, 7), each having a rim, and a bottom (8);
a light pervious cover (3);
a hinge (4) secured to the trough-like body portion and the cover, respectively, and pivotably connecting said body portion and said cover.
said cover, when in closed position against said body portion, engaging one of the rims of the body portion;
sealing means (56) between said cover and said body portion along said rim;
electrical operating elements (39, 41, 42) for operation of a lamp means located in said housing; and
holding and support means (52) located in said housing for holding and supporting said electrical operating elements,
wherein, in accordance with the invention,
the trough-like portion (2) comprises an elongated profiled extruded structure of predetermined length, defining open ends and two respectively parallell side walls (5, 6);
wherein said profiled extrusion structure has a cross section of generally U shape defining two generally parallel leg portions (21, 22), forming said side walls, and a bottom connecting portion (23), unitary with said leg portions;
the free ends of said leg portions defining two portions of said rim which extend in a longitudinal direction;
wherein said profiled extrusion structure, adjacent the rim of one of said leg portions (22), is formed with a groove (24) shaped and dimensioned to receive one wing of said hinge (4);
and two end caps (11) are provided, secured to and sealed on the open ends of the extruded structure.

5,012,396

METHOD OF APPARATUS FOR ILLUMINATING TELEVISION STUDIO AND VIDEO TAPE PRODUCTION FACILITIES

Paul D. Costa, Burlingame, San Mateo, Calif.

Continuation of Ser. No. 177,099, Apr. 4, 1988, abandoned. This application Sep. 21, 1989, Ser. No. 410,258
Int. Cl.[5] F21S 3/00; F21K 2/00
U.S. Cl. 362—224 4 Claims



1. A method for illuminating a television studio and video tape production facilities comprising the steps of,
a. mounting a plurality of fixtures at spaced locations around the studio, each fixture including an array of fluorescent tubes, each tube having a formulation of phosphors coating the interior surface of the tube for generating fluorescent and phosphorescent light emissions at frequencies having a color spectrum suitable for illuminating television and video production without a filter or filter system,
b. energizing said tubes with electrical current pulses provided by an electrical ballast having an operational frequency in the range of from 10,000 to 100,000 cycles per second for stimulating sustained fluorescent and phosphorescent light emission from the phosphor coatings on the interior surface of the tubes,
c. directing light rays from the tubes away from the fixtures and inwardly towards the studio.

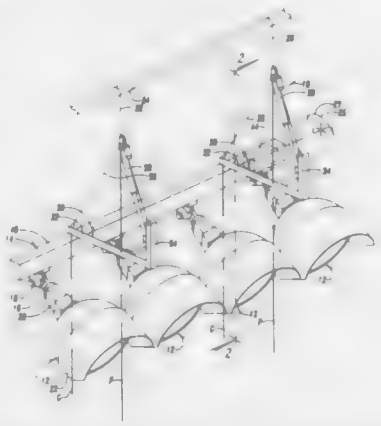
SOCKET AND CHANGEABLE BULB HOUSING SNAP FASTENER FOR CHRISTMAS LIGHT STRINGS

Jeou N. Tseng, No. 539, Sec. 4, Chung Hua Rd., Hsin Chu City, Taiwan

Filed Aug. 15, 1990, Ser. No. 567,800
Int. Cl.[5] F21V 17/06
U.S. Cl. 362—237 2 Claims



1. A socket and changeable bulb housing snap fastener for Christmas light strings, comprising a socket and a bulb, said bulb comprising a lighting element and an insert having two leads mounted thereon which are electrically connected to said lighting element, a hole being centrally formed on said socket for receiving said insert, the improvement comprising:
an annular outer flange being formed on said socket;
at least one tongue of insulating material extending radially and outwardly from a periphery of said outer flange, a

substantially rectangular slot being formed on each said tongue adjacent to a free end of each said tongue, a V-shaped groove being formed on an upper side of each said tongue at an end opposite to said free end and extending transversely to a length of each said tongue;

a bulb housing having a hollow annular engaging portion for engaging with said socket, an annular inner flange being formed on an uppermost portion of an inner periphery of said engaging portion, said engaging portion receiving an upper portion of said socket and resting on said annular outer flange, while said annular inner flange rest on an upper surface of said insert;

a corresponding number of T-shaped male members having a snapping head being formed relative to each said tongue on an outer periphery of said annular engaging portion of said bulb housing, each said slot having a width slightly less than a maximum width of said snapping head of said T-shaped male member, each said slot being engageable with each corresponding said T-shaped male member by bending each said tongue upwardly about said V-shaped groove and pushing each said tongue against each corresponding said T-shaped male member, such that each respective said snapping head is forced through each corresponding said slot.

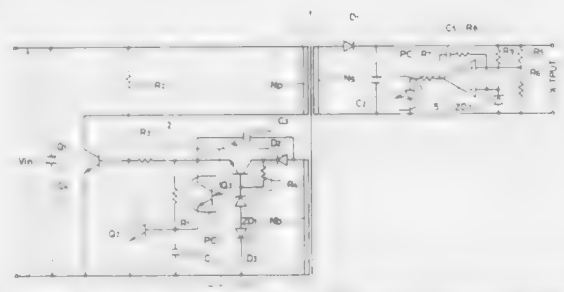
LIGHT BAR LEVELER
Robert D. Jones, Oskaloosa, and David M. Demeyer, Colfax, both of Iowa, assignors to Musco Corp., Oskaloosa, Iowa
Filed Jan. 18, 1990, Ser. No. 466,916
Int. Cl.[5] F21V *21/14*
U.S. Cl. 362—250 **5 Claims**

1. A leveling means for maintaining or adjusting the orientation of a support member suspended from a suspension means having a longitudinal axis which is generally horizontally positioned, and to which is mounted one or more light fixtures, comprising:



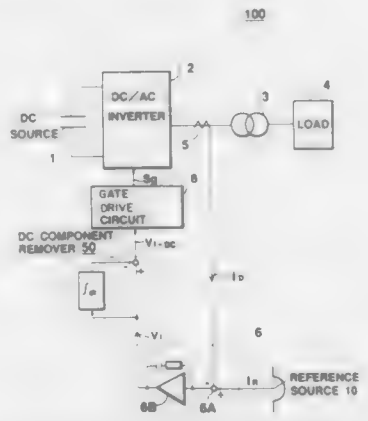
a bracket means attached to the support member and having a distal end extended outwardly from the support member;

a pulley means attached to the suspension means;

a cable means attached at one opposite end to the distal end of the bracket means, and extending through the pulley means to the support member at its other opposite end; and

an extendable and retractable actuator means attached at opposite ends between generally the distal end of the bracket means and the pulley means.

5,012,399
SELF-OSCILLATION TYPE CONVERTER
Hiroshi Takemura, and Yasuji Okamoto, both of Kyoto, Japan, assignors to Murata Manufacturing Co., Ltd., Japan
Filed Dec. 7, 1989, Ser. No. 447,216
Claims priority, application Japan, Dec. 9, 1988, 63-312645
Int. Cl.[5] H02M *3/338*
U.S. Cl. 363—18 **8 Claims**



1. A self-oscillation type converter comprising a transformer having a primary winding and a feedback winding, and a switching transistor having a control electrode and being connected to the primary winding of the transformer, a voltage generated in the feedback winding of said transformer being fed back to the control electrode of said switching transistor, comprising in the following order:

constant current means for receiving a voltage generated in said feedback winding and supplying a constant current through a control resistor to said control electrode of the switching transistor in response to said voltage generated in the feedback winding,

time constant means for receiving an output of said constant current means and defining a time period which starts from generation of said voltage in said feedback winding and continues until the end of a turning-on time period of said switching transistor, and

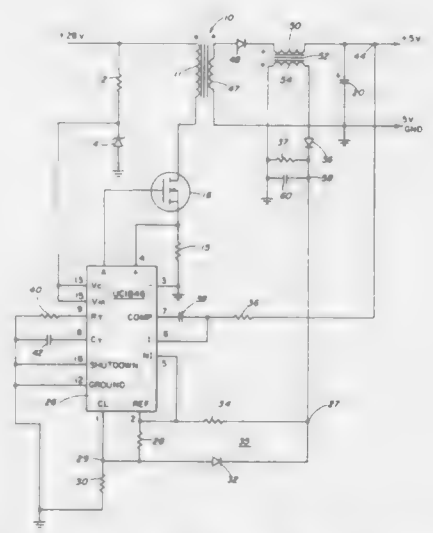
switching means for receiving an output of said time constant means and forcibly turning off said switching transistor according to said output of said time constant means.

5,012,400
DC/AC POWER CONVERTING APPARATUS INCLUDING DC COMPONENT REMOVER
Nobuyuki Yasuda, Tokyo, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan
Filed Sep. 21, 1989, Ser. No. 410,057
Claims priority, application Japan, Sep. 26, 1988, 63-238815
Int. Cl.[5] H02M *07/537, 1/12*
U.S. Cl. 363—95 **8 Claims**

1. A power converting apparatus comprising:

means for supplying DC (direct current) power;

DC-to-AC inverting means for inverting the DC power into AC (alternating current) power;



transformer means for transforming the AC power to obtain desirable AC power;

detecting means for detecting an output signal from the DC-to-AC inverting means to produce an output detection signal;

calculating means for performing a control calculation for the DC-to-AC inverting means to enable the output detection signal to follow a reference signal by generating a first output instruction signal; and,

DC component removing means, located in a feedback loop between the calculating means and the DC-to-AC inverting means, for removing a DC component from the first output instruction signal to derive a second output instruction signal such that the inverting operation of the DC-to-AC inverting means is controlled based upon the second output instruction signal to prevent DC magnetization of the transformer means.

5,012,401
SWITCHING POWER SUPPLY WITH FOLDBACK CURRENT LIMITING
Francis M. Barlage, Tucson, Ariz., assignor to Allied-Signal Inc., Morris Township, Morris County, N.J.
Filed Mar. 19, 1990, Ser. No. 495,8[illegible]
Int. Cl.[5] H02M *7/537*
U.S. Cl. 363—97 **23 Claims**

1. In a switching power supply, apparatus comprising in combination:

a transformer having a primary side comprising at least one primary winding and a secondary side comprising at least one secondary winding, the secondary side being adapted to provide an output signal for use by an external load and a feedback signal for use in internal current limiting; and

current limiting means, comprising a series combination of a resistor and a diode connected to the secondary side to receive the feedback signal such that the diode is reverse-biased in reference to the feedback signal and is interposed between the resistor and the secondary side, for preventing current flow through the diode when the feedback signal exceeds a predetermined level during normal operation of the power supply and for permitting current flow through the diode when the feedback signal is less than the predetermined level, the current limiting means being operative in response to the feedback signal and a reference voltage signal to prevent or permit current flow through the diode.

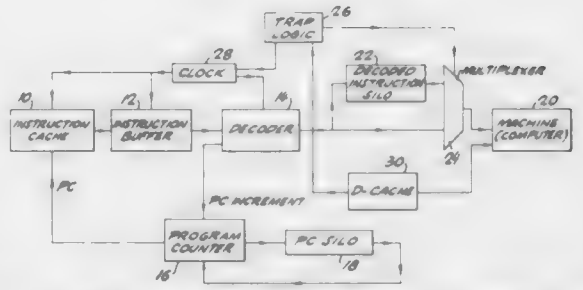
5,012,402
SYSTEM FOR MODIFYING A MACHINE'S PROGRAM AT A REMOTE LOCATION
Yasuo Akiyama, Kyoto, Japan, assignor to Murata Kikai Kabushiki Kaisha, Kyoto, Japan
Filed Dec. 16, 1988, Ser. No. 285,508
Claims priority, application Japan, Dec. 17, 1987, 62-317478
Int. Cl.[5] G06F *15/46*
U.S. Cl. 364—192 **5 Claims**

2. A method for controlling a device at a first location, the method comprising the steps of:

providing a programmable sequencer for driving and controlling the device,

performing a modification of the device at the first location,

performing a modification of the program for the programmable sequencer at the first location to thereby produce a modified program,



sending contents of the modified program to a computer at a second location,

checking and correcting contents of the modified program at the second location to thereby produce a corrected program,

sending the corrected program to the sequencer at the first location, and

inputting the corrected program to the sequencer at the first location.

5,012,403
APPARATUS AND METHOD FOR REPLAYING DECODED INSTRUCTIONS
James B. Keller, Arlington; Kevin L. Ladd, West Townsend, and James J. Reisert, Boxborough, all of Mass., assignors to Digital Equipment Corporation, Maynard, Mass.
Filed Apr. 1, 1988, Ser. No. 176,613
Int. Cl.[5] G06F *9/30, 9/40*
U.S. Cl. 364—200 **9 Claims**

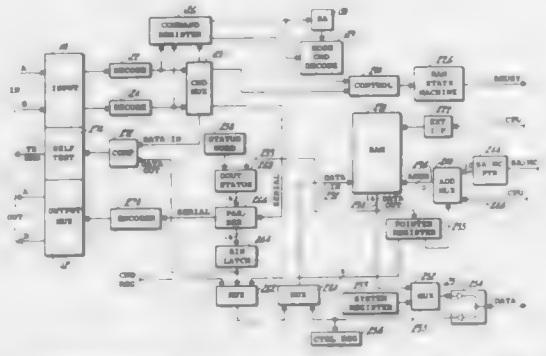
1. A method of replaying instructions to a computer said instructions being decoded by a decoder, and said instructions occurring during a trap shadow, which is a time between an instruction which has caused a trap occurrence and issuance of a trap handler address, the method comprising the steps of:

siloing the decoded instructions in the sequence that they are output by the decoder, for a period of time at least equal to said trap shadow;

issuing a trap handler address;

freezing further decoding of succeeding instructions by the decoder upon issuance of the trap handler address;

replaying said siloed decoded instructions to the computer upon issuance of the trap handler address; and



unfreezing the decoder to permit the decoder to continue decoding of the succeeding instructions after the siloed decoded instructions have been replayed.

5,012,404

INTEGRATED CIRCUIT REMOTE TERMINAL STORES INTERFACE FOR COMMUNICATION BETWEEN CPU AND SERIAL BUS

John W. Pressprich, Woodland Park, Colo., assignor to United Technologies Corporation, Hartford, Conn.

Filed Oct. 28, 1988, Ser. No. 263,748
Int. Cl.[5] G06F *13/00, 13/14, 13/16, 13/36*
U.S. Cl. 364—200 10 Claims

1. An integrated circuit system comprising at least one integrated circuit for interfacing between a serial bus and a CPU and comprising:

an input-output section connected to said serial bus and comprising decoding means for decoding bus commands;

chip control means, responsive to said decoding means, for controlling various components of said integrated circuit;

memory control means, connected to said chip control means, for controlling memory addresses in an integrated circuit memory, and;

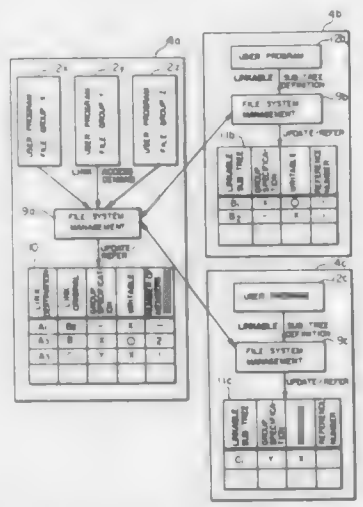
host interface means for passing signals to and from said CPU connected to said integrated circuit system, characterized in that:

said memory control means controls an on-chip two-input memory located on the same chip as said chip and memory control means and controls the flow of memory addresses along a first path extending from said host interface means to said memory and along a second path extending from said input-output section through command decoding means and pointer assignment means to an address port on said on-chip memory;

said chip control means controls a set of data paths having a first branch extending from said host interface means through a first set of controllable devices to a data input port in said on-chip memory, a second branch extending from said input-output section through a set of controllable devices to said data input port, a third branch extending from a data output port in said on-chip memory to an output encoder and thereafter to output bus interface means external to said integrated circuit, a fourth branch extending from said data output port to said host interface means, and a fifth branch extending from said data output port through at least one controllable device to said address port, whereby output data may be converted to an address;

a set of control lines extend from said CPU to CPU interface command means in said integrated circuit for control by said CPU of read and write operations between said CPU and said on-chip memory;

said memory comprises a pointer section containing up to a predetermined number of address pointers for indicating the location of data blocks within a receive storage section of memory for the storage of messages received from said serial bus and for indicating the location of blocks within a transmit storage section of memory for the storage of messages to be sent onto said serial bus, both of said storage sections being subdividable by pointer assignment into a set of at least two storage subsections, whereby said memory is configurable by said CPU through pointer assignment;



said integrated circuit further includes assignment means responsive to a serial bus command, for assigning a pointer to serial bus data to be stored in said memory, whereby data may be selectively stored in one of said storage subsections.

5,012,405

FILE MANAGEMENT SYSTEM FOR PERMITTING USER ACCESS TO FILES IN A DISTRIBUTED FILE SYSTEM BASED ON LINKAGE RELATION INFORMATION

Takashi Nishikado; Megumu Kondo, both of Kawasaki; Kazuhiko Fukuoka, Machida, and Fumiya Murata, Hadano, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Continuation of Ser. No. 109,317, Oct. 19, 1987, abandoned.
This application Aug. 3, 1989, Ser. No. 389,260
Claims priority, application Japan, Oct. 17, 1986, 61-24525
Int. Cl.[5] G06F *15/20*
U.S. Cl. 364—200 17 Claims

1. A file management system for managing a plurality of tree structure files, each of said tree structure files including one directory file and at least one branch file directed by said directory file, said file management system comprising:

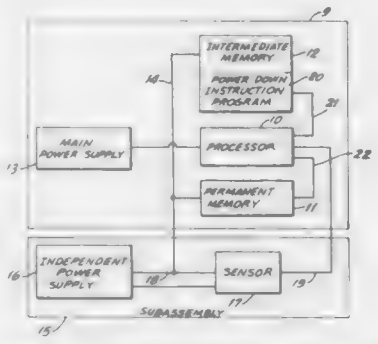
a plurality of processing means each having first memory means for storing a set of tree structure files; and

line means, connected to said plurality of processing means, for transmitting data or commands between each of said plurality of processing means;

wherein at least a first one of said plurality of processing means includes

linking means for providing linkage relation between a first file in said tree structure files in said first one of said processing means and a second file in said tree structure files in a second one of said plurality of processing means in response to a linkage request from an user,

second memory means for storing said linkage relation between said first file and said second file together with an indicator indicating a group of one or more users including said user for which said linkage relation is valid, and



means for judging, in response to a request to access a file directed by said second file through said first file from a first user, whether said request is permissible by checking whether linkage relation between said first file and said second file is valid for said first user by searching said indicator in said second memory means.

5,012,406

LINE OF POWER INTERRUPTION IN PREDETERMINED AREA OF INTERNAL PERMANENT MEMORY

Pierre J. Martin, Caracas, Venezuela, assignor to Power Card Supply, Caracas, Venezuela

Filed Apr. 19, 1988, Ser. No. 183,674
Int. Cl.[5] G06F *1/30*
U.S. Cl. 364—200 10 Claims

1. In a computer supplied by an electric power source and comprising at least an internal intermediate memory for retaining parts of a work in progress while it is operated on by the computer during various states of the computer and an internal permanent memory utilized by the computer to store completed parts of the work in progress through transfer along internal channels, both of which memories are used during normal computer operation, the improvement comprising:

an independent source of power,

detecting means for indicating an interruption of energy supply from said electric power source,

means for reserving memory address locations in said internal permanent memory,

means for switching, in response to detection of said interruption, the independent source of power into operation in relation with said computer,

means responsive to the detecting means for determining the state of the computer operating on the work in progress at the time of interruption, and

means for providing special austere orderly powering down instructions to terminate external computer interfaces and to automatically transfer identically the state of the computer including all work in progress as it exists at the time of interruption to said reserved memory address locations in said internal permanent memory through the normally used internal channels with an indication in the computer of said interruption of said power source, said means for switching then disconnecting said independent source of power.

5,012,407

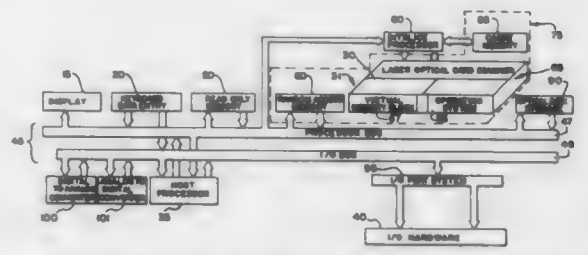
COMPUTER SYSTEM WHICH ACCESSES OPERATING SYSTEM INFORMATION AND COMMAND HANDLERS FROM OPTICAL STORAGE VIA AN AUXILIARY PROCESSOR AND CACHE MEMORY

Charles A. Finn, 26762 SW. 124 Ct., Naranja, Fla. 33032

Filed Dec. 11, 1984, Ser. No. 680,477
Int. Cl.[5] G06F *15/00*
U.S. Cl. 364—200 6 Claims

1. A computer system comprising:

host processing means for processing instructions and data;



first memory means for storing instructions and data;

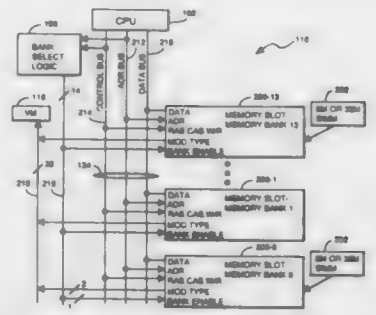
a processor bus connecting said host processing means and said first memory means;

auxiliary processing means connected to said processor bus, cache memory means, and optical storage means, and controlled by said host processing means for retrieving information stored in said optical storage means and for storing said retrieved information in said cache memory means;

said host processing means accessing the information stored in said cache memory means via said processor bus, storing the accessed information in the first memory means, and controlling operation of said computer system based upon the accessed information stored in said first memory means;

said optical storage means having scanning means and a write once, read many times optical storage medium for storing operating system information which controls normal operation of said computer system, and for storing

command handler information comprising a plurality of command handlers which control said computer system in response to a user entered command; and



said host processing means controlling said auxiliary processing means to retrieve said operating system information from said optical storage means to control normal operation of said computer system upon initialization of said computer system, and further controlling said auxiliary processing means to retrieve said command handler information from said optical storage means to control the operation of said computer system in response to the user entered command.

5,012,408

MEMORY ARRAY ADDRESSING SYSTEM FOR COMPUTER SYSTEMS WITH MULTIPLE MEMORY ARRAYS

David G. Conroy, Maynard, Mass., assignor to Digital Equipment Corporation, Maynard, Mass.

Filed Mar. 15, 1990, Ser. No. 494,780
Int. Cl.[5] G06F *13/00*
U.S. Cl. 364—200 8 Claims

1. A computer memory system, comprising:

address bus means for transmitting sets of address signals, each set of address signals defining an address in a predefined address space;

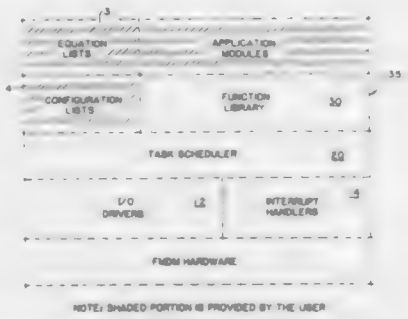
a plurality of memory module slot means, coupled to said address bus means, for receiving memory modules; each memory module slot means including means for receiving a corresponding memory module enable signal; at least one of said memory module slot means including means for receiving at least two different types of memory modules having differing amounts of memory storage;

memory management means, coupled to said plurality of memory module slot means, for assigning an address range

to each memory module slot means solely on the basis of a type of memory module, if any, inserted therein, each said assigned address range being independent of which type of memory modules, if any, are inserted in other ones of said memory module slot means; and

decoder means coupled to said address bus means and said plurality of memory module slot means, for decoding each said set of address signals, and for generating a memory module enable signal corresponding to one of said memory module slot means whenever said set of address signals define an address in one of said predefined address ranges assigned to said plurality of memory module slot means;

wherein each said memory module slot means has a fixed, predefined address range assigned thereto for each different type of memory module which it has means for receiving, and said assigned address ranges for memory module slot means with memory modules inserted therein need not be contiguous;



whereby memory modules can be inserted in any selected ones of said memory module slot means without regard to the corresponding address ranges assigned thereto.

5,012,409

OPERATING SYSTEM FOR A MULTI-TASKING OPERATING ENVIRONMENT

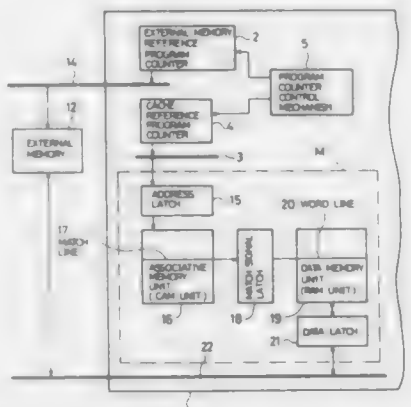
Mitchell S. Fletcher, 17432 N. 60th Dr., Glendale, Ariz. 85308, and Richard P. Semma, 8501 E. Lee Pl., Tucson, Ariz. 85715

Filed Mar. 10, 1988, Ser. No. 166,334
Int. Cl.[5] G06F *9/00, 9/46*
U.S. Cl. 364—200 **5 Claims**

1. A task scheduler system, including an array of priority queues for use in a real time multitasking operating system including equation lists, configuration lists, a function library, input and output drivers, user-created task definition lists of major and minor tasks, including major and minor task elements, and interrupt handlers, initialized to have programmable timer interrupts, comprising:

(a) means for task scheduling according to priority wherein upon the completion of each library function the priority queues are interrogated and the highest priority task segment is found whose requested resource is available and executed and wherein task segments in the same priority queue are executed in round-robin fashion,

and wherein the task scheduling means further includes means for maintaining the status of all major tasks in the system in the states of unlocked and done, unlocked and active, unlocked and waiting, locked and active, or locked and waiting including means for locking tasks into a mode of operation so as to only allow the locked task to execute overriding the normal state of priority execution, and wherein the task scheduling means still further includes waiting means for suspending operation on a task that requires completion of a library function; and



(b) means for task creation responsive to programmable timer interrupts including means for interrogating the task definition lists and means for creating all major and minor task elements from the task definition lists so as to create major and minor tasks which are added to the priority queues.

5,012,410

DATA PROCESSOR WITH INSTRUCTION CACHE MEMORY

Tatsuya Ueda, Itamishi, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 2, 1988, Ser. No. 227,290
Claims priority, application Japan, Aug. 5, 1987, 62-196805
Int. Cl.[5] G06F *13/00*
U.S. Cl. 364—200 **8 Claims**

1. A microprocessor system having a microprocessor and coupled to an external memory comprising:

a first address bus for transmitting an address to the external memory;

a first register coupled to said first address bus for outputting the address to said first address bus;

a cache for storing a plurality of addresses and a corresponding plurality of data;

a second address bus, coupled to said cache, for transmitting the address to said cache;

a second register, coupled to said second address bus, for outputting the address to said second address bus;

a data bus, coupled to said external memory and to said cache, for transmitting data between said external memory and said microprocessor;

a third register, coupled to said cache and to said data bus, for transmitting data between said data bus and said cache memory;

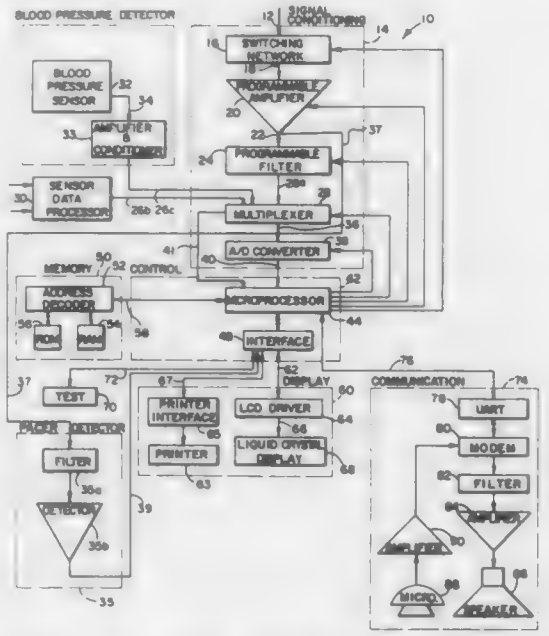
means, coupled to said first and second registers, for issuing a control signal wherein said control signal updates a contents of said second register, with a next address during a cache read of a previous address while maintaining a content of said first register for data being read from said cache and begins a cache read of said next address using an updated contents of said second register once a data stored at said previous address is output from said cache to said third register.

5,012,411

APPARATUS FOR MONITORING, STORING AND TRANSMITTING DETECTED PHYSIOLOGICAL INFORMATION

Charles J. Policastro, 2122 Old Forde Way, Lansdale, Pa. 19446; Edmond J. Dougherty, Philadelphia, Pa., and Martin J. Dowling, Haddonfield, N.J., assignors to Charles J. Policastro, Lansdale, Pa.

Filed Jul. 23, 1985, Ser. No. 757,965
Int. Cl.[5] A61B *5/04*
U.S. Cl. 364—413.06 **19 Claims**



1. A portable, completely self-contained, battery-powered, microprocessor controlled, diagnostic quality apparatus small in size so as to be carried or worn by a patient or other user for monitoring, storing and transmitting detected physiological information of a person being monitored, the apparatus comprising:

means for sequentially receiving analog signals corresponding to heart activity from at least five different cardiac sensors attached at different locations on the body of the person being monitored to provide diagnostic quality cardiac information;

means for receiving analog electrical signals corresponding to blood pressure of the person being monitored from at least one sensor;

means for converting the received analog signals corresponding to heart activity and to blood pressure to a series of digital pulses at a predetermined sampling rate;

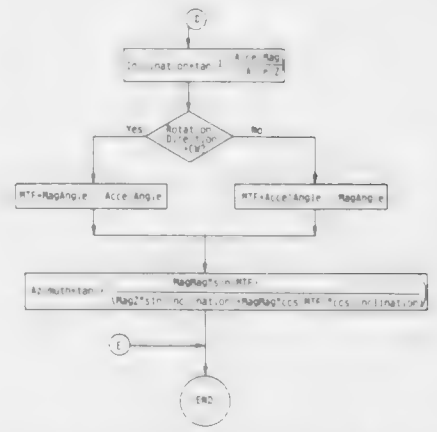
memory means for receiving and storing the digital pulses in predetermined memory locations, the memory means being of the circular type and of a predetermined size capable of storing digital pulses equivalent to at least three minutes of diagnostic quality physiological activity so that when the memory means is filled with stored digital pulses, further digital pulses which are received are stored in the memory means by deleting previously stored digital

pulses on a first-in, first-out basis, the memory means including means for preventing the deletion of at least a portion of the stored digital pulses corresponding to a period of physiological activity preceding the happening of an event, the memory means continuing to store digital pulses corresponding to physiological activity subsequent to the happening of the event until the memory means is filled, whereupon no further digital pulses are stored;

means for recalling the stored digital pulses from the memory means;

means for receiving the recalled digital pulses from the memory means, for converting the digital pulses to analog signals and for displaying the analog signals to provide a graphic representation of the physiological information;

means for receiving the recalled digital pulses from the memory means and for transmitting the digital pulses to a remote location over a communications system; and



means for receiving control signals from the remote location over the communications system and for converting the control signals into digital control pulses, the digital control pulses controlling operation of the apparatus and transferring data to the apparatus.

5,012,412

METHOD AND APPARATUS FOR MEASUREMENT OF AZIMUTH OF A BOREHOLE WHILE DRILLING

Walter A. Helm, Plainville, Conn., assignor to Teleco Oilfield Services Inc., Meriden, Conn.

Filed Nov. 22, 1988, Ser. No. 275,115
Int. Cl.[5] E21B *47/022*
U.S. Cl. 364—422 **29 Claims**

1. A method for determining the azimuth angle of a borehole being drilled by instruments contained downhole in a tool in the drillstring, including the steps of:

rotating the drillstring;

sensing with accelerometer means while the drillstring is rotating the instantaneous acceleration components of gx and gz at the location of the tool;

sensing with magnetometer means while the drillstring is rotating the instantaneous magnetic field components of hx and hz at the location of the tool wherein the components gz and hz are along the axis of the drillstring, the component gx being orthogonal to gz and the component hx being orthogonal to hz;

determining the rotation rate of the drillstring;

determining the direction of the rotation of the drillstring;

determining azimuth angle from at least one of the equivalent relationships

$$\text{Azimuth} = \tan^{-1}\left[\frac{\sin(\theta)\sin(\phi)}{\sin(inc)\cos(\theta) + \cos(inc)\sin(\theta)\cos(\phi)}\right]$$

$$\text{Azimuth} = \tan^{-1}\left[\frac{\sin(\phi)}{\sin(inc)\cos(\theta) + \cot(inc)\cos(\phi)}\right]$$

$$\text{Azimuth} = \tan^{-1}\left[\frac{\sin(\phi)}{\sin(inc)\frac{Hz}{|Hx|} + \cos(inc)\cos(\phi)}\right]$$

$$\text{Azimuth} = \tan^{-1}\left[\frac{|Hx|\sin(\phi)}{Hz\sin(inc) + |Hx|\cos(inc)\cos(\phi)}\right]$$

where

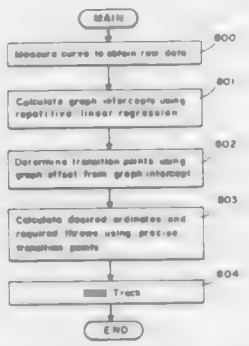
θ = the angle between the tool axis and the earth's magnetic field vector which is determined as a function of $|Hx|$ and Hz;

ϕ = the phase angle between the fundamental frequency component hx and gx;

INC = the angle between the tool axis and the earth's gravity vector which is determined as a function of $|Gx|$ and Gz;

Hz = the time average of hz;

$|Hx|$ = the magnitude of the first discrete fourier transform coefficient of hx; and



|Gx| = the magnitude of the first discrete fourier transform coefficient of gx.

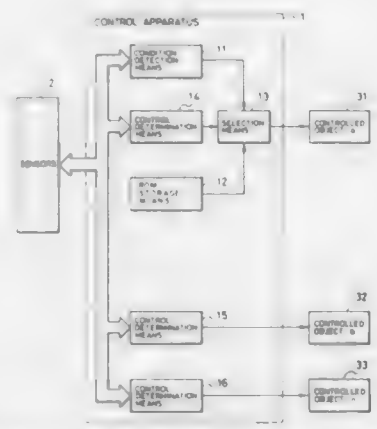
5,012,413

RAILROAD TRACK CURVE LINING APPARATUS AND METHOD

Dennis A. Sroka, and William E. Perry, both of Ludington, Mich., assignors to Pandrol Jackson, Inc., Ludington, Mich.

Filed Jul. 27, 1988, Ser. No. 225,040
Int. Cl.[5] G06F *15/20;* **E01B** *35/10*
U.S. Cl. 364—424.01 **20 Claims**

1. An apparatus for lining a railroad track comprising:
a vehicle assembly for traveling along a railroad track,
shifting means for laterally shifting the railroad track;
measuring means carried by said vehicle assembly for measuring initial track ordinates as said vehicle assembly travels along said track;
computer means for calculating an ideal track shape as a function of said initial track ordinates, said computer means including:
memory means for receiving and storing the initial track ordinates;
means for detecting sequences of relatively constant ordinate values indicative of tangent and curve track segments;
means for performing a plurality of linear regressions on varying sequences of ordinate values for each spiral track segment between segments of relatively constant ordinate values;
selecting means for selecting one of the linear regressions associated with each spiral as the best fit linear regression;
means for finding the points of intersection between each best-fit linear regression and the relatively constant value at either end thereof;
means for locating the track transition points as a function of the points of intersection, the transition points being distinct from said intersection points; and
means for calculating the desired track ordinates as a function of the tangent and curve information and the transition points; and
control means for causing said shifting means to move the track responsive to said desired ordinate values as said vehicle assembly travels along the track.



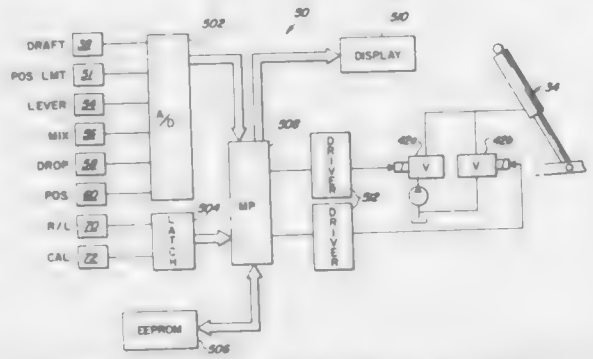
5,012,414

VEHICLE CONTROL APPARATUS

Mitsuaki Ishii, and Masaaki Miyazaki, both of Hyogo, Japan, assignors to Mitsubishi Denki K.K., Tokyo, Japan

Continuation of Ser. No. 125,661, Nov. 25, 1987, abandoned. This application Nov. 13, 1989, Ser. No. 434,574
Claims priority, application Japan, Nov. 25, 1986, 61-281201
Int. Cl.[5] G06F *15/20*
U.S. Cl. 364—424.03 **6 Claims**

1. An apparatus for controlling a vehicle comprising:
sensor means (2) for sensing conditions at various parts of the vehicle, and for outputting information in accordance with the sensed conditions;
an object (31–33) which is to be controlled;
control determination means (14–16), coupled to said sensor means, for storing predetermined control specifications, and for generating a first control signal for said object in accordance with the output information from said sensors means and said stored predetermined control specifications;
condition detection means (11), coupled to said sensors, for detecting output information therefrom, and for outputting a predetermined control signal when the detected output information from said sensor means represents a predetermined sensed condition which is improbable in practical use;



storage means (12) for storing identifying data which corresponds to the predetermined control specifications stored in said control determination means, said storage means including means for reading out said stored identifying data as a second control signal for said object; and
selection means (13), in response to said condition detection means, for selectively applying one of said first and second control signals to said object, whereby an operator who applies the predetermined condition which is improbable in practical use can ascertain the predetermined control specifications stored in said control determination means by observing the operation of said object which will be controlled by said second control signal.

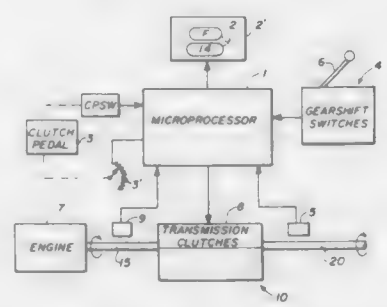
CONTROL SYSTEM CALIBRATION

Thomas E. Boe, Grundy County; Mark A. Bergene; Carl E. Kittle, both of Cedar Falls, and Gregory E. Sparks, Waterloo, all of Iowa, assignors to Deere & Company, Moline, Ill.

Division of Ser. No. 294,537, Jan. 6, 1989, Pat. No. 4,931,967. This application Jan. 23, 1990, Ser. No. 469,655
Int. Cl.[5] A01B *63/112*
U.S. Cl. 364—424.07 **3 Claims**



1 In a hitch control system having a rockshaft hydraulic cylinder for moving the hitch under th control of a control valve, a control unit for controlling operation of the control valve in response to movement of an operator-movable command lever and in response to at least one sensed parameter such as a draft force parameter and a hitch position parameter, and a display connected to the control unit, the control unit comprising:
means for storing control valve parameters associated with different volumes of rockshaft cylinders;
means for storing index values, each index value being associated with a particular volume of a rockshaft cylinder and with at least one of the stored control valve parameters;
means for selectively displaying a certain one of the stored index values depending upon the position of the command lever; and
means for selecting said at least one of said stored control valve parameters which is associated with the displayed index value, the control unit controlling the control valve as a function of the sensed parameter, the command lever and the selected control valve parameters.

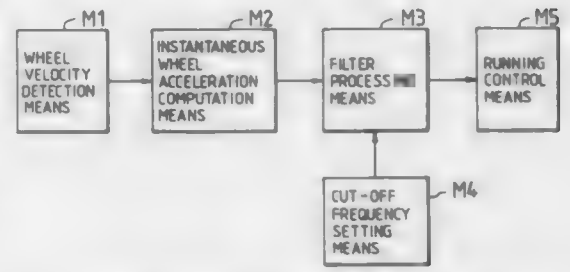
MEDIUM SPEED TRANSMISSION SHUTTLE SHIFTING

Garth H. Bulgrien, Ephrata, Pa.; Jim E. Goodbar, Coffeyville, Kans., and Paul W. Johnson, Boulder, Colo., assignors to Ford New Holland, Inc., New Holland, Pa. and Deere & Company, Moline, Ill.

Division of Ser. No. 444,312, Dec. 1, 1989, abandoned. This application Dec. 18, 1989, Ser. No. 452,020
Int. Cl.[5] B60K *41/08*
U.S. Cl. 364—424.1 **13 Claims**



1. A method of controlling vehicle deceleration during shuttle shifting of a transmission having an initial clutch set for selectively connecting an engine driven input drive shaft in driving relationship with a first plurality of shafts, a final clutch set for selectively connecting a second plurality of shafts in driving relationship with an output shaft for driving the vehicle, and an intermediate clutch set for selectively connecting the first plurality of shafts in driving relationship with said second plurality of shafts, first gears on said first plurality of shafts for driving all of said first plurality of shafts at the same speed when any clutch of said initial clutch set is energized, and second gears on said first plurality of shafts for driving said second plurality of shafts at different speeds relative to the speeds of said first plurality of shafts when any one clutch of said set of intermediate clutches is energized, said method comprising:
energizing the one clutch in said initial set of clutches corresponding to the slowest speed of operation of said first plurality of shafts;
energizing the one clutch in said intermediate set of clutches corresponding to the slowest speed of operation of said second plurality of shafts such that said transmission is placed in the lowest available speed of operation;
energizing a first clutch in said final set of clutches corresponding to the slowest speed of operation of said output shaft in the direction of movement of said vehicle;
sensing vehicle speed; and
modulating the pressure exerted by said first clutch of said final set of clutches to decelerate the speed of movement of said vehicle.

MOTOR VEHICLE RUNNING CONTROL APPARATUS

Takashi Watanabe; Shusaku Fujimoto, both of Kariya, and Kazunori Sakai, Aichi, all of Japan, assignors to Nippondenso Co., Ltd., Kariya and Toyota Jidosha Kabushiki Kaisha, Toyota, both of, Japan

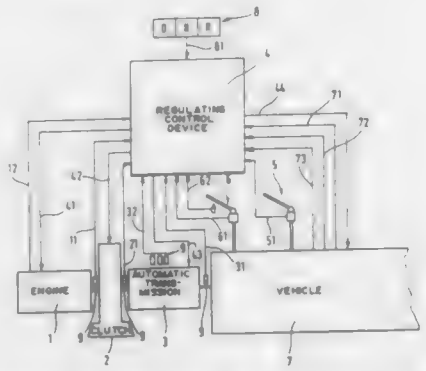
Filed Mar. 6, 1989, Ser. No. 319,202
Claims priority, application Japan, Mar. 4, 1988, 63-52278
Int. Cl.[5] B60T *8/32*
U.S. Cl. 364—426.02 **22 Claims**

1. A vehicle control apparatus for a vehicle having a set of road wheels including drive wheels and driven wheels, the apparatus comprising:
means for controlling a running condition of said vehicle based upon wheel acceleration signals and wheel velocity signals; and
wheel acceleration signal generating means for generating said wheel acceleration signals and said wheel velocity signals, said wheel acceleration signals representing respective values of rotational acceleration of each of said road wheels of said vehicle, said wheel velocity signals representing respective values of rotational velocity of said wheels, said wheel acceleration signal generating means comprising for each wheel:
wheel velocity detection means for detecting a velocity of said each wheel and producing data representing said wheel velocity,
instantaneous wheel acceleration computation means for computing successive values of instantaneous wheel acceleration from said wheel velocity data, and for outputting said successive values as an instantaneous wheel acceleration signal,
filter processing means for excluding high frequency components from said instantaneous wheel acceleration signal which are above a predetermined filter cut-off frequency and thereby outputting said wheel acceleration signal,
filter cut-off setting means for setting said filter cut-off frequency in accordance with a specific condition of said wheel, in which said wheels comprise drive wheels and driven wheels, and said filter cut-off setting means setting said cut-off frequency to a first predetermined value when said wheel acceleration is computed for a drive wheel and to a second predetermined value when said wheel acceleration is computed for a driven wheel, said first predetermined value being lower than said second predetermined value.

5,012,418

VEHICLE OPERATING AND SPEED REGULATING DEVICE

Petzold, Rainer, Friedrichshafen, Fed. Rep. of Germany, assignor to Zahnradfabrik Friedrichshafen, AG., Friedrichshafen, Fed. Rep. of Germany



PCT No. PCT/EP87/00159, § 371 Date Aug. 18, 1988, § 102(e) Date Aug. 18, 1988, PCT Pub. No. WO87/05867, PCT Pub. Date Oct. 8, 1987

PCT Filed Mar. 20, 1987, Ser. No. 273,038

Claims priority, application PCT Int'l Appl., Mar. 27, 1986, PCT/EP86/00185

Int. Cl.[5] B60K *41/08, 41/28;* **G05D** *13/66*

U.S. Cl. 364—426.04 7 Claims

1. Apparatus for controlling the acceleration and deceleration of a motor vehicle having an engine, an automatic transmission, a clutch coupling the engine with the transmission, and gas and brake pedals in order to optimize engine performance and to maintain a given vehicle speed established by operation of the pedals, comprising

(a) means for continuously sensing the position of the brake pedal;

(b) means for continuously sensing the position of the gas pedal;

(c) means for continuously sensing the speed of the vehicle and the operating conditions of the engine, clutch, and transmission, respectively;

(d) first means for continuously calculating a power difference, a gradient for power change and the engine load and speed change in accordance with the sensed positions of the brake and gas pedals and with the sensed vehicle speed and operating conditions of the engine, clutch and transmission;

(e) second means for continuously calculating a transmission position in accordance with a new engine speed resulting from said calculation of engine speed; and

(f) means for producing control signals delivered to the engine, clutch and transmission to control the operation thereof for acceleration and deceleration of the vehicle, whereby a desired vehicle speed is maintained

---

5,012,419

SYSTEM AND METHOD FOR AUTOMATICALLY CONTROLLING VEHICLE SPEED TO DESIRED CRUISE SPEED

Isao Yamamoto, Kanagawa, Japan, assignor to Nissan Motor Company, Ltd., Japan

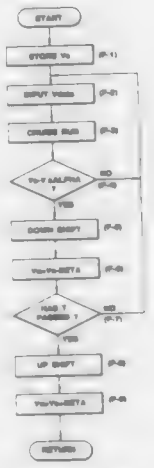
Filed Dec. 22, 1988, Ser. No. 288,083

Claims priority, application Japan, Dec. 28, 1987, 62-329579

Int. Cl.[5] B60K *31/00*

U.S. Cl. 364—426.04 10 Claims

10. A method of automatically controlling speed of a vehicle to a desired cruise speed, comprising the steps of:



(a) detecting current vehicle speed;

(b) storing an indication of desired cruise speed for the vehicle;

(c) deriving an indication of the difference between the detected current vehicle speed and the indication of stored cruise speed;

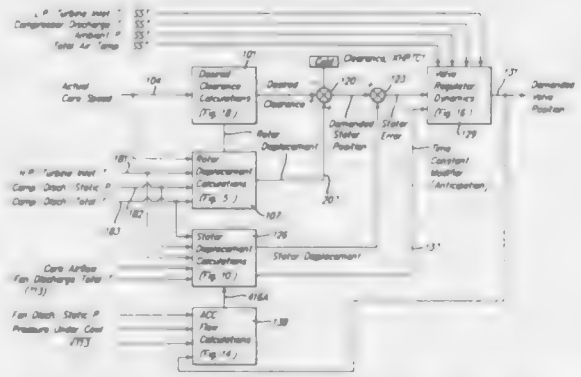
(d) adjusting an operating variable of a driving force adjusting mechanism of an engine of the vehicle in response to the indication of the speed difference so that the vehicle speed substantially coincides with the stored cruise speed;

(e) determining whether the detected current vehicle speed is less than the stored cruise speed by a first predetermined value;

(f) shifting down a transmission mechanism of the vehicle when the detected vehicle speed is less than the stored cruise speed by the first predetermined value and simultaneously updating the stored cruise speed to reduce the stored cruise speed by a second predetermined value; and

(g) adjusting the vehicle speed so that it substantially coincides with the updated cruise speed.

5,012,420



ACTIVE CLEARANCE CONTROL FOR GAS TURBINE ENGINE

Roger C. Walker, Fairfield; Scott P. Reese, West Chester; David L. Joyce, Middletown, and David A. Kastrup, Cincinnati, all of Ohio, assignors to General Electric Company, Cincinnati, Ohio

Filed Mar. 31, 1988, Ser. No. 175,894

Int. Cl.[5] F02C *7/12, 7/18;* **F01D** *25/08*

U.S. Cl. 364—431.02 38 Claims

4. A clearance control for a gas turbine engine, comprising:

(a) means for calculating first, steady-state, turbine rotor and casing temperatures, based on measurements of selected engine operating characteristics;

(b) means for modifying the first temperatures, based on the respective behaviors of the first temperatures;

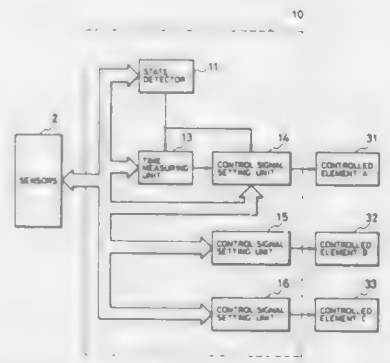
(c) means for calculating turbine rotor and casing diameters, based on the modified temperatures of (b);

(d) means for computing a desired clearance between the rotor and casing based on engine speed; and

(e) means for adjusting temperature of the casing in order to attain the desired clearance.

5,012,421

VEHICLE CONTROL APPARATUS



Mitsuaki Ishii, Hyogo, Japan, assignor to Mitsubishi Denki K. K., Tokyo, Japan

Continuation of Ser. No. 124,522, Nov. 24, 1987, abandoned. This application Apr. 27, 1989, Ser. No. 344,526

Claims priority, application Japan, Nov. 24, 1986, 61-280419

Int. Cl.[5] F02B *3/00*

U.S. Cl. 364—431.10 5 Claims

1. A control apparatus for a vehicle, which apparatus can be rapidly tested prior to being placed in normal use, comprising:

a plurality of sensors for detecting respective operating conditions at various portions of said vehicle, including an engine of said vehicle;

a plurality of controlled elements operated in response to output signals of said sensors;

time measuring means for measuring a fixed time interval from a predetermined point in time;

state detection means for detecting when an output signal of at least one of said sensors is in a predetermined improbable state which would not occur in normal operation of said control apparatus after said apparatus has been placed in normal use; and

control determination means for reading output information from said sensor and processing said information in accordance with a predetermined procedure, with the output information of at least a first one of said sensors normally having no effect on the respective controlled element for said time interval measured by said time measuring means, said control determined means, upon detection of said improbable state which would not occur in normal operation by said state detection means, applying the output information of said first sensor to control said respective controlled element independently of said time determined by said time measuring means, and prior to the elapse of said time interval.

5,012,422

CONTROLLING ENGINE FUEL INJECTION

Shinsuke Takahashi, Yokohama; Teruji Sekozawa, Kawasaki, and Motohisa Funabashi, Sagamihara, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

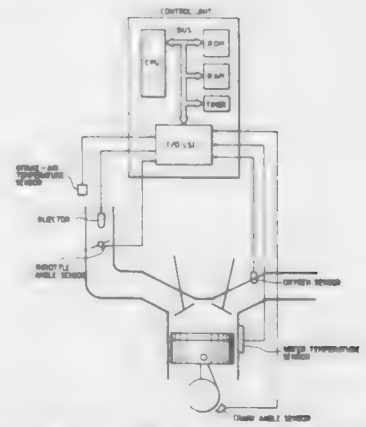
Filed Jan. 25, 1989, Ser. No. 301,363

Claims priority, application Japan, Jan. 29, 1988, 63-17062

Int. Cl.[5] F02B *3/00*

U.S. Cl. 364—431.050 31 Claims

1. An engine fuel injection control method for use in an electronic fuel injection controller for an engine, which is designed to control the fuel supply quantity by measuring and calculating engine running conditions, said method comprising the steps of:



(A) experimentally determining, at a central location for many engines, the relationship between accurately measured air flow and at least one of engine running conditions over the operating range of the engine;

(B) storing said relationship in a readable look-up table associated with the measured engine;

(C) measuring throttle angle and producing a throttle angle signal;

(D) measuring crank angle and producing a crank angle signal;

(E) measuring water temperature and producing a water temperature signal;

(F) measuring intake air temperature and producing an intake air temperature signal;

(G) measuring the oxygen content in the exhaust gas and producing an oxygen content signal;

(H) calculating an estimated value of the engine running condition from at least some of said signals;

(I) determining the air flow from said look-up table and said calculated value for the engine running condition;

(J) controlling the fuel supply quantity based upon said air flow; and

(K) continuously repeating at least one of said steps C, D., E. F. G and said steps H, I, J in order during the running of the engine.

5,012,423

BACK-UP FLY BY WIRE CONTROL SYSTEM

Stephen S. Osder, Scottsdale, Ariz., assignor to McDonnell Douglas Corporation, Long Beach, Calif.

Filed Apr. 17, 1989, Ser. No. 338,624

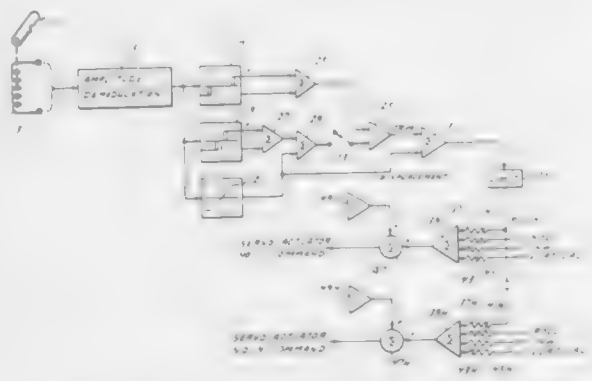
Int. Cl.[5] B64C *13/16*

U.S. Cl. 364—432 26 Claims

1. A back-up fly by wire control system comprising:

input control means for controlling at least on flight characteristic of an aircraft;

linear transmission means, connected to and responsive to said input control means, for generating an output proportional to the degree of input control applied to said input control means;



first step transmission means, connected to and responsive to said input control means, for generating a constant output when said input control means is set to the magnitude limit of its control, said constant output having a polarity indicative of the polarity of said limit, and for generating no output when said input control means is set to less than a maximum limit of control;

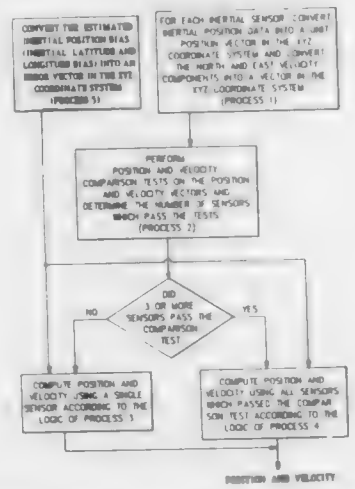
second step transmission means, connected to and responsive to said input control means, for generating a constant output rate when said output control means exceeds a prespecified limit of control said constant output rate having a polarity indicative of the polarity of said prespec-

ified limit, and for generating no output when said input control means is set to less than said prespecified limit of control;

limitation means for limiting the amplitude of a control signal;

control coupling means, connected to said linear transmission means, said first and said second step transmission means, and said limitation means for constantly coupling

said linear transmission means and said first step transmission means to said limitation means, and for switchably coupling said second step transmission means to said limitation means; and,



selective actuator means, connected to said limitation means, for weighting control signals received from said control means, summing said weighted control signals with a time integral position signal, and acting upon said summed weighted control signals.

5,012,424

MULTIPLE SENSOR SYSTEM AND METHOD

David W. Dodson, Glendale, Ariz., assignor to Honeywell Inc., Minneapolis, Minn.

Filed Feb. 22, 1989, Ser. No. 313,927
Int. Cl.[5] G05D *1/10;* **G01C** *21/00*
U.S. Cl. 364—449 **10 Claims**

5. A multiple sensor method of computing position and velocity from data from a first sensor unit and a second sensor unit and a third sensor unit, comprising the steps of:

resolving the data from the first sensor unit and the data from the second sensor unit and the data from the third sensor unit into a common XYZ coordinate system for obtaining a unit position vector and a horizontal velocity vector for each of the three sensor units;

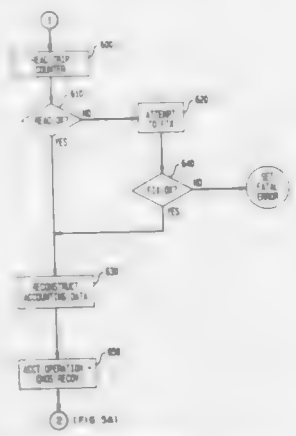
comparing in a comparison test each unit position vector with a corresponding unit position vector of a selective prior reading thereof for each of the three sensor units;

comparing in the comparison test each velocity vector with a corresponding velocity vector of a selective prior reading for each of the three sensor units;

determining by using a selective comparison process which sensor units pass the comparison tests of the comparisons of each of the three sensor units and which sensor unit is closest to passing if not passing;

computing position and velocity using a first selective computing process if all three sensor units do not pass their comparison tests and using data from one sensor unit either passing its comparison tests or being closest to passing if not passing, or computing position and velocity using a second selective computing process and using data from all three sensor units if all three sensor units pass their comparison tests;

storing an inertial position bias as an error vector in the XYZ coordinate system, and



transforming the unit position vector and the horizontal velocity vector as computed to a geodetic latitude/longitude system for use by a user.

5,012,425

EPM HAVING AN IMPROVEMENT IN NON-VOLATILE STORAGE OF ACCOUNTING DATA

Nanette Brown, Orange, Conn., assignor to Pitney Bowes Inc., Stamford, Conn.

Filed Dec. 30, 1988, Ser. No. 292,194
Int. Cl.[5] G07B *17/02*
U.S. Cl. 364—464.02 **7 Claims**

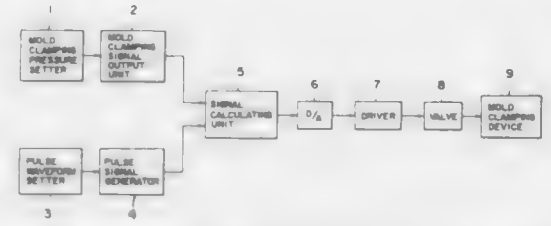
1. A postage meter comprising:

a microcomputer operating under control of a microcomputer program;

a non-volatile memory connected to said microcomputer for storing accounting data;

printing means for printing an indicia, said indicia including a value;

said printing means being operatively connected to said microcomputer and wherein printing of said value is accounted for by said microcomputer, said accounting data being stored in said non-volatile memory;



said non-volatile memory having a first plurality of buffers comprising an accounting data store for storing updated accounting data at predetermined intervals, a second plurality of buffers comprising a print counter store and a third plurality of buffers comprising a store for storing the indicia value; wherein current accounting data is calculated from previously updated accounting data stored in said first plurality of buffers, said print counter data store in said second plurality of buffers and the indicia value.

5,012,426

METHOD AND APPARATUS FOR CONTROLLING INJECTION COMPRESSION MOLDING

Susumu Harada, and Hiroshi Kumazaki, both of Numazu, Japan, assignors to Toshiba Kikai Kabushiki Kaisha, Tokyo, Japan

Filed Apr. 18, 1989, Ser. No. 340,067
Claims priority, application Japan, Apr. 20, 1988, 63-97196
Int. Cl.[5] G06F *15/00;* **B29C** *47/92*
U.S. Cl. 364—476 **6 Claims**

1. Apparatus for controlling injection compression molding comprising:

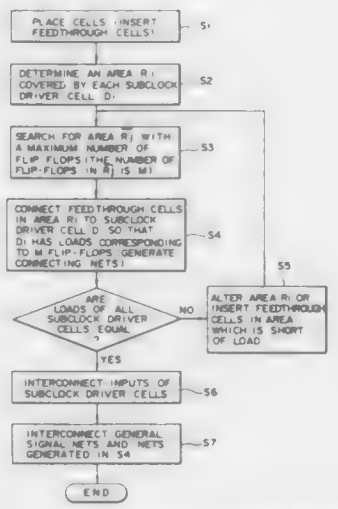
a mold clamping pressure setter for setting the mold clamping pressure of said injection compression molding;

a pulse waveform setter which sets a pressure waveform which varies a pressure set by said mold clamping setter in accordance with an interval after starting mold closing;

a digital pulse signal generator for outputting the pressure set by said mold clamping pressure setter as an electric signal representing a pressure waveform;

a signal calculating unit for converting said electric signal into a signal commensurate with a preset pressure waveform;

a digital analog converter for converting said digital pulse signal into an analog signal; and



driving means for driving a mold clamping device in response to said analog signal.

5,012,427

SEMICONDUCTOR INTEGRATED CIRCUIT AND METHOD OF MANUFACTURING THE SAME

Mototaka Kuribayashi, Kawasaki, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jan. 30, 1989, Ser. No. 303,261
Claims priority, application Japan, Jan. 30, 1988, 63-20305; Mar. 23, 1988, 63-67108
Int. Cl.[5] G06F *15/60, 15/20*
U.S. Cl. 364—490 **10 Claims**

1. A method of manufacturing a semiconductor integrated circuit device, comprising the steps of:

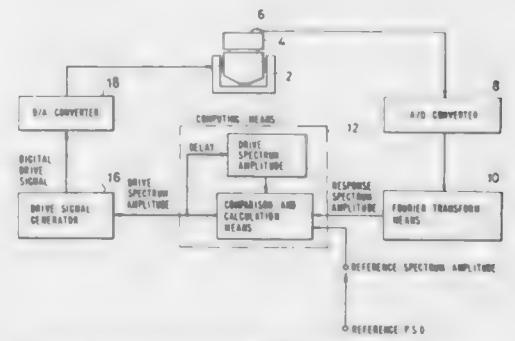
forming, on a semiconductor chip, a plurality of cell arrays including at least one cell array having at least one main cell and at least one feed-through cell;

arranging a plurality of clock driver cells on said plurality of cell arrays so that at least one of said clock driver cells is provided in each of said cell arrays;

determining the number of said main cells in each of said cell arrays which are to be driven by said clock driver cells;

detecting the maximum number of said main cells which it is determined are to be driven in the above step;

calculating the difference between the detected maximum number of said main cells and the total number of said main cells included in each of said cell arrays; and



connecting, to said clock driver cells, said feed-through cells, the number of which corresponds to the calculated difference, so that loads imposed on said clock driver cells are made substantially uniform.

5,012,428

VIBRATION CONTROL SYSTEM

Kazuyoshi Ueno, Nishinomiya, and Katsushi Imoto, Itami, both of Japan, assignors to IMV Corporation, Osaka, Japan

Filed Jul. 13, 1989, Ser. No. 379,391
Claims priority, application Japan, Nov. 25, 1988, 63-298506
Int. Cl.[5] G06F *15/20*
U.S. Cl. 364—508 **11 Claims**

1. Vibration control system, comprising:

sensing means for sensing a movement of a test object;

an A/D converter for converting a detected signal from said sensing means into a digital response signal;

Fourier transform means which converts the digital response signal into a response spectrum amplitude signal and outputs the response spectrum amplitude signal;

means for generating a reference spectrum amplitude signal from a given reference power spectral density data;

computing means which calculate a drive spectrum amplitude using the response spectrum amplitude and said reference spectrum amplitude signal, and outputs a drive spectrum amplitude signal;

random phase generating means for outputting a signal representing a set of random phases;

multiplying means which calculates a drive spectrum by multiplying components of the drive spectrum amplitude signal by the random phase factor signal from the random phase generating means;

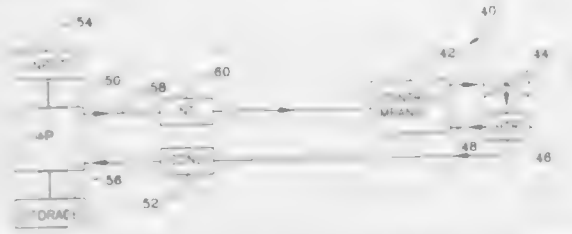
inverse Fourier transform means which converts the drive spectrum into a time domain signal;

phase shift means for shifting the phase of the time domain signal;

windowing means for windowing the time domain signal to obtain a windowed time domain signal;

said random phase generating means, said multiplying means, said inverse Fourier transform means, said phase shift means and said windowing means including means for repeating their operation to obtain plural windowed time domain signals; and

overlapping means which overlaps the plural windowed time domain signals for outputting a digital drive signal;



a D/A converter for converting the digital drive signal from the overlapping means into an analog drive signal and for outputting the analog signal to control the operation of a vibration generator.

5,012,429

METHOD AND APPARATUS FOR OPTIMIZATION OF FEEDWATER HEATER LIQUID LEVEL

Joel B. Lantz, Bedford Heights, Ohio, assignor to Neundorfer, Inc., Willoughby, Ohio

Filed Jan. 17, 1989, Ser. No. 298,346
Int. Cl.[5] G01F *23/22*; F16K *31/02*
U.S. Cl. 364—509 **29 Claims**

1. A control apparatus for maintaining optimum water levels in a feedwater heater of the type including an outer shell and an internal tubing structure, for receiving and condensing into water in the shell, steam from a steam turbine for heating feedwater that is flowing through the tubing structure to a steam boiler which supplies steam to the turbine, and for discharging liquid water from the shell while maintaining certain water levels in the bottom of the shell and in a drains subcooler portion of said feedwater heater, said apparatus comprising:

first means for storing, as a function of boiler load, breakpoint water level setpoint data and for calculating operating water level setpoint data from said breakpoint water level setpoint data, said breakpoint water level setpoint data having been determined from breakpoints of a plurality of curves, each representing a drains cooler approach temperature vs. water level setpoint characteristic for a predetermined boiler load;

water level sensing means for providing water level data corresponding to water levels measured in the bottom of the shell of said feedwater heater;

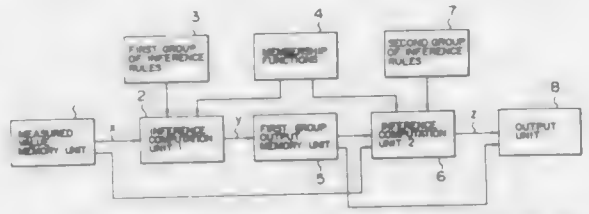
control means responsive to said operating water level setpoint data from said first means for receiving and responding to said water level data from said water level sensing means for controlling a discharge valve to discharge liquid water from the shell of said feedwater heater to control said liquid water level in the shell of said feedwater heater; and

boiler load determining means for determining said boiler load and for providing boiler load data to said first means,

said first means operable for establishing operating water level setpoints for said control means as a function of said boiler load data,

thereby providing boiler load-responsive level control for said feedwater heater for optimizing operation thereof.

5,012,430



FUZZY INFERENCE-BASED DIGITAL CONTROL METHOD AND APPARATUS

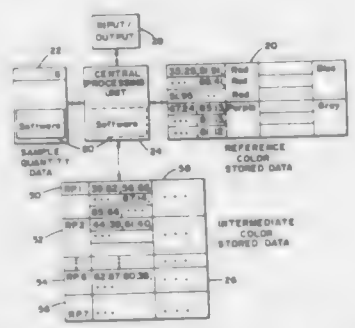
Akito Sakurai, Hachioji, Japan, assignor to Hitachi, Ltd., Tokyo, Japan

Filed Sep. 2, 1987, Ser. No. 92,137
Claims priority, application Japan, Sep. 3, 1986, 61-207275
Int. Cl.[5] G06F *15/00*
U.S. Cl. 364—513 **11 Claims**

1. In a digital control method including the steps of taking measurable state variable values of a controlled object as inputs or said state variable values and values computed from said state variables as inputs, computing values of fuzzy variables obtained from implication rules for fuzzy interference, expressed in the form of conditional statements, using said input variables as fuzzy variables, and controlling said controlled object according to the result of said computing, a fuzzy inference-based digital control method comprising, in said computing step:

a first step of computing fuzzy variables representing the state of the controlled object on the basis of selected ones

of input measurable variable values in accordance with predetermined implication rules of a group regarding attributes of said controlled object; and



a second step of computing control variable values for the controlled object from inputs including at least the fuzzy variables determined by said first step, in accordance with predetermined implication rules of another group regarding a control output to be applied to the controlled object.

5,012,431

OBJECTIVE COLOR NOTATION SYSTEM

Ralph Stanziola, Neshanic Station, N.J., assignor to Colwell/General, Inc., Minneapolis, Minn.

Continuation of Ser. No. 175,519, Mar. 31, 1988, abandoned.
This application Feb. 2, 1990, Ser. No. 476,122
Int. Cl.[5] G01J *3/46*
U.S. Cl. 364—526 **21 Claims**

13. A system for generating color sample data comprising:

(a) first storage means for storing photometric characteristics of a set of reference colors and for storing data indicative of a number of intermediate colors to be generated;

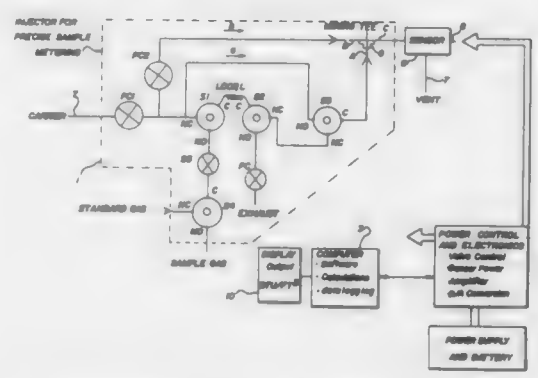
(b) central processing means electrically interconnected with the first storage means, a second storage means, and an output means and under software control for:

(i) accessing the data stored in the first storage means;

(ii) computing proportions of each reference color comprisin each intermediate color for which reflectance data is to be generated; and

(iii) computing reflectance data at each wavelength for which reference color photometric characteristics are stored in said first storage means for each intermediate color;

(c) second storage means electrically interconnected with the central processing means and output means for storing the reflectance data computed for each intermediate color; and



(d) output means for accessing and outputting the data stored in said second storage means.

5,012,432

MICROCALORIMETER SENSOR FOR THE MEASUREMENT OF HEAT CONTENT OF NATURAL GAS

Joseph R. Stetter; Melvin W. Findlay, both of Naperville, and Chongshan Yue, Chicago, all of Ill., assignors to Gas Research Institute, Chicago, Ill.

Filed Jun. 13, 1989, Ser. No. 365,460
Int. Cl.[5] G01N *25/22*
U.S. Cl. 364—557 **20 Claims**

1. An apparatus for measuring the BTU content of a sample gas, said apparatus comprising,

a catalytic sensor means for sensing the heat content of a gas,

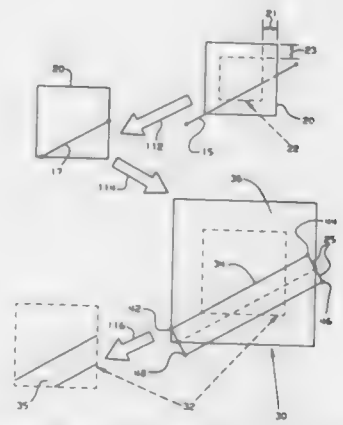
processing means operatively associated with said sensor means for calculating and display means for displaying the heat content of gas in contact with said sensor,

first flow control means for providing a predetermined flow of a carrier gas into contact with said sensor means for establishing and storing a baseline reference signal of heat content of the carrier gas in said processing means,

second flow control means having measuring means therein for providing a precise gas volume chamber and valve means connected with said measuring means whereby a standard gas is injected into said measuring means to provide a metered sample of standard gas, said second flow control means including means for mixing the metered sample of standard gas with carrier gas and for passing the sample of standard gas and carrier gas into contact with the sensor means to provide and store a further reference signal of heat content in said processing means, and whereby a sample gas is subsequently injected into said measuring means to provide a metered sample of sample gas to be mixed with carrier gas and the mixed sample gas and carrier gas passed into contact with the sensor means to provide a signal to enable said processing means to calculate the heat content of the sample gas.

5,012,433

MULTISTAGE CLIPPING METHOD



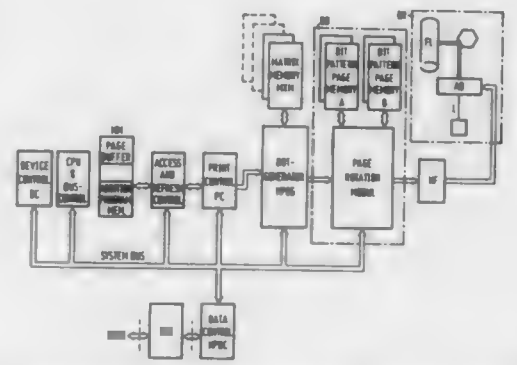
Robert M. Callahan, Woodstock; Bruce C. Hempel, Tivoli, and Bob C. Liang, West Hurley, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jun. 9, 1989, Ser. No. 364,524
Continuation of Ser. No. 43,067, Apr. 27, 1987 abandoned.
Int. Cl.[5] G06F *15/62*
U.S. Cl. 364—518 **15 Claims**

1. A method for performing clipping in a graphic workstation by a multistage technique, wherein said method operates on geometric data in said workstation, said data having size characteristics, said method comprising the steps of:

establishing a first clipping region larger than a desired field of view;

defining a virtual viewport which is a mapping transformation of said first clipping region, said virtual viewport being defined for accurately clipping geometric primitives; and



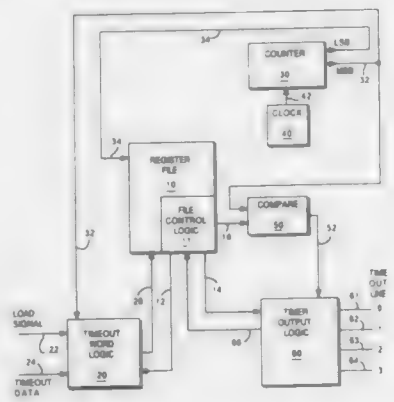
selecting said first clipping region based on said size characteristics of the data being processed.

5,012,434

APPARATUS AND METHOD FOR SELECTIVE ROTATION OF DATA PRINTED BY A MATRIX PRINTER

Kurt Zietlow, Erding, and Ernst Engst, Munich, both of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Continuation of Ser. No. 314,300, Feb. 21, 1989, abandoned, which is a continuation of Ser. No. 816,905, Jan. 8, 1986, abandoned. This application Jul. 12, 1989, Ser. No. 378,508
Int. Cl.[5] G06F *15/20*
U.S. Cl. 364—523 **9 Claims**



1. A method for representing a page of graphical symbols printed by an electro-photographic matrix printer, with a selected angular rotation, including the steps of, storing said page as a page of graphical symbols to be printed in a bit pattern page memory as bits in a bit pattern arranged in columns and rows, said page memory storing said page of graphical symbols in the form of a plurality of blocks, in which the orientation of the blocks is rotated and the bit patters of said blocks is not rotated, and driving said printer with said bit pattern for printing in line-by-line fashion for generating said page to be printed by reading out said bits from said bit pattern page memory in a predetermined sequence, with the orientation of the bits within the blocks being rotated, to produce a selectively rotated representation of said page to be printed through normal line-by-line operation of said printer.

5,012,435

MULTIPLE EVENT TIMER CIRCUIT

Roger N. Bailey; Robert L. Mansfield, and Alexander K. Spencer, all of Austin, Tex., assignors to International Business Machines Corporation, Armonk, N.Y.

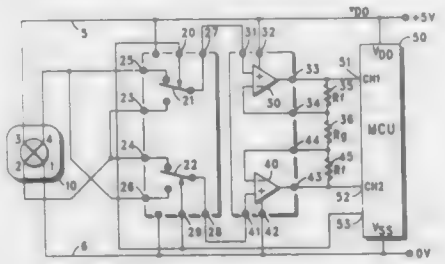
Filed Nov. 17, 1988, Ser. No. 273,295
Int. Cl.[5] G06F *9/18;* G04B *23/12*
U.S. Cl. 364—569 22 Claims

21. A timer comprising:

counter means for repetitively providing a current output, each having an iteratively increasing sequence of bits relative to a preceding output;

a plurality of load signal means each for providing a load signal specifying a current output from the counter means and including means for specifying a timeout period;

a plurality of register means each connected to an individual and unique one of said load signal means and for forming a timeout data word from said current counter means output and said specified time period from its connected load signal means and each including means for storing its respective timeout data word; and



comparison means for comparing each successive counter means output with the timeout data word in each of said register means and providing a timeout signal when any one timeout data word is equal to the compared counter means output.

5,012,436

SENSOR ARRANGEMENT WITH AMPLIFIER OFFSET CANCELLATION

Michel Burri, Geneva, Switzerland, assignor to Motorola, Inc., Schaumburg, Ill.

Filed Oct. 5, 1989, Ser. No. 417,416
Claims priority, application United Kingdom, Oct. 28, 1988, 8825257
Int. Cl.[5] G01L *27/00;* H03F *1/02*
U.S. Cl. 364—571.02 1 Claim

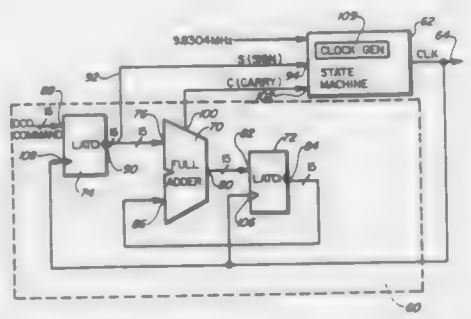
1. A method of processing sensor signals including the steps of:

connecting during a first measurement stage first and second signals provided by the sensor to respective ones of first and second amplifier means;

reversing the connections to the first and second amplifier means during a second measurement stage to provide two pairs of amplifier output signals;

storing signals derived from the two pairs of amplifier output signals;

combining the stored signals to substantially cancel amplifier offset voltages; and



subtracting the stored signals of each pair from one another within their pairs so that in each pair, signals derived from the first output of the sensor are subtracted from the signals derived from the second output and the results of the subtractions are combined.

DIGITALLY CONTROLLED OSCILLATOR

Bradley J. Recker; Derrick I. Roe, both of Rockford, and Christopher J. Rozman, Park Ridge, all of Ill., assignors to Sundstrand Corporation, Rockford, Ill.

Filed Nov. 29, 1989, Ser. No. 442,899
Int. Cl.[5] G06F *15/20*
U.S. Cl. 364—701 11 Claims

1. A digitally controlled oscillator (DCO) which develops an oscillator signal responsive to a digital period command signal consisting of a series of bits provided on input lines, comprising:

a binary full adder having a first set of inputs coupled to the input lines, a second set of inputs, a set of summation outputs and a carry output;

a latch having a set of latch inputs each coupled to one of the summation outputs of the binary full adder, a clock input and a set of latched outputs each coupled to one of the second set of inputs of the binary full adder wherein the binary full adder sums the bits of the period command signal with bits appearing at the latched outputs and provides a summed value to the summation and carry outputs; and

a finite state machine coupled to the carry output of the binary full adder and to the clock input of the latch wherein the finite state machine produces the oscillator signal whereby such signal has a period determined by the period command signal.

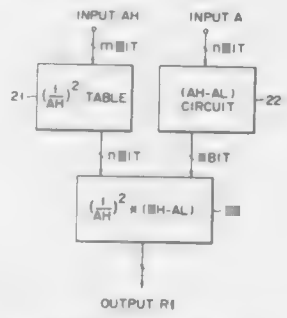
RECIPROCAL ARITHMETIC CIRCUIT WITH ROM TABLE



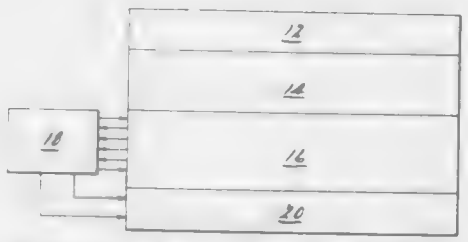
Akira Yamaguchi, Yokohama, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Nov. 30, 1989, Ser. No. 443,357
Claims priority, application Japan, Dec. 8, 1988, 63-310707
Int. Cl.[5] G06F *7/52*
U.S. Cl. 364—765 12 Claims

1. A reciprocal arithmetic circuit comprising:

first memory means, including a conversion table, for storing approximate information items corresponding to the reciprocals of the squares of upper-bit data AH of divisors, for converting the upper-bit data AH of a predetermined divisor A supplied as an address to the first memory means into an approximation of the squared reciprocal $(1/AH)^2$ of the upper-bit data AH of divisor A, and for outputting the approximation;

subtracter means for deriving a difference between the upper-bit data AH and lower-bit data AL of the divisor A (AH − AL); and



multiple means connected to receive an output of said first memory means and an output of said subtracter means, for deriving the product $(1/AH)^2.(AH-AL)$ to make the output of said first memory means more nearly equal to the reciprocal 1/A of the divisor A.

5,012,439

METHOD AND APPARATUS FOR PERFORMING DIVISION

J. Gregory Nash; Milos Ercegovac, both of Los Angeles, and Thomas Lang, Woodland Hills, all of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Dec. 29, 1986, Ser. No. 947,169
Int. Cl.[5] G06F *7/52, 7/38*
U.S. Cl. 364—766 15 Claims

1. An apparatus for generating a quotient from a dividend and a divisor by recursive subtraction operations without using carry propagation during each subtraction operation, said apparatus comprising:

means, for generating a plurality of quotient digits from said divisor and said dividend, including a division recursion circuit for performing recursive subtraction operations on said dividend;

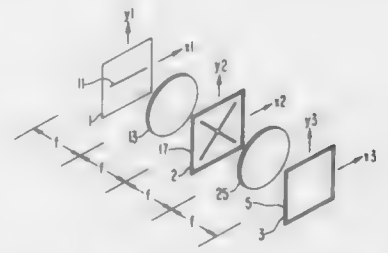
quotient selection circuit electrically connected to said division recursion circuit for expressing each of said quotient digits as a logical zero or as a logical one with a sign; and

quotient conversion circuit electrically connected to said quotient selection circuit for representing said quotient in two's complement notation.

5,012,440

OUTER PRODUCT OPTICAL INTERFEROMETER WITH MASK

Jonathan D. Cohen, Hanover, Md., assignor to The United States of America as represented by the Director, National Security Agency, Washington, D.C.



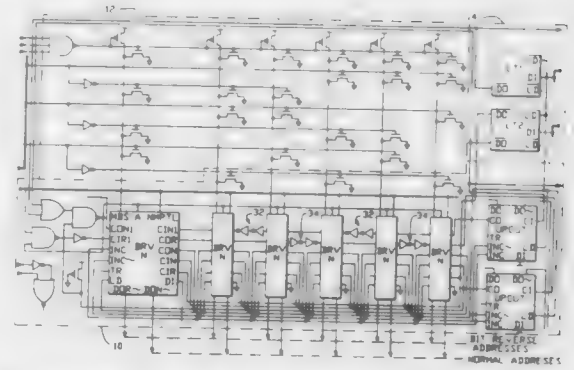
Filed Mar. 1, 1989, Ser. No. 318,027
Int. Cl.[5] G06E *3/00;* G06G *7/19;* G01B *9/02*
U.S. Cl. 364—837 3 Claims

1. An outer product interferometer, comprising:

a light source located in an input plane having one-dimensional extent along an axis;

means for detection located in an output plane;

means for imaging light from said input plane to said plane; and



a mask located in the Fourier transform plane of said imaging means, said mask being opaque except for segments of two nonparallel lines, with neither of said lines being perpendicular to said axis of said light source.

5,012,441

APPARATUS FOR ADDRESSING MEMORY WITH DATA WORD AND DATA BLOCK REVERSAL CAPABILITY

Refael Retter, Haifa, Israel, assignor to Zoran Corporation, Santa Clara, Calif.

Filed Nov. 24, 1986, Ser. No. 933,815
Int. Cl.[5] G06F *12/02, 7/544*
U.S. Cl. 364—900 3 Claims

1. Memory addressing circuitry comprising:

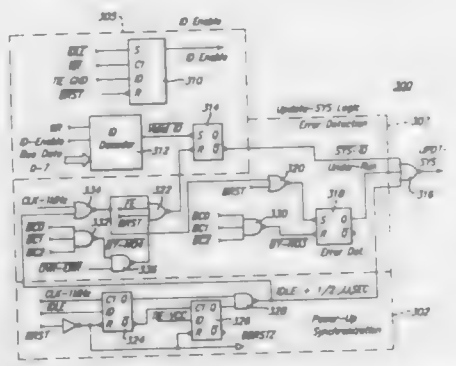
a first binary counter comprising a plurality of serially connected binary cells,

a second binary counter comprising a plurality of serially connected binary cells,

a first bus for loading a count into said first and second binary counters,

an address bus for receiving count from said first and second counters, said binary cells of said counters being connected to said address bus whereby the least significant bits of one counter correspond to the most significant bits of the other counter whereby addresses from said two counters increment in opposite directions, and address mode means for controlling the application of addresses from said first and second binary counters to said address bus.

5,012,442



BUS RECEIVER POWER-UP SYNCHRONIZATION AND ERROR DETECTION CIRCUIT

John M. McCambridge, Northville, Mich., assignor to Chrysler Corporation, Highland Park, Mich.

Filed Dec. 19, 1988, Ser. No. 286,196
Int. Cl.[5] G06F *15/00*
U.S. Cl. 364—900 4 Claims

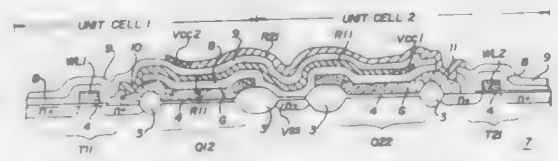
1. A power-up synchronization and error detection appara-

tus of an addressable bus receiver for synchronizing receipt of asynchronously transferred parallel word messages from a serial to parallel conversion system of said bus receiver and for further transferring of said parallel words to an end user device, said receiver having input terminals coupled to a data link which transfers serially digital messages from a bus transmitter, the but transmitter broadcasting separate serial messages of a distinctive number of words to said receiver and to a plurality of other addressable bus receivers, said receiver responding to serial messages containing a chosen number of words, said other receivers responding to messages containing a different number of words, each of said messages being preceded and succeeded by a fixed number of IDLE bits used for distinguishing each message placed on said data link, one of said words of each message containing address information for use by said receiver and said other receivers in receiving said messages from said bus transmitter, said serial to parallel conversion system of said receiver also providing: (1) a system clock signal for use in synchronizing synchronous sequential circuits of said apparatus, (2) an IDLE signal for indicating transmission of IDLE bits, (3) a system buffered reset (BRST) signal for resetting sequential logic circuits of said apparatus during power-up and restart of operations, (4) a write (WR) pulse signal following the formation of each parallel word, (5) a framing error (FE) pulse signal for indicating a missing stop bit in the serially transferred data from the link, (6) an over range error (OVR-ERR) signal which responds to each serial bit received, and (7) word-1 to word-N (BC-0 to BC-B) signals that designate the word content of each message, said apparatus comprising:

(a) power-up synchronization logic means having input terminals for receiving said BRST, said IDLE and said clock (CLK) signals regardless of the content of said parallel word message transferred from said serial to parallel data conversion system of said receiver during power up of said receiver and producing therefrom at an output terminal a disabling IDLE+½ microsecond signal after receipt of a chosen number of rising edges of IDLE pulse signals which synchronizes receipt of said parallel word messages to said IDLE pulse signals said IDLE+½ microsecond signal being an enabling signal used in said receiver to inhibit transfer of said parallel words to the end user device until after the occurrence of said chosen number of rising edges of said IDLE pulse signals;

(b) address logic circuit means adapted to receive at input terminals inverse signals of IDLE, WR and BRST along with parallel word messages from said data conversion system and producing therefrom at an output terminal a system identification (SYS-ID) signal representing a match between an address word contained in the parallel message and a corresponding hardwired address within said address logic circuit means, said SYS-ID signal also being used to enable transfer of said parallel words to the end user if a match occurs or to disable transfer if a match does not occur;

(c) error detection logic mean shaving input terminals adapted to receive signals of BCO-BCN, WR, FE, BRST, OVR ERR, CLK from said data conversion system and said IDLE+½ microsecond signal from said power-up and synchronization logic means and producing therefrom at an output terminal an error signal if any of the designated input signals combine in a chosen manner that would hinder transfer of said parallel word messages to the end user device; and



(d) an update system logic means adapted to receive at input terminals said IDLE+½ microsecond signal, said SYS-ID signal and said error signal and producing at an output terminal an enabling update conjunctive signal representing an enabling signal which allows the further transfer of said parallel word messages to the end-user device if the sum of said IDLE+½ microsecond signal, said SYS-ID signal and said error signal causes an enabling signal at the output of said update system logic means.

5,012,443

SEMICONDUCTOR STATIC RAM INCLUDING LOAD RESISTORS FORMED ON DIFFERENT LAYERS

Taiji Ema, Kawasaki, Japan, assignor to Fujitsu Limited, Kanagawa, Japan

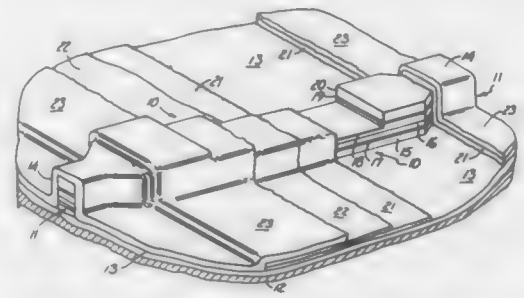
Filed Dec. 6, 1988, Ser. No. 280,473
Claims priority, application Japan, Dec. 9, 1987, 62-311578
Int. Cl.[5] G11C *5/02, 5/06*
U.S. Cl. 365—51 **11 Claims**

1. A semiconductor static random access memory device formed on a semiconductor substrate and a plurality of insulation layers formed over said semiconductor substrate, said semiconductor static random access memory device, comprising:

a plurality of unit cell pairs, wherein each of said unit cell pairs includes a first unit cell and a second unit cell which are arranged adjacent in a data-line direction, each first unit cell and each second unit cell comprises a flip-flop which is formed by a pair of inverter circuits, each inverter circuit includes a field effect transistor formed on said substrate and a load resistor, and load resistors of each first unit cell and load resistors of each second unit cell are formed on different insulation layers and have respectively a layer pattern extending over a substrate surface of an adjacent unit cell within each of said unit cell pairs.

5,012,444

OPPOSED FIELD MAGNETORESISTIVE MEMORY SENSING



Allan T. Hurst, Jr., Anoka, Minn., and Arthur V. Pohm, Ames, Iowa, assignors to Honeywell Inc., Minneapolis, Minn.

Filed Apr. 4, 1990, Ser. No. 504,777
Int. Cl.[5] G11C *11/15*
U.S. Cl. 365—173 **36 Claims**

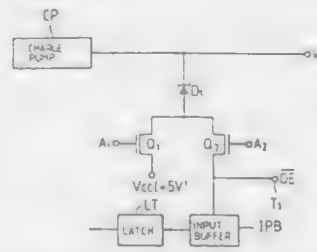
1. A method for sensing magnetic states of magnetic bit structures each comprising a memory film of a magnetoresistive, anisotropic, magnetic material between first and second terminal portions thereof and each having a word line conductor located across an electrical insulating layer from its said memory film which extends over a pair of opposite edges of that said memory film with each said edge extending between said first and second terminal portions, said memory film of each magnetic bit structure having an easy axis of magnetization oriented substantially along that direction in which its corresponding said word line conductor extends with directions of magnetization along said easy axis determining said magnetic states of that said magnetic bit structure, said memory film of each magnetic bit structure having portions thereof

sufficiently near either of its said pair of opposite edges exhibiting magnetizations therein oriented substantially parallel to said edges with such edge magnetizations directed at least partially in substantially a common direction, said method comprising:

providing a selected activation current through a first said word line conductor in a direction which results in that

magnetic field due thereto in said memory film of a corresponding first said magnetic bit structure being oriented substantially opposite said common direction; and

sensing a change in electrical resistance due to said activation current between said



first magnetic bit structure first and second terminal portions to provide a signal representative thereof.

5,012,445

PROGRAMMABLE READ ONLY MEMORY BEING CAPABLE OF CONTROLLING INTERNAL WRITING VOLTAGE OF EXTERNAL VOLTAGE

Ujiie Kazuaki, and Shinji Nabetani, both of Tokyo, Japan, assignors to Hitachi, Ltd. and Hitachi VLSI Engineering Co., both of Tokyo, Japan

Filed Jul. 28, 1988, Ser. No. 225,314
Claims priority, application Japan, Oct. 13, 1987, 62-257877
Int. Cl.[5] G11C *7/00, 11/40, 16/04, 16/06*
U.S. Cl. 365—189.06 **24 Claims**

24. A semiconductor memory device including a plurality of nonvolatile storage elements each of which requires a predetermined voltage to write a data into a nonvolatile storage element, a first external terminal for receiving an external writing control signal and a second external terminal for receiving an external output control signal for controlling output of a stored data in a nonvolatile storage element, said semiconductor memory device comprising:

voltage generating means for generating a first voltage;

voltage limiting means coupled to said voltage generating means and including an internal reference node and means for limiting said first voltage to a limited voltage in accordance with a second voltage applied to said internal reference node;

external voltage providing means coupled to said first external terminal and to said internal reference node, and including means for providing an internal voltage corresponding to an external voltage applied to said second external terminal to said internal reference node;

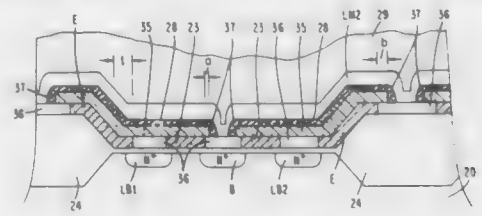
switching means coupled to said internal reference node and to mode selection means and responsive to a mode selection signal from said mode selection means for providing a reference voltage to said internal reference node so that said limited voltage becomes substantially equal to said predetermined voltage, wherein said switching means allows said limited voltage to change to a voltage having smaller absolute value than that of said predetermined voltage in accordance with said external voltage in a state which said switching means does not provide said reference voltage to said internal reference node; and

said mode selection means including:

timing signal generating means coupled to said first external terminal, and including means responsive to a change from a first level to a second level in a control signal to be applied to said first external terminal for generating a first operation signal and means responsive to a change from said second level to said first level in said control signal for generating a second operation signal;

first holding means coupled to said second external terminal and responsive to said first operation signal for holding data applied on said second external terminal;

second holding means coupled to said second external terminal and responsive to said second operations signal for holding data applied on said second external terminal; and



mode select circuit coupled to said first and second holding means and for generating said mode selection signal in accordance with the held data in said first and second holding means.

5,012,446

LARGE-SCALE EPROM MEMORY WITH A HIGH COUPLING FACTOR

Albert Bergemont, La Tronche, France, assignor to SGS-Thomson Microelectronics S.A., Gentilly, France

Filed Aug. 11, 1989, Ser. No. 392,325
Claims priority, application France, Aug. 11, 1988, 88 10963
Int. Cl.[5] G11C *11/40;* **H01L** *29/68*
U.S. Cl. 365—185 **5 Claims**

1. A memory array comprising

plural floating gate transistors each including a source, drain, control gate and floating gate;

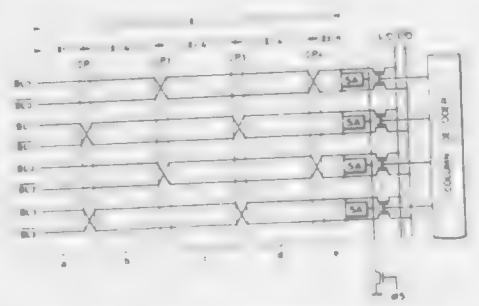
word lines (LM1, LM2) extending along a first direction, called row direction, interconnecting the control gates (25) of the floating gate transistors;

bit lines (LB1, LB2) extending along a second direction, called column direction, interconnecting the drains of the floating gate transistors;

a constant-potential line (B) extending along a column and formed by diffusion of a first conductivity type interconnecting the sources of the floating gate transistors, the constant-potential line being arranged between each pair of bit lines, all the constant-potential lines being at the same potential;

an isolation area (24) extending along a column arranged on a side of each bit line opposite to one of the constant-potential lines;

a conductive pad (E) covering longitudinal sides of the isolation areas (24), said pad (E) being made of the same material as the material forming the floating gates (23) of the floating gate transistors;



a conductive area (35) connecting the floating gate (23) of each transistor to the corresponding pad, the conductive area being superposed with the corresponding word line from which it is separated by an isolation layer (28).

5,012,447

BIT LINE STRUCTURE FOR A DYNAMIC TYPE SEMICONDUCTOR MEMORY DEVICE

Yoshio Matsuda, and Kazuyasu Fujishima, both of Hyogo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 28, 1988, Ser. No. 276,741
Claims priority, application Japan, Nov. 28, 1987, 62-300977
Int. Cl.[5] G11C *5/06, 11/40*
U.S. Cl. 365—206 **14 Claims**

1. A semiconductor memory device comprising.

a plurality of memory cells arranged in a matrix constituted by rows and columns for storing charges representing information;

a plurality of bit line pairs each constituted of a pair of bit lines said bit lines provided corresponding to the rows of said plurality of memory cells and connected to said memory cells of the corresponding rows; and

a plurality of sense amplifier means arranged corresponding to said plurality of bit line pairs for detecting, when the charges representing information of said memory cells are read, a potential difference appearing on said bit line pair; wherein

each of said plurality of bit line pairs comprises an even number of intersecting portions, said intersecting portions being arranged such that one of the bit lines constituting each said bit line pair is adjacent one of the bit lines constituting a neighboring one of said bit line pairs for a first length and is adjacent the other one of the bit lines constituting said neighboring bit line pair for a second length; and the other one of the bit lines constituting the bit line pair is adjacent said one of the bit lines of said neighboring bit line pair for said second length and is adjacent said other of the bit lines of said neighboring bit line pair for said second length.

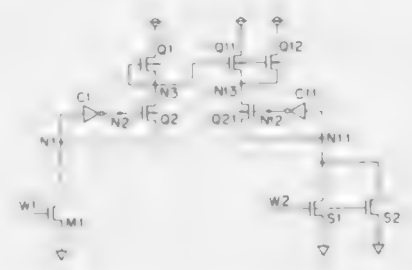
SENSE AMPLIFIER FOR A ROM HAVING A MULTILEVEL MEMORY CELL

Shigeki Matsuoka, Suita; Hiizu Okubo, Nishinomiya, and Daisuke Kosaka, Takarazuka, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan



Division of Ser. No. 940,017, Dec. 10, 1986, abandoned. This application Jul. 15, 1988, Ser. No. 220,976
Claims priority, application Japan, Dec. 13, 1985, 60-280567; Sep. 25, 1986, 61-227396
The portion of the term of this patent subsequent to Jun. 14, 2002, has been disclaimed.
Int. Cl.[5] G11C *17/18*
U.S. Cl. 365—208 **7 Claims**

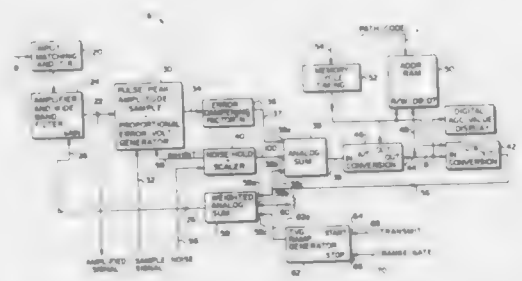
1. A sense circuit comprising:

at least one multilevel memory transistor having one of at least first and second possible memory states which are identifiable by respective first and second levels of current flowing therethrough, respectively, said at least one memory transistor including a first terminal for receiving a first activation signal, a second terminal connected to a first node and a third terminal connected to a first reference potential;

at least a pair of first and second reference transistors which pass current having said first and second levels, respectively, under the same biasing condition as that of said memory transistor, each of said reference transistors including a first terminal for receiving a second activation signal, a second terminal connected to a second node and a third terminal connected to said first reference potential;

first current supplying means connected between said first node and a second reference potential for supplying a

predetermined amount of current to said memory transistor when said first activation signal is supplied; and



second current supplying means connected between said second node and said second reference potential and also connected to said first current supplying means for supplying approximately twice said predetermined amount of current to said reference transistors when said second activation signal is supplied.

5,012,449

SONIC FLOW METER

John D. Todd, Falmouth, Mass., assignor to Ferranti O.R.E. Inc., Falmouth, Mass.

Filed Jun. 30, 1989, Ser. No. 374,265
Int. Cl.[5] G01S *15/00*
U.S. Cl. 367—89 **4 Claims**

1. A flow meter comprising:

(A) a plurality of sonic transducers, at least a plurality of which are operable as transmitting transducers and at least a plurality of which are operable as receiving transducers, transducers, each of the transmitting transducers being operable to transmit sonic pulses along a different sonic path associated therewith through a fluid to an associated receiving transducer, each receiving transducer responding to the reception of a sonic pulse to generate a transducer output representative thereof;

(B) a driver for alternately driving each transmitting transducer individually to transmit sonic pulses along the sonic path associated therewith, each sonic pulse transmission defining the beginning of a new cycle of operation;

(C) an amplifier, having an output port, a gain-control port adapted to receive a gain-control signal, and an input port adapted to receive an amplifier input, for amplifying the amplifier input with a gain determined by the gain-control signal to generate an amplifier output;

(D) means for selectively coupling the amplifier input port to receive the transducer output of the receiving transducer associated with the sonic path associated with the transmitting transducer currently being driven by the driver;

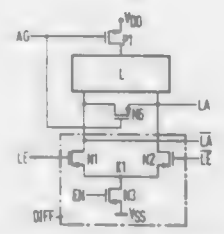
(E) an AGC circuit responsive to the amplified signal to generate therefrom an AGC signal representing an AGC value associated with the path taken by the sonic pulse from which the amplified signal resulted;

(F) memory means responsive to the AGC signal to store the AGC value represented thereby separately from each AGC value associated with another path;

(G) means for (i) retrieving from the memory means, for use during a given cycle of operation in which the driver drives a given transmitting transducer, the AGC value represented by the AGC signal during a previous cycle in which the driver drove the given transmitting transducer and (ii) generating a retrieved-value signal from the retrieved AGC value;

(H) a TVG circuit for generating a TVG signal that changes monotonically during a time interval between the time at which the driver sends a pulse and the time at which a receiving transducer receives it;

(I) gain-control means responsive to the retrieved-value signal for generating a gain-control signal dependent thereon and applying the gain-control signal to the gain-control port of the amplifier during the given cycle of operation, the gain-control means also being responsive to the TVG signal so that the gain-control signal depends on both the TVG signal and retrieved-value signal; and



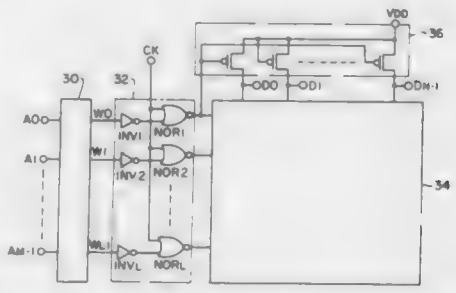
(J) measurement means responsive to the amplifier output for measuring the time intervals between transmission of sonic pulses and reception thereof, for comparing the time intervals for different paths, for computing therefrom the flow rate of the fluid flowing through the paths, and for generating an indication of the flow rate.

5,012,450

READ AMPLIFIER FOR STATIC MEMORIES IN CMOS TECHNOLOGY

Hans-Juergen Mattausch, Kirchheim; Klaus Althoff, Munich, and Gerd Neuendorf, Germering, all of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Siemens Aktiengesellschaft, Munich, both of, Fed. Rep. of Germany

Filed Jul. 8, 1988, Ser. No. 222,006
Claims priority, application Fed. Rep. of Germany, Aug. 18, 1987, 3727558
Int. Cl.[5] G11C *7/00*
U.S. Cl. 365—2[illegible] **11 Claims**



1. A read amplifier comprising at least one load component (L), at least one differential amplifier component (DIFF) and a compensation transistor (N6), characterized in that a switching transistor (P1) is directly connected between said load component (L) and a voltage source V_{DD}; said switching transistor disconnecting the operating voltage during a preloading phase and turning it on during an interpretation phase; and a gate terminal of said switching transistor (P1) forms a first circuit input (AG) in common with a gate terminal of said compensation transistor (N6), wherein said switching transistor (P1) is a p-channel field effect switching transistor which has a source terminal which is connected to the voltage source (V_{DD}) and has a drain terminal which is connected to said load component (L), wherein first and second p-channel field effect transistors (P2, P2', P2''; P3, P3', P3'') form one load component (L); source terminals of said p-channel field effect transistors (P2, P2', P2''; P3, P3', P3'') are connected to the drain terminal of said switching transistor (P1); and the drain terminals of said first and second p-channel field effect transistors (P2, P2', P2''; P3, P3', P3'') respectively, provide the first and the second outputs of said read amplifier (LA, $\overline{LA}$), and wherein the gates of said switching and compensating transistors are connected together.

ROM CIRCUIT

Hyeong-keun An; Young-cheol Kim; Seok-jeong Lee, all of Seoul, and Jung-jae Yu, Pusan, all of Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Kyunggi-do, Rep. of Korea

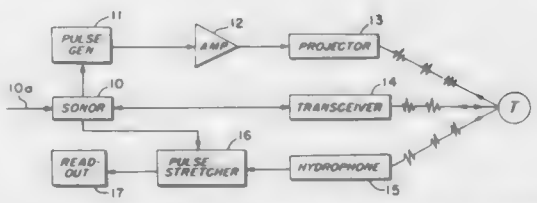
Filed Mar. 12, 1990, Ser. No. 492,097
Claims priority, application Rep. of Korea, Feb. 20, 1990, 90-2072
Int. Cl.[5] G11C *13/00*
U.S. Cl. 365—230.05 **10 Claims**

1. A ROM circuit, having M address lines and N output lines, comprising:

a decoder for generating 2^M bit word signals according to M bit address signals input on said M address lines;

a gate means for selectively supplying said 2^M bit word signals to 2^M word lines according to a clock signal;

a memory cell array for storing the desired data according to a combinational existence of MOS transistors at predetermined cross sections of said word lines and said output lines; and



a precharged means for precharging said output lines according to said clock signal.

5,012,452

PULSE TRANSFORMATION SONAR

Clarence S. Johnson, San Diego, and Clarence G. Blanc, Escondido, both of Calif., assignors to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed May 1, 1972, Ser. No. 249,080
Int. Cl.[5] H04K *3/00*
U.S. Cl. 367—1 **9 Claims**

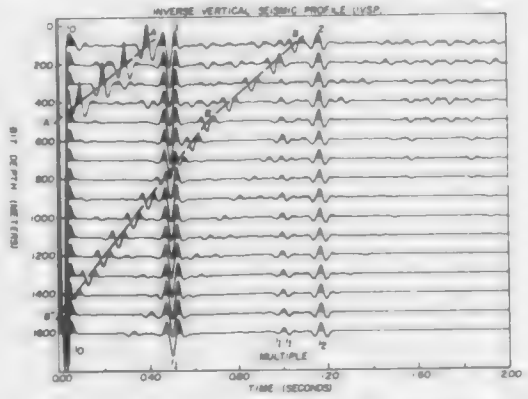
1. A system permitting the audio analysis of broadband ultrasonic energy comprising:

means for projecting pulses of said broadband ultrasonic energy;

means for receiving reflected pulses of said broadband ultrasonic energy;

means connected to the receiving means for dividing the

entire bandwidth of said reflected pulses of said broadband ultrasonic energy and for translating its information content into the acoustic spectrum; and



means coupled to the dividing and translating means for providing a real-time representation of said acoustic spectrum.

INVERSE VERTICAL SEISMIC PROFILING WHILE DRILLING

Lewis J. Katz, 3521 Westwood Dr., Salt Lake City, Utah 84109

Filed Apr. 27, 1990, Ser. No. 516,115
Int. Cl.[5] G01V *1/36*
U.S. Cl. 367—57 **26 Claims**

26. A system for compiling inverse vertical seismic profiles and pseudo reflection seismograms utilizing the transmitted pulses and the secondary reflectances of a seismic signal produced by a seismic source within a borehole, comprising:

a downhole seismic source position able at a first depth position;

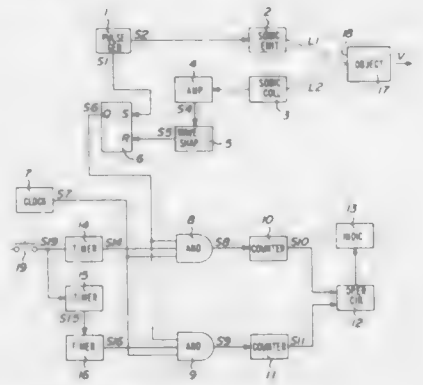
means for adjusting the depth position of said downhole seismic source in said borehole to a plurality of depth positions differing from said first depth position;

a seismic sensor positionable transversely away from said borehole and within sensing distance from said downhole seismic source;

recording means for recording data comprising direct waves, primary reflectances and secondary reflectances of seismic signals produced by said downhole seismic source;

autocorrelating means for autocorrelating recordings made by said recording means while said seismic source is at a particular depth position and producing a plurality of autocorrelation functions corresponding to different depth positions,

computing means for stacking said autocorrelation functions produced by said autocorrelating means to produce stacked autocorrelation functions at each of said different depth positions to produce an inverse vertical seismic profile and for stacking a plurality of said stacked autocorrelation functions corresponding to said different depth positions to produce a pseudo reflection seismogram; wherein



said autocorrelating means and said computing means are positionable at the site of said borehole and produce said autocorrelation functions, stacked autocorrelation functions, and inverse vertical seismic profile in approximately real time.

5,012,454

ULTRASONIC LOW RANGE SPEED METER

Tadao Okazaki, Hamakita, Japan, assignor to Fujie Bussan Kabushiki Kaisha, Japan

Filed Apr. 23, 1990, Ser. No. 512,900
Claims priority, application Japan, Sep. 26, 1989, 1-250351
Int. Cl.[5] G01S *15/00*
U.S. Cl. 367—89 **4 Claims**

1. An ultrasonic speed meter comprising

a pulse generator,

a clock pulse generator,

a detection head connected to said pulse generator and including an ultrasonic emitter and an ultrasonic collector both directed towards a sound reflective face of a mobile object performing a linear displacement,

first means for gating clock pulses over a first operation period,

second means for gating clock pulses over a second operation period,

a flip-flop having a set terminal connected to said pulse generator, a reset terminal responsive to a signal from said collector of said detection head, and an output terminal connected to said first and second gating means,

means for fixing the interval between said first and second operation periods,

a first counter connected to said first gating means and, after counting said clock pulses past said first gating means during said first operation period, generative of a first count value which indicates an average distance between said detection head and said reflective face of said mobile object during said first operation period,

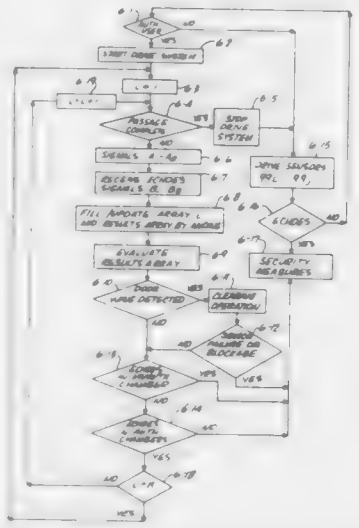
a second counter connected to said second gating means and, after counting said clock pulses past said second gating means during said second operation period, generative of a second count value which indicates an average distance between said detection head and said reflective face of said mobile object during said second operation period, and

an operational circuit connected to said first and second counters for calculating an average speed of said linear displacement during said interval set by said fixing means on the basis of said first and second count values.

5,012,455

SECURITY DOOR WITH IMPROVED SESNOR FOR DETECTING UNAUTHORIZED PASSAGE

Milan Schwarz, La Verne, and Robert Mayer, Pleasanton, both of Calif., assignors to Revolving Door Control, Inc., Claremont, Calif.



Filed Oct. 11, 1989, Ser. No. 419,760
Int. Cl.[5] G08B *13/16*
U.S. Cl. 367—93 **27 Claims**

1. A control system for a security door of the type having a housing with a first portal and a second portal, a door member rotatably disposed in the housing and having a plurality of wings which, in cooperation with the housing, define a plurality of compartments moveable between the first and second portals in response to rotation of the door member, the control system comprising:

means for rotating the door member to move a selected compartment from one of the first and second portals to the other of the first and second portals;

sensing means disposed in the housing for emitting energy waves into the housing between the first and second portals, for detecting echoes of the energy waves due to any objects of persons in the housing and outputting a signal indicative of an echo or no echo;

detection means for determining the position of the selected compartment; and

controller means, connected to the sensing means and to the detection means, for driving the sensing means and the means for rotating in response to identification of an authorized user, and for detecting passage of any objects or persons in any of the compartments other than the selected compartment based on the position of the selected compartment and the detection of any echoes by the sensing means,

wherein the sensing means comprises multiple sensors, each of the sensors receiving a driving signal from the controller means for generating successive bursts of waves, wherein the bursts occur at varying cycle times.

AQUATIC TRANSDUCER SYSTEM

Thomas R. Mitchell, 2520 Rubidoux Blvd., Riverside, Calif. 92509, and Robert E. Landesman, 598 W. Huntington Dr., Arcadia, Calif. 91006

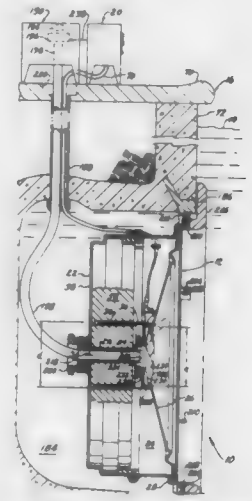
Filed Sep. 11, 1989, Ser. No. 405,749
Int. Cl.[5] H04R *9/00*
U.S. Cl. 367—175 **48 Claims**

1. An underwater transducer system for a body of water, comprising:

(a) a housing;

(b) means for positioning the housing in the water;

(c) a diaphragm in the housing;



(d) means for connecting an outer edge of the diaphragm to the housing, at least one side of the diaphragm being in direct contact with the water;

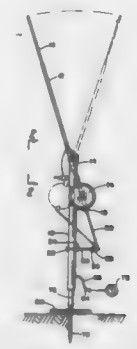
(e) a coil assembly having at least one turn of a conductive material about a coil axis, opposite ends of the conductive material forming a pair of coil terminals;

(f) means for rigidly affixing the coil assembly to the diaphragm, the coil assembly being movable within the housing, comprising:

(i) a tubular member extending to one end of the coil assembly, the tubular member having a cylindrical inside surface concentric with the coil axis; and

(ii) a centrally located boss portion formed in the diaphragm, the boss portion having a cylindrical outside surface in locating engagement with the inside surface of the tubular member;

(g) a magnetic field magnet in the housing for producing a magnetic field, and having an associated annular slot for receiving the coil assembly, the magnetic field intersecting the conductive material of the coil assembly, whereby a voltage between the coil terminals is correlated with sound waves in the water; and



(h) a cylindrical strip of a lubricative plastic material located within the annular slot for preventing contact between the coil assembly and the magnet by sliding contact between the strip and the coil assembly.

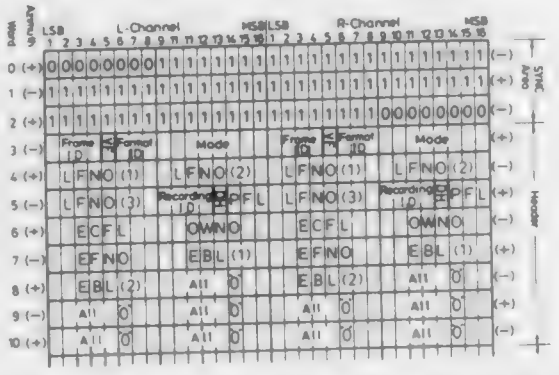
DATA RECORDER



Kentaro Odaka, Tokyo; Shinya Ozaki, Kanagawa; Masaki Yamada, Kanagawa; Yoshizumi Inazawa, Kanagawa, and Hiroshi Ishibashi, Kanagawa, all of Japan, assignors to Sony Corporation, Tokyo, Japan

Continuation of Ser. No. 210,229, Jun. 23, 1988, abandoned. This application Jun. 11, 1990, Ser. No. 536,074

Claims priority, application Japan, Jun. 29, 1987, 62-161924

Int. Cl.[5] G11B *5/09*

U.S. Cl. 360—32 **20 Claims**

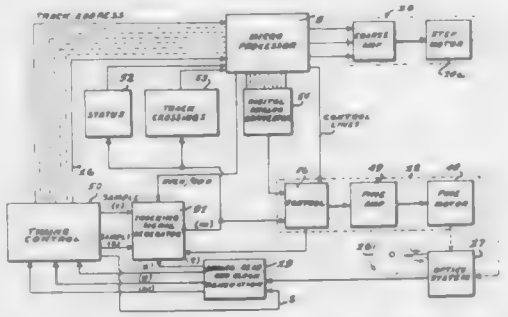
1. A method of recording digital data signals in a main data area in a series of track pairs on a recording medium comprising the steps of;

receiving digital information signals from an external source and dividing them into frames, each frame corresponding to a different pair of tracks to be recorded on the recording medium;

for each of the two tracks forming each frame, generating header portions, having identical contents, which are each arranged to be recorded before the digital information signals in the respective tracks; and

recording the digital information signals and the header portions in the main data area in a series of pairs of tracks on the recording medium according to a predetermined, digital audio tape recorder (DAT) format.

5,012,460



RAM HEAD POSITIONING AND TRACKING SYSTEM

Steve S. Popovich; Russell A. Meyer; William J. Stanis, all of Colorado Springs; Christopher Miller, Manitou Springs, and Gary R. Mitchell, Woodland Park, all of Colo., assignors to Information Storage, Inc., Colorado Springs, Colo.

Filed May 31, 1985, Ser. No. 739,514

Int. Cl.[5] G11B *7/00, 7/007*

U.S. Cl. 369—32 **7 Claims**

1. A random access memory optical read/wire head positioning and tracking system for information storage media comprising;

Media carrying means having a plurality of tracks formed by the deposition in the media in multiple sector format of a plurality of optically readable pits and wherein the readable pits in each sector include a plurality of tracking pit pairs interspersed at intervals between groups of other serially deposited readable pits and wherein the pits of the pairs are bilaterally offset from the center line of the track to which they are related;

Central control means having a track address output;

An optical-system carrying head movable with respect to the media, wherein the optical system comprises a light source directed to the media and means responsive to light reflected from the pits to produce an electrical signal;

Open loop incremental actuator means responsive to the output of the control means and operable connected to the head for coarse positioning of the head in step movements transversely of the tracks; and

A read/write head transverse velocity servomechanism loop, including motor means operable connected to the head, responsive to the central control means and the said electrical signals produced by light reflected from the pits to position the head over an addressed track.

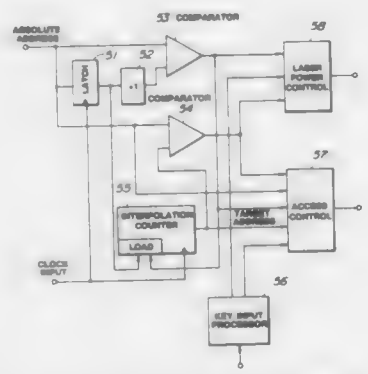
DISK RECORDING APPARATUS FOR RE-ESTABLISHING A RECORDING MODE AT A DESIRED ADDRESS

Tadao Yoshida, Kanagawa, and Ryo Ando, Tokyo, both of Japan, assignors to Sony Corporation, Tokyo, Japan



PCT No. PCT/JP88/00196, § 371 Date Oct. 21, 1988, § 102(e) Date Oct. 21, 1988, PCT Pub. No. WO88/06785, PCT Pub. Date Sep. 7, 1988

PCT Filed Feb. 24, 1988, Ser. No. 273,335

Claims priority, application Japan, Feb. 27, 1987, 62-44825

Int. Cl.[5] G11B *7/00*

U.S. Cl. 369—44.33 **4 Claims**

1. In a disk recording apparatus for recording information by projecting a laser beam having an adjustable power level on a predetermined one of a plurality of tracks in an optically recordable disk on which absolute addresses have been recorded in advance, said disk recording apparatus being operative to read said absolute addresses indicative of a position of said laser beam on said optically recordable disk; a system for re-establishing a recording mode at a desired recording position in said predetermined one of said plurality of tracks of said laser beam after the occurrence of an undesired track jump of said laser beam, comprising:

detecting means for detecting an undesired track jump of said laser beam from said predetermined one of said plurality of tracks to another track during a recording operation;

address counting means for maintaining a current address in said predetermined one of said plurality of tracks after the occurrence of said undesired track jump by counting clock signals synchronized with the absolute addresses read by said disk recording apparatus indicating a current address of said laser beam;

first power adjusting means for adjusting the power level of said laser beam to a non-recording level upon the detection of said undesired track jump by said detecting means;

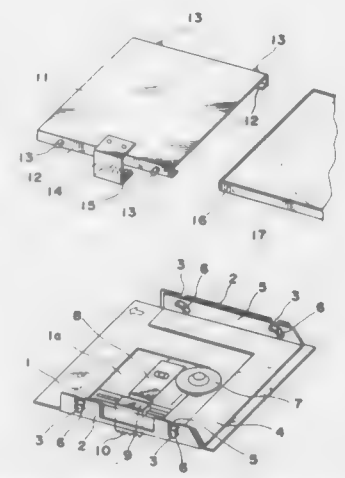
repositioning means for repositioning said laser beam to a different track of said optically recordable disk after said undesired track jump;

comparing means for comparing the absolute addresses read by the disk recording apparatus from said different track of said optically recordable disk with said current address maintained by said address counting means to detect coincidence thereof; and

second power adjusting means for increasing the adjustable power level of the laser beam to a recording level after detection of coincidence of one of said absolute addresses and said current address by said comparing means.

5,012,462

DISC PLAYER HAVING LOCKING MECHANISM FOR PICKUP



Hirayuki Tsujita, Gifu, Japan, assignor to Sanyo Electric Co., Ltd., Moriguchi, Japan

Filed Jul. 1, 1988, Ser. No. 214,344

Claims priority, application Japan, Jul. 3, 1987, 62-102852[U]

Int. Cl.[5] G11B *33/02, 17/022*

U.S. Cl. 369—77.1 **6 Claims**

1. A disc player which comprises a pickup for displacement in a radial direction of a disc by a driving means, an engaging portion formed on said pickup, a holder for holding said disc and which is displaced vertically immediately following loading and unloading of a disc in said disc player, and a stopper portion formed on said holder, whereby during unloading, said stopper portion of said holder engages said engaging portion of said pickup to prevent said pickup from displacement, said stopper portion and said engaging portion being vertically separated from each other through said vertical displacement of said holder following loading for allowing displacement of said pickup.

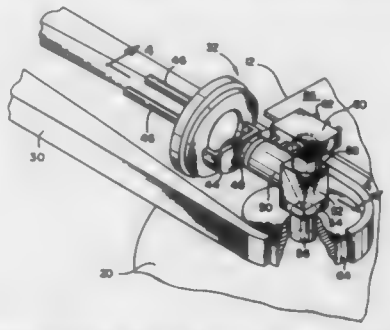
5,012,463

OPTICAL READ/WRITE STORAGE SYSTEM FOR FLEXIBLE MEDIA HAVING BERNOULLI STABILIZATION AT THE OPTICAL HEAD

Stephen W. Farnsworth, Berthoud; David R. Dodds, Boulder; Slobodan R. Perera, Boulder, and K. John Stahl, Boulder, all of Colo., assignors to Bernoulli Optical Systems Company, Boulder, Colo.

Filed Mar. 14, 1988, Ser. No. 167,652

Int. Cl.[5] G11B *7/00*



U.S. Cl. 369—100 **1 Claim**

1. An optical read/write storage system for reading and writing data to and from flexible optical media, comprising:

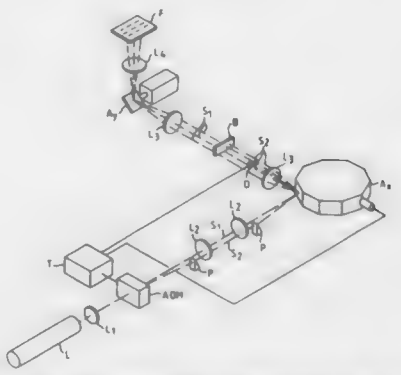
optical means for providing focused light onto said flexible media and for receiving reflected light from said flexible media;

first Bernoulli stabilization means, positioned proximate said flexible media, for providing primary Bernoulli stabilization of said flexible media while reading and writing data, said first stabilization means having an opening providing access to said flexible media; and

second Bernoulli stabilization means, connected to said optical means and positioned proximate said flexible media, for providing fine Bernoulli stabilization of said flexible media in the immediate region surrounding said optical means so that said optical means need not be moved substantially toward or away from said media in order to maintain said light focused on said media, said second Bernoulli stabilization means comprising a body member having an aperture through which said focused light is directed, said body member having a first flat surface around said aperture, said first flat surface lying in a plane generally parallel to said flexible media, and said body member having a second surface extending away from said first surface outside of said plane so that Bernoulli stabilization of said flexible media in the area of said first surface is created when said media is moving relative to said first surface.

5,012,464

COMPUTER-CONTROLLED LASER IMAGING SYSTEM WITH AUTOMATIC BEAM START AT LINE BEGINNING



Hans J. Vedder, Puchheim, and Hans Krenn, Grasbrunn, both of Fed. Rep. of Germany, assignors to AGFA-Gevaert AG, Leverkusen, Fed. Rep. of Germany

Filed Mar. 8, 1989, Ser. No. 320,778

Claims priority, application Fed. Rep. of Germany, Mar. 9, 1988, 3807659

Int. Cl.[5] G11B *7/085, 7/125*

U.S. Cl. 369—116 **7 Claims**

1. A computer-controlled laser imaging system for switching on a laser imaging beam at the beginning of a line of an image surface, the system comprising:

a laser and lens for emitting a laser-light beam;

an acoustic/optical modulator for receiving and modulating the beam into a primary beam of first-order diffraction

corresponding to the desired image and for separating in a y-direction transverse to the x-direction from the laser-light beam an unmodulated 0th-order secondary beam for use in determining line start;

a first telescopic lens system and a rotary polygonal mirror for deflecting the modulated beam in the x-direction of the line to be written;

means for receiving the secondary beam and focusing same through the first lens system on the mirror in registration with the primary modulated beam, whereby the primary and secondary beams cross on the mirror;

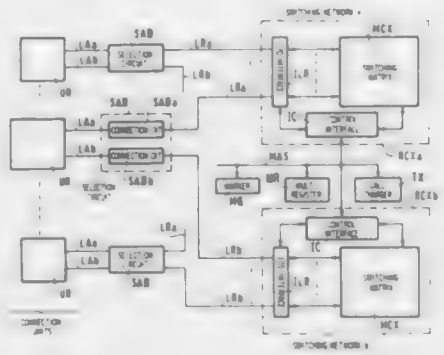
a second telescopic lens system and a projecting lens for receiving the deflected main beam and casting same on the image surface;

a photodetector in the second lens system positioned in the secondary beam and also positioned to intercept the primary beam generally at the beginning of a line; and

circuit means connected between the photodetector and the modulator for initiating modulation when the photodetector is impinged by the beams.

5,012,465

INTERCONNECTION SYSTEM FOR INTERCONNECTING CONNECTION UNITS AND A CENTRAL SWITCHING FACILITY



Didier Helou, Saint Cyr L'Ecole; Jean-Yves Peron, Lannion; René Coutin, Guingamp, and Georges Thiebaut, Perros Guirec, all of France, assignors to Alcatel Cit, Paris, France

Filed Feb. 2, 1990, Ser. No. 473,755

Claims priority, application France, Feb. 2, 1989, 89 01348

Int. Cl.[5] H04Q *11/04*; H04J *3/00*

U.S. Cl. 370—58.1 **3 Claims**

1. An interconnection system for interconnecting connection units and a central switching facility, said central switching facility being duplicated and constituted by two switching networks, each connection unit being connected to both switching networks via a selection circuit comprising two connection circuits, each connection circuit being connected by an access link to the connection unit and by a network link to one of the switching networks, said network and access links being two-way multiplex links having frames of fixed length;

wherein each connection circuits has two operation modes: a normal operation mode and a message operation mode, the latter consisting in receiving messages from the switching networks and sending messages to the switching networks; each mode being activated by frames sent form the switching networks to the connection circuits, each frame comprising 16-bit time slots providing: 8 data bits, 5 transparent bits, and 3 check bits; a first one of the check bits being a connection circuit operation mode bit having a value 0 for a normal operation mode and a value 1 for message operation mode; the value of the first check bit being fixed by the switching network in each time slot that it transmits towards the connection circuit;

and wherein each message comprises a multiframe of order thirty-two, said first check bit having the value 1 for only one time slot out of the time slots transmitted by the switching network to the connection circuit, and likewise for one time slot out of the time slots delivered by the connection circuit to the switching network, the value 1 being maintained for thirty-one frames and replaced by the value 0 during the thirty-second frame of a multiframe; said message being conveyed by the second check bit; and the third check bit conveying a cyclic redundancy check of order thirty-two, calculated over all of the bits conveyed by the frames of the multiframe.

CALL SERVICE INITIALIZATION ARRANGEMENT

Rolfe E. Buhrke, Westchester; Robert B. Dianda, Wheaton; Leo R. Katzenstein, Naperville, all of Ill.; Michael B. McClurkan, Little Rock, Ark., and John S. Tsai, Naperville, Ill., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Continuation-in-part of Ser. No. 108,249, Oct. 13, 1987, abandoned. This application Dec. 11, 1989, Ser. No. 449,653

Int. Cl.[5] H04J *3/24*

U.S. Cl. 370—62 **18 Claims**

1. An initialization method for a switch connectable via a single line to a plurality of terminals, said switch including means for storing a plurality of service profiles each defining a set of call services, said method comprising

said switch receiving on said line a first identifier defining one of said plurality of terminals and a second identifier defining one of said plurality of service profiles,

in response to receipt of said first and second identifiers, said switch enabling for said one terminal a set of call services defined by said one service profile,

in response to receipt of said second identifier, said switch determining a third identifier distinguishing said one service profile from any other service profiles defining sets of call services enabled for ones of said plurality of terminals, and

after determining said third identifier, said switch transmitting said third identifier to said one terminal and thereafter addressing said one terminal using said third identifier.

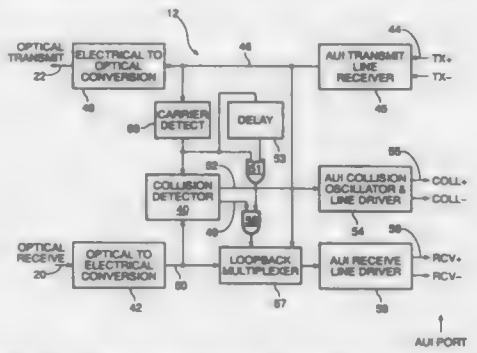
5,012,467

METHOD AND APPARATUS FOR COLLISION DETECTION IN A LOCAL AREA NETWORK TRANSCEIVER

Ronald C. Crane, Mountain View, Calif., assignor to 3Com Corporation, Santa Clara, Calif.

Filed Oct. 10, 1989, Ser. No. 418,080

Int. Cl.[5] H04J *3/02*



U.S. Cl. 370—85.3 **5 Claims**

1. A method for detecting collisions of packets of Manchester coded binary data comprising:

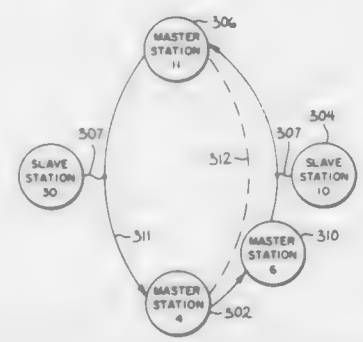
preselecting a period of time between expected transitions of a Manchester coded binary data signal to serve as a timing window;

transmitting a Manchester coded binary data signal, each said Manchester coded binary data signal having a transition at a repetitive expected time interval relative to a previous transition;

receiving said Manchester coded binary data signal; and

producing a packet collision signal whenever said transitions of said Manchester coded binary data fail to appear during said timing window.

5,012,468



MASTER SLAVE INDUSTRIAL TOKEN PASSING NETWORK

Stuart B. Siegel, Canton, and Jeffery C. Marriott, Ann Arbor, both of Mich., assignors to Allen-Bradley Company, Inc., Milwaukee, Wis.

Filed Dec. 28, 1989, Ser. No. 458,108

Int. Cl.[5] H04J *3/24*

U.S. Cl. 370—85.5 **5 Claims**

1. A method of communicating over a network formed by at least one master and slave station interconnected by a communications medium, comprising the steps of:

(a) passing a master token to each of the master stations in a predetermined order;

(b) enabling each master station to send a message on the network when it has possession of the master token;

(c) successively passing a solicit token to each of said master stations in a predetermined order;

(d) enabling each master station to send a solicit message on the network when it has possession of both the solicit token and the master token, said solicit message being directed to a recipient station connected to the communications medium but not one of those stations yet receiving the master token;

(e) enabling the recipient station which receives the solicit message to become one of said plurality of stations receiving the master token and the solicit token if the recipient station is a master station; and

(f) enabling the recipient station which receives the solicit message to send a negative acknowledgment message on the communications medium if the recipient station is a slave station, without becoming one of said plurality of stations receiving the master token.

ADAPTIVE HYBRID MULTIPLE ACCESS PROTOCOLS

Karamvir Sardana, 49/42 Punjabi Bagh, New Delhi 110 026, India

Filed Jul. 29, 1988, Ser. No. 226,210

Int. Cl.[5] H04J *3/16*

U.S. Cl. 370—95.3 **23 Claims**

10. A communications station for use on a single channel, time division, multiple access network, said single channel being divided into a plurality of time slots, said communications station comprising in combination;

selectable Aloha protocol means for transmitting and receiving message information packets using an Aloha protocol;

selectable Reservation protocol means for transmitting and receiving message information packets using a Reservation protocol;

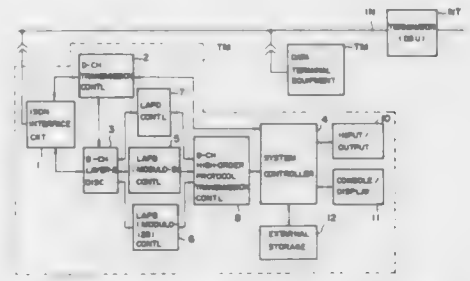
selectable TDMA protocol means for transmitting and receiving message information packets using a TDMA protocol;

first switching means for switching between said Aloha protocol means and said Reservation protocol means; and

second switching means for switching between said Reservation protocol means and said TDMA protocol means.

5,012,470

DATA TERMINAL EQUIPMENT AND DATA TRANSMISSION CONTROL METHOD



Toshifumi Shobu, Atsugi; Hiroshi Shibata, Zama, and Fumihiro Ogasawara, Ebina, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

Filed Sep. 8, 1989, Ser. No. 404,634

Claims priority, application Japan, Sep. 22, 1988, 63-236360; Oct. 7, 1988, 63-252113; Feb. 13, 1989, 1-31235; May 9, 1989, 1-114134

Int. Cl.[5] H04J *3/12*; H04Q *11/04*

U.S. Cl. 370—110.1 **20 Claims**

1. A data terminal equipment which is coupled to an integrated services digital network through an access line and uses a hierarchical protocol in conformity to an OSI reference standard model, comprising:

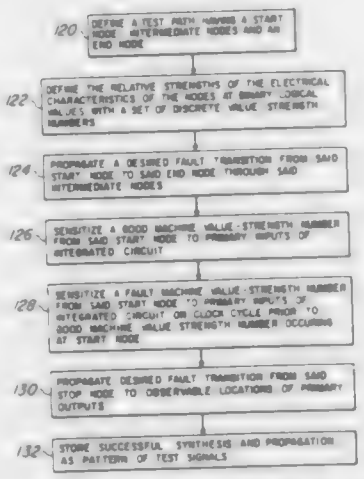
first data link protocol means for providing a link access procedure balanced (LAPB) modulo-8 data link protocol;

second data link protocol means for providing an LAPB modulo-128 data link protocol;

third data link protocol means for providing a link access procedure for a data channel (LAPD) data link protocol;

protocol determining means for determining a data link protocol to be used by referring to an address field and a control field of a call set-up signal which is supplied from a second data terminal equipment; and

data link protocol activating means, coupled to said first, second and third means and



said protocol determining means, for selecting and activating one of said first, second and third means on the basis of the result provided by said protocol determining means.

VALUE-STRENGTH BASED TEST PATTERN GENERATOR AND PROCESS

Theo J. Powell, Dallas; John I. Hickman, Cooper, and Jeri J. Crowley, Garland, all of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Filed Sep. 30, 1988, Ser. No. 252,289
Int. Cl.[5] G06F *11/10*
U.S. Cl. 371—27 **4 Claims**

1. A process of generating patterns of test signals that test stuck-at faults in semiconductor integrated circuits, said integrated circuits including field effect transistors, some of which have different electrical characteristics, said test signals being applied to said semiconductor integrated circuits, said integrated circuits including plural primary inputs and plural primary outputs and having plural internal nodes indirectly energizable from said primary inputs and indirectly readable from said primary outputs, said process comprising the steps of:

(a) defining a relative strength of the electrical characteristics of said nodes at binary logic values with a set of discrete value-strength numbers;

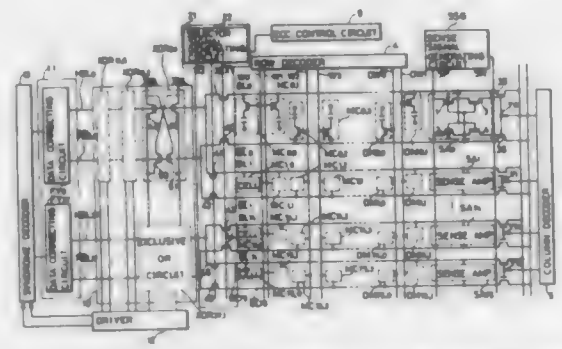
(b) selecting a said node of said integrated circuit;

(c) assigning a value-strength number representing a desired stuck-at fault to said selected node;

(d) attempting to sensitize said assigned value-strength number to a pattern of input signals to be applied to said primary inputs, said sensitizing including sensitizing value-strength numbers from said selected node to said primary inputs;

(e) attempting to propagate said assigned value-strength number to a pattern of output signals to be read from said primary outputs, said propagating including propagating value-strength numbers from said selected node to said primary outputs;

(f) indicating whether said attempting to sensitize and attempting to propagate successfully located a test pattern of logical states at said primary inputs and outputs to indicate said value-strength number at said selected node; and



(g) repeating said steps (a) through (f) for every node of said integrated circuit.

5,012,472

DYNAMIC TYPE SEMICONDUCTOR MEMORY DEVICE HAVING AN ERROR CHECKING AND CORRECTING CIRCUIT

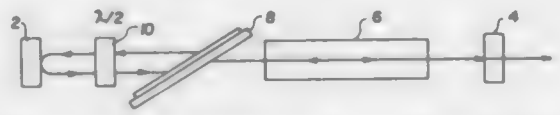
Kazutami Arimoto; Kiyohiro Furutani, and Koichiro Mashiko, all of Hyogo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Dec. 22, 1988, Ser. No. 288,218
Claims priority, application Japan, Dec. 25, 1987, 62-332542
Int. Cl.[5] G06F *11/10*
U.S. Cl. 371—40.1 **18 Claims**

1. A semiconductor memory device having error correcting means incorporated in a memory cell array, comprising:

a plurality of m bit line pair groups, each group having a plurality of n adjacent bit line pairs, wherein m and n are integers greater than 1;

error correcting means having a plurality of m circuit elements for correcting any erroneous potential appearing on a bit line pair; and



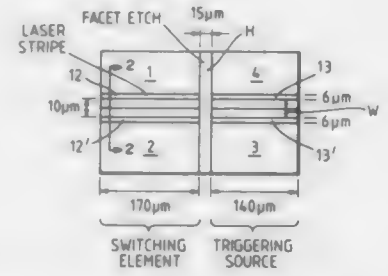
switching means for selectively connecting each of said plurality of n bit line pairs contained in each of said bit line pair groups to respective ones of said circuit elements of said error correcting means.

5,012,473

FIXED WAVELENGTH LASER USING MULTIORDER HALFWAVE PLATE

Herman E. Reedy, Adams Township, Butler County, Pa., assignor to II-VI Incorporated, Saxonburg, Pa.

Filed Dec. 13, 1989, Ser. No. 450,157
Int. Cl.[5] H01S *3/098*
U.S. Cl. 372—19 **16 Claims**



1. A laser adapted to operate at a constant predetermined wavelength comprising: a highly reflective, rear mirror at one end of a laser cavity, an output coupler spaced from and aligned with said rear mirror at an outlet end of said laser cavity, an active laser medium positioned between and in alignment with said rear mirror and said output coupler, a thin film polarizer intermediate said rear mirror and said active laser medium, and a multiorder halfwave plate positioned between and aligned with said rear mirror and said thin film polarizer, with said halfwave plate designed to rotate incident light beams traveling therethrough by 180° at said predetermined wavelength and to rotate incident light beams traveling therethrough by an amount other than 180° at wavelengths other than said predetermined wavelength, and with said thin film polarizer designed to reflect substantially all of the S-polarization of incident light beams, to transmit substantially all of the P-polarization of incident light beams at said predetermined wavelength, and to transmit less than substantially all of the P-polarization of incident light beams at wavelengths other than said predetermined wavelength.

POLARIZATION SWITCHING IN ACTIVE DEVICES

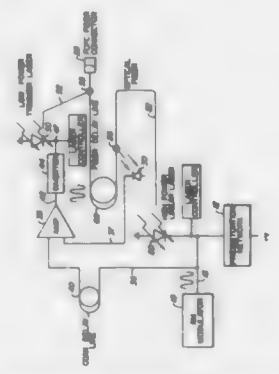
Ian H. White, Cambridge, and Richard S. Linton, Chester, both of England, assignors to British Telecommunications public limited company, London, England

PCT No. PCT/GB89/00236, § 371 Date Oct. 16, 1989, § 102(e) Date Oct. 16, 1989, PCT Pub. No. WO89/08937, PCT Pub. Date Sep. 21, 1989
PCT Filed Mar. 9, 1989, Ser. No. 424,232
Claims priority, application United Kingdom, Mar. 9, 1988, 8805620
Int. Cl.[5] H01S *3/103*
U.S. Cl. 372—27 **46 Claims**

1. A bistable polarisation source comprising:

a semiconductor injection laser providing optical gain in two waveguiding paths,

the waveguiding paths extending substantially parallel to one another at a small enough separation to enable the fields of optical radiation in the two paths to overlap,



the laser being switchable between first and second states in which the direct optical output of the laser is predominantly TE polarised and predominantly TM polarised respectively.

5,012,475

ANALOG COMPENSATION SYSTEM FOR LINEAR LASERS

Bruce D. Campbell, Portola Valley, Calif., assignor to Wavelength Lasers, Inc., Sunnyvale, Calif.

Filed Apr. 17, 1990, Ser. No. 510,390
Int. Cl.[5] H01S *3/10*
U.S. Cl. 372—29 **17 Claims**

1. An error compensation system comprising:

a first laser;

modulation means coupled to the first laser for providing an output signal to drive the first laser to cause it to emit modulated light;

an optical fiber disposed to receive light from the first laser;

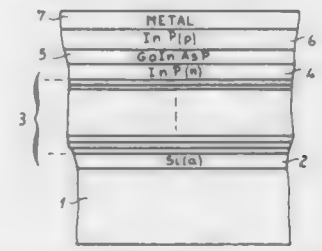
tap means coupled to the optical fiber for removing a desired amount of light from the optical fiber;

sensing means disposed in proximity to the tap for detecting the light removed from the optical fiber and in response providing a first signal;

comparator means connected to the sensing means to receive the first signal and connected to the modulation means to receive the output signal, and in response thereto provide an error correction signal;

a second laser connected to receive the error correction signal and in response emit modulated light; and

summing means connected to receive the light from the second laser and combine it with light from the first laser on the optical fiber; and



detector means coupled to the summing means to receive the combined light from the first and second laser and to generate an output signal with the desired modulation without the distortions.

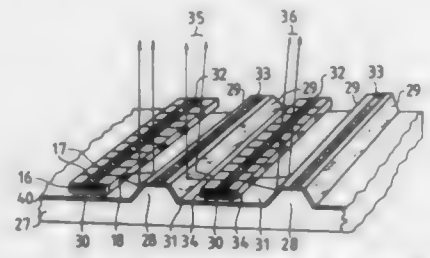
5,012,476

DEVICE OF SEMICONDUCTOR MATERIALS FORMED ON A SUBSTRATE HAVING A DIFFERENT LATTICE PARAMETER AND APPLICATION TO A LASER

Manijeh Razeghi, Gif sur Yvette; Martin Defour, Courbevoie; Franck Omnes; Philippe Maurel, both of Les Ulis; Robert Blondeau, Ablis, and Michel Krakowski, Paris, all of France, assignors to Thomson-CSF, Paris, France

PCT No. PCT/FR88/00269, § 371 Date Jan. 11, 1989, § 102(e) Date Jan. 11, 1989, PCT Pub. No. WO88/10007, PCT Pub. Date Dec. 15, 1988
PCT Filed May 27, 1988, Ser. No. 313,974
Claims priority, application France, Jun. 2, 1987, 87 07709
Int. Cl.[5] H01S *3/19*
U.S. Cl. 372—45 **11 Claims**

1. Device of semiconductor materials comprising:



a diamond substrate (1);

at least one silicon layer (2) deposited on one face of the substrate;

a series of layers of semiconductor compounds forming a matching superlattice (3), which are deposited on the silicon layer (2) and in which layers thereof located nearest the silicon layer (2) have a first lattice parameter which is little different from that of the silicon layer (2) and in which most distant layers thereof have a second lattice parameter;

a component of semiconductor material (c) juxtaposed to the superlattice (3) in which at least a layer thereof located nearest the superlattice (3) has a lattice parameter which is little different from that of the second lattice parameter.

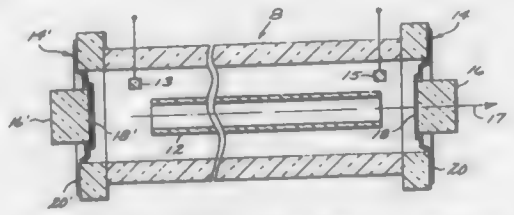
Int. Cl.[5] H01S 3/19
U.S. Cl. 372—50 8 Claims

1. An optoelectronic power device for emitting coherent light generated by a plurality of elementary lasers associated in strips of lasers, said device being formed of an integrated circuit, supported by a substrate made of semiconductor materials, and comprising:
at least one array of elementary semiconductor lasers having parallel, longitudinal flanks and formed by epitaxial growth on the substrate,
a plurality of layers, including an emitting strip for emitting a beam of coherent light in a plane thereof, constituting each of the elementary lasers, each of the emitting strips being mutually parallel and extending perpendicular to the parallel, longitudinal flanks of the array of lasers and producing two beams of coherent light at each end thereof, the beams being parallel to a plane of the substrate, and
at least one reflecting bar, parallel to the array of lasers and adjacent at least one end of each of the emitting strips, said bar being etches in relief in the substrate to provide the at least one reflecting bar with inclined, longitudinal flanks and having a height at least equal to that of the array so that the flanks of the reflecting bar from reflectors that reflect the beams, emitted by the strips, substantially perpendicularly to the plane of the substrate,
wherein said integrated circuit is complemented by at least one first metallization deposited on the array of lasers, and a second metallization for electrical supply of the lasers of the array, and
wherein the at least one reflecting bar has, perpendicularly to a longitudinal axis thereof, a substantially semi-circular section, a semi-circular surface thereof forming the inclined flanks of the at least one reflecting bar and being metallized by a metallization to increase reflectivity.



5,012,478
MONOLITHIC MULTIPLE BEAM SEMICONDUCTOR LASER
Ryo Hattori; Hitoshi Kagawa, and Masaki Mori, all of Itami, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan
Filed Sep. 25, 1989, Ser. No. 412,095
Claims priority, application Japan, Sep. 27, 1988, 63-243375
Int. Cl.[5] H01S 3/19
U.S. Cl. 372—50 5 Claims

1. A monolithic laser having at least two laser sections for producing at least a low output power beam and a high output power beam, the monolithic laser comprising, in combination:
a cavity for the low power beam having front and rear facets coated to have reflectances in the range between about 25% and 33%, the low power cavity also having a rated output power which is coordinated with the front and rear facet reflectances to produce output radiation at a predetermined wavelength;
a cavity for the high power beam having front and rear facets, the front facet being coated to have a reflectance in the range between about 1% and 4%, the rear facet being

coated to have a reflectance in the range of about 50% to 65%, the high power cavity having a rated output power coordinated with the reflectances of said front and rear facets to produce radiation when operated at the rated power which is within about 1 nm of the predetermined wavelength of the low power beam.

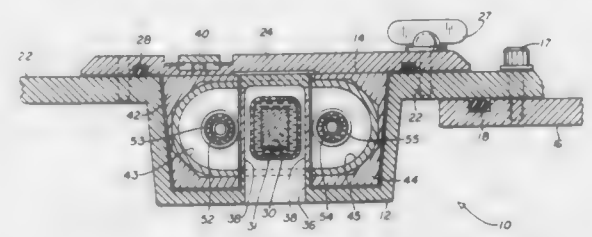
ULTRAVIOLET METAL VAPOR LASER HAVING HARD SEALED INTERNAL MIRRORS
William F. Hug, 382 E. California Blvd., Pasadena, Calif. 91106, and Manfred R. Otto, 1016 Corinthian Way, Pomona, Calif. 91767
Continuation-in-part of Ser. No. 142,019, Jan. 11, 1988. This application Aug. 1, 1989, Ser. No. 388,148
Int. Cl.[5] H01S 3/22
U.S. Cl. 372—56 1 Claim

1. An ultraviolet metal vapor laser tube comprising:
a. an elongated envelope;
b. an active laser medium consisting of helium gas and cadmium vapor and being contained in said elongated envelope;
c. an output coupling mirror assembly which is disposed on one end of said elongated envelope and which is formed from a glass substrate which has a thickness in the range of 3.0 to 10.0 millimeters and transmits at least 85% of light energy at a wavelength of 325 nanometers, said glass substrate having a partially reflecting multilayer dielectric coating formed on its inner surface, said partially reflecting multilayer dielectric coating being optimally transmissive to light energy within the ultraviolet spectrum;
d. a reflector mirror assembly which is disposed on the opposite end of said elongated envelope and which is formed from a glass substrate which has a reflecting multilayer dielectric coating formed on its inner surface, said reflecting multilayer dielectric coating being substantially reflective to light energy at a wavelength of 325 nanometers;
e. first mounting means for mounting said output coupling mirror assembly at one end of the elongated envelope, said first mounting means having a first metal flange member which has an aperture formed therein;
f. second mounting means for mounting said reflector mirror at the other end of the elongated envelope, said second mounting means having a second metal flange member which has an aperture formed therein; and



g. a glass solder which bonds said output coupling mirror assembly and said reflector mirror assembly to said first and second metal flange members, respectively, whereby said output coupling mirror assembly, said reflector mirror assembly, said glass solder and said first and second metal flange members have coefficients of thermal expansion which are substantially equal.

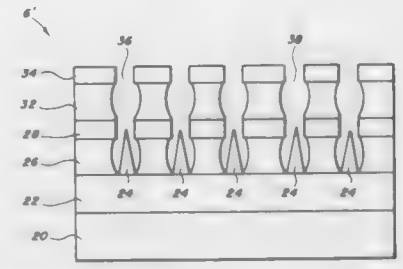
GAS LASER
Hans Krueger, Munich, and Wolfgang Welsch, Baldham, both of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany
Filed Apr. 2, 1990, Ser. No. 502,912
Claims priority, application Fed. Rep. of Germany, Apr. 17, 1989, 3912609
Int. Cl.[5] H01S 3/03
U.S. Cl. 372—61 10 Claims



1. In a gas laser device of the type in which a hollow tube of a material selected from the group consisting of glass and ceramic is closed at one end with a cap which is soldered to the tube, the improvement for providing improved adhesion of the solder and a durable gas-tight connection between the tube and the cap, wherein:
the cap is metal and comprises an end portion over and covering the one end of the tube and a shaped portion extending from said end portion over a portion of the tube adjacent the one end of the tube, said shaped portion including a free edge and a marginal section extending between said end portion and said free edge, said free edge lying closer to the tube than said marginal section; and
the glass solder comprises lead borate and fills the space between the shaped portion and the end portion of the tube.

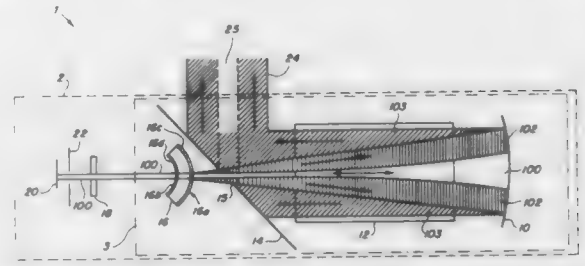
FLASHLAMP LINE REPLACEABLE UNIT
Carlos A. Casteleiro, Orlando, Fla., assignor to Martin Marietta Corporation, Bethesda, Md.
Filed Mar. 9, 1990, Ser. No. 491,010
Int. Cl.[5] H01S 3/093
U.S. Cl. 372—72 21 Claims



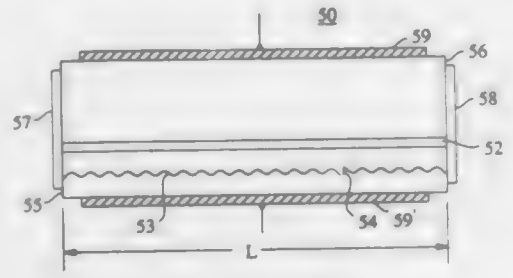
1. A laser arrangement utilizing a pair of interfitting housing members, with one of said housing members serving to support a non-cylindrically shaped solid state laser material, and the other of said housing members having at least one reflective cavity surface in which pumping means are supported, said pumping means serving, when energized, to produce excitation in said laser material, said one housing member being contiguous to an optical bed in which a resonator is contained, said housing members being fully operational to produce a useful output, said pumping means being replaceable when said housing members have been separated, such replacement of said pumping means being accomplishable without disturbing the alignment of said solid state laser material and without accessing the clean volume of said optical bed.

5,012,482
GAS LASER AND PUMPING METHOD THEREFOR USING A FIELD EMITTER ARRAY
Henry F. Gray, Alexandria, Va., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.
Filed Sep. 12, 1990, Ser. No. 581,620
Int. Cl.[5] H01S 3/09
U.S. Cl. 372—74 12 Claims

1. A method for electron pumping a gas laser, comprising the steps of:
locating afield emitter array within a laser cavity envelope having a laser active gas, said field emitter array having a plurality of conducting layers and having an insulating layer between any two of said conducting layers;
applying a variable first predetermined voltage to said field emitter array effective to cause said array to emit a plurality of electrons from said field emitter array effective to pump said laser active gas to cause said system to lase.

5,012,483
NARROW-BANDWIDTH DIFFRACTION-LIMITED COUPLED STABLE-UNSTABLE RESONATOR LASER CAVITY
John F. Reintjes, Alexandria, Va.; Lawrence L. Tankersley, Annapolis; David G. Cooper, Riva, both of Md., and James L. Dexter, Alexandria, VA, assignors to The United States of America as represented by the Secretary of the Navy, Washington, D.C.
Filed Sep. 27, 1990, Ser. No. 589,142
Int. Cl.[5] H01S 3/08
U.S. Cl. 372—95 12 Claims

1. A laser cavity providing high power laser radiation with diffraction-limited divergence and narrow-bandwidth, comprising:
a stable laser cavity operating on a low order TEM mode and providing narrow bandwidth laser radiation;
an unstable laser cavity disposed within said stable laser cavity; and



an optical coupler located within said stable laser cavity and coupled to said unstable laser cavity for coupling said narrow bandwidth laser radiation from said stable laser cavity to said unstable laser cavity.

5,012,484

ANALOG OPTICAL FIBER COMMUNICATION SYSTEM, AND LASER ADAPTED FOR USE IN SUCH A SYSTEM

Edward J. Flynn, Summit; Leonard J-P Ketelsen, Fanwood, and Charles B. Roxlo, Bridgewater, all of N.J., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

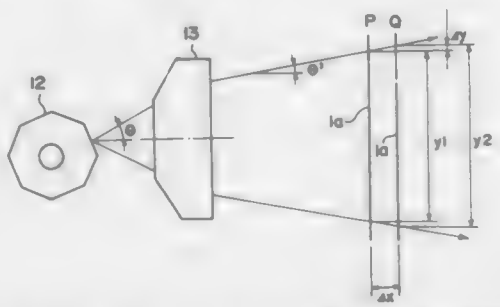
Filed Jan. 2, 1990, Ser. No. 459,922
Int. Cl.[5] H01S *3/08*
U.S. Cl. 372—96 **12 Claims**

1. A semiconductor laser comprising

(a) a semiconductor body forming a radiation cavity of length L defined by a front facet and a back facet, associated with each of said facets being a reflectivity, and associated with the cavity during operation of the laser is a photon density and a gain;

(b) a diffraction grating; and

(c) contact means facilitating flowing an electrical current through the semiconductor body; characterized in that the laser further comprises



(d) means adapted for producing a non-uniform photon density in the cavity, with the density of photons being larger in the portion of the cavity that is adjacent to the back facet of the cavity (to be referred to as the "back" portion) than it is in the remaining portion of the cavity (to be referred to as the "front" portion), such that during operation of the laser the gain in the back portion is substantially independent of the current through the semiconductor body whereas the gain in the front portion of the cavity is a function of the current through the semiconductor body.

5,012,485

LASER BEAM SCANNING APPARATUS

Naoto Ohmori, Osaka, Japan, assignor to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed Sep. 8, 1989, Ser. No. 404,956
Claims priority, application Japan, Sep. 10, 1988, 63-226961
Int. Cl.[5] H01S *3/08*
U.S. Cl. 372—108 **4 Claims**

1. A laser beam scanning apparatus for beam scanning a medium with a laser beam being deflected by a deflector, comprising:

a first mirror provided with a surface for reflecting the laser beam, after being deflected by the deflector along a first light path;

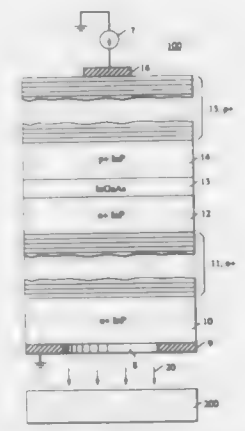
a second mirror with a surface provided for reflecting the laser beam from the first mirror for folding a light path between the first mirror and the medium in such a relationship that the first light path between the deflector and the first mirror is not intersected with a second light path between the second mirror and the medium, and

the first and second mirrors being positioned so as to fulfill the following conditions:

$$0<\theta_1<45°$$

$$\theta_1<\theta_2<90° \quad 2\theta_1<90°$$

where θ_1 and θ_2 represent angles between respectively the first and second mirror surfaces thereof and a plane perpendicular to a beam scanning plane from the deflector to the first mirror,



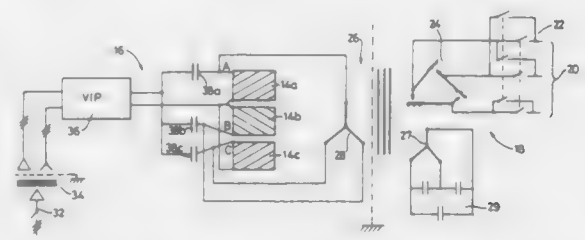
the first and second mirrors are movable, respectively, for adjusting a length of a scanning line on the medium, wherein when one of the first and second mirrors is moved during adjusting, said moved mirror has a lesser shift amount of the scanning line on the medium in a direction perpendicular to the scanning line as compared with a movement of the other mirror.

5,012,486

VERTICAL CAVITY SEMICONDUCTOR LASER WITH LATTICE-MISMATCHED MIRROR STACK

Sergey Luryi, Bridgewater, and Ya-Hong Xie, Flemington, both of N.J., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Apr. 6, 1990, Ser. No. 506,413
Int. Cl.[5] H01S *3/19*
U.S. Cl. 372—45 **18 Claims**



1. A semiconductor laser structure comprising an active semiconductor layer upon which a cladding layer and a mirror stack have been grown, the mirror stack comprising a plurality of semiconductor layers at least one of which is lattice-mismatched with respect to another contiguous thereto.

5,012,487

INDUCTION MELTING

John H. Simcock, Droitwich, Great Britain, assignor to Inductotherm Europe Limited, Hereford & Worcester, United Kingdom

Filed Oct. 18, 1989, Ser. No. 423,320
Claims priority, application United Kingdom, Jun. 14, 1989, 8913620
Int. Cl.[5] H05B *6/06*
U.S. Cl. 373—147 **15 Claims**

1. Induction melting apparatus including a vessel for holding a melt of molten metal, induction coil means operatively associated with the vessel, and power supply means for providing power input to the induction coil means, said input having a melting component at a first preselected frequency for operatively holding the melt at a preselected temperature by induction heating and an agitation component at a second preselected and different frequency for agitation of the melt by inducing turbulence therein; the power supply means comprising an agitation power supply circuit operatively supplying current to the coil means at said second frequency, and a melting power supply circuit including series resonant means through which the melting component is operatively applied to the coil means at said first frequency at the same time as the agitation component is applied thereto, each said supply circuit including means for regulating said component respective thereto independently of and without affecting the other of said components.

5,012,488

CRUCIBLE FOR INDUCTIVE HEATING

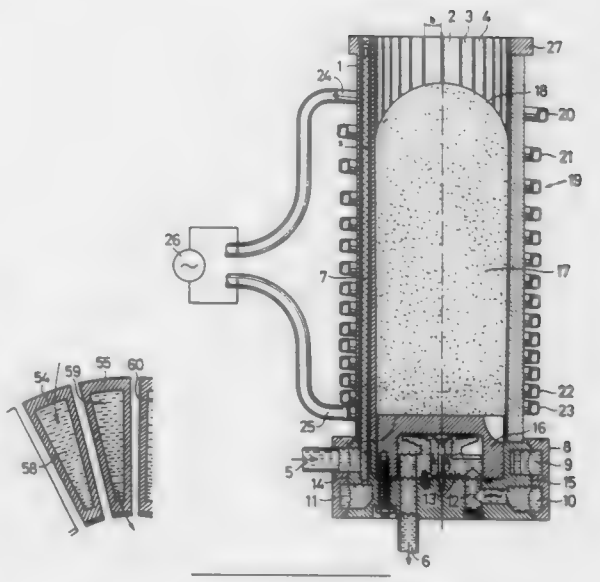
Otto W. Stenzel, Gründau, Fed. Rep. of Germany, assignor to Leybold Aktiengesellschaft, Fed. Rep. of Germany

Filed Mar. 5, 1990, Ser. No. 489,042
Claims priority, application Fed. Rep. of Germany, Dec. 4, 1989, 3940029
Int. Cl.[5] H05B *6/24*
U.S. Cl. 373—156 **11 Claims**

1. A crucible for the induction heating of materials, which comprises:

a plurality of vertical segments having at least two parts with different conductivity, a first part facing away from the material which is made of an electrically poor conductor, and a second part facing toward the material which is made of an electrically good conductor, in which the thickness of the vertical segment satisfies the equation:

$$\kappa < \frac{2}{\pi f \mu_0 b^2}$$



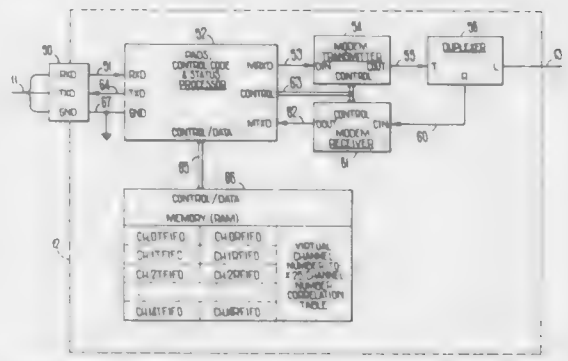
where

κ = specific electrical conductivity of the first part

f = frequency of the a.c. current flowing through the induction coil

μ_0 = magnetic permeability in vacuo

b = thickness of the vertical segment; and an induction coil wrapped around the vertical segments.



5,012,489

METHOD FOR SENDING A PLURALITY OF DATA CHANNELS OVER A SINGLE COMMUNICATIONS LINE

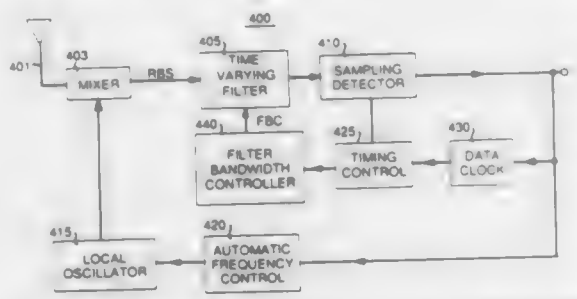
Richard J. Burton, Buford; John A. Copeland, III, Dunwoody; John W. Jerrim; Toby L. Nixon, both of Duluth; Martin H. Sauser, Jr., Atlanta; Robert E. Weatherford, Jr., Norcross, all of Ga.; Larry D. Becker, Walton Beach, Fla., and David F. Strawn, Marietta, Ga., assignors to Hayes Microcomputer Products, Inc., Norcross, Ga.

Filed Nov. 7, 1988, Ser. No. 267,963
Int. Cl.[5] H04L *5/02, 5/14*
U.S. Cl. 375—8 **24 Claims**

1. In a data transfer system containing a data terminal equipment (DTE) and a data communications equipment (DCE), a method for sending commands and data from said DTE to said DCE, comprising the steps of:

(A) defining a plurality of data channels for transferring said data from said DTE to said DCE, only a single data channel of said plurality of data channels being selected at any time;

(B) performing a data transfer procedure comprising:



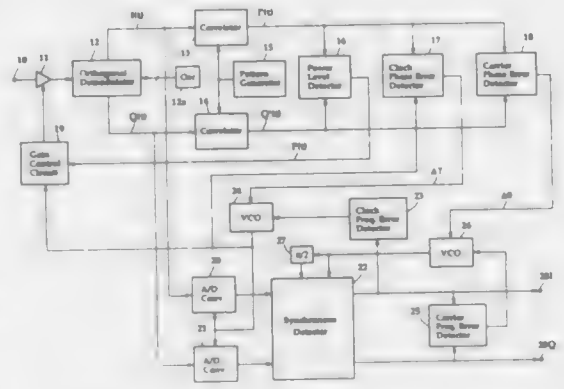
(1) identifying a predetermined data channel by which said data is to be transferred;
(2) if said predetermined data channel is not enabled then delaying the transfer of said data until said predetermined data channel has been enabled by said DCE;
(3) if said predetermined data channel is enabled but not selected then selecting said predetermined data channel;
(4) inspecting each character of said data to be sent to said DCE;
(5) if said character is not one of a predetermined set of characters, then sending said character to said DCE;
(6) if said character is one of said predetermined set of characters then generating a first character corresponding to said character, sending the ASCII character DC2 to said DCE, and sending said first character to said DCE; and
(C) performing a command procedure comprising:
(1) sending said DC2 character to said DCE; and
(2) performing at least one of the following: sending a code AN, where A is a predetermined value and N is a channel number, to enable channel N, sending a code BN, where B is a predetermined value, to select said predetermined channel, and sending at least one character of a command to said DCE.

5,012,490

VARYING BANDWIDTH DIGITAL SIGNAL DETECTOR

Robert E. Myer, Denville, N.J., assignor to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Dec. 26, 1989, Ser. No. 456,897
Int. Cl.[5] H04B *15/00*
U.S. Cl. 375—58 **13 Claims**



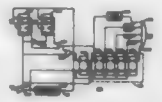
8. A communication system for exchanging information signals over a plurality of channels comprising:
a plurality of transmitters each responsive to an information signal having a plurality of levels and transitions between the levels occurring at predetermined intervals for generating a prescribed band signal having a distinct carrier modulated by the information signal, the prescribed bands forming a set of overlapping frequency band channels, and
at least one receiver comprising:
means for receiving the set of overlapping frequency band channel signals including a signal having a first carrier signal modulated by a first information signal,
means responsive to the received signals for forming a demodulated signal including a component corresponding to the first information signal,
means for detecting the levels of the demodulated signal between the transitions of the first information signal,
means responsive to the detected levels of the demodulated signal for synchronizing the demodulated signal forming means to the first carrier frequency, and
means responsive to the detected levels of the demodulated signal for synchronizing the detecting means to the transitions of the first information signal,
the detecting means including:
means for restricting the demodulated signal to a first bandwidth at the transition instants of the first information signal and to a second narrower bandwidth between the transitions of the first information signal, and
means for sampling the demodulated signal from the bandwidth limiting means during the second narrower bandwidth of the demodulated signal to form a signal corresponding to the first information signal.

5,012,491

PREAMABLE DETECTION CIRCUIT FOR DIGITAL COMMUNICATIONS SYSTEM

Motoya Iwasaki, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Aug. 7, 1989, Ser. No. 390,040
Claims priority, application Japan, Aug. 5, 1988, 63-195911
Int. Cl.[5] H04B *1/26*
U.S. Cl. 375—96 **10 Claims**



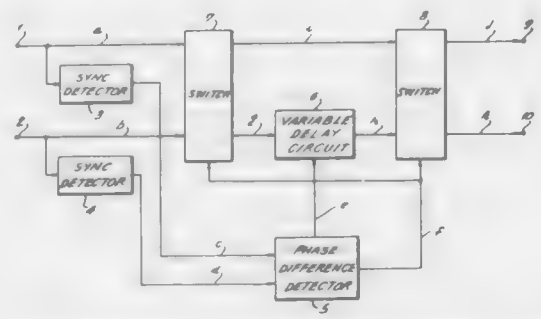
1. A preamble detection circuit for a receive end of a transmission system in which a preamble containing a predetermined bit pattern and a digital signal are modulated upon orthogonal carriers and transmitted in a series of burst signals from a transmit end of the system, said receive end comprising symbol clock generator means for generating a local clock pulse, sampler means for sampling orthogonal signals in response to said local clock pulse, variable-frequency carrier generator means for generating first local orthogonal carriers having variable frequency and phase, and synchronous detector means for synchronously detecting the transmitted symbols from outputs of said sampler means with said first local orthogonal carriers, said circuit comprising:
orthogonal demodulator means for noncoherently detecting the transmitted burst signals with second local orthogonal carriers of constant frequency equal to the frequency of the transmitted orthogonal carriers, said second local orthogonal carriers tending to deviate in phase over a predetermined range from the transmitted orthogonal carriers, said orthogonal demodulator means generating in-phase and quadrature output signals as said orthogonal signals;
means for generating a local bit pattern corresponding to the bit pattern contained in said preamble;
first and second correlators, the first correlator providing a correlation calculation between the local bit pattern and the in-phase output signal and the second correlator providing a correlation calculation between the local bit pattern and the quadrature output signal;
carrier phase error detector means connected to the outputs of the first and second correlators for detecting a carrier phase error of the second local orthogonal carriers with respect to the transmitted carriers and controlling said variable-frequency carrier generator means with the detected carrier phase error; and
clock phase error detector means connected to be responsive to one of the outputs of the first and second correlators and to the output of the symbol clock generator means for detecting a clock phase error of the local clock pulse with respect to symbols contained in the transmitted burst signals and controlling the symbol clock generator means with the detected clock phase error.

5,012,492

APPARATUS AND METHOD FOR DETECTING A CARRIER SIGNAL

Daniel W. Sexton, and Timothy J. Williams, both of Charlottesville, Va., assignors to GE Fanuc Automation North America, Inc., Charlottesville, Va.

Filed Sep. 29, 1989, Ser. No. 415,691
Int. Cl.[5] H03D *3/04*
U.S. Cl. 375—82 **9 Claims**



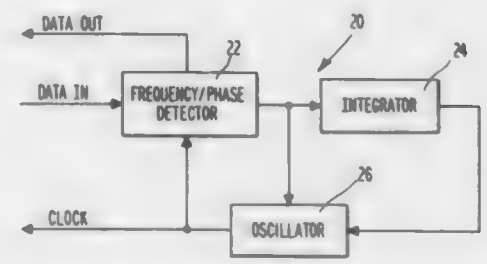
1. A carrier detection circuit for detecting the presence of a carrier signal including a sequence of first symbols exhibiting a first frequency and second symbols exhibiting a second frequency, said circuit comprising:
threshold detecting means, responsive to said carrier signal, for generating a first carrier detect pulse exhibiting a first logic state each time one of said first and second symbols exhibits a voltage exceeding a predetermined threshold level and otherwise generating a first carrier detect pulse exhibiting a second logic state; and
carrier detection pulse generating means, coupled to said threshold detecting means, for generating a second carrier detect pulse only if each of a plurality of consecutive first carrier detect pulses exhibits said first logic state.

5,012,493

PHASE DIFFERENCE-ADJUSTING CIRCUIT

Ichiro Hirai, and Toru Amano, both of Tokyo, Japan, assignors to NEC Corporation, Japan

Filed Jul. 18, 1989, Ser. No. 381,598
Claims priority, application Japan, Jul. 18, 1988, 63-177025
Int. Cl.[5] H04L *1/02, 7/04*
U.S. Cl. 375—100 **4 Claims**



1. A phase-adjusting circuit for adjusting the phase relation between input data strings supplied via input lines, comprising:
sync detecting means provided for each of said lines, for generating frame sync detection signals by detecting frame sync signals of said input data strings;
means responsive to said frame sync detection signals for detecting a first data string having a largest delay of the input data strings;
phase difference-detecting means for detecting phase differences between said first data string and remaining data strings other than the first data string to produce phase difference signals for said remaining data strings;
line connecting signal-generating means responsive to said phase difference signals for generating line connecting signals;
variable-delay means responsive to said phase difference signals for outputting delayed data strings by giving delays to said remaining data strings;
first switching means responsive to said line connecting signals for delivering said remaining data strings to said variable-delay means and for outputting said first data string in an undelayed state; and
second switching means responsive to said line connecting signals for delivering said first data string and said delayed data strings to output lines corresponding to said input lines.

5,012,494

METHOD AND APPARATUS FOR CLOCK RECOVERY AND DATA RETIMING FOR RANDOM NRZ DATA

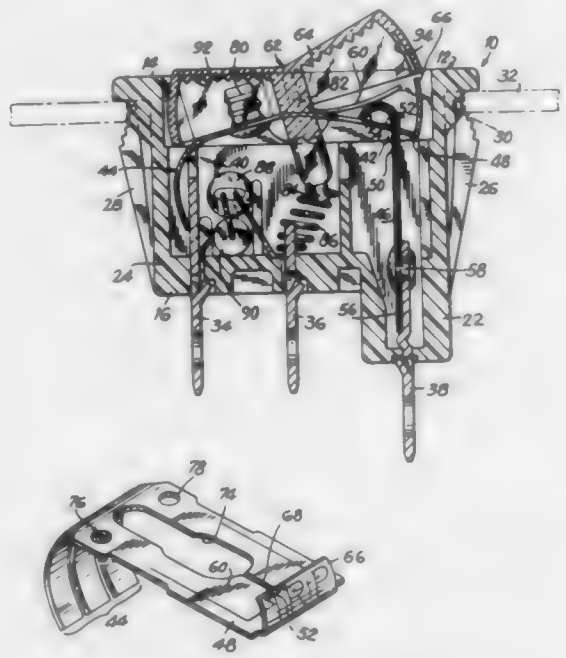
Benny W. H. Lai, San Jose, and Richard C. Walker, Palo Alto, both of Calif., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Nov. 7, 1989, Ser. No. 432,869
Int. Cl.[5] H04L *7/033*
U.S. Cl. 375—120 **24 Claims**

13. A phase detector for detecting the phase difference between a random NRZ data signal and a clock signal, comprising:
sampling means, connected to receive said clock signal and said data signal, for sampling said data signal in response to said clock signal and for generating a number of consecutive samples of said data signal; and
determination means, connected to said sampling means, for determining whether the phase of said clock signal is definite or indefinite in relation to said consecutive samples, for assigning a definite phase relationship whenever said phase is determined to be indefinite, wherein phase assignment is made in response to the frequency relationship between said data signal and said clock signal, and for generating a phase signal representative of the determined phase relationships.

5,012,495

SWITCH AND CIRCUIT BREAKER COMBINATION DEVICE



Ronald G. Munroe, Hallandale, Fla., and Christopher J. Sedlmayr, New York, N.Y., assignors to Eagle Electric Mfg. Co. Inc., Long Island City, N.Y.

Filed Mar. 19, 1990, Ser. No. 495,495
Int. Cl.[5] H01H *37/00, 71/16*
U.S. Cl. 337—3 **15 Claims**

1. A device for protecting an electrical load from electrical current overload, comprising:
(a) a housing;
(b) electrical switching means on the housing and including an actuatable switch element movable between open and closed positions to respectively prevent and enable electrical current to flow through the switching means;
(c) resettable circuit breaker means in the housing for interrupting current flow to the load in response to a current overload, and for preventing resumption of the current flow until the breaker means is reset, said breaker means being electrically connected in series with the switching means and including a latch element and a resettable trip element, said latch element being movable along a path in response to the current overload from a latched position to a tripped position in which the latch and trip elements

are respectively latched and unlatched relative to each other;

(d) actuator means for resetting the trip element from the tripped to the latched position, and for simultaneously moving the switch element from the closed to the open position to prevent current from flowing to the load during resetting, said actuator means being further operative for moving the switch element from the open to the closed position while maintaining the trip element in the latched position to enable current to resume flowing to the load

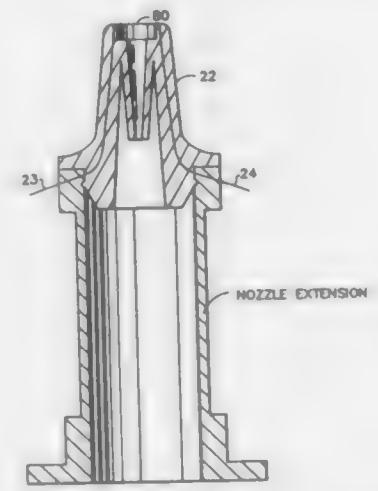
after resetting, said actuator means including an actuator mounted on the housing for manual displacement;

(e) means for mounting the switch element on the actuator for joint displacement therewith; and

(f) means for mounting the trip element on the actuator for joint displacement therewith during resetting, said trip element being biasingly urged for displacement relative to the actuator away from said path to the tripped position and maintained at a distance from and out of engagement with, the latch element until the breaker means is reset.

5,012,496

DROP COUNTING SYSTEM



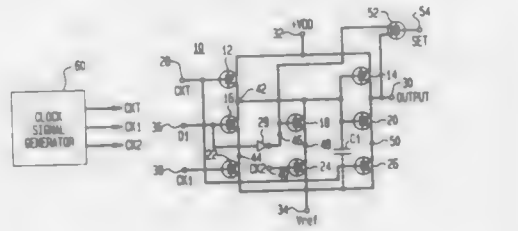
Robert N. Weinreb, Rancho Santa Fe; Jerzy J. Lewak, Del Mar, and Andreas W. Dreber, San Diego, all of Calif., assignors to Acumetric, Inc., San Diego, Calif.

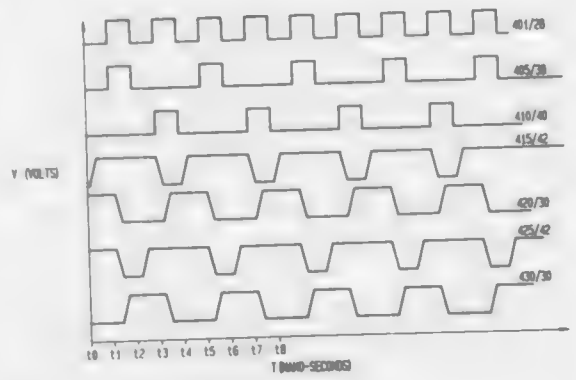
Filed Nov. 7, 1989, Ser. No. 433,014
Int. Cl.[5] A61M *5/172*
U.S. Cl. 377—21 **26 Claims**

1. An electronic drop counting device, including:

a. sensor means, coupled to a source of fluid, for generating a distinctive signal upon the separation of a drop of fluid as it separates from the source of fluid;

b. detection means, coupled to the sensor means, for receiving the output of the sensor means, detecting each distinctive signal, and generating a drop pulse in response to such detection.





5,012,497

HIGH SPEED FREQUENCY DIVIDER CIRCUIT

Swye N. Lee, Lawrenceville, N.J., assignor to David Sarnoff Research Center, Inc., Princeton, N.J.

Filed Jan. 25, 1990, Ser. No. 470,273
Int. Cl.[5] H03K *23/44*
U.S. Cl. 377—118 **34 Claims**

1. A frequency divider comprising:

storing means;

means for receiving a first frequency signal;

means for receiving at least one clock signal having a frequency that is a sub-multiple of the first frequency;

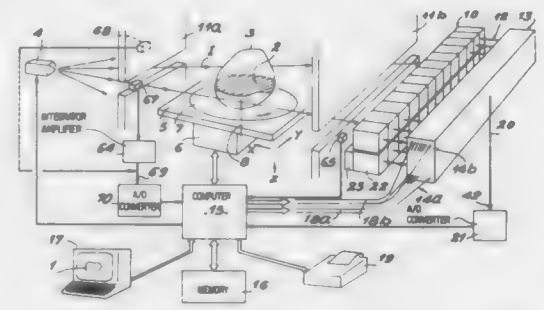
an output being adapted to be set to first and second logic states;

means responsive to the first frequency signal and the at least one sub-multiple frequency clock signal for generating a sub-multiple frequency signal at the output comprising:

means responsive to the first frequency signal for placing the storing means in a set condition;

means responsive to the at least one sub-multiple frequency signal for placing the storing means in a reset condition;

means responsive to the storing means being in its reset condition for setting the output to the first logic state; and



means jointly responsive to the storing means being in its set condition and the first frequency signal for resetting the output to the second logic state.

5,012,498

X-RAY TOMOGRAPHY DEVICE

Marc Cuzin, La Tronche, and Francis Glasser, Jarrie, both of France, assignors to Commissariat a l'Energie Atomique, Paris, France

Filed Jan. 24, 1989, Ser. No. 300,896
Claims priority, application France, Jan. 25, 1988, 88-00784
Int. Cl.[5] A61B *6/00;* **H05G** *1/34;* **F16K** *3/00*
U.S. Cl. 378—22 **8 Claims**

1. An X-ray tomography device for obtaining the image of at least one plane cutting, of an object, comprising:

an X-ray source for supplying high-energy pulses at a predetermined frequency;

a primary collimator for directing the high-energy pulses so that the high-energy pulses traverse the object close to a cutting plane;

at least one bar of photoelectric measuring detectors for receiving the high-energy pulses which have been attenuated by the object and have passed through a secondary collimator, these photoelectric detectors respectively supplying electric detection pulses representative of the attenuated energy pulses originating from the object;

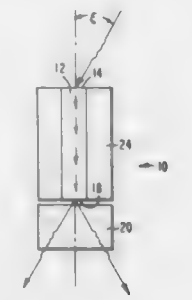
display and processing means connected to the photoelectric measuring detectors so as to supply an image of said at least one plane cutting;

means for translating and moving the object;

the display and processing means include a set of integrator-amplifier circuits connected to the photoelectric measuring detectors, each integrator-amplifier circuit having means for controlling an integration period;

a computer connected to a memory and to said display means and having control outputs respectively connected to the integrator-amplifier circuits, the memory of the computer containing a sequencing and processing program so as to control each integrator-amplifier circuit so that each electric detection pulse supplied by a corresponding photoelectric detector is integrated during a first rough measurement period and so as to integrate this electric detection pulse on at least one second correction detection pulse from the next electric detection pulse;

each integrator-amplifier circuit supplying an analog to digital converter a first rough measurement pulse and a second correction pulse having duration corresponding to the first rough measurement period and the at least one second correction period, the amplitude of the first rough measurement pulse representative of the energy of the attenuated energy pulses originating from the object which are received by the photoelectric measuring detectors, the amplitude of the second pulse being representative of the drag of the electric detection pulses supplied by the photoelectric measuring detectors and any possible radiation from the object, the analog to digital converter having one output connected to the computer so as to supply numerical values respectively representative of the amplitudes of the first rough measurement pulse and of the second correction pulse;



the computer processing these numerical values for each electric detection pulse so as to supply one actual numerical value measuring the energy of the attenuated energy pulse received by the photoelectric measuring detectors, this actual numerical value being recorded in the memory, the actual numerical values thus recorded for all the photoelectric measuring detectors being used by the computer so as to control display of the image of said at least one plane cutting by the display means and wherein the amplitude of the second correction pulse is also representative of the stray current of the photoelectric measuring detectors.

5,012,499

GAMMA RAY DETECTING DEVICE USING DISLOCATION-FREE CRYSTAL

Victor Vali, Laguna Hills, and David B. Chang, Tustin, both of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Oct. 19, 1989, Ser. No. 423,830
Int. Cl.[5] G21K *1/06*
U.S. Cl. 378—84 **10 Claims**

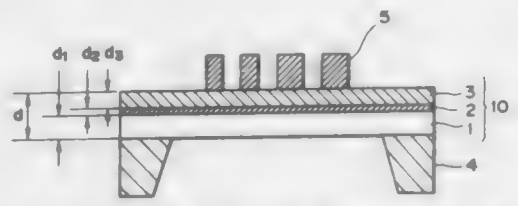
1. A γ-ray detector comprising:

a dislocation-free single crystal having an input surface and a transmission surface at opposite ends thereof;

an active shield surrounding the crystal and functioning as an anticoincidence counter; and

γ-ray detector means disposed adjacent the transmission surface of the crystal for receiving and detecting γ-rays of a predetermined wavelength incident on the input surface of the crystal at a specific Bragg angle and transmitted through the crystal.

5,012,500



X-RAY MASK SUPPORT MEMBER, X-RAY MASK, AND X-RAY EXPOSURE PROCESS USING THE X-RAY MASK

Yutaka Watanabe, Atsugi; Yasuaki Fukuda, Hadano, and Shigetaro Ogura, Tama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Dec. 27, 1988, Ser. No. 290,624
Claims priority, application Japan, Dec. 29, 1987, 62-335224
Int. Cl.[5] G21K *5/00*
U.S. Cl. 378—35 **36 Claims**

1. An X-ray mask support member comprising a support frame, and a support membrane which is held on said support frame and includes X-ray-transmissive membranes laminated in

multiple layers, wherein said support membrane comprises and holds between the multiple layers at least one layer of a transmissive membrane T having an electrical resistivity of 1×10^{-6} Ω-cm or less.

APPARATUS FOR PRODUCING PANORAMIC X-RAY IMAGE PROJECTIONS

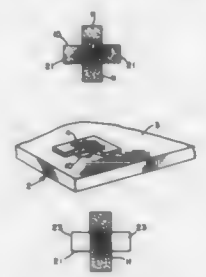
Juhani Palonen, and Hannu Purhonen, both of Espoo, Finland, assignors to Instrumentarium Corp., Finland

Filed Mar. 28, 1990, Ser. No. 500,181
Claims priority, application Finland, Sep. 14, 1989, 894339
Int. Cl.[5] A61B *6/14*
U.S. Cl. 378—38 **4 Claims**

1. An apparatus for producing panoramic X-ray image projections from a certain section of a dental arch shaped object, said apparatus comprising a fixed body (1), a movable supporting arm (11) whose opposite ends are fitted with an X-ray source (12) and a film holder (13) on the opposite sides of an object (24) to be imaged, means (20l4 23) for setting supporting arm (11) in a rotating motion around the object, and means (2, 4, 15) for setting the centre of this rotating motion in a linear movement in dependence on the angular position of supporting arm (11), characterized in that the apparatus further includes means (3, 6, 10) for selecting the direction of linear motion (translatory motion).

5,012,502

METHOD FOR DETERMINING DEGREE OF INTERCONNECTION OF SOLDER JOINTS USING X-RAY INSPECTION



John Battin, Poway, and Thomas Stroebel, San Diego, both of Calif., assignors to IRT Corporation, San Diego, Calif.

Filed Jun. 18, 1990, Ser. No. 539,132
Int. Cl.[5] G01B *15/06;* **B23K** *31/12*
U.S. Cl. 378—58 **27 Claims**

1. A method of determining the quality of solder interconnection of a solder joint between a first electrical member and a second electrical member by X-ray inspection comprising:

forming a first indicator feature at a first solder joint location of said first electrical member, said first indicator feature having a first set of parameters comprising size, shape and orientation;

forming a second indicator feature at a second solder joint location of said second electrical member, said second indicator feature having a second set of parameters comprising size, shape and orientation of which at least one of said second set of parameters is different from that of said first set of parameters, so that at least one edge of both said first and said second indicator features are visible in an X-ray image of said solder joint, and so that melting of solder deposited on said first indicator feature when said solder is in contact with said second indicator feature will cause said solder to flow and solidify upon cooling to

cover all of said first indicator feature and all of said second indicator feature; and

taking an X-ray image of said solder joint;

inspecting said X-ray image to determine whether said solder has fully covered said first indicator feature and said second indicator feature, whereby quality of said solder joint interconnection is determined to be good if said solder flowed to fully cover both indicator features, and quality of said solder joint interconnection being determined to be poor if said solder did not flow to fully cover both indicator features.

5,012,503

METHOD FOR STERILIZATION OF POLYVINYL ALCOHOL GEL BY GAMMA-RAY

Masao Nambu; Tadayuki Onishi, both of Yokohama, and Masayuki Onohara, Ibaraki, all of Japan, assignors to Sumitomo Bakelite Company, Ltd. and Nippon Oil Company, Ltd., both of Minato, Japan

PCT No. PCT/JP87/00847, § 371 Date Jul. 1, 1988, § 102(e) Date Jul. 1, 1988, PCT Pub. No. WO88/03414, PCT Pub. Date May 19, 1988
PCT Filed Nov. 4, 1987, Ser. No. 233,660
Claims priority, application Japan, Nov. 5, 1986, 61-261794
Int. Cl.[5] G21K *5/00*
U.S. Cl. 378—64 **3 Claims**

1. A method for sterilization of polyvinyl alcohol gel while decreasing by-product deterioration rates to about 0.0095% or less comprising: irradiating with γ-ray,

(A) a hydrogel obtained by freezing thawing an aqueous polyvinyl alcohol solution so that the number of times of accumulative freezing amounts to 2–8 times, or

(B) a hydrogel in a range of dehydration rate of 3–30% obtained by subjecting an aqueous polyvinyl alcohol solution in the frozen state to vacuum partial dehydration; wherein the irradiation dosage of γ-ray is from about 3.5 to about 7 Mrad.

5,012,504

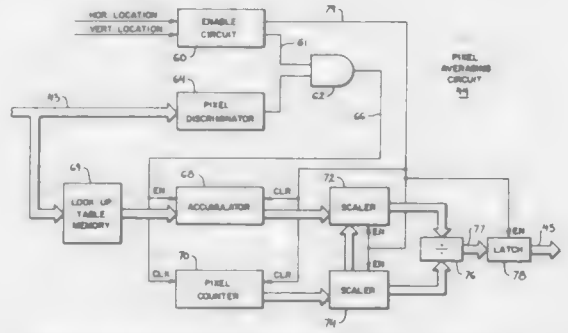
AUTOMATIC BRIGHTNESS COMPENSATION FOR FLUOROGRAPHY SYSTEMS

James A. McFaul, Waukesha; David L. McDaniel, Dousman, and Barry F. Belanger, Elm Grove, all of Wis., assignors to General Electric Company, Milwaukee, Wis.

Filed Dec. 26, 1989, Ser. No. 456,447
Int. Cl.[5] H05G *1/44, 1/34, 1/32, 1/64*
U.S. Cl. 378—108 **14 Claims**

1. In an X-ray imaging system having a device that emits an X-ray beam, means responsive to the X-ray beam for producing a signal representing an image produced by the X-ray beam, and means for digitizing the signal into a series of discrete picture elements each of which having a brightness level; the improvement comprising a circuit for deriving an average brightness level including:

means for determining whether picture elements in the series are within a predefined region in the image;



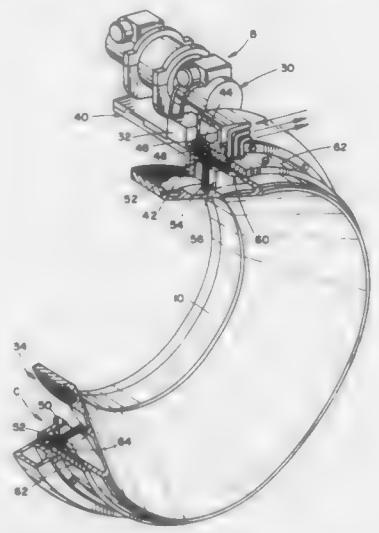
a threshold detector which determines the relationship of picture element brightness levels to a predetermined value;

accumulator means, responsive to both said means for determining and said threshold detector, for producing a summation of the brightness levels of selected picture elements;

means for counting the number of selected picture elements, the brightness levels of which are summed by said accumulator means;

means for scaling the summation of selected picture element brightness levels and the selected picture element count by a common factor; and

means for dividing the scaled summation of selected picture element brightness levels by the scaled selected picture element count to derive the average brightness level.



5,012,505

FLUIDIC SLIP RING FOR CT SCANNERS

Anton Z. Zupancic, Kirtland; Anthony Palermo, Chesterland, and Robert E. Levar, Willoughby, all of Ohio, assignors to Picker International, Inc., Highland Hts., Ohio

Filed May 19, 1989, Ser. No. 354,384
Int. Cl.[5] A61B *6/03;* **H01J** *1/42*
U.S. Cl. 378—130 **18 Claims**

11. A CT scanner comprising:

a patient receiving region defined within a stationary frame;

a fluid cooled x-ray tube mounted on a rotating frame for rotation about the patient receiving region, the x-ray tube having an x-ray window through which x-rays are transmitted across the patient receiving region;

a radiation detection means for detecting radiation which has traversed the patient receiving region;

an image reconstruction means for reconstructing an image representation from signals generated by the x-ray detection means;

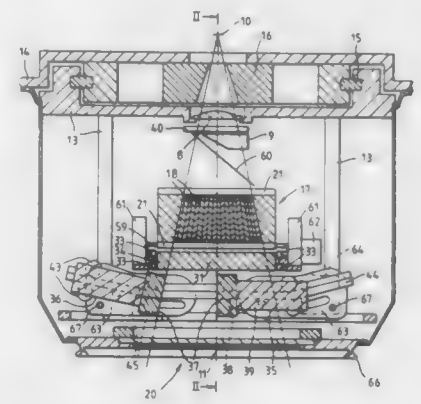
a fluid slip ring for providing fluid communication between the rotating and stationary frames, the fluidic slip ring including:

a rotating annular portion having first and second circumferential cooling fluid channels defined therein;

a stationary annular portion surrounding the rotatable portion in a generally mating relationship with the channels;

a sealing means for preventing cooling fluid flow out of the channels between the rotating and stationary annular portions;

a first fluid passage through the stationary annular portion with a first aperture in alignment with the first channel and a second passage through the stationary annular portion having an aperture in alignment with the second channel;



a cooling fluid circulating means for circulating a cooling fluid through the fluidic slip ring between the stationary and rotating frames, the stationary annular portion passages being operatively connected with the cooling fluid circulating means, whereby cooling fluid flows through one of the first passages into the first channel, flows from the first channel to the rotating frame, absorbs x-ray tube heat, flows from the rotating frame back to the second channel, and flows through the second stationary annular portion passage.

5,012,506

MULTILEAF COLLIMATOR

Francis J. Span, Eindhoven, Netherlands, and Brian S. Driver, Langley Green, Great Britain, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Oct. 7, 1988, Ser. No. 255,073
Claims priority, application United Kingdom, Oct. 28, 1987, 8925254
Int. Cl.[5] G21K *1/02*
U.S. Cl. 378—152 **13 Claims**

1. A collimator for a beam of penetrating radiation emitted from a substantially point source of radiation, said collimator comprising

(a) first and second pluralities of adjacent pairs of wedge-shaped leaves, said first and said second pluralities being disposed in opposition,

wherein adjacent leaves of each of said first and second pluralities are disposed side-by-side in a fan-shaped configuration, said configuration converging substantially

toward an apex at an effective point location of the source of radiation, and

wherein each of said wedge-shaped leaves is disposed for translational displacement in a direction transverse to radiation from the source of radiation on a first support structure, said leaves of each pair being independently displaced toward and away from one another,

(b) bearing means disposed between each leaf and said support structure for bearing said leaf,

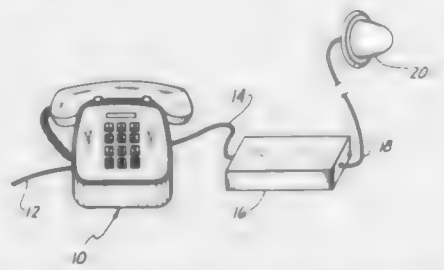
(c) motive means for displacing each leaf independently of one another,

(d) readout means for determining position of each of said leaves,

(e) a first pair of opposed block diaphragm leaves disposed in said radiation at a side of said first and second pluralities opposite to said source of radiation, said first pair of opposed block diaphragm leaves being disposed on a second support structure for independent translational displacement toward and away from each other in a first direction transverse to said radiation,

(f) a second pair of opposed block diaphragm leaves disposed in said radiation at said side of said first and second pluralities opposite to said source of radiation, and second pair of opposed block diaphragm leaves being disposed on a third support structure for independent translational displacement toward and away from each other in a second direction transverse to said radiation, said second direction being at right angles to said first direction, and

(g) displacement means for moving each of said first pair of opposed block diaphragm leaves and said second pair of opposed block diaphragm leaves respectively toward and away from each other,



wherein the inner end surface of one of said first and second pairs of opposed block diaphragm leaves are planar, and wherein said translational displacement of said one of said first and second pairs of opposed block diaphragm leaves includes a rotational displacement so that said planar end surfaces are maintained parallel to beams of said radiation for all displacement positions of said one of said first and second pairs of opposed block diaphragm leaves.

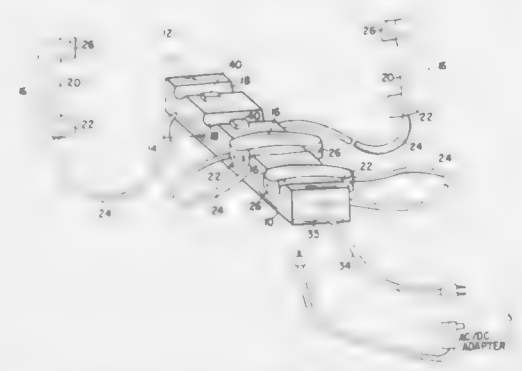
5,012,507

TELEPHONE ACTIVATED EMERGENCY LIGHT SYSTEM

Suzanne E. Leighton, 20160 Palomar, Lake Elsinore, Calif. 92330; Raymond J. Kemp, P.O. Box 1216, Wildomar, Calif. 92395, and Philip D. Hawkins, Norco, Calif., assignors to Raymond J. Kemp, Wildomar and Suzanne E. Leighton, Lake Elsinore, both of, Calif.

Filed Mar. 6, 1989, Ser. No. 318,840
Int. Cl.[5] H04M *11/04*
U.S. Cl. 379—37 **13 Claims**

1. A system for facilitating the location of premises originating a distress telephone call by personnel responding to such call, comprising:



first means for continuously monitoring the dialing of telephone calls from the premises including discriminator means selectively responsive to the dialing of a particular sequence indicative of a distress call while ignoring all other dialing and switch means actuated upon such selective response, whereby indicator means may be enabled by said switch means for guiding personnel arriving into the general vicinity to the originating premises.

5,012,508

TELEPHONIC SPEECH TRAINING DEVICE

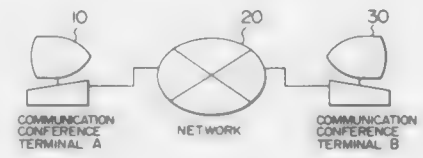
Harry C. Gibbens, Jr., 11327 Louise Ave., Lynwood, Calif. 90262-3113

Filed Oct. 31, 1989, Ser. No. 429,622
Int. Cl.[5] H04M *11/00*
U.S. Cl. 379—52 **2 Claims**

1. A telephone speech training device, comprising a box adopted for placement on a table top, said box having a horizontal length dimension defining a longitudinal axis and a horizontal width dimension defining a transverse axis; said box having an upper face; a plural number of upwardly facing saddles spaced apart along said box upper face in the direction of the box longitudinal axis; each saddle comprising a groove extending parallel to the box transverse axis along the box upper face; a plural number of telephone handsets, one for each saddle; each saddle being configured to underlie and support a telephone handset in an inactive standby position; each handset comprising an elongated housing, a microphone located in said housing at one end thereof, and a speaker located in said housing at the other end thereof; a number of individual amplifiers in said box, each said amplifier having an input and an output; first wiring connections between each microphone and an amplifier input; second wiring connections between each speaker and an amplifier output; a flexible signal cord extending from each telephone handset to a point on the box in the vicinity of the saddle for the respective handset; each flexible signal cord containing a first wiring connection associated with the respective microphone, and a second wiring connection associated with the respective speaker; a power supply cord extending from the box for connection to a household outlet; and electrical connections within the box between the power supply cord and the amplifiers for supply current to said amplifiers; said flexible signal cords and said amplifiers constituting the sole electrical links between the various handsets.

5,012,509

COMMUNICATION CONFERENCE APPARATUS AND METHOD FOR REMOTE CONFERENCING



Koozoo Nakamura, Hitachiota, and Seizi Maruo, Hitachi, both of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Dec. 20, 1989, Ser. No. 453,930
Claims priority, application Japan, Dec. 23, 1988, 63-323333
Int. Cl.[5] H04N *1/42*
U.S. Cl. 379—53 **19 Claims**

1. A communication conference apparatus in which a plurality of communication conference terminals, each including input means for entering materials used for conferences, a display unit and an audio input-output unit, are connected through a communication network for holding a conference between separated partners by exchanging sounds and images between said separated partners, wherein each of said communication conference terminals comprises:

means for memorizing materials used for conference;

means for registering at least a conference host identifier, conference identifier and conference partner identifier at setup of a conference; and

means for identifying, for management, a specific conference by a logical AND operation of said conference host identifier, said conference identifier and said conference partner identifier which have been registered.

5,012,510

DYNAMIC CALLBACK TECHNIQUE

Randolph J. Schaubs, Stone Mountain, and David J. Naddor, Doraville, both of Ga., assignors to Scientific Atlantic Inc., Alantic, Ga.

Filed Apr. 27, 1988, Ser. No. 186,908
Int. Cl.[5] H04M *11/00;* **H04N** *17/00*
U.S. Cl. 379—92 **12 Claims**

1. A method of dynamically transferring stored data from a remote unit having a digital identifier comprising a plurality of bits arranged in a predetermined order to a central location over a communication network, the method comprising the steps of:

(a) shifting the bits of the digital identifier in a predetermined manner into a counter in order to generate a callback time within a callback period of predetermined length, the callback time being determined by the count generated by shifting the bits into said counter and the bits being shifted into said counter beginning with the least significant bit of the digital identifier;

(b) calling back said central location at the callback time;

(c) transferring the stored data to said central location if said remote unit is connected to said central location when calling back;

(d) waiting for a time period equal to the callback period before calling back to said central location if said remote unit is not connected to said central location when calling back; and

(e) repeating steps (c) and (d) until said remote unit is connected to said central location so as to transfer stored data.

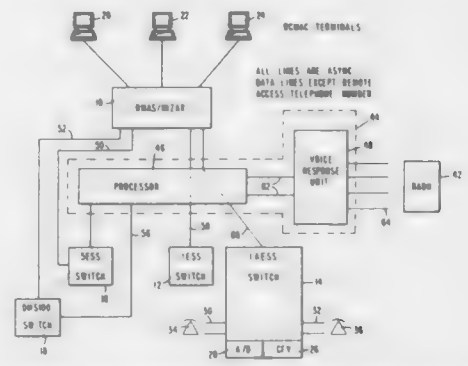
5,012,511

METHOD OF AND SYSTEM FOR CONTROL OF SPECIAL SERVICES BY REMOTE ACCESS

John P. Hanle, Silver Spring, Md., and James E. Curry, Herndon, Va., assignors to Bell Atlantic Network Services, Inc., Arlington, Va.

Filed Apr. 6, 1990, Ser. No. 505,386
Int. Cl.[5] H04M *3/54*
U.S. Cl. 379—211 **20 Claims**

1. In a telecommunications system having a plurality of switching means interconnected by trunks, a plurality of subscriber stations arranged in groups with each group being served by one of said switching means, a plurality of subscriber lines connecting each switching means with the group of subscriber stations served thereby, a switching network in each switching means for establishing communication paths between calling subscriber stations and called subscriber stations addressed by the calling stations, at least one of said switching means including means for providing special services to subscriber stations served thereby, computer means associated with said switching means and adapted to respond to input signals to generate recent change signals to program switch translation variables in said switching means, and terminals connected to said computer means for entering programming orders, the improvement comprising:



adjunct means associated with said computer means and connected to at least one of said switching means which includes means for providing special services to subscriber stations served thereby;

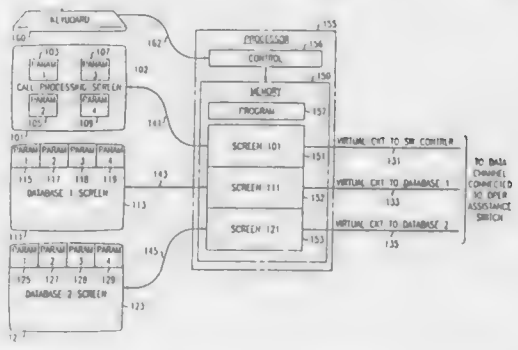
a multiline hunt group associated with a Remote Access Directory Number (RADN);

said adjunct means including:

voice response means connected to said multiline hunt group; and

processor means responsive to subscriber identification and stored class of service information (a) for recognizing that

a special service is to be provided to a subscriber station connected to one of said switch means including means for providing special services to subscriber stations served thereby, and (b) for generating a signal for programming said switch means in the circuit to said subscriber station so as to effect the modification necessary to provide the special service to that subscriber station; and



said processor means being connected between said computer means and at least one of said switch means for transmitting to said switch means signals from said computer means for programming switch translation variables originated by said terminals connected to said computer means.

5,012,512

TELEPHONE OPERATOR AND AGENT TO DATABASE COMMUNICATION ARRANGEMENT

Richard J. Basso, Naperville; Randall S. Hansen, St Charles; Edward P. Kolasa, Streamwood; Mark L. Reynolds, Wheaton, and Chun P. Tam, Naperville, all of Ill., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Mar. 30, 1990, Ser. No. 502,091
Int. Cl.[5] H04M *3/60, 3/64*
U.S. Cl. 379—218 **11 Claims**

1. In an operator assistance switching system comprising a display device, an input device, and memory for storing image

data for a display, a method of processing an operator assistance call comprising the steps of:

responsive to receipt of a call in said operator assistance switching system, displaying call processing data, including a group of parameters, for said call in a call processing display and storing image data for controlling said call processing display;

responsive to a first input received from said input device, requesting additional data from a database and displaying said additional data and said parameters on a database display and storing image data for controlling said database display;

responsive to a second input received from said input device, modifying one of said parameters in said database display and automatically modifying said image data for controlling said database display and said call processing display to control displays including said modified parameter

TELEPHONE HANDSET COVER

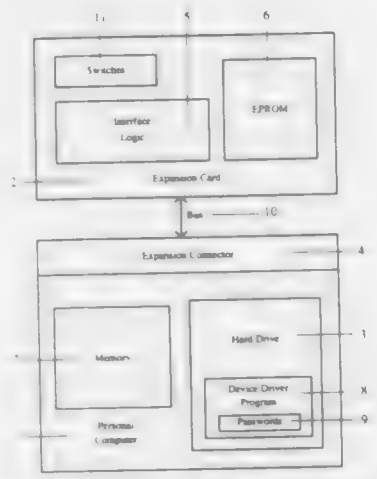
George L. Dale, P.O. Box 3526, Lacey, Wash. 98503, and Robert E. Brown, Olympia, Wash., assignors to George L. Dale, Lacey, Wash.

Filed Aug. 1, 1989, Ser. No. 388,245
Int. Cl.[5] H04M *1/00*
U.S. Cl. 379—451 **21 Claims**

1. A telephone handset cover comprising:

(a) a grip cover comprised of an impact energy absorbing material for covering the handgrip portion of a telephone handset;

(b) two endcovers connected to either end of said grip cover for covering the receiver and transmitter portions of said handset, said endcovers comprised of an impact energy absorbing material and having a groove engaging lip molded therein for secure and correct placement of the handset cover upon said handset; and



(c) a grip cover closure.

5,012,514

HARD DRIVE SECURITY SYSTEM

Paul Renton, 14926 20th SW., Seattle, Wash. 98166

Filed Jun. 26, 1990, Ser. No. 543,429
Int. Cl.[5] H04L *9/00*
U.S. Cl. 380—4 **16 Claims**

1. A security system for controlling access to a personal computer, said computer containing a hard drive, a random access memory, and at least one expansion slot, comprising:

an expansion card for insertion into said expansion slot;

a file residing on said hard drive containing the established passwords of the security system;

said expansion card containing a read only memory for storing a first program having a first portion for altering the interrupt table of the personal computer so as to establish said first program as a part of the disk drive management interrupt of said computer, and further operative to write into a new location in said random access memory the initial values of the interrupt table altered by said first portion of said first program;

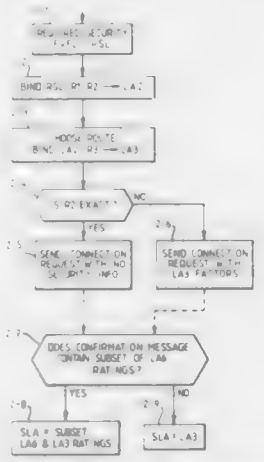
said first program having a second portion operative to store in said random access memory one or more flags indicative of the status of the security system;

said first program having a third portion responsive to said one or more flags and the disk drive management interrupt of said computer, operative to deny access to any floppy disk drives while said flags indicate that the security system is active by returning an error code to said computer;

a second program existing upon, and executed from, said hard drive, operative to read said file existing upon said hard drive containing the established passwords of the security system, and operative to request and verify a password against said file, and operative to deny access to the computer system until a valid password is entered, and further operative to modify said one or more flags in said random access memory so as to reflect the current status of the security system.

5,012,515

SECURITY METHOD FOR A DISTRIBUTED DATA PROCESSING SYSTEM



David G. McVitie, Congleton, United Kingdom, assignor to International Computers Limited, London, England

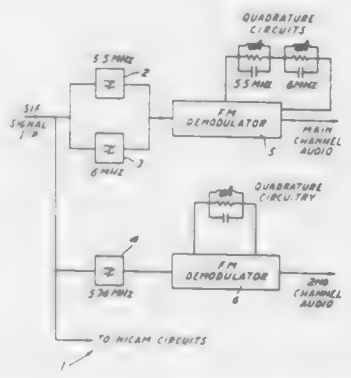
Filed Jun. 14, 1990, Ser. No. 537,609
Claims priority, application United Kingdom, Jul. 20, 1989, 8916586
Int. Cl.[5] H04L *9/00*; **G06F** *7/04*
U.S. Cl. 380—49 **2 Claims**

1. A method of operating a distributed data processing system comprising a plurality of servers, each server having security information indicating its own view of security levels in the system, the method comprising the steps:

(a) sending a message from a first server to a second server, the message containing security information derived from the security information maintained by the first server;

(b) upon receipt of said message at the second server, combining the security information in the message with the security information maintained by the second server, to form combined security information indicating an overall security level for the connection as viewed by the second server;

(c) sending a further message back from the second server to the first server, the further message containing said combined security information, and



(d) upon receipt of said further message at the first server combining the security information in the further message with the security information maintained by the first server, to form further combined security information indicating an overall security level for the connection as viewed by the first server.

5,012,516

SWITCHING CIRCUITRY

David W. Walton, Otley, and Roger Harrison, Halifax, both of England, assignors to Ferguson Limited, Enfield, United Kingdom

PCT No. PCT/GB89/00443, § 371 Date Feb. 27, 1990, § 102(e) Date Feb. 27, 1990, PCT Pub. No. WO89/10671, PCT Pub. Date Nov. 2, 1989
PCT Filed Apr. 26, 1989, Ser. No. 438,472
Claims priority, application United Kingdom, Apr. [illegible], 1988, 8810048
Int. Cl.[5] H04H *5/00*
U.S. Cl. [illegible]—3 **4 Claims**

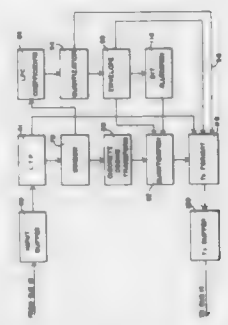
1. Automatic switching circuitry for use in receiving NICAM signals, comprising:

filter means for receiving NICAM signals and passing signals of a certain band;

a quadrature phase shift key decoder coupled to receive signals passed by said filter means and for producing a decoded NICAM signal;

oscillator means for generation of a plurality of signals of different frequencies coupled to said quadrature phase shift key decoder;

a demultiplexer means receiving the decoded NICAM output signals of the quadrature phase shift key decoder for generating a mute signal responsive to no output signal from the quadrature phase shift key decoder and for generating an audio output signal responsive thereto; and



control logic means responsive to sensing a mute signal generated by said demultiplexer means for switching said filter means and oscillator means between various values until the quadrature phase shift key decoder produces a decoded NICAM output signal.

5,012,517

ADAPTIVE TRANSFORM CODER HAVING LONG TERM PREDICTOR

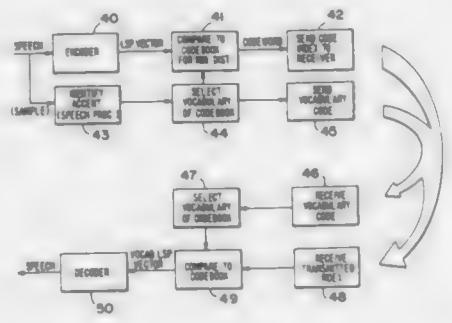
Philip J. Wilson, and Harprit Chhatwal, both of San Diego, Calif., assignors to Pacific Communication Science, Inc., San Diego, Calif.

Filed Apr. 18, 1989, Ser. No. 339,991
Int. Cl.[5] G01L *5/00*
U.S. Cl. 381—31 **31 Claims**

1. Apparatus for removing the periodicity from a speech signal in a transform coder prior to the quantization of said speech signal, which speech signal is a sampled time domain speech signal composed of information samples, said transform coder sequentially segregating said speech signal into blocks of information samples, comprising:

filter means for filtering each of said blocks of samples to remove spurious peaks;

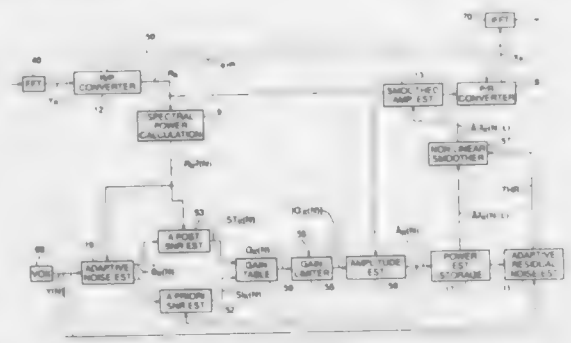
clipping means for enhancing certain samples contained in said blocks necessary to determine pitch;



function means for generating an autocorrelation function of each of said sample blocks after it has been operated upon by said clipping means;

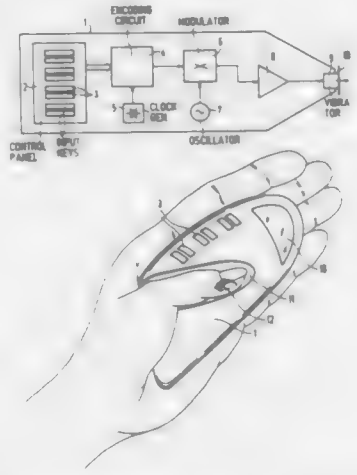
pitch means for determining the maximum value in said autocorrelation function;

LTP means for determining long term predictor parameters in relation to said maximum value and other values contained in said autocorrelation function; and



a difference means for calculating a periodicity value for each sample in said block wherein the calculation of said periodicity value is based upon said maximum value and said long term predictor parameter and for generating a revised block of difference samples by subtracting said periodicity value from the corresponding sample.

5,012,518
LOW-BIT-RATE SPEECH CODER USING LPC DATA REDUCTION PROCESSING
Yu J. Liu, Wharton, and Joseph Rothweiler, Cranford, both of N.J., assignors to ITT Corporation, New York, N.Y.
Division of Ser. No. 385,644, Jul. 26, 1989, Pat. No. 4,975,956.
This application Aug. 16, 1990, Ser. No. 570,126
Int. Cl.[5] G10L *5/00*
U.S. Cl. 381—42 **4 Claims**



1. In a speech coder system of the type having an encoder for converting input speech signals into spectral coefficients in successive frames, and for encoding said spectral coefficients into quantized vector indexes,
an improvement comprising a codebook for storing a vocabulary of codewords in the form of respectively defined vector indexes corresponding to words to be spoken as input speech signals to said encoder, and means for comparing the quantized vector indexes output from said encoder to the codewords of said codebook and outputting the defined vector indexes corresponding thereto with a minimum distortion for transmission.

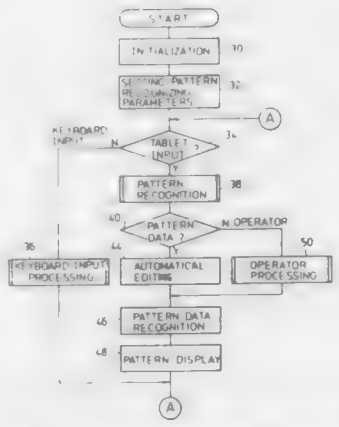
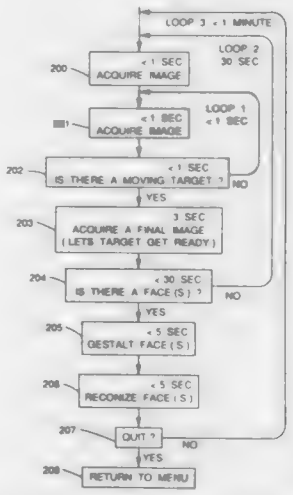
NOISE REDUCTION SYSTEM
Shabtai Adlersberg, Petah-Tikva; Yoram Stettiner, Ramat-Hasharon; Mendel Aizner, Rishon-Le-Zion, and Alberto Berstein, Beer Sheeva, all of Israel, assignors to The DSP Group, Inc., San Jose, Calif.
Continuation of Ser. No. 150,752, Feb. 1, 1988, abandoned. This application Jan. 5, 1990, Ser. No. 463,950
Claims priority, application Israel, Dec. 25, 1987, 84948
Int. Cl.[5] G10L *5/00*
U.S. Cl. 381—47 **10 Claims**



1. A digital processing method for reducing the noise in noisy speech signals, including the steps of:
(a) generating background noise estimates from noisy speech and storing said background noise estimates;
(b) generating adaptive current noise estimates from current noisy speech signals and stored background noise estimates;
(c) generating current gain estimates from adaptive current noise estimates and past speech estimates; and
(d) using current gain estimates and current noisy speech to obtain current speech estimates,
wherein said step of using adaptive current noise estimates and past speech estimates to obtain current gain estimates includes the step of limiting the lower limit of the gain estimate to eliminate musical noise, and
wherein said step of generating adaptive current noise estimates includes employing results of a speech/no speech decision from information obtained from current signal input to distinguish said noisy speech from background noise.

5,012,520
HEARING AID WITH WIRELESS REMOTE CONTROL
Gerhard Steeger, Erlangen, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany
Filed Apr. 25, 1989, Ser. No. 342,870
Claims priority, application Fed. Rep. of Germany, May 6, 1988, 3815598
Int. Cl.[5] H04R *25/00*
U.S. Cl. 381—68 **15 Claims**

1. A hearing aid system comprising:
hearing aid means adapted to be disposed in the region of the ear of user for assisting the user in recognition of sound having frequencies in the normal human audible sound range, said hearing aid means including at least one adjustable component;
wireless control means adapted to be held in the hand of said user for generating an information-containing signal corresponding to information entered by said user for adjusting said adjustable component of said hearing aid means;
a vibrator in said wireless control means for generating an acoustic control signal including said information containing signal, said vibrator vibrating at a frequency outside of said normal human audible sound range having a contact surface adapted for contact with the skin of the user to acoustically transmit said acoustic control signal via the body of said user; and
receiver means included in said hearing aid means for receiving said acoustic control signal after transmission through the body of said user and for converting said acoustic control signal into an electrical control signal for adjusting said adjustable component.



5,012,521
CONTEXT-BASE INPUT/OUTPUT SYSTEM
Yasuo Endo; Shinji Akimichi; Tadayoshi Hirose; Motonori Furukawa, and Kyoko Yoshida, all of Chuo, Japan, assignors to Takenaka Corporation, Japan
Filed Dec. 29, 1988, Ser. No. 291,619
Claims priority, application Japan, Mar. 18, 1988, 63-65524
Int. Cl.[5] G06K *9/00*
U.S. Cl. 382—1 **16 Claims**

1. A context-base input/output system comprising:
input means having an electronic pen and a tablet for converting a locus which was drawn by said electronic pen on said tablet into dot data and inputting said dot data;
first determining means based on the inputted dot data for determining what of at least segment, circle and arc is expressed by said locus;
display means based on the determination result of said first determining means for displaying the pattern expressed by said locus in a display unit;
memory means for memorizing graphic processing commands corresponding to a plurality of predetermined patterns for graphic processing, respectively;
second determining means based on the determination result of said first determining means for determining whether or not said predetermined patterns stored in said memory means are expressed by said locus and identifying any expressed predetermined patterns; and
processing means based on the determination result of said second determining means for graphic processing in response to the graphic processing commands corresponding to said predetermined patterns identified by said second determining means.

AUTONOMOUS FACE RECOGNITION MACHINE
Laurence C. Lambert, Bedford, Mass., assignor to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.
Filed Dec. 8, 1988, Ser. No. 282,227
Int. Cl.[5] G06K *9/00, 9/20;* **H04N** *7/18;* **G07D** *7/00*
U.S. Cl. 382—2 **1 Claim**

1. A face recognition video system which locates and recognizes a human face in a video scene which has an input scene size of about 512 by 480 pixels and a random background, wherein said face recognition video system identifies said human face with a set of stored characteristics which are correlated with known human faces, said face recognition video system comprising:
a camera which receives said video scene and outputs it in an analog electrical signal;
a means for converting analog signals into digital signals, said converting means receiving and converting said analog electrical signal from said camera into a digital electrical signal;
a means for applying an elliptical mask to said video scene around a location of said human face for recognizing and identifying human faces, said applying means receiving said digital electrical signal from said converting means and locating said human face within that video scene by searching for and extracting detected facial characteristics within said video scene, said applying means then applying said elliptical mask around the location of the human face and defining a detected gestalt-face within said video scene with a minimum facial size of 64 by 64 pixels by identifying said detected facial characteristics using the detected facial characteristics of whole human faces by comparing said detected facial characteristics of said detected gestalt face with said set of stored face characteristics and outputting a name associated with the stored face characteristics which successfully correlates with said detected gestalt face, wherein said applying means comprises a Micro Vax computer which has a memory which has said set of stored face characteristics stored therein

along with a set of names of said known human faces, said Micro Vax computer being electrically connected with said converting means to receive said digital electrical signal thereby, said Micro Vax computer searching said video scene for detected facial characteristics beginning with a search for a pair of eyes in said video scene, said Micro Vax computer outputting a signal to indicate that there are no human faces in said video scene when no pair of eyes are detected, said Micro Vax computer continuing to look for said facial characteristics once a human face is detected until it has sufficient detected facial characteristics to form said detected gestalt face which may be compared with said set of stored face characteristics and to identify said human face in said video scene thereby; and
and a means for displaying said name produced by said applying means, said displaying means being electrically connected with said applying means to receive said name therefrom.

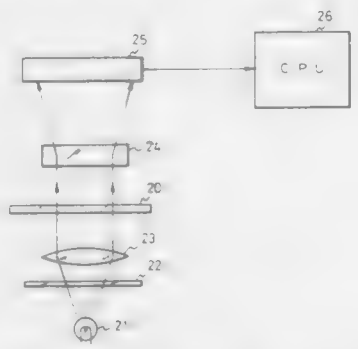
DIMENSION CHECKING METHOD
Kenichi Kobayashi, Tokyo, and Shougo Matsui, Sagamihara, both of Japan, assignors to Fujitsu Limited, Kawasaki, Japan
Continuation of Ser. No. 023,743, Mar. 9, 1987, abandoned. This application Dec. 29, 1988, Ser. No. 291,358
Claims priority, application Japan, Mar. 10, 1986, 61-051960
Int. Cl.[5] G06K *9/00*
U.S. Cl. 382—8 **6 Claims**

1. A method for checking dimensions of patterns comprising the steps of:
a first process for selecting patterns of a predetermined shape from a number of patterns having various kinds of shapes; and

a second process for determining whether or not each of the selected patterns is formed with a predetermined dimension, wherein said first process comprises the steps of



determining dimensions of each pattern by scanning the pattern along a center of the pattern to obtain pulse signals, a time width of each pulse signal corresponding to dimensions of each pattern, and

selecting patterns by excluding patterns having dimensions larger than a predetermined range of dimensions;

wherein the second process comprises the steps of

determining a position of a center of gravity of each selected pattern,

determining an upper limit pattern image and a lower limit pattern image for each selected pattern,

superimposing said upper and lower limit pattern images on a profile of each selected pattern, centers of gravity of each upper and lower limit pattern images being superimposed with the center of gravity of each selected pattern, and

determining an acceptability of each selected pattern based upon whether or not each selected pattern is determined to be within a range of the upper limit pattern image and the lower limit pattern image wherein the range of the upper limit pattern image and the lower limit pattern image is smaller than the predetermined range of dimensions of the first process.

AUTOMATIC INSPECTION METHOD

Christopher J. Le Beau, Tempe, Ariz., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Feb. 27, 1989, Ser. No. 315,645

Int. Cl.[5] G06K *9/00*

U.S. Cl. 382—8 **7 Claims**

1. A method for automatically inspecting semiconductor die comprising:

obtaining an image of the semiconductor die;

performing a direction edge enhancement and selecting a first and a second threshold value of an edge enhanced image;

conditionally dilating the second threshold value with the first threshold value to conditionally grow prominent edge features; and

determining the semiconductor die location and rotation by correlating discrete die perimeter edge points, wherein the discrete die perimeter edge points are weighted, shifted and summed to perform the correlating.

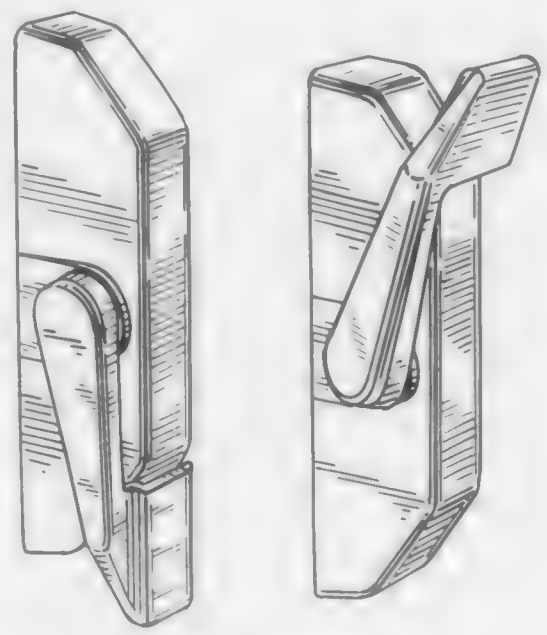
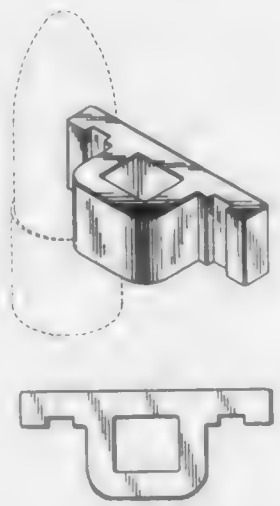
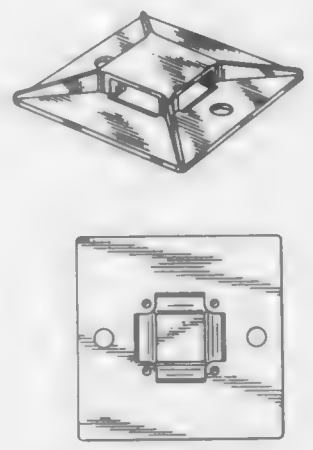
HAND-HELD HOT MELT DISPENSER
Octavio K. Nüsse, and Wolf-Dieter Krause, both of Münster, Fed. Rep. of Germany, assignors to Black & Decker Inc., Newark, Del.
Filed Aug. 11, 1988, Ser. No. 231,419
Term of patent 14 years
U.S. Cl. D8—30



316,507
PORTABLE BAND SAW
Fusao Fushiya; Katsuyasu Ito, and Yoshinori Shibata, all of Anjo, Japan, assignors to Makita Electric Works, Ltd., Anjo, Japan
Filed May 13, 1988, Ser. No. 193,644
Claims priority, application Japan, Nov. 18, 1987, 62-47216
Term of patent 14 years
U.S. Cl. D8—64

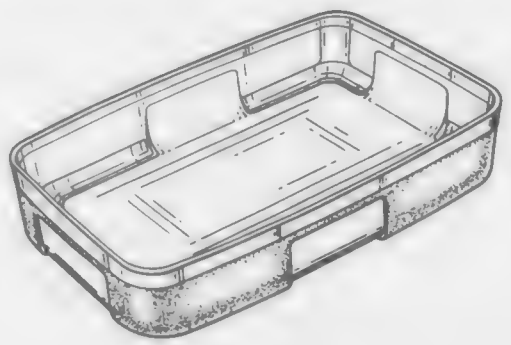


316,508
AIRFEED PECK DRILL
John F. Stewart; Joseph F. Carter; James A. Maass, and Russell D. Richardson, all of Lexington, S.C., assignors to Cooper Industries, Inc., Houston, Tex.
Filed Oct. 30, 1987, Ser. No. 116,123
Term of patent 14 years
U.S. Cl. D8—68



316,509
WINDOW LOCK
Douglas A. Nolte, Owatonna, Minn., assignor to Truth Incorporated, Owatonna, Minn.
Filed Jan. 17, 1989, Ser. No. 297,[illegible]
Term of patent 14 years
U.S. Cl. D8—337

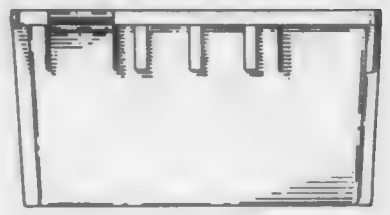
316,510
LIGHT HOLDER
Willrad C. Duty, 3049 Bronson Dr., and Michael T. Hegland, 7604 Spring Lake Rd., both of Mounds View, Minn. 55432
Filed Mar. 8, 1989, Ser. No. 3[illegible],362
Term of patent 14 years
U.S. Cl. D8—373



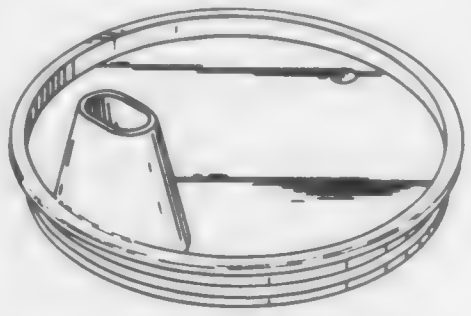
316,511
CABLE TIE MOUNT
Frederick E. White, Jr., Marietta, Ga., assignor to Panduit Corp., Tinley Park, Ill.
Filed Aug. 21, 1989, Ser. No. 397,155
Term of patent 14 years
U.S. Cl. D8—373

316,512
CONNECTOR FOR PICTURE FRAMES OR THE LIKE
Robert T. Pistorius, 19 Peak St., Lake Ronkonkoma, N.Y. 11779
Filed May 2, 1988, Ser. No. 189,608
Term of patent 14 years
U.S. Cl. D8—382

316,513
FOOD CONTAINER OR THE LIKE
Martin J. Wolff, North Providence, R.I., assignor to Dart Industries Inc., Deerfield, Ill.
Filed Nov. 18, 1988, Ser. No. 275,021
Term of patent 14 years
U.S. Cl. D9—431

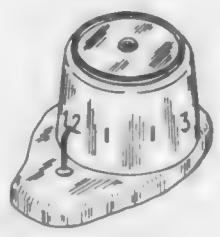


316,514
COMBINED BOTTLE AND CAP
Kay E. Wiseman, Burnham, and Brian E. Kichenside, Bushey Heath, both of England, assignors to Chesebrough-Pond's U.S.A. Co., division Conopco, Inc., Greenwich, Conn.
Filed Dec. 19, 1988, Ser. No. 286,546
Claims priority, application United Kingdom, Jun. 20, 1988, 1051636
Term of patent 14 years
U.S. Cl. D9—409

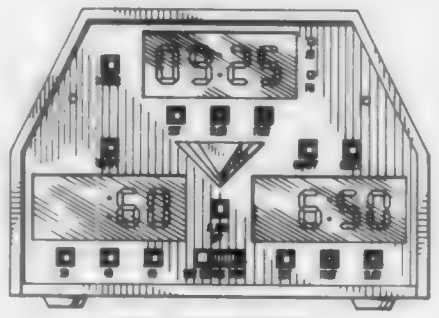


316,515
POTATO CARTON
Richard J. Walsh, Merrill, and Dale W. Waldren, Klamath Falls, both of Oreg., assignors to Basin Produce Corp., Tulelake, Calif.
Filed Jul. 24, 1989, Ser. No. [illegible],969
Term of patent 14 years
U.S. Cl. D9—423

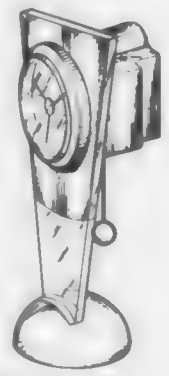
316,516
CONTAINER
Charles Poirier, Cté Bellechasse, Canada, assignor to IPL Inc., St. Damien Bellechasse, Canada
Filed Jul. 18, 1989, Ser. No. 381,511
Term of patent 14 years
U.S. Cl. D9—424



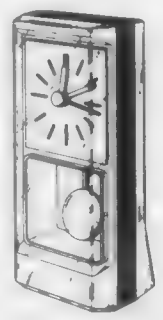
316,517
CLOSURE
Peter Coy, 3510 S. Wakefield St., Fairlington Mews, Arlington, Va. 22206
Filed Jun. 17, 1988, Ser. No. 208,277
Term of patent 14 years
U.S. Cl. D9—447



316,518
HOUSING FOR AN AIR FRESHENER
Earl Hoyt, Franklin Lakes, N.J., assignor to Reckitt & Colman Products Limited, Burlington Lane, England
Filed Jun. 29, 1989, Ser. No. 374,223
Term of patent 14 years
U.S. Cl. D9—447



316,519
DIGITAL CLOCK
E. Lakin Phillips, 2733 Centreville Rd., Herndon, Va. 22071
Filed May 25, 1988, Ser. No. 185,934
Term of patent 14 years
U.S. Cl. D10—15



316,520
MULTI TIME CLOCK
Henry F. Luwisch, Sr., Rte. 1, Box 482 M, Cut Off, La. 70345

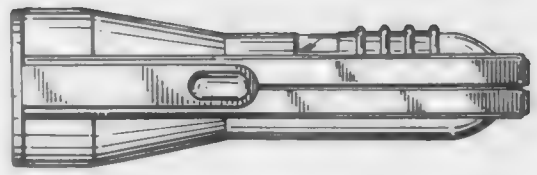
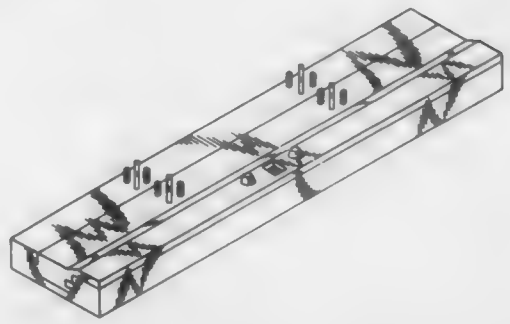
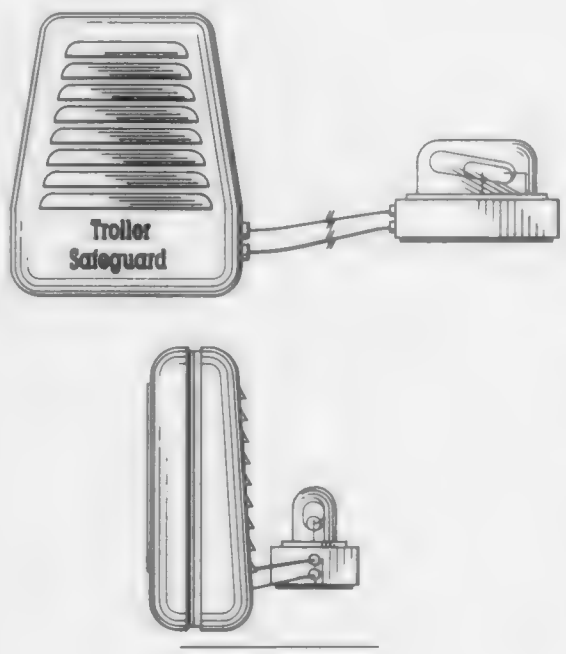
WRISTWATCH
Yoshio Hirabayashi, Suwa, Japan, assignor to Seiko Epson Corporation, Tokyo, Japan
Filed Apr. 6, 1988, Ser. No. 178,958
Claims priority, application Japan, Nov. 9, 1987, 62-45726
Term of patent 14 years
U.S. Cl. D10—32



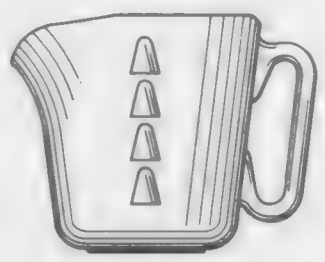
316,524
CONSTANT CYCLE ELECTRIC TIMER
Keith Ericson, 808 Forest Acres Dr., Nashville, Tenn. 37220
Filed May 18, 1988, Ser. No. 195,524
Term of patent 14 years
U.S. Cl. D10—40



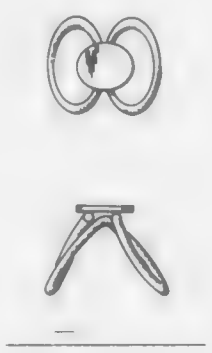
316,525
MEASURING GAUGE FOR WRENCH SIZING
Robert Waddell, Clifton Royal, R.R. #2, Kings Country, New Brunswick, Canada E0G 1N0 , and Roger N. Orser, P.O. Box 538, Grand Bay, New Brunswick, Canada E0G 1W0
Filed Oct. 5, 1988, Ser. No. 254,014
Term of patent 14 years
U.S. Cl. D10—64



316,526
ULTRASONIC DISTANCE ESTIMATOR
Ram Shalvi, Hong Kong, Hong Kong, assignor to Solar Wide Industrial Limited, Kowloon, Hong Kong
Filed May 24, 1989, Ser. No. 356,921
Claims priority, application United Kingdom, Nov. 28, 1988, 1055286
Term of patent 14 years
U.S. Cl. D10—70

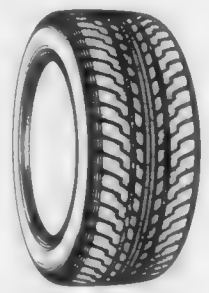


316,527
ANALYTIC COLORMETRIC INSTRUMENT
Robert G. Neuman, Philadelphia, Pa., assignor to Exocell, Inc., Philadelphia, Pa.
Continuation-in-part of Ser. No. 245,423, Sep. 16, 1988, Division of Ser. No. 245,259, Sep. 16, 1988. This application Nov. 9, 1988, Ser. No. 269,556
Term of patent 14 years
U.S. Cl. D10—81

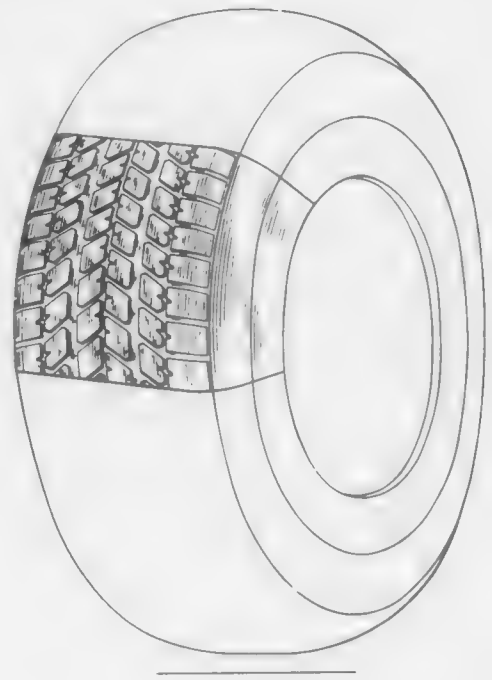


316,528
TROLLING MOTOR TILT POSITION ALARM
Samuel D. Wilson, Jr., 1523 Foxdale Dr., Murfreesboro, Tenn. 37130
Filed Dec. 9, 1988, Ser. No. 282,298
Term of patent 14 years
U.S. Cl. D10—106

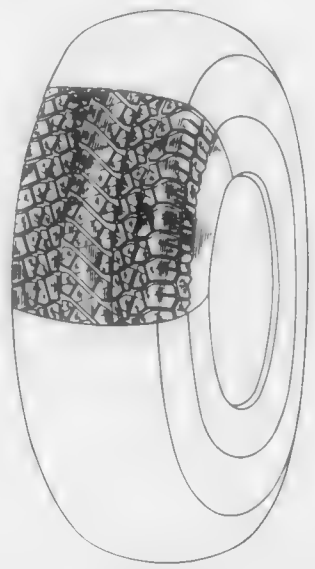
316,529
MEASURING VESSEL
Wellington E. Beckman, Sr., 8920 ½ Dexter, Tampa, Fla. 33604
Filed Jan. 6, 1989, Ser. No. 294,503
Term of patent 14 years
U.S. Cl. D10—46.2



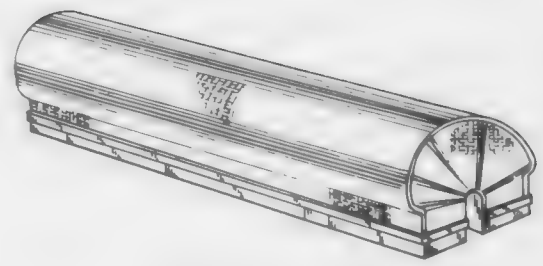
316,530
BOW CLASP
Leyman E. Clifton, 1038 Northcliffe Dr., NW., Atlanta, Ga. 30318
Filed Jan. 4, 1988, Ser. No. 140,597
Term of patent 14 years
U.S. Cl. D11—202



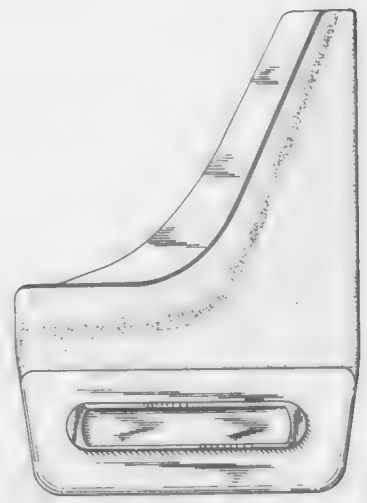
316,531
VAN
Vahe Karapetian, 4801 Los Feliz Blvd., Los Angeles, Calif. 90027
Filed Feb. 16, 1988, Ser. No. 156,083
Term of patent 14 years
U.S. Cl. D12—99



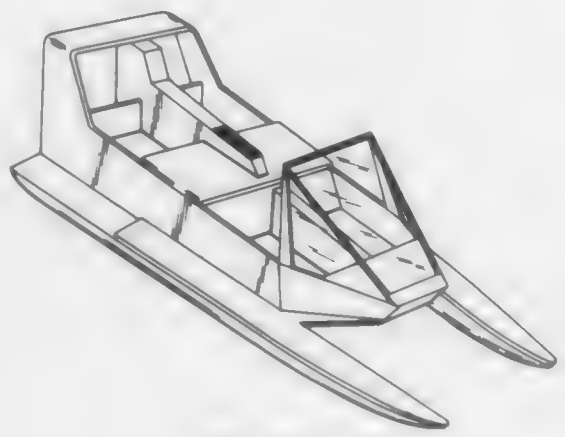
316,532
AUTOMOBILE TIRE
Toru Tsuda, and Shinichi Watanabe, both of Tokyo, Japan, assignors to Bridgestone Corporation, Tokyo, Japan
Filed Feb. 9, 1989, Ser. No. 308,691
Claims priority, application Japan, Sep. 30, 1988, 63-38192
Term of patent 14 years
U.S. Cl. D12—147



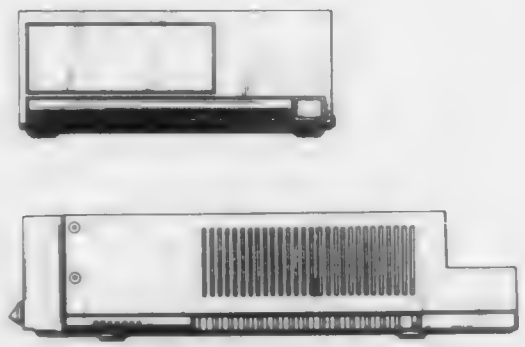
316,533
TIRE
Laurie W. Killian, Cuyahoga Falls, Ohio, assignor to The Uniroyal Goodrich Tire Company, Akron, Ohio
Filed Apr. 17, 1989, Ser. No. 339,426
Term of patent 14 years
U.S. Cl. D12—147



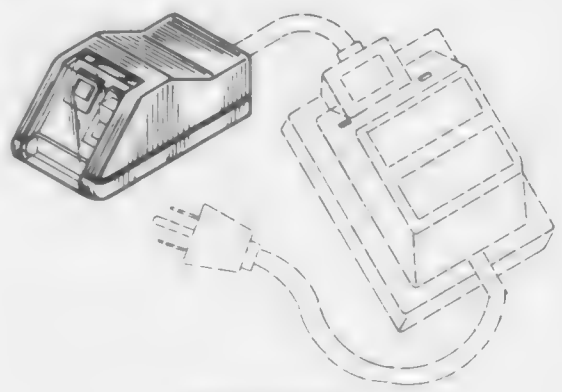
316,534
TIRE
John A. Hutz, Orchard Lake, Mich., assignor to The Uniroyal Goodrich Tire Company, Akron, Ohio
Filed Apr. 17, 1989, Ser. No. 339,4[illegible]
Term of patent 14 years
U.S. Cl. D12—147



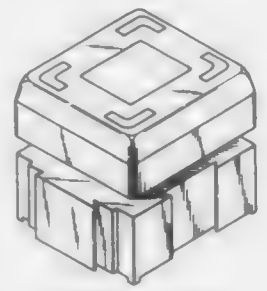
316,535
WINDOW PAD
George M. Fenn, 4630 Mission Blvd., San Diego, Calif. 92109
Filed Jun. 27, 1988, Ser. No. 213,972
Term of patent 14 years
U.S. Cl. D12—155



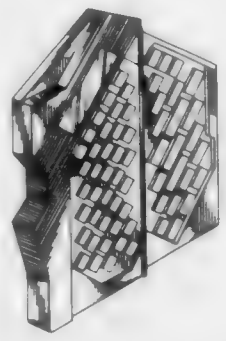
316,536
COMBINED AUTOMOBILE SPLASH GUARD AND DISPLAY UNIT
Pierre Charet, and Duke Kraai, both of Miami, Fla., assignors to Rally Manufacturing, Inc., Miami, Fla.
Filed Feb. 3, 1988, Ser. No. 151,793
The portion of the term of this patent subsequent to Jan. 2, 2004, has been disclaimed.
Term of patent 14 years
U.S. Cl. D12—185



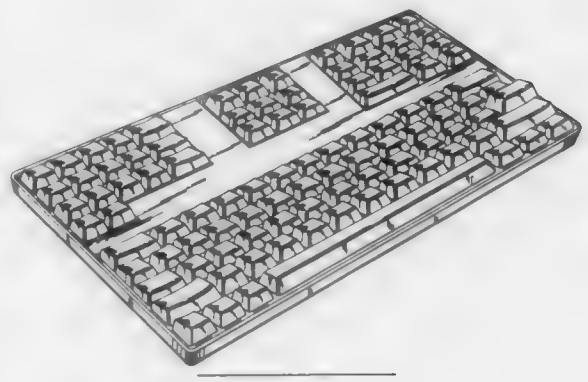
316,537
POWER BOAT
Adam E. Prystupa, 3200 W. Lawn Ave., Tampa, Fla. 33611
Filed May 8, 1989, Ser. No. 348,649
Term of patent 14 years
U.S. Cl. D12—300



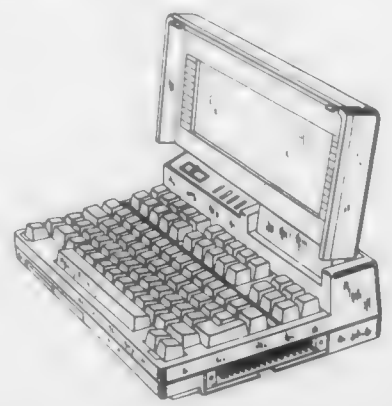
316,538
AUDIO POWER SUPPLY
Farad Azima, Stonehill, England, assignor to Mission International Limited, Cambridgeshire, England
Filed Apr. 26, 1988, Ser. No. 186,200
Claims priority, application United Kingdom, Nov. 13, 1987, 1046324
Term of patent 14 years
U.S. Cl. D13—110



316,539
ELECTRICAL SWITCH FOR A SURGE PROTECTOR
Thomas W. Judd, and Edward L. Hames, both of Peterborough, N.H., assignors to Curtis Manufacturing Company, Inc., Jaffrey, N.H.
Filed Jan. 6, 1989, Ser. No. 294,496
Term of patent 14 years
U.S. Cl. D13—158

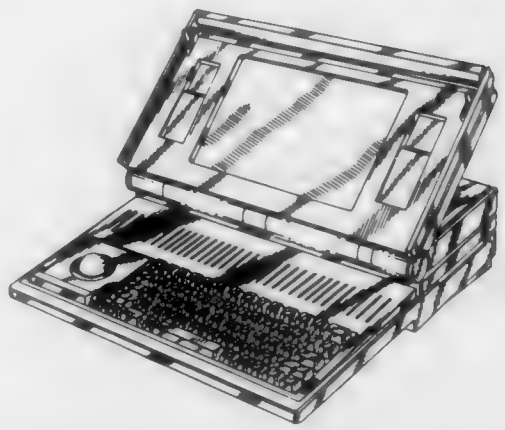


316,540
PUSH BUTTON SWITCH
Kenichi Hirose, Tokyo, Japan, assignor to Nihon Kaiheiki Kogyu Kabushiki Kaisha, Japan
Filed Mar. 31, 1989, Ser. No. 330,884
Claims priority, application Japan, Dec. 21, 1988, 63-49758
Term of patent 14 years
U.S. Cl. D13—171

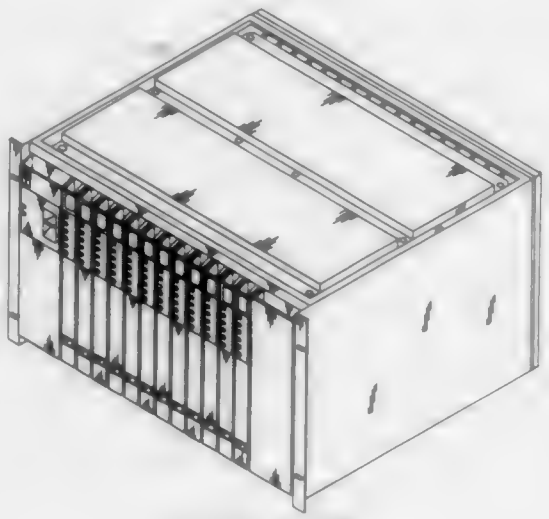


316,541
HAND-HELD DATA ENTRY TERMINAL
Leslie W. Roberts, Tucson, Ariz., assignor to Impetus, Inc., Tucson, Ariz.
Filed Feb. 6, 1989, Ser. No. 274,040
Term of patent 14 years
U.S. Cl. D14—100

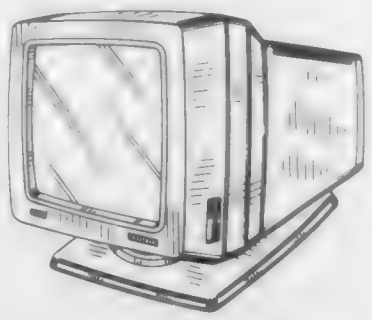
316,542
COMPUTER KEYBOARD
James H. Vesley, Yorktown, Va., assignor to nView Corporation, Newport News, Va.
Filed Jun. 5, 1989, Ser. No. 361,120
Term of patent 14 years
U.S. Cl. D14—100



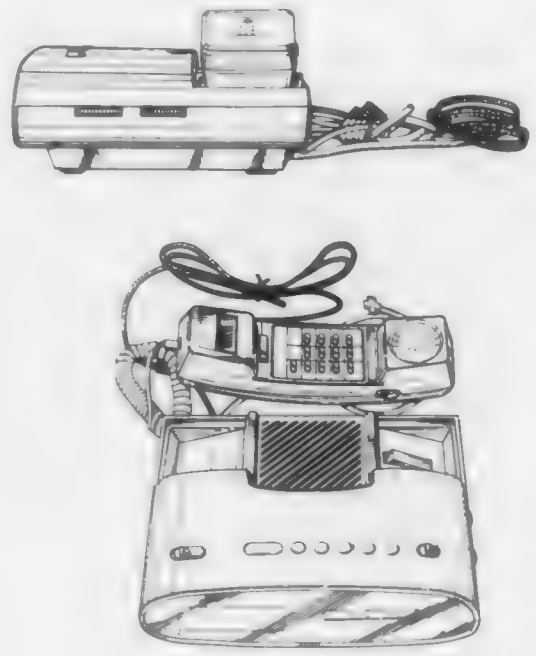
316,543
PORTABLE COMPUTER
Thomas R. Grimm, Troy; LaVaughn F. Watts, Jr., and Hermon L. Pope, Jr., both of Temple, all of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.
Filed May 31, 1988, Ser. No. 200,498
Term of patent 14 years
U.S. Cl. D14—106



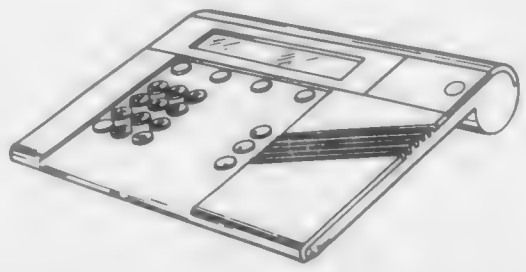
316,544
PORTABLE COMPUTER OR SIMILAR ARTICLE
Hartmut H. Esslinger, Los Gatos; Eric I. Gruenberg, Soquel, and James R. Stewart, San Jose, all of Calif., assignors to Apple Computer, Inc., Cupertino, Calif.
Filed Jan. 23, 1989, Ser. No. 299,718
The portion of the term of this patent subsequent to Apr. 30, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D14—106



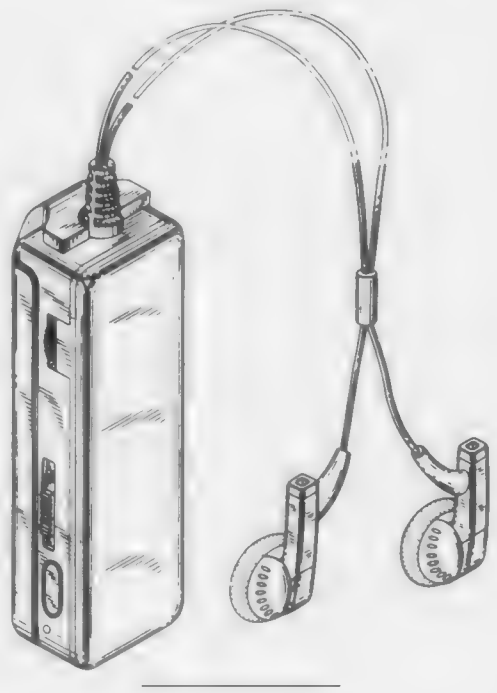
316,545
PORTABLE COMPUTER OR SIMILAR ARTICLE
Hartmut H. Esslinger, Los Gatos; Eric I. Gruenberg, Soquel, and James R. Stewart, San Jose, all of Calif., assignors to Apple Computer, Inc., Cupertino, Calif.
Filed Jan. 23, 1989, Ser. No. 299,720
The portion of the term of this patent subsequent to Apr. 30, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D14—106



316,546
RACK OF MODEMS
Gilbert Pedinielli, Nice, and Daniel Riebelet, St. Barnabe, both of France, assignors to International Business Machines Corporation, Armonk, N.Y.
Filed Mar. 10, 1989, Ser. No. 322,818
Claims priority, application France, Sep. 13, 1988, 88 5[illegible]9
Term of patent 14 years
U.S. Cl. D14—107

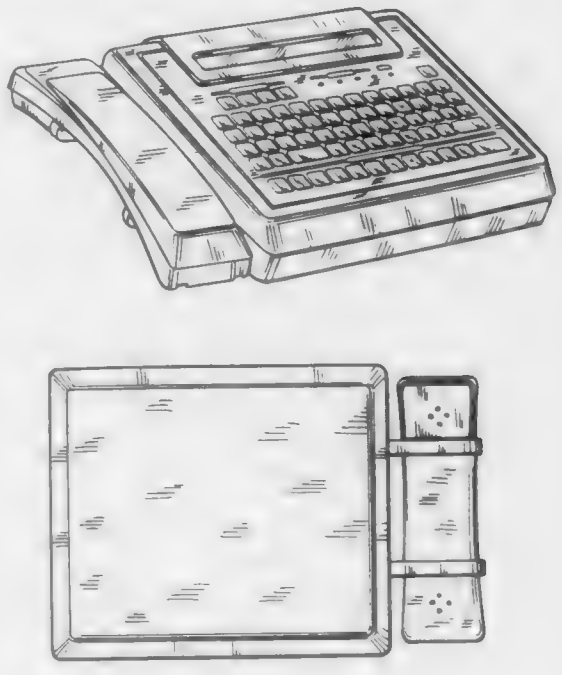


316,547
VIDEO DISPLAY MONITOR
Robert Faranda, Acton, Mass.; Hirotomi Teranishi, Monterey, Calif., and Bernard Maurer, Melrose, Mass., assignors to Digital Equipment Corporation, Maynard, Mass.
Filed Apr. 23, 1987, Ser. No. 67,081
The portion of the term of this patent subsequent to Feb. 12, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D14—113

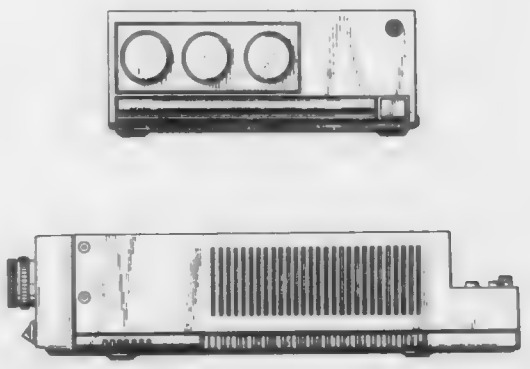


316,548
COMBINED TELEPHONE, DIGITAL CLOCK AND RADIO
Wai C. Yeung, Chai Wan, Hong Kong, assignor to Goly Industrial Company Limited, Hong Kong
Filed Jul. 17, 1990, Ser. No. 553,265
Claims priority, application United Kingdom, Jan. 18, 1990, 2004096
Term of patent 14 years
U.S. Cl. D14—144

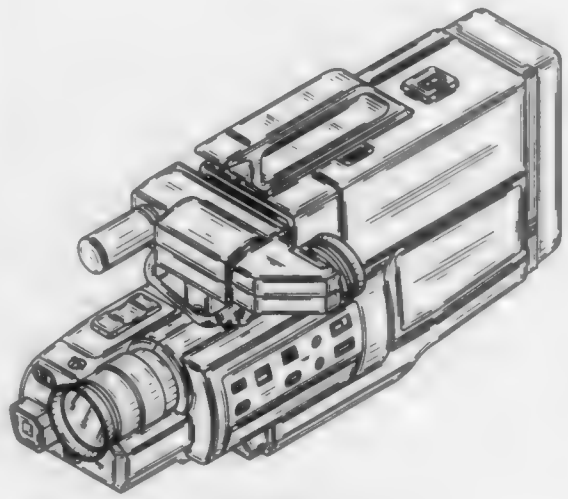
316,549
KEYBOARD FOR STAFF LOCATOR SYSTEMS
Jan E. H. Hampf, Särö , Sweden, assignor to Tateco AB, Gothenburg, Sweden
Filed Apr. 19, 1988, Ser. No. 183,181
Claims priority, application Sweden, Oct. 26, 1987, 872424
Term of patent 14 years
U.S. Cl. D14—159



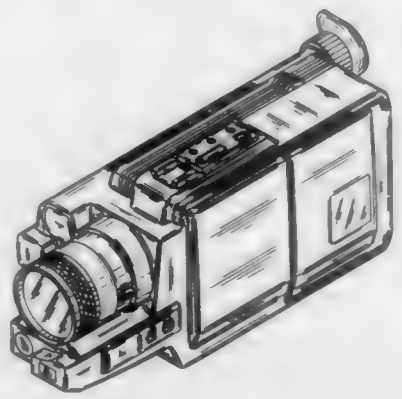
316,550
COMBINED EARPHONE AND RECEIVER
Takashi Sogabe, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan
Filed Nov. 7, 1988, Ser. No. 267,784
Claims priority, application Japan, May 23, 1988, 63-20206
Term of patent 14 years
U.S. Cl. D14—168



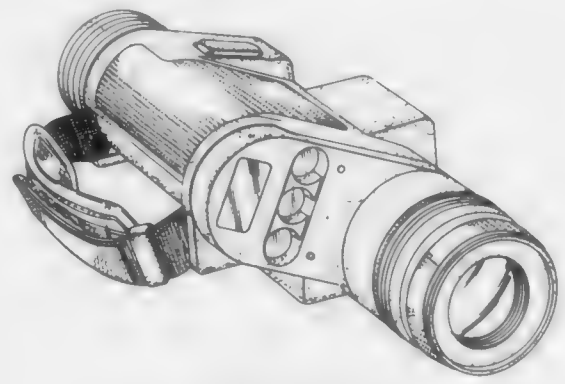
316,551
HEADPHONE
Kazuo Ichikawa, Kokubunji, Japan, assignor to Sony Corporation, Tokyo, Japan
Filed Dec. 29, 1988, Ser. No. 291,857
Claims priority, application Japan, Jun. 29, 1988, 63-25960
Term of patent 14 years
U.S. Cl. D14—205



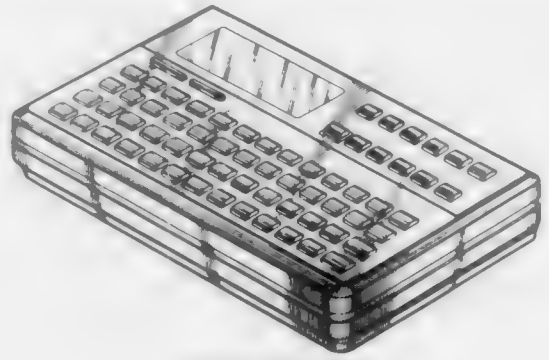
316,552
TELEPHONE EXCHANGER
Orlando Miozzo, Via A. Ferrero, 9, 35133 Padova, Italy
Filed Jan. 8, 1990, Ser. No. 461,780
Claims priority, application Int'l Pat. Institute, Aug. 7, 1989, DM/014303
Term of patent 14 years
U.S. Cl. D14—241



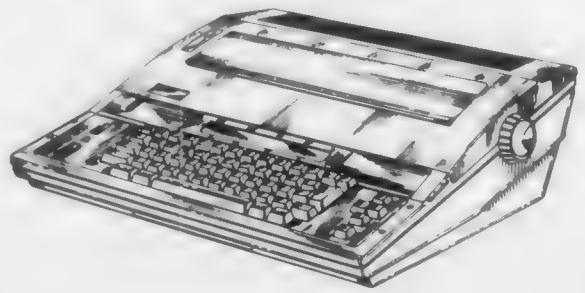
316,553
AUDIO AMPLIFIER
Farad Azima, Huntingdon, England, assignor to Mission International Limited, Cambridgeshire, England
Filed Apr. 26, 1988, Ser. No. 186,196
Claims priority, application United Kingdom, Nov. 13, 1987, 1046321
Term of patent 14 years
U.S. Cl. D14—265



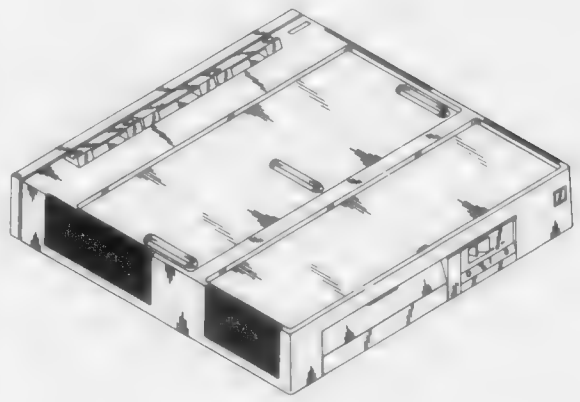
316,554
COMBINED VIDEO CAMERA AND VIDEO TAPE RECORDER
Hiroshi Ooi, and Sho Okamura, both of Osaka, Japan, assignors to Sharp Corporation, Osaka, Japan
Filed May 23, 1988, Ser. No. 197,806
Claims priority, application Japan, Nov. 30, 1987, 62-49292
Term of patent 14 years
U.S. Cl. D16—202



316,555
COMBINED VIDEO CAMERA AND VIDEO TAPE RECORDER
Hiroshi Ooi, and Atsuko Hattori, both of Osaka, Japan, assignors to Sharp Corporation, Osaka, Japan
Filed Jun. 8, 1988, Ser. No. 204,182
Claims priority, application Japan, Dec. 11, 1987, 62-50843
Term of patent 14 years
U.S. Cl. D16—202

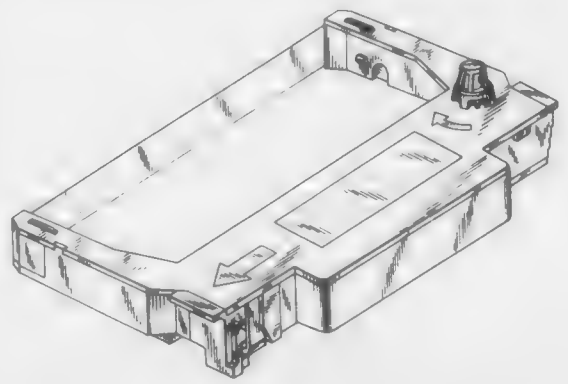


316,556
CAMERA WITH WRIST STRAP
Alan G. Reddig, Rochester, N.Y.; James S. Couch, Powell, and Robert W. Mervar, Columbus, both of Ohio, assignors to Eastman Kodak Company, Rochester, N.Y.
Filed Mar. 16, 1988, Ser. No. 169,186
Term of patent 14 years
U.S. Cl. D16—200

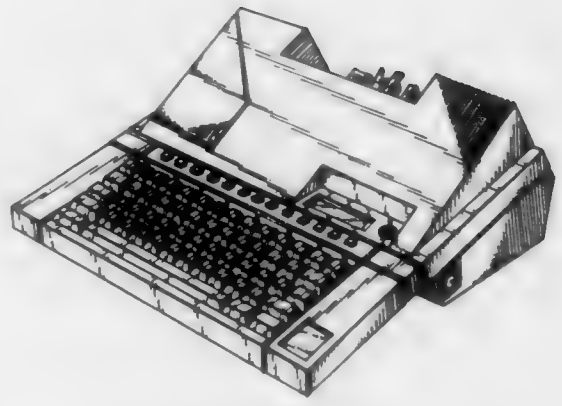


316,557
PORTABLE WORD PROCESSOR
Yukinori Ido, Tokyo, Japan, assignor to Casio Computer Co., Ltd., Tokyo, Japan
Filed Nov. 25, 1988, Ser. No. 276,465
Claims priority, application Japan, Jun. 9, 1988, 63-22841
Term of patent 14 years
U.S. Cl. D18—1

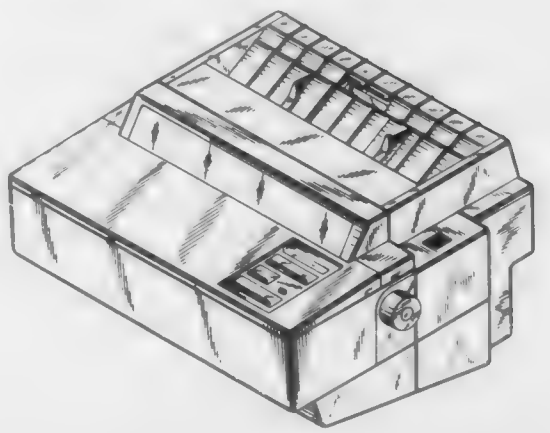
316,558
TYPEWRITER
Paul M. Pierce, Syracuse, N.Y., assignor to Smith Corona Corporation, Cortland, N.Y.
Filed Jan. 6, 1989, Ser. No. 294,544
Term of patent 14 years
U.S. Cl. D18—1



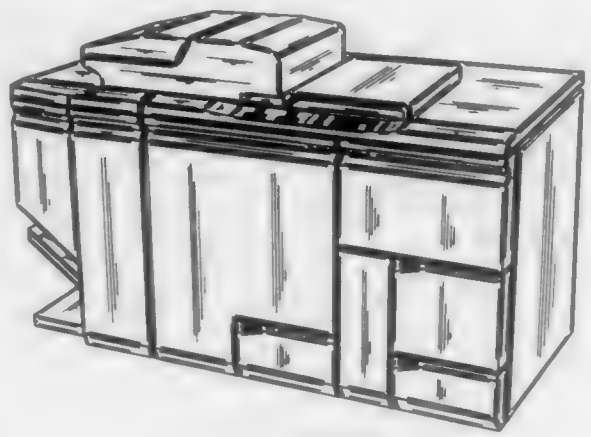
316,559
CONTROL UNIT FOR ELECTRONIC CASH REGISTER OR THE LIKE
Timothy D. Wetzel, Durham, N.C., assignor to International Business Machines Corporation, Armonk, N.Y.
Filed Jan. 3, 1989, Ser. No. 292,961
The portion of the term of this patent subsequent to Feb. 16, 2002, has been disclaimed.
Term of patent 14 years
U.S. Cl. D18—4



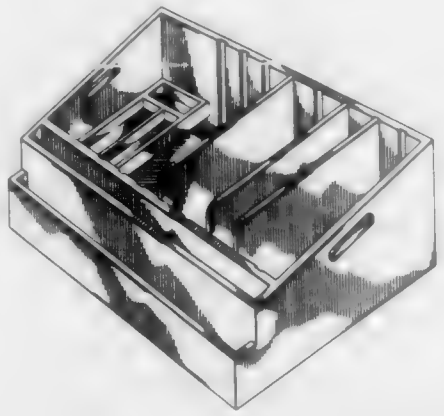
316,560
Patent Not Issued For This Number



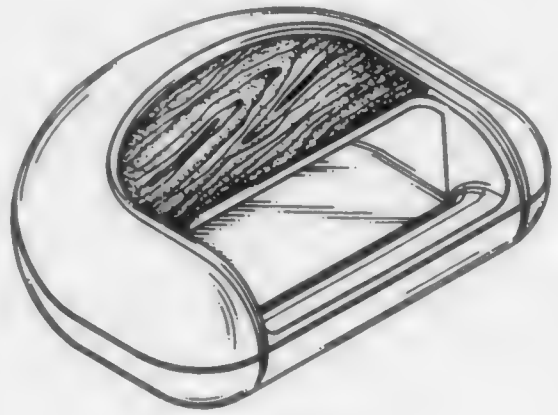
316,561
INK RIBBON CARTRIDGE
Akira Koyabu, Nagano, Japan, assignor to Seiko Epson Corporation, Tokyo, Japan
Filed Oct. 5, 1989, Ser. No. 418,619
Claims priority, application Japan, Apr. 17, 1989, 1-14216
Term of patent 14 years
U.S. Cl. D18—12



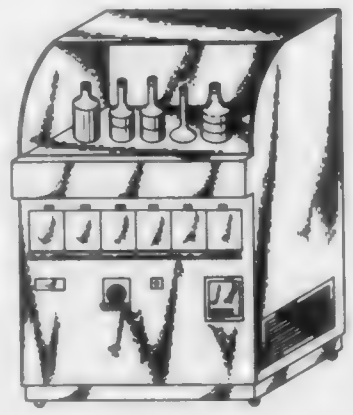
316,562
TAPE PRINTING MACHINE
Nancy Lavander, Lauderdale, Minn., assignor to Varitronic Systems, Inc., Minneapolis, Minn.
Filed Mar. 4, 1988, Ser. No. 164,113
Term of patent 14 years
U.S. Cl. D18—13



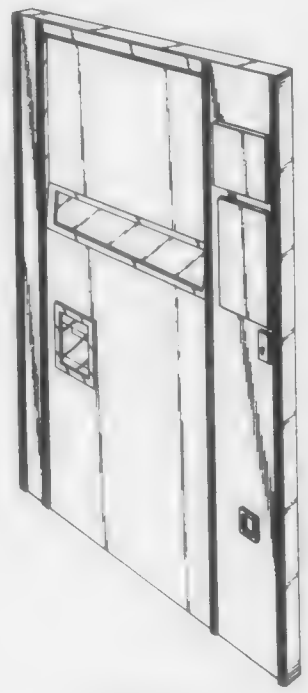
316,563
PRINTER
Friedrich F. Frenkler, Tokyo; Hitoshi Igarashi, and Kaneko Isao, both of Nagano, Japan, assignors to Seiko Epson Corporation, Tokyo, Japan
Filed Jun. 14, 1988, Ser. No. 206,630
Claims priority, application Japan, Jan. 25, 1988, 63-2554
Term of patent 14 years
U.S. Cl. D18—13



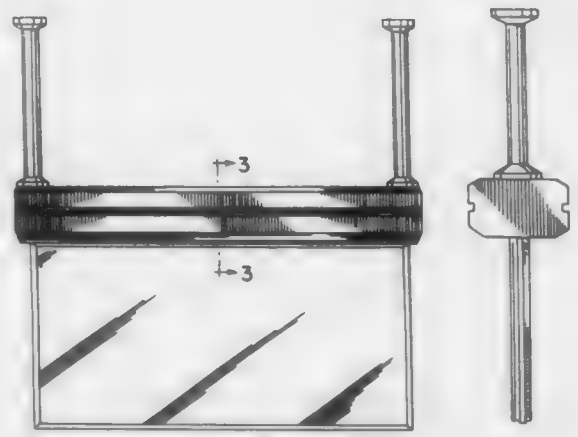
316,564
COPYING MACHINE
Mikio Kosako; Atsuko Hattori, and Yasuhiko Mano, all of Osaka, Japan, assignors to Sharp Corporation, Osaka, Japan
Filed Jul. 13, 1989, Ser. No. 380,074
Term of patent 14 years
U.S. Cl. D18—39



316,565
COMBINED PORTABLE HOLDER FOR FILE AND ASSORTED DESK ARTICLES
Z. Lee Rust, 8530 N. 22nd Ave., No. 1121, Phoenix, Ariz. 85021
Filed Jun. 8, 1988, Ser. No. 204,557
Term of patent 14 years
U.S. Cl. D19—75

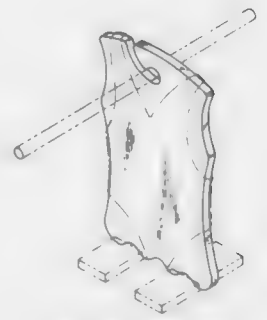


316,566
PAPER CLIP CONTAINER
Jam Sun, No. 39, Lane 106, Sec. 7, Yen-Ping N. Rd., Taipei, Taiwan
Filed Jul. 14, 1988, Ser. No. 218,610
Term of patent 14 years
U.S. Cl. D19—75

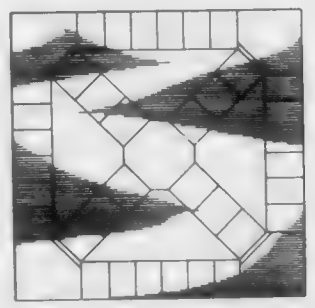


316,567
MIXED DRINK MACHINE
James Beckles, 3614 Dryden Ct., Virginia Beach, Va. 23462
Filed Feb. 16, 1988, Ser. No. 155,748
Term of patent 14 years
U.S. Cl. D20—5

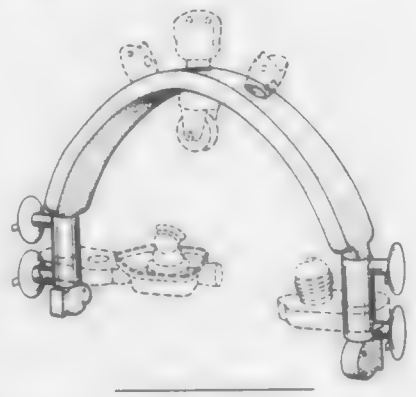
316,568
BEVERAGE VENDING MACHINE FRONT PANEL
Walter L. Koch, Ormond Beach, Fla., assignor to Gross-Given Manufacturing Company, St. Paul, Minn.
Filed May 9, 1988, Ser. No. 192,306
Term of patent 14 years
U.S. Cl. D20—8



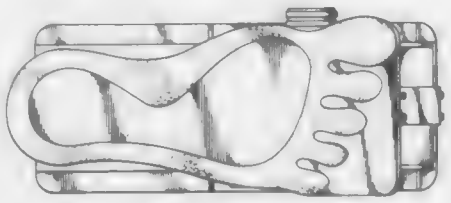
316,569
DISPLAY SIGN
William E. Leggate, Richmond, and Michael G. Sirois, Ottawa, both of Canada, assignors to Popmedia Ltd., Ottawa, Canada
Filed Nov. 4, 1988, Ser. No. 267,004
Claims priority, application Canada, May 6, 1988, 06-05-88-2
Term of patent 14 years
U.S. Cl. D20—10



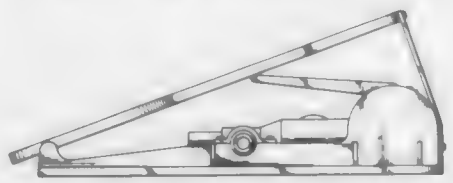
316,570
IDENTIFICATION TAG HOLDER
Jerl A. Golden, 3745 Olive Ave., Long Beach, Calif. 90807
Filed Sep. 22, 1988, Ser. No. 247,599
Term of patent 14 years
U.S. Cl. D20—22



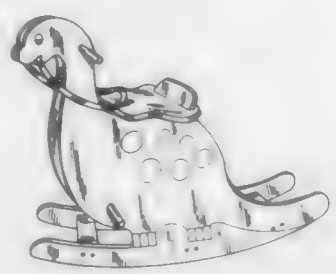
316,571
DISPLAY FORM
D. J. Romero-Comas, and Maria Soledad-Duran, both of Edificio Fuenteclara (Soto-Moraleja), Acobendas (Madrid), Spain
Filed Aug. 16, 1988, Ser. No. 232,876
Term of patent 14 years
U.S. Cl. D20—29



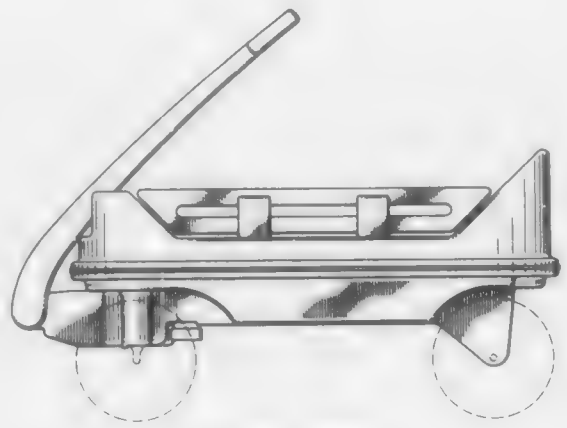
316,572
GAME BOARD
Richard Aube, Longueuil, Canada, assignor to Les Entreprises Aube et Khacho Inc., Sherbrooke, Canada
Filed Mar. 23, 1988, Ser. No. 171,933
Claims priority, application Canada, Jan. 22, 1988, 22-01-88-1
Term of patent 14 years
U.S. Cl. D21—34

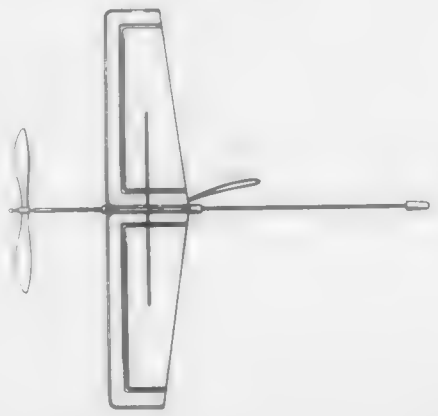


316,573
BATH ARCH
Maryann Finiw, Brooklyn, and David M. Williams, New York, both of N.Y., assignors to The Child Growth and Development Corporation, New York, N.Y.
Filed Mar. 22, 1988, Ser. No. 171,616
Term of patent 14 years
U.S. Cl. D21—59



316,574
WATER BALL GAME CONTROL VALVE
Mark W. Fuller, Studio City; Alan S. Robinson, El Monte, and John Werner, Sunland, all of Calif., assignors to Wet Enterprises, Inc., Burbank, Calif.
Filed Apr. 11, 1988, Ser. No. 180,014
Term of patent 14 years
U.S. Cl. D21—59

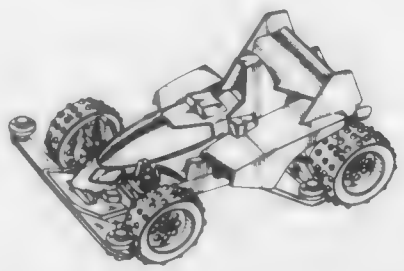




316,575
SIMULATIVE ROCKING TOY
Nancy Warren, Greensboro, N.C., assignor to Rosalco, Inc., Louisville, Ky.
Filed Oct. 2, 1989, Ser. No. 416,265
Term of patent 14 years
U.S. Cl. D21—68

316,576
WAGON
Maarten W. VanHuystee, East Aurora, N.Y., assignor to The Quaker Oats Company, Chicago, Ill.
Filed Aug. 17, 1989, Ser. No. 395,095
Term of patent 14 years
U.S. Cl. D21—71

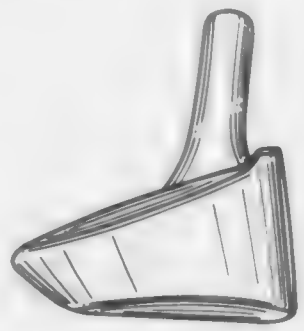
316,577
MODEL KITE OR THE LIKE
John J. Kovats, Fernandina Beach, Fla., assignor to Space Adventures, Incorporated, Jacksonville, Fla.
Filed May 9, 1989, Ser. No. 349,504
Term of patent 14 years
U.S. Cl. D21—88



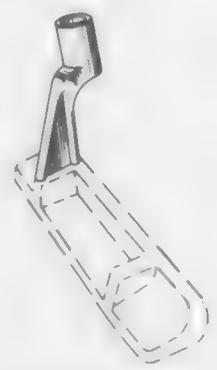
316,578
TOY KITE
John J. Kovats, Fernandina Beach, Fla., assignor to Space Adventures, Incorporated, Jacksonville, Fla.
Division of Ser. No. 289,782, Dec. 27, 1988. This application Jul. 12, 1990, Ser. No. 551,754
Term of patent 14 years
U.S. Cl. D21—88

316,579
SELF REVERSING TOP
Jimmie M. Dally, 11875 Freeman Ave., Hawthorne, Calif. 90250
Filed Apr. 18, 1988, Ser. No. 182,758
Term of patent 14 years
U.S. Cl. D21—95

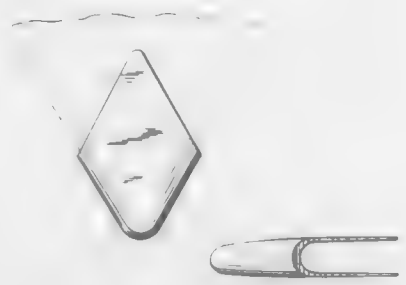
316,580
TOY RACING CAR
Hiroyuki Yoshino, Shizuoka, Japan, assignor to Kabushiki Kaisha Tamiya Mokei, Japan
Filed Aug. 15, 1989, Ser. No. 393,770
Term of patent 14 years
U.S. Cl. D21—137



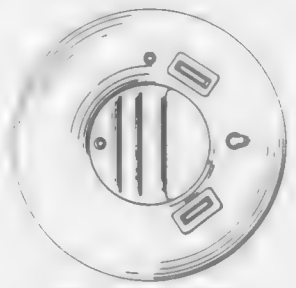
316,581
FLOATING TOY DUCK
Martin M. Trossman, Orchard Park, N.Y., assignor to The Quaker Oats Company, Chicago, Ill.
Filed Aug. 15, 1988, Ser. No. 232,614
Term of patent 14 years
U.S. Cl. D21—160



316,582
MOUSE FIGURE
Clara W. Preston, 7658 E. Rte. 29, Mechanicsburg, Ohio 43044
Filed Oct. 24, 1988, Ser. No. 261,648
Term of patent 14 years
U.S. Cl. D21—188



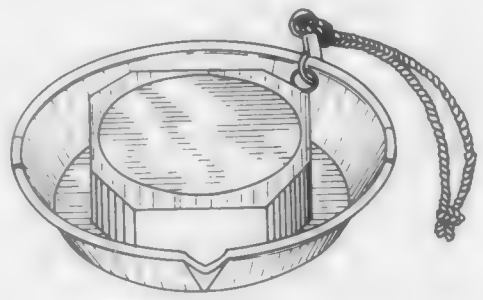
316,583
GOLF CLUB HEAD
Steven J. Mahaffey, Hampden, Mass., and Gary H. Houlston, Salem, S.C., assignors to Spalding & Evenflo Companies, Inc., Tampa, Fla.
Filed Jul. 21, 1988, Ser. No. 222,[illegible]
Term of patent 14 years
U.S. Cl. D21—214



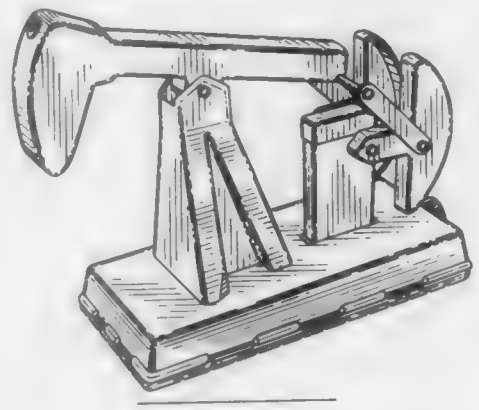
316,[illegible]
HOSEL FOR A GOLF CLUB HEAD
Anthony J. Antonious, 205 E. Joppa Rd., Towson, Md. 21204
Filed Apr. 17, 1986, Ser. No. 856,101
Term of patent 14 years
U.S. Cl. D21—221

316,585
WATER SPORT BOARD SAFETY TIP
David Skedeleski, and Eric Arakawa, both of Aiea, Hi., assignors to Surfco of Hawaii, Aiea, Hi.
Filed Jul. 18, 1989, Ser. No. 381,169
Term of patent 14 years
U.S. Cl. D21—230

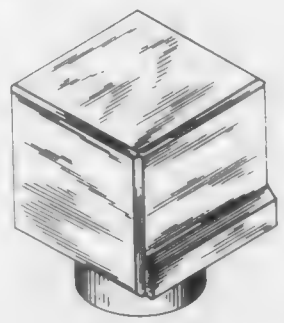
316,586
FLOAT WITH WATER SQUIRTER
Leon H. Tager, San Carlos, and William R. Storey, Sunnyvale, both of Calif., assignors to Poolmaster, Inc., Menlo Park, Calif.
Filed Sep. 22, 1989, Ser. No. 411,071
Term of patent 14 years
U.S. Cl. D21—237



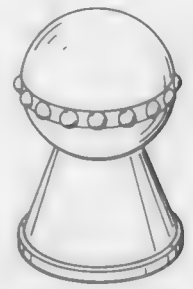
316,587
HANDGUN
Harry W. Sanford, 2171 Highland Oaks Dr., Arcadia, Calif. 91722
Filed Nov. 3, 1987, Ser. No. 116,507
Term of patent 14 years
U.S. Cl. D22—104



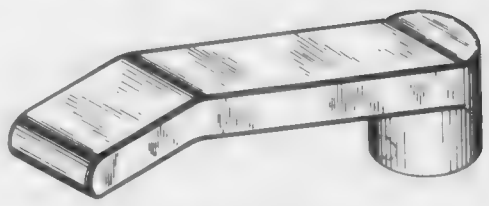
316,588
BOW RISER WITH THUMBHOLE
Dennis N. Highby, Sidney, Nebr., assignor to Cabela's Inc., Sidney, Nebr.
Filed May 5, 1989, Ser. No. 347,795
Term of patent 14 years
U.S. Cl. D22—107



316,589
BAIT PREPARATION CONTAINER
Lester N. Blackiston, 6 N. 18th St., Richmond, Va. 23223
Filed Feb. 23, 1988, Ser. No. 159,182
Term of patent 14 years
U.S. Cl. D22—136

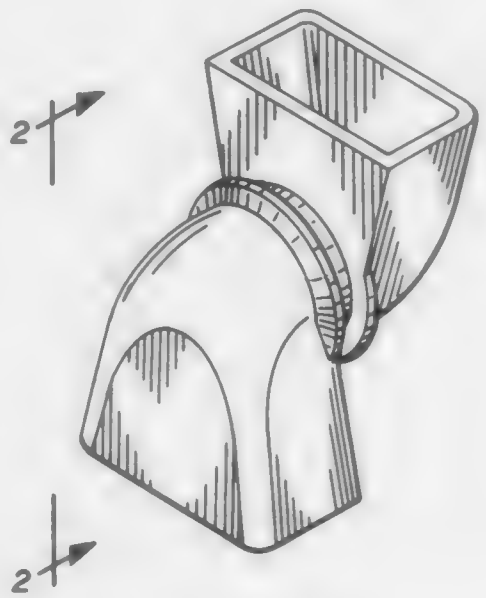


316,590
GARDEN SPRINKLER
LeRoy D. Stucky, 207 Fescue Dr., Inman, Kans. 67546
Filed Sep. 19, 1988, Ser. No. 245,539
Term of patent 14 years
U.S. Cl. D23—215



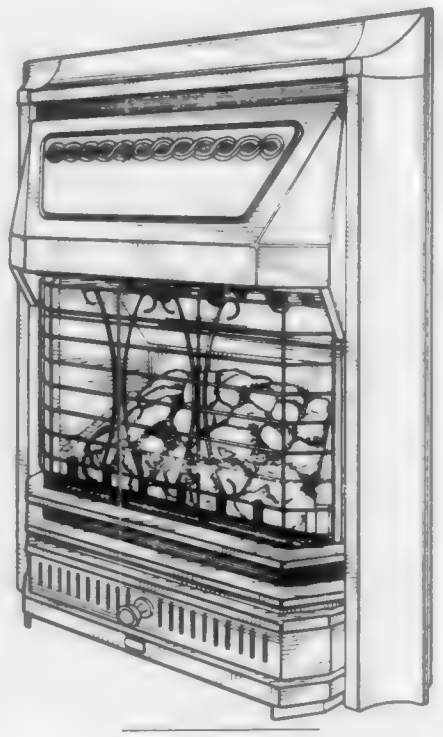
316,591
FAUCET HANDLE OR THE LIKE
Christian Ragonot, Paris, France, assignor to Jacob Delafon, Paris, France
Filed Nov. 30, 1988, Ser. No. 278,313
Claims priority, application France, Sep. 5, 1988, [illegible] 5478
Term of patent 14 years
U.S. Cl. D23—250

316,592
FAUCET HANDLE
Franz W. Jans, Offenbach am Main, Fed. Rep. of Germany, assignor to Jado Bathroom and Hardware Manufacturing Corp., Camarillo, Calif.
Division of Ser. No. 52,957, May 22, 1987, Pat. No. Des. 310,709. This application Mar. 5, 1990, Ser. No. 487,806
Term of patent 14 years
U.S. Cl. D23—250

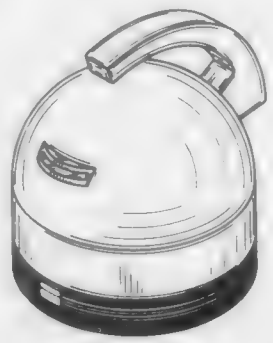


316,593
SPOUT
Herbert V. Kohler, Jr., Kohler; Mary J. Reid, Sheboygan; Bruce M. Sauter, Kohler, and Alan D. Bengtson, Sheboygan, all of Wis., assignors to Kohler Co., Kohler, Wis.
Filed Jan. 12, 1988, Ser. No. 144,442
Term of patent 14 years
U.S. Cl. D23—255

316,594
SHOWER DRAIN HAIR-TRAP
David Y. Yuen, 1825 Paseo Azul, Rowland Heights, Calif. 91748
Filed Nov. 13, 1987, Ser. No. 119,992
Term of patent 14 years
U.S. Cl. D23—261

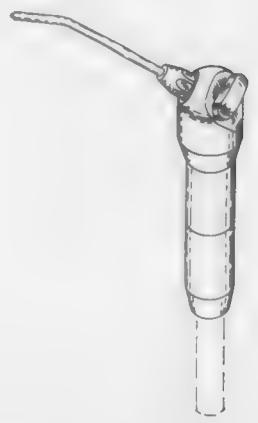


316,595
VENTILATOR FOR VEHICLE BODIES
Charles J. Sauber, 10 N. Sauber Rd., Virgil, Ill. 60182
Division of Ser. No. 337,490, Apr. 13, 1989, Pat. No. 4,909,134.
This application Sep. 26, 1989, Ser. No. 412,877
Term of patent 14 years
U.S. Cl. D23—324

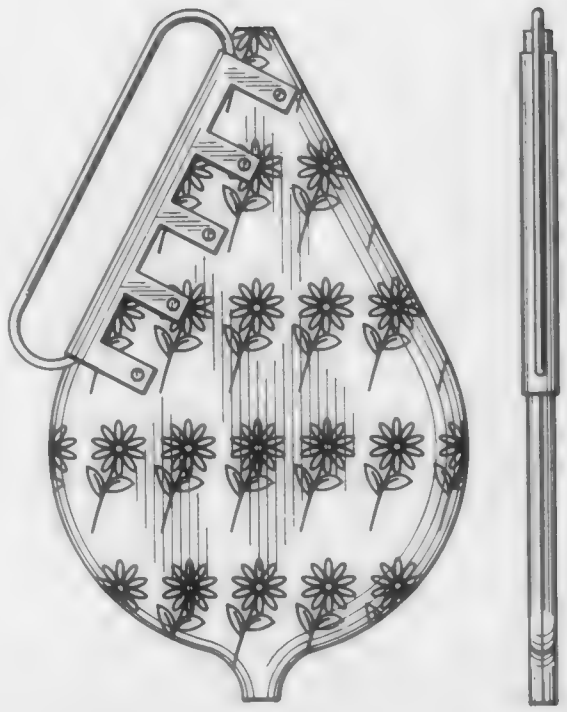


316,596
FAN HEATER
Mitsugu Ooki; Kiminori Yamaguchi, and Shinichi Yokoyama, all of Osaka, Japan, assignors to Sharp Corporation, Osaka, Japan
Filed Dec. 20, 1989, Ser. No. 455,735
Claims priority, application Japan, Jun. 21, 1989, 1-22910
Term of patent 14 years
U.S. Cl. D23—335

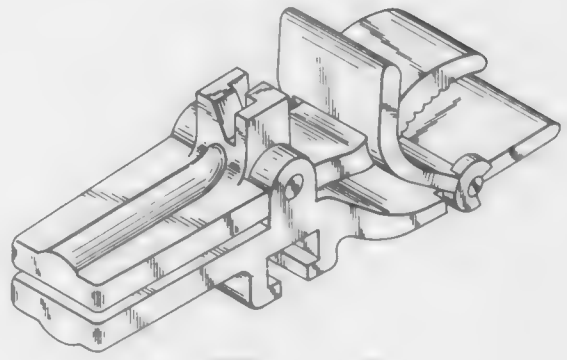
316,597
GAS FIRED HEATER
Martin L. Smith, Birmingham, and Alan Constable, Warwickshire, both of England, assignors to Valor Heating Limited, London, England
Filed Apr. 15, 1988, Ser. No. 182,322
Claims priority, application United Kingdom, Oct. 20, 1987, 1 745 699
Term of patent 14 years
U.S. Cl. D23—342



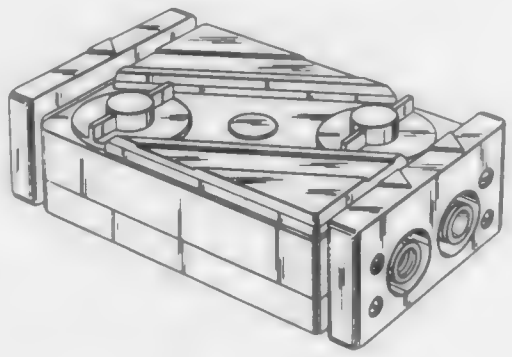
316,598
SUPERSONIC HUMIDIFIER
Shinichi Morooka, Osaka, Japan, assignor to Sharp Corporation, Osaka, Japan
Filed Jan. 3, 1989, Ser. No. 292,726
Claims priority, application Japan, Aug. 3, 1988, 63-31115
Term of patent 14 years
U.S. Cl. D23—356

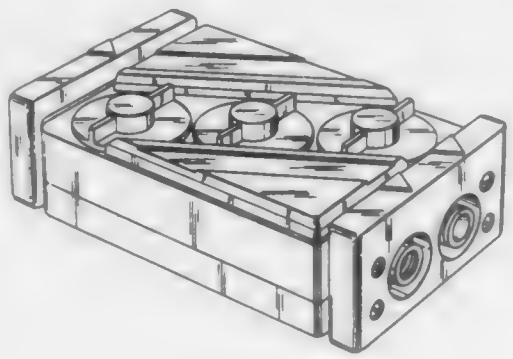


316,599
PORTABLE ELECTRICAL FAN
Jui-Shang Wang, Taipei, Taiwan, assignor to Duracraft Corporation, Sudbury, Mass.
Filed Aug. 9, 1989, Ser. No. 391,325
The portion of the term of this patent subsequent to Feb. 26, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D23—378

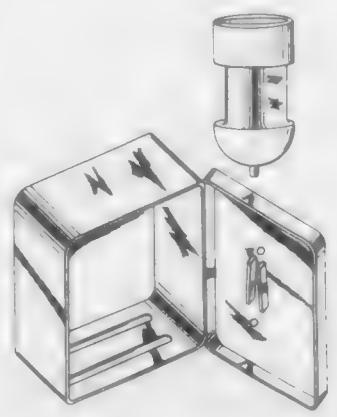


316,600
DENTAL SYRINGE
George K. Austin, Jr., and Pierre LaPlante, both of Newberg, Oreg., assignors to A-Dec, Inc., Newberg, Oreg.
Filed Mar. 2, 1989, Ser. No. 318,801
Term of patent 14 years
U.S. Cl. D24—14



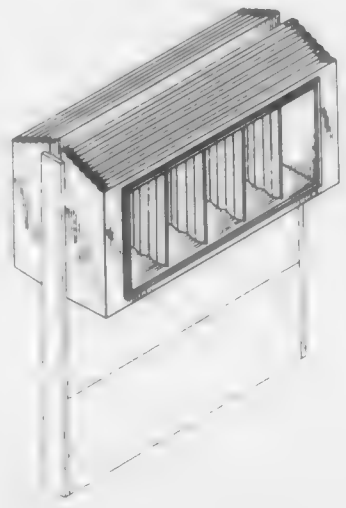


316,601
SURGICAL VASCULAR CLAMP
Daniel Shichman, Trumbull, Conn., assignor to United States Surgical Corporation, Norwalk, Conn.
Continuation-in-part of Ser. No. 65,781, Jun. 24, 1987. This application Dec. 16, 1988, Ser. No. 285,869
Term of patent 14 years
U.S. Cl. D24—27

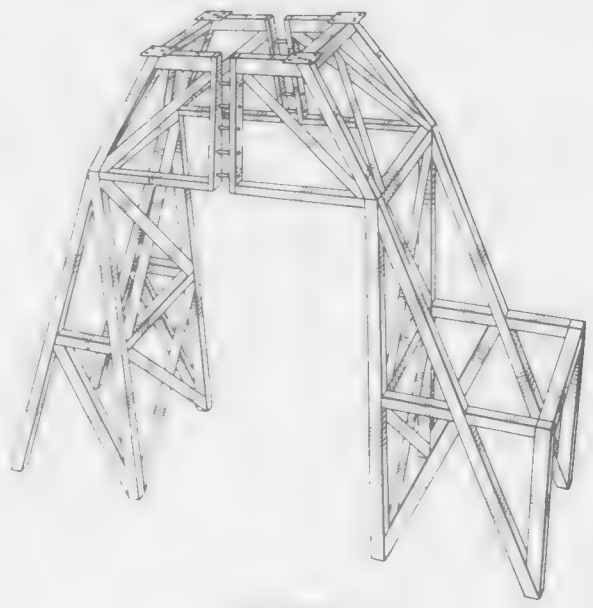


316,602
URINARY BAG COVER
Thelma L. Dungan, and Richard E. Dungan, both of 417 S. Bouziden, Moore, Okla. 73160
Filed Mar. 7, 1988, Ser. No. 164,646
Term of patent 14 years
U.S. Cl. D24—54

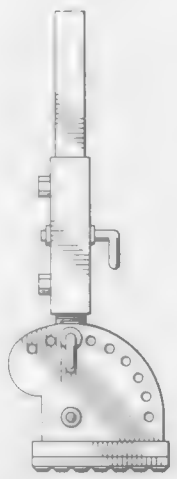
316,603
AUTOMATIC VENTILATOR
Thomas F. Fangrow, Jr., Corona, Calif., assignor to Life Support Projects, Inc., Irvine, Calif.
Filed Sep. 9, 1988, Ser. No. 242,473
Term of patent 14 years
U.S. Cl. D24—53



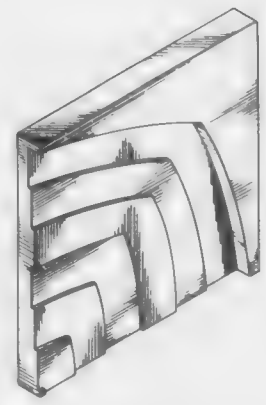
316,604
COMBINED DOUCHE DISPENSER BOTTLE AND STORAGE CABINET
Mary E. Reynolds, P.O. Box 446, Breckenridge, Tex. 7[illegible]24
Filed Sep. 6, 1988, Ser. No. 240,239
Term of patent 14 years
U.S. Cl. D24—59



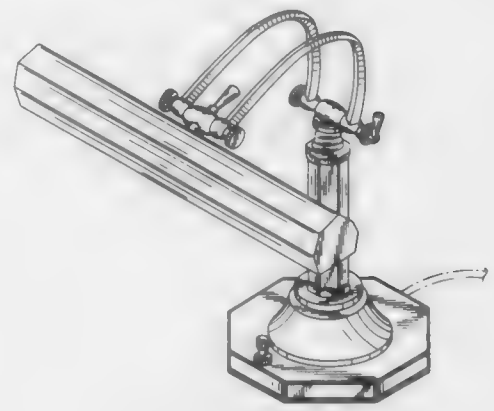
316,605
DECORATIVE GLASS PANEL
Norbert J. Guetle, Jr., Cincinnati, Ohio, and Marlin Greene, Redmond, Wash., assignors to Pease Industries, Inc., Fairfield, Ohio
Filed Jan. 30, 1989, Ser. No. 302,863
Term of patent 14 years
U.S. Cl. D25—103



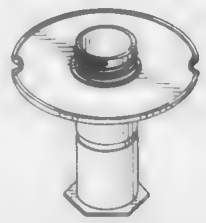
316,606
MAIL WALL TILE
Frank A. Friedman, San Francisco, Calif., assignor to Herman Miller, Inc., Zeeland, Mich.
Filed Feb. 19, 1988, Ser. No. 158,150
Term of patent 14 years
U.S. Cl. D25—138



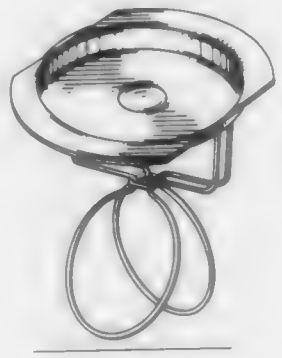
316,607
STEEL CONSTRUCTION SUPPORT
Nils Y. Harde, P.O. Box 22113, S-200 63, Malmo, Sweden
Filed Oct. 13, 1987, Ser. No. 108,039
Claims priority, application Sweden, Apr. 13, 1987, 87-0834
Term of patent 14 years
U.S. Cl. D25—66



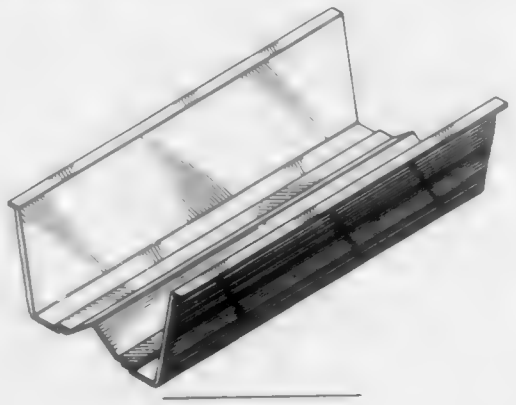
316,608
LADDER LEVELING ATTACHMENT
John E. Wagner, 233 Milbank Ave., Greenwich, Conn. 06830
Filed Jan. 31, 1989, Ser. No. 304,411
Term of patent 14 years
U.S. Cl. D25—68



316,609
TILE
Sergio Stocca, Opicina, Italy, assignor to Candusso F.lli s.r.l. - Bilicbora, Monfalcone, Italy
Filed Sep. 7, 1988, Ser. No. 243,101
Term of patent 14 years
U.S. Cl. D25—138

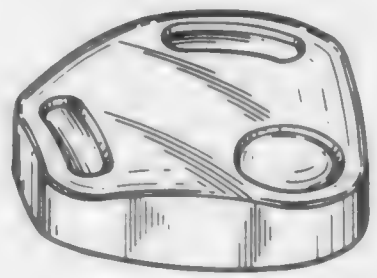


316,610
ADJUSTABLE TABLE LAMP
Craig A. Winn, 1035 Watsoncenter Rd., Carson, Calif. 90745
Filed Jan. 31, 1989, Ser. No. 304,116
Term of patent 14 years
U.S. Cl. D26—65

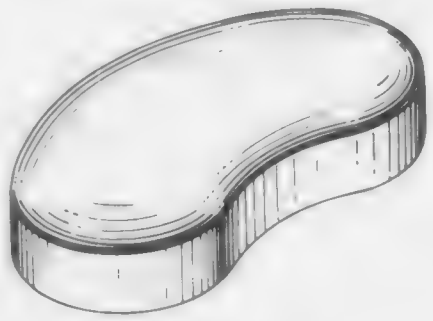


316,611
HANDLE FOR SURGERY LAMP
Charles Spina, Ross, Calif., assignor to MDT Corporation, Torrance, Calif.
Filed Mar. 18, 1988, Ser. No. 170,413
Term of patent 14 years
U.S. Cl. D26—113

316,612
LIGHT BULB ATTACHMENT FOR SUPPORTING SCENTED FRAGRANT OIL OR THE LIKE
Marcia J. Scott, 414½ Truman, NE., Albuquerque, N. Mex. 87108
Filed May 27, 1988, Ser. No. 199,578
Term of patent 14 years
U.S. Cl. D26—113

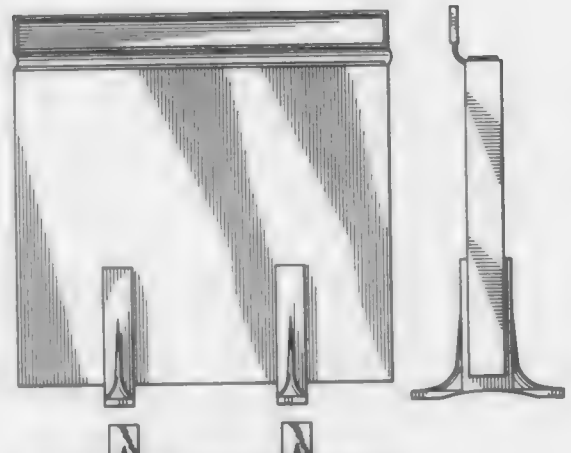


316,613
LIGHT FIXTURE LENS
Frank Stein, 1600 Parker Ave., Fort Lee, N.J. 07024
Filed Apr. 5, 1988, Ser. No. 177,777
Term of patent 14 years
U.S. Cl. D26—122



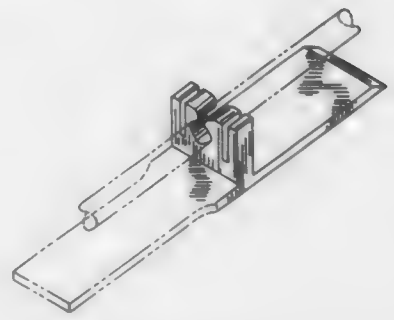
316,614
LIGHTER OR THE LIKE
Kaname Ichikawa, Tokyo, Japan, assignor to Modern Royal Co., Ltd., Tokyo, Japan
Filed Feb. 2, 1990, Ser. No. 473,706
Claims priority, application Japan, Dec. 20, 1989, 1-46135
Term of patent 14 years
U.S. Cl. D27—154

316,615
TABLET
Peter J. Rue, Little Hallingbury; Glenda Spray, Long Eaton, and Fiona R. Bird, Welwyn, all of England, assignors to Glaxo Group Limited, London, England
Filed Oct. 19, 1988, Ser. No. 259,602
Claims priority, application United Kingdom, Apr. 26, 1988, 1050278; Apr. 26, 1988, 1050280
Term of patent 14 years
U.S. Cl. D28—2

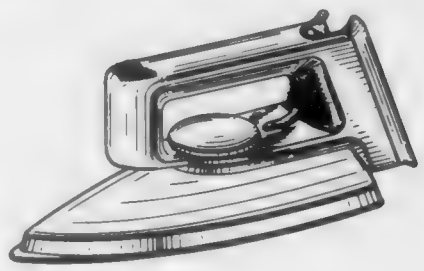


316,616
TABLET
Stewart T. Leslie, and Eric G. Nicol, both of Cambridge, United Kingdom, assignors to Euroceltique, S.A., Luxembourg
Filed Dec. 23, 1985, Ser. No. 812,390
Claims priority, application United Kingdom, Jun. 22, 1985, 1027486
Term of patent 14 years
U.S. Cl. D28—2

316,617
COMBINED TOOTHPICK AND FLOSSER
Ying S. Cheung, Flat A, 3rd Floor, Ashley Mansion, 10-14 Ashley Road, Tsim Sha Tsui, Kowloon, Hong Kong
Filed Mar. 29, 1990, Ser. No. 501,172
Claims priority, application United Kingdom, Nov. 10, 1989, 2002401
Term of patent 14 years
U.S. Cl. D28—64



316,618
GRILL CLEANING DEVICE
Margaret A. Lullie, and Anthony J. Lullie, both of 871 N.W. 203 St., Miami, Fla. 33169
Filed Jun. 22, 1988, Ser. No. 209,789
Term of patent 14 years
U.S. Cl. D32—35



316,619
POOL CLEANING TOOL
Charles P. Richardson, and Linda M. Richardson, both of 1201 Vassor Cir., Plano, Tex. 75075
Filed Aug. 12, 1988, Ser. No. 231,245
Term of patent 14 years
U.S. Cl. D32—35

316,620
BOOT SCRAPER
Richard F. Magor, 3455 Grand Valley Canal Rd., Clifton, Colo. 81520
Filed Feb. 28, 1989, Ser. No. 316,676
Term of patent 14 years
U.S. Cl. D32—47

316,621
ELECTRIC IRON
Gerrit-Jan Van Surksum, Eindhoven, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.
Filed Feb. 22, 1988, Ser. No. 159,023
Claims priority, application Benelux, Aug. 28, 1987, 62467-02
Term of patent 14 years
U.S. Cl. D32—70

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 30TH DAY OF APRIL, 1991

NOTE —Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

A. B. Chance Company: *See—*
Hamilton, Daniel; Hoyt, Robert M.; Halferty, Patricia J.; and Odom, J. Thomas, 5,011,336, Cl. 405-230.000.

A.C. Innovations, Inc.: *See—*
Levi, Avraham Y.; and Quarberg, Craig D., 5,011,319, Cl. 403-109.000.

A. Menarini Industrie Farmaceutiche Riunite: *See—*
Meli, Alberto; Volterra, Giovanna; Giannotti, Danilo; and Pestellini, Vittorio, 5,011,833, Cl. 511-211.000.

A.P. Green Industries, Inc.: *See—*
Hunter, Orville, Jr.; Hill, James L.; and Potts, David E., 5,011,802, Cl. 501-100.000.

A.R.T. of Asheboro, Ltd.: *See—*
Hayes, Franklin A.; and Sexton, Harold E., 5,011,103, Cl. 248-99.000.

Aalderink, Friedrich, to Eno Electronic GmbH. Arrangement for the generation of a yarn having fancy twists arranged and/or formed at random. 5,010,721, Cl. 57-11.000.

AB Tetra Pak: *See—*
Traegaardh, Paul, 5,011,467, Cl. 493-309.000.

ABB Power T&D Company, Inc.: *See—*
Harrold, Ronald T., 5,012,195, Cl. 324-553.000.

ABB Stromberg Teollisuus Oy: *See—*
Savonjousi, Aslak, 5,011,088, Cl. 241-21.000.
Savonjousi, Aslak, 5,011,090, Cl. 241-21.000.

Abel, Don E. Garden hose concealing arrangement including independently usable lid. 5,011,034, Cl. 220-23.860.

Abel, Thomas; and Hirschfeld, Klaus, to Leopold Kostal GmbH & Co. KG, Firma. Control device for use in an electrical switch. 5,012,056, Cl. 200-519.000.

Abolins, Visvaldis; Betts, Joseph E.; Holub, Fred F.; and Lee, Gim F., Jr., to General Electric Co. Crosslinkable flame retardant composition of polyphenylene ether and elastomers. 5,011,736, Cl. 428-407.000.

Abram, David A. S.; and Wishart, Bruce W., to Empteezy Limited. Self-emptying container. 5,011,360, Cl. 414-424.000.

Abramovici, Rudolf; and Hida, George T., to Benchmrk Structural Ceramics Corporation. Process for making molybdenum disilicide or molybdenum disilicide/alumina compositions. 5,011,800, Cl. 501-96.000.

Abrevaya, Hayim; and Imai, Tamotsu, to UOP. Dual profile surface-impregnated dehydrogenation catalyst and process. 5,012,027, Cl. 585-443.000.

AC Greiff Ytbehandling AB: *See—*
Loof, Ingemar, 5,011,085, Cl. 239-690.000.

Accurate Box Company, Inc.: *See—*
Plunkett, Robert L., 5,011,070, Cl. 229-109.000.

Ace Medical Inc.: *See—*
Rambo, Robert D.; and Yorke, John A., 5,010,902, Cl. 128-888.000.

Ackley, Robert E., to Span-America Medical Systems, Inc. Multilayer supplemental support pad. 5,010,610, Cl. 5-481.000.

Acumetric, Inc.: *See—*
Weinreb, Robert N.; Lewak, Jerzy J.; and Dreher, Andreas W., 5,012,496, Cl. 377-21.000.

Acurex Corporation: *See—*
Knuth, William H.; and Beveridge, John H., 5,010,730, Cl. 60-246.000.

Adam, Yossi: *See—*
Levanon, Moshe; Grossinger, Israel; Adam, Yossi; and Landa, Benzion, 5,012,300, Cl. 355-328.000.

Adamson, Arthur P.; Butler, Lawrence; and Wall, Robert A., to General Electric Company. Geared counterrotating turbine/fan propulsion system. 5,010,729, Cl. 60-226.100.

Adaway, Timothy J.: *See—*
Orvik, Jon A.; Pearson, Norman R.; Haag, Anthony P.; Adaway, Timothy J.; Kershner, Larry D.; and Kende, Andrew S., 5,012,017, Cl. 568-803.000.

Adessi, Alfred A. Multi-purpose safety exercise apparatus. 5,011,140, Cl. 272-118.000.

Adkins, Charles M.; Brazell, James R.; Mayer, Gerard T.; and Stacey, Henry C., to Sperry Marine Inc. Method and apparatus for countering vibrations of a platform. 5,012,174, Cl. 318-649.000.

Adler, Robert J.: *See—*
Palepu, Prakash T.; Wu, Cheng-Kuang; and Adler, Robert J., 5,011,022, Cl. 209-155.000.

Adlersberg, Shabtai; Stettiner, Yoram; Aizner, Mendel; and Berstein, Alberto, to DSP Group, Inc., The. Noise reduction system. 5,012,519, Cl. 381-47.000.

Adolph Coors Company: *See—*
Moen, Bruce A.; and Cook, Harold, Jr., 5,011,037, Cl. 220-271.000.

Advanced Micro Device, Inc.: *See—*
Chew, Thomas, 5,012,384, Cl. 361-159.000.

Advanced Technology Systems, Inc.: *See—*
Agbede, Robert O., 5,010,694, Cl. 51-429.000.

Aebischer, Patrick; Galletti, Pierre M.; Panol, George; and Miracoli, Luigi, to Brown University Research Foundation. Implantable delivery system for biological factors. 5,011,472, Cl. 604-50.000.

Aebischer, Patrick; and Salessiotis, Anastassios N., to Brown University Research Foundation. Composite nerve guidance channels. 5,011,486, Cl. 606-152.000.

Agbede, Robert O., to Advanced Technology Systems, Inc. Fluid cutting machine. 5,010,694, Cl. 51-429.000.

Agfa-Gevaert AG: *See—*
Vedder, Hans J.; and Krenn, Hans, 5,012,464, Cl. 369-116.000.

Agfa-Gevaert, N.V.: *See—*
Tavernier, Serge M.; Janssens, Robert F.; and Zwijsen, Jan A., 5,012,288, Cl. 355-259.000.

Agresta, Frank J., to WPM, Inc. Accessory faucet having quick attaching means. 5,010,922, Cl. 137-359.000.

Agricultural and Food Research Council, The: *See—*
Perry, Margaret M., 5,011,780, Cl. 435-317.100.

Aichinger, Heinrich: *See—*
Herzog, Klaus; Boehning, Karl-Heinz; Aichinger, Heinrich; Plueckhan, Juergen; Mross, Wolf D.; and Schwarzmann, Matthias, 5,011,809, Cl. 502-348.000.

Air Products and Chemicals, Inc.: *See—*
Davis, Ruth A.; Nicholas, David M.; Smith, Dale D.; Wang, Shoou-I; and Wright, Richard A., 5,011,670, Cl. 423-450.000.
Gottier, Gerry N., 5,011,521, Cl. 62-11.000.

Airhart, Tom P., to Atlantic Richfield Company. Characterization of the full elastic effect of the near surface on seismic waves. 5,010,976, Cl. 181-108.000.

Aisan Kogyo Kabushiki Kaisha: *See—*
Mine, Koichi; and Suzuki, Sigeru, 5,011,369, Cl. 415-55.100.
Yoshida, Shigeru; and Ito, Yoshimasa, 5,011,367, Cl. 415-55.100.

Aisin Aw Co., Ltd.: *See—*
Tsukamoto, Kazumasa; Ishikawa, Kazunori; Taniguchi, Takuji; Iwatsuki, Kunihiro; and Taga, Yutaka, 5,010,991, Cl. 192-3.300.

Aisin Seiki Kabushiki Kaisha: *See—*
Okumura, Nobuo; and Miura, Atsuyuki, 5,010,737, Cl. 62-6.000.

Aiso, Keiji: *See—*
Takahashi, Mineo; Nakayama, Susumu; Yamashima, Osamu; Suzuki, Satoshi; Harada, Toshihiko; and Aiso, Keiji, 5,010,642, Cl. 29-868.000.

Aizner, Mendel: *See—*
Adlersberg, Shabtai; Stettiner, Yoram; Aizner, Mendel; and Berstein, Alberto, 5,012,519, Cl. 381-47.000.

Ajorca S.A.: *See—*
Fussi, Fernando; Diaz, Victor B.; and Domanico, Richardo H., 5,011,919, Cl. 536-21.000.

Akabane, Hidetomo: *See—*
Okada, Hiroshi; Saitoh, Noritaka; Akabane, Hidetomo; and Tashiro, Shintaro, 5,012,198, Cl. 328-155.000.

Akasaki, Yutaka; Nukada, Katsumi; and Sato, Katsuhiro, to Fuji Xerox Co., Ltd. Electrophotographic photoreceptor containing a fluorene derivative. 5,011,757, Cl. 430-58.000.

Akasaki, Yutaka; Nukada, Katsumi; and Sato, Katsuhiro, to Fuji Xerox Co., Ltd. Fluorene derivative and process for preparation thereof. 5,011,969, Cl. 558-402.000.

Akihama, Shigeyuki; Kobayashi, Mikio; Suenaga, Tatsuo; Fukumoto, Toshiyuki; Taniguchi, Yoshikazu; and Nakagawa, Hiroaki, to Kajima Corporation. Curtain wall. 5,010,705, Cl. 52-477.000.

Akimichi, Shinji: *See—*
Endo, Yasuo; Akimichi, Shinji; Hirose, Tadayoshi; Furukawa, Motonori; and Yoshida, Kyoko, 5,012,521, Cl. 382-1.000.

Akishino, Katsuo: *See—*
Ishida, Tetsuro; Danno, Yoshiaki; Akishino, Katsuo; and Fukui, Toyoaki, 5,010,863, Cl. 123-339.000.

Akita, Minoru: *See—*
Tominaga, Kenji; Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo; Morishima, Hideo; Nakayama, Takashi; Moriya, Kumiaki; Matsumoto, Masaki; Akita, Minoru; Niino, Tsuyoshi; Ochiai, Kanehiro; Shiozawa, Akihiko; Uchiyama, Yuichi; Yasuno, Toyoharu; Moriya, Kenji; Kinoshita, Shouichirou; Kage, Kazuo; and Kubota, Ryuji, 5,011,652, Cl. 376-283.000.

Akiyama, Yasuhiro: *See—*
Ohkita, Masao; Akiyama, Yasuhiro; Takikawa, Makito; and Arayama, Yoshihiko, 5,012,366, Cl. 360-102.000.

Akiyama, Yasuo, to Murata Kikai Kabushiki Kaisha. System for modifying a machine's program at a remote location. 5,012,402, Cl. 364-192.000.

Aksman, Igor, to ICI Americas Inc. Stabilized polymer latex composition. 5,011,883. Cl. 524-513.000.

Aktiebolaget Electrolux *See—*
Tolf, Anders K. H., and Stridh, Keijo A., 5,010,920, Cl. 137-565.000.
Alaurent, Jacques. Fastening member for a curtain telescopic rod 5,011,030, Cl. 211-105.600.
Albert-Frankenthal AG *See—*
Weisbrod, Norbert; and Kobler, Norbert, 5,010,815, Cl. 101-217.000
Alberts, Jack B.; and McNeely, Michael D., to Keystone International Holdings Corp. Shock absorbing sealing means for flow control devices. 5,011,116, Cl. 251-334.000
Albrecht, David E. Check valve. 5,010,916, Cl. 137-454.200.
Alcan International Limited *See—*
Strong, David S.; and Dawson, John A., 5,011,747, Cl. 429-27.000
Alcatel Cit: *See—*
Frindel, Sebastien; and Mathieu, Luc, 5,011,368, Cl. 415-90.000
Helou, Didier; Peron, Jean-Yves; Coutin, Rene, and Thiebaut, Georges, 5,012,465, Cl. 370-58.100.
Pernet, Michel, 5,012,078, Cl. 235-441.000
Alcorn, Byron A.; Cherry, Robert W.; Coleman, Mark D.; Rauchfuss, Brian D.; and Taylor, Gary L., to Hewlett-Packard Co. Method and apparatus for gamma correcting pixel value data in a computer graphics system. 5,012,163, Cl. 315-383.000
Aldrich, Charles S.; Applegate, Steven L.; Craft, James A.; Molloy, James J.; and Pawley, Michael L., to International Business Machines Corporation. Toner metering apparatus. 5,012,289, Cl. 355-260.000
Aldrich, Charles S.; Dyer, Stanley, and Ream, Gregory L., to International Business Machines Corporation. Transfer station control in an electrophotographic reproduction device. 5,012,293, Cl. 355-274.000
Aleem, Mohd A. *See—*
Frantz, Gary A.; Aleem, Mohd A.; Rademacher, Loren; and Rateike, Lee R., 5,012,145, Cl. 310-68.00D
Alfa Lancia S.p.A *See—*
Pasquali, Renato; and Drago, Raffaele, 5,011,431, Cl. 439-540.000
Alfermann, August W. *See—*
Rao, Nagaraj N.; Wandrey, Christian, Petersen, Maike, and Alfermann, August W., 5,011,775, Cl. 435-135.000
Alfred Teves GmbH *See—*
Bischoff, Gilbert; Breitwieser, Karl, and Emmel, Eckhard, 5,011,234, Cl. 303-4.000.
Karafa, Nandor, and Liebers, Lutz, 5,012,117, Cl. 250-572.000
Allan, James: *See—*
Marello, Hugo; and Allan, James, 5,011,144, Cl. 273-29.000
Allegheny Ludlum Corporation: *See—*
Dean, Douglas C., 5,011,548, Cl. 148-27.000.
Allegro Microsystems, Inc.: *See—*
Guillotte, Paul A.; Panaccione, Paul; Martiska, Thomas J., and Gagnon, Jay J., 5,012,322, Cl. 357-72.000
Allen-Bradley Company, Inc.: *See—*
Siegel, Stuart B., and Marriott, Jeffery C., 5,012,468, Cl. 370-85.500
Allen, Diane. Holder for barrettes. 5,011,716, Cl. 428-4.000
Allergan, Inc. *See—*
Woodward, David A., 5,011,856, Cl. 514-573.000.
Allied-Signal. *See—*
Shacklette, Lawrence W., Townsend, Linda B., and Jow, Taiguang R., 5,011,748, Cl. 429-50.000.
Allied-Signal Inc. *See—*
Barder, Timothy J., 5,011,822, Cl. 505-1.000
Barlage, Francis M., 5,012,401, Cl. 363-97.000
Boyd, Gary L., 5,011,353, Cl. 411-383.000
Brown, Arthur K., Jr., 5,011,238, Cl. 303-116.000.
Marshall, Robert M.; Raybon, James C., Jr., and Medeiros, Robert W., 5,011,616, Cl. 252-8.700.
Ramanan, V. R. V., 5,011,553, Cl. 148-403.000.
Tumpey, John J., 5,012,146, Cl. 310-68.00D.
Allmendinger, Thomas *See—*
Kvita, Vratislav, Baumann, Marcus, Fischer, Walter; Mayer, Carl W.; and Allmendinger, Thomas, 5,011,944, Cl. 549-214.000
Almeras, Roland; and Herelier, Patrick, to Societe de Prospection et d'Inventions Techniques (S.P.I.T.) Marking device adapted for mounting on a fastener driving apparatus. 5,010,811, Cl. 101-3.100
Alps Electric Co., Ltd. *See—*
Matsui, Toshimasa, 5,012,055, Cl. 200-408.000
Ohkita, Masao; Akiyama, Yasuhiro, Takikawa, Makito, and Arayama, Yoshihiko, 5,012,366, Cl. 360-102.000
Ohwada, Isso, 5,011,307, Cl. 400-124.000
Taga, Yuji; and Katoh, Masashi, 5,012,355, Cl. 360-31.000
Alston, William B., and Gratz, Roy F. Substituted 1,1,1-triaryl-2,2,2-trifluoroethanes and processes for their synthesis. 5,011,955, Cl. 552-101.000.
Althoff, Klaus: *See—*
Mattausch, Hans-Juergen; Althoff, Klaus; and Neuendorf, Gerd, 5,012,450, Cl. 365-208.000.
Altman, Ralph A.; Gooch, John P.; and Dismukes, Edward B., to Electric Power Research Institute, Inc. Catalytic oxidation of SO_2 to SO_3 in the presence of fly ash. 5,011,516, Cl. 55-5.000
Alzo N.V.: *See—*
Bartels, Tamme; and Pilaszek, Wincenty L. S., 5,011,994, Cl. 564-278.000.
Amada Company, Limited: *See—*
Ream, Stanley L., Lee, C. S.; Lim, G. C., and Fukae, Kenneth, 5,011,282, Cl. 356-153.000.
Amano, Tadashi; and Watanabe, Junichi, to Shin-Etsu Chemical Co., Ltd. Process for preparing vinyl chloride polymer using hydroxyphenyl monomers. 5,011,897, Cl. 526-202.000.
Amano, Toru *See—*
Hirai, Ichiro, and Amano, Toru, 5,012,493, Cl. 375-100.000
Amemiya, Isao, Sakai, Tadashi, and Uno, Shigeki, to Kabushiki Kaisha Toshiba. Solution component sensor device. 5,011,589, Cl. 204-416.000.
American Environmental Systems, Inc. *See—*
Yehl, James E., and Coppom, Rex R., 5,010,777, Cl. 73-864.810
American Health Foundation *See—*
Jones, Ronald C.; and Weisburger, John H., 5,011,697, Cl. 426-92.000
American Medical Systems, Inc. *See—*
Polyak, Mark, and Pugh, Robert W., Jr., 5,010,882, Cl. 128-79.000
American National Can Company *See—*
Gehrke, Russell P., Johnson, Richard E., Jr., and Kim, Yong J., 5,011,719, Cl. 428-35.700
American Packaging Corporation *See—*
Black, Richard A., Jr., and Yannuzzi, Gilbert N., Jr., 5,011,299, Cl. 383-126.000.
American Standard Inc. *See—*
Glamm, Paul R., 5,011,112, Cl. 251-129.110
Amoco Corporation *See—*
Brett, J. Ford, and Warren, Tommy M., 5,010,789, Cl. 76-108.200
Gottschalk, Stephen C., 5,010,640, Cl. 29-602.100
Lane, Kelley R., and Schammel, Wayne P., 5,012,030, Cl. 585-527.000
Robeson, Lloyd M., and Harris, James E., 5,011,894, Cl. 525-437.000
Sikkenga, David L., Zaenger, Ian C.; and Williams, Gregory S., 5,012,024, Cl. 585-320.000
Taheri, Hassan, 5,011,945, Cl. 549-260.000
Amos Press, Inc. *See—*
Boyd, Bruce D., Geoghegan, Robert J.; Metz, Barbara A.; Rosen, Karen L., Rosen, Richard D., Bally, Alex, and Sears, Ronald J., 5,011,005, Cl. 206-0.810
AMP Incorporated *See—*
Bowen, Terry P., and Rowlette, John R., 5,011,255, Cl. 350-96.190
Schultz, Albert N., Jr., and Zakary, Paul D., 5,012,391, Cl. 361-428.000
Simmons, Randy G., 5,011,424, Cl. 439-352.000
Waters, Mark H., 5,011,436, Cl. 439-681.000
Ampex Corporation: *See—*
Bishop, Thomas S., 5,012,327, Cl. 358-17.000
Amphenol Corporation: *See—*
Blunt, Christopher W., 5,011,434, Cl. 439-620.000
An, Hyeong-keun, Kim, Young-cheol, Lee, Seok-jeong, and Yu, Jung-jae, to Samsung Electronics Co., Ltd. ROM circuit. 5,012,451, Cl. 365-230.050
Andersen, Edward A. *See—*
Andersen, Eric T., and Andersen, Edward A., 5,011,358, Cl. 414-273.000
Andersen, Eric T., and Andersen, Edward A. Height indicator for a fork lift truck. 5,011,358, Cl. 414-273.000
Anderson, Alan R. Susceptor for converting microwave energy into heat and method of use. 5,012,068, Cl. 219-10.55M.
Anderson Corporation *See—*
Evans, Harold H., and Bruchu, Todd W., 5,010,708, Cl. 52-656.000
Anderson, David S., to General Mills, Inc. Container with lid closure having an improved flared stand feature. 5,011,006, Cl. 206-45.240.
Anderson, Jim L., Beltz, Terry W.; and Taylor, Raymond E., to Nestec S.A. Ravioli machine. 5,010,807, Cl. 99-450.600
Anderson, John E. Portable article handling/supporting apparatus. 5,011,364, Cl. 414-694.000.
Ando, Hironori *See—*
Yamada, Shuji, and Ando, Hironori, 5,012,278, Cl. 355-55.000.
Ando, Masaaki, Matsuzaka, Masaaki, and Saita, Masahiro, to Nippon Seiko Kabushiki Kaisha. Multiple-imaging charged particle-beam exposure system. 5,012,105, Cl. 250-398.000
Ando, Moritoshi, Oka, Hiroshi; and Iwata, Satoshi, to Fujitsu Limited. Wiring pattern detection method and apparatus. 5,011,960, Cl. 356-376.000
Ando, Ryo *See—*
Yoshida, Tadao; and Ando, Ryo, 5,012,461, Cl. 369-44.330
Andoh, Shinya *See—*
Sasabe, Minoru, Imamura, Masao; Yoshida, Yasunobu; Andoh, Shinya; and Miyake, Hiroshi, 5,011,798, Cl. 501-87.000.
Andreas Stihl: *See—*
Hoffmann, Joachim, 5,010,649, Cl. 30-276.000
Schierling, Roland; and Dohse, Hans-Peter, 5,010,858, Cl. 123-179.00P
Andros, Andrew A., and Campana, Thomas J., Jr., to Telefind Corporation. Paging receiver with continuously tunable antenna and RF amplifier. 5,012,235, Cl. 340-825.440.
Andus Corporation. *See—*
Kittler, Wilfred C., Jr., Czukor, Janos; and Stoddard, Darrell, 5,011,569, Cl. 156-656.000.
Anritsu Corporation: *See—*
Kawano, Youzo; Takahashi, Tadashi, Shimura, Yasuhiko; and Takahashi, Yukihiro, 5,012,183, Cl. 324-96.000.
Ansel, Robert E. *See—*
Murphy, Edward J.; Krajewski, John J.; and Ansel, Robert E., 5,011,635, Cl. 264-22.000.
ANT Nachrichtentechnik GmbH: *See—*
Erbele, Kurt, 5,012,390, Cl. 361-413.000.
Antonio, Lavezzo: *See—*
Roberto, Giani, Ettore, Parini; Massimiliano, Borsa, and Antonio, Lavezzo, 5,011,838, Cl. 514-234.200.

Antonioli, Giuseppe, to Wirtgen AG. Modular element for defining areas and routes on carriage roads and the like. 5,011,325, Cl. 404-6.000
Antonious, Anthony J. Weight distribution for golf club head. 5,011,151, Cl. 273-164.000
Antoon, Mitchell K., Jr., and Hill, David J., to Hercules Incorporated. Breathable microporous film and methods for making it. 5,011,698, Cl. 426-395.000
Antos, John M. *See—*
Sargent, Charles L., Antos, John M.; and Biba, Scott I., 5,010,602, Cl. 4-432.000
Aoki, Masakazu, and Suzuki, Akira, to Hitachi, Ltd. Oil-free screw compressor apparatus. 5,011,388, Cl. 418-95.000
Apple Computer, Inc: *See—*
Gruenberg, Eric I., Stewart, James R.; and Halicho, James J., 5,011,198, Cl. 292-41.000
Applegate, Steven L.. *See—*
Aldrich, Charles S.; Applegate, Steven L.; Craft, James A.; Molloy, James J., and Pawley, Michael L., 5,012,289, Cl. 355-260.000
Applied Analytical Industries, Inc. *See—*
Park, Moo K.; and Caldwell, Henry C., 5,011,852, Cl. 514-419.000.
Applied Power Inc. *See—*

Bland, Jacqueline D. *See*—
Lewtas, Kenneth; and Bland, Jacqueline D., 5,011,505, Cl. 44-393.000.

Blanyer, Richard J.; and Mathews, Charles L. Method and apparatus for coating a core material with metal. 5,010,637, Cl. 29-505.000.

Blasi, Wayne M. *See*—
Kennedy, Peter D.; and Blasi, Wayne M., 5,012,251, Cl. 342-176.000.

Blasius, Udo. *See*—
Rodi, Anton; Blasius, Udo; Reithofer, Jurgen, and May, Karl-Heinz, 5,010,812, Cl. 101-148.000.

Blaupunkt-Werke GmbH. *See*—
Becker, Hubert, 5,012,255, Cl. 343-704.000.

Blin, Philippe, Weber, George; and Barbe, Jacques, to Institut de Recherces de la Siderurgie Francaise "IRSID". Device for continuously casting liquid metal between two rolls. 5,010,948, Cl. 164-428.000.

Bloeck, Margarete. *See*—
Werner, Martin, Bloeck, Margarete, and Bichsel, Heinz, 5,011,657, Cl. 420-538.000.

Blondeau, Robert. *See*—
Razeghi, Manijeh; Defour, Martin; Omnes, Franck; Maurel, Philippe, Blondeau, Robert; and Krakowski, Michel, 5,012,476, Cl. 372-45.000.

Bloodline Technology. *See*—
Bredesen, Mark S.; and Schmerler, Elliott D., 5,010,889, Cl. 128-715.000.

Bloom, John J., Jr., to Caterpillar Inc. Indicating apparatus for a coupling. 5,010,962, Cl. 172-430.000.

Blunt, Christopher W., to Amphenol Corporation. Filtered electrical connector. 5,011,434, Cl. 439-620.000.

Blythe, Robert J.; and Scally, Paul G., to Sumitomo Rubber Industries Limited. Pneumatic tires. 5,011,876, Cl. 524-77.000.

Blythin, David J.; Shue, Ho-Jane; and Ganguly, Ashit K., to Schering Corporation. Cyclic diesters of 4-hydroxy-1,3-benzenedimethanol and compositions and methods employing such compounds. 5,011,845, Cl. 514-291.000.

Blythin, David J.; and Shue, Ho-Jane, to Schering Corporation. Aryl-substituted naphthyridine and pyridopyrazine derivatives and their use in treating hyperproliferative skin diseases. 5,011,860, Cl. 514-861.000.

BM Corp.: *See*—
Farrell, John J., 5,011,399, Cl. 425-557.000.

Board of Regents, The University of Texas System, The: *See*—
Khokhar, Abdul R.; Newman, Robert A.; and Krakoff, Irwin H., 5,011,959, Cl. 556-137.000.
Langsjoen, Per H.; Folkers, Karl A.; and Langsjoen, Peter H., 5,011,858, Cl. 514-690.000.
Stevens, Kathleen R.; and Connor, Thomas H., 5,011,020, Cl. 206-570.000.
Tasch, Aloysious F., Jr.; Shin, Hyungsoon; and Maziar, Christine M., 5,012,306, Cl. 357-23.400.

Boatman, John M., to Riddle, Donald C.; and Bernard, William M., Jr., part interest to each. Appliance for heating water by microwave power. 5,012,059, Cl. 219-10.55E.

BOC Group, Inc., The: *See*—
Chang, Ping; and Smith, P. A. Joel, 5,012,064, Cl. 219-121.150.

Bock, Edward C., to Xerox Corporation. Right-to-left scanning system for copying documents or bound books. 5,012,275, Cl. 355-25.000.

Bock, Robert E., to Illinois Tool Works, Inc. Glide assembly with inside holding clip. 5,010,621, Cl. 16-39.000.

Bodenseewerk Geratetechnik GmbH: *See*—
Ohlenburger, Hans, 5,012,387, Cl. 361-388.000.

Bodolus, Christopher L.: *See*—
Gupta, Victor; Bodolus, Christopher L.; Paparizos, Christos; and Shaw, Wilfrid G., 5,012,028, Cl. 585-500.000.

Bodziak, Douglas P.; Hunder, Ray A.; Roth, Steven P.; Grovender, Steven L.; and Molenda, Robert P., to Minnesota Mining & Manufacturing Company. Hexagonal pad. 5,011,186, Cl. 281-12.000.

Boe, Thomas E.; Bergene, Mark A.; Kittle, Carl E.; and Sparks, Gregory E., to Deere & Company. Control system calibration. 5,012,415, Cl. 364-424.070.

Boeckner, James W., Jr.: *See*—
Pollard, Christopher A.; and Boeckner, James W., Jr., 5,012,371, Cl. 360-105.000.

Boehning, Karl-Heinz: *See*—
Herzog, Klaus; Boehning, Karl-Heinz; Aichinger, Heinrich; Plueckhan, Juergen; Mross, Wolf D.; and Schwarzmann, Matthias, 5,011,809, Cl. 502-348.000.

Boehringer Ingelheim GmbH: *See*—
Hess, Joachim; Muller, Klaus R.; and Muller, Manfred, 5,011,946, Cl. 549-274.000.

Boeing Company, The: *See*—
Chan, Yuen-Kwok, 5,012,249, Cl. 342-25.000.
Glancy, Jerry L.; and Birch, John C., 5,011,200, Cl. 292-113.000.
Jensen, Tom M.; and Hamilton, Herbert E., 5,011,348, Cl. 410-79.000.
Lubowitz, Hyman R.; and Sheppard, Clyde H., 5,011,905, Cl. 528-170.000.
McLaren, Douglas; and Orr, William W., 5,011,098, Cl. 244-134.00B.

Boenko, Sergei K.; and Shvartsman, Alexandr Y. Surgical forceps. 5,011,491, Cl. 606-207.000.

Bolton, Theodore S., and Tobin, Curtis L., Sr., to Carrier Corporation. Actuation mechanism for vent and exhaust doors. 5,010,742, Cl. 62-262.000.

Bondoc, Alfredo A.: *See*—
Chich, Adem, Lalwani, Steven S.; Bettoli, Steven C.; Grube, Louis L.; and Bondoc, Alfredo A., 5,011,726, Cl. 428-141.000.

Bonko, Mark L.; and Lopp, Loran C., Jr., to Goodyear Tire & Rubber Company, The. Agricultural tire and tread lug therefor. 5,010,935, Cl. 152-209.00B.

Bonner, Alex G.: *See*—
Coull, James M.; Rappin, Darryl J.; Koester, Hubert; Pluskal, Malcolm G.; Steuck, Michael J.; and Bonner, Alex G., 5,011,861, Cl. 521-53.000.

Bonnyman, John; and Baldas, John, to Commonwealth of Australia. Preparation of 99m Tc radiopharmaceuticals. 5,011,916, Cl. 534-14.000.

Bonsignore, Frank J.: *See*—
Berkes, John S.; and Bonsignore, Frank J., 5,012,290, Cl. 355-271.000.

Bonus Games: *See*—
Lovell, John G., Sr., and Owens, Garry W., 5,011,157, Cl. 273-238.000.

Boom, Mark V. Handle for baby wipe container. 5,011,536, Cl. 134-6.000.

Boots Company PLC, The: *See*—
MacLean, Lachlan; Roberts, David L.; Barron, Kenneth; Nichol, Kenneth J.; and Harrison, Albert E., 5,011,931, Cl. 546-155.000.

Booz, George W.: *See*—
Thornton, Peter B.; Cone, Stanley H.; and Booz, George W., 5,010,663, Cl. 38-52.000.

Borck, Gerald-Wolfgang; Ell, Manfred; and Erhardt, Hans-Dieter, to BASF Aktiengesellschaft. Packaging for articles, in particular those having a right parallelepiped shape. 5,011,014, Cl. 206-387.000.

Borg-Warner Automotive, Inc.: *See*—
Huntley, Peter, 5,010,989, Cl. 192-0.033.

Boris, Frederick, Jr., to Lori Corporation. Interchangeable core lock. 5,010,753, Cl. 70-371.000.

Bornes, Philippe: *See*—
Aurtoi, Jean-Marc; and Bornes, Philippe, 5,011,339, Cl. 406-191.000.

Borom, Marcus P.; Szala, Lawrence E.; Brun, Milivoj; Miller, Steven A.; and Mourer, David P., to General Electric Company. Molten metal transfer tube. 5,011,049, Cl. 222-590.000.

Borovsky, Dov; and Carlson, David A., to University of Florida; and United States of America, Agriculture. Novel compositions and process for inhibiting digestion in blood-sucking insects. 5,011,909, Cl. 530-328.000.

Borowiec, Joseph C.; and El-Hamamsy, Sayed-Amr, to General Electric Company. Power factor correction circuit. 5,012,161, Cl. 315-247.000.

Borthwick, Allan D.: *See*—
Semeraro, Claudio; Micheli, Dino; Pieraccioli, Daniele; Gaviraghi, Giovanni; and Borthwick, Allan D., 5,011,848, Cl. 514-356.000.

Bortolin, Roberto; and Parbhoo, Bhukandas, to Dow Corning Limited. Method of making organosilbutadiyne polymers. 5,011,961, Cl. 556-431.000.

Bose, Ajit K.; and Strater, Kurt F., to Union Camp Corporation. Halter top bag. 5,011,298, Cl. 383-8.000.

Boser, Werner; Sieg, Giselher; and Wedekind, Robert, to Dom-Sicherheitstechnik GmbH & Co. KG. Lock cylinder with electromagnetic tumbler. 5,010,750, Cl. 70-276.000.

Bosier, Maurice H.; and Dixon, Gerald, to International Business Machines Corporation. Magnetic head/support assembly and access mechanism for a disk file. 5,012,368, Cl. 360-104.000.

Bott, Kaspar: *See*—
Nick, Bernhard; Bott, Kaspar; and Schulz, Guenther, 5,011,991, Cl. 564-204.000.

Bottum, Edward W.: *See*—
Sobieski, John L.; and Bottum, Edward W., 5,011,105, Cl. 248-219.100.

Boudewijns, Arnoldus J. J., to U.S. Philips Corp. Integrated delay line. 5,012,143, Cl. 307-606.000.

Boudreau, Michael P.; Jacoby, Randall W.; and Laughlin, James L., to Kirschner Medical Corporation. Orthopedic fixation device. 5,010,881, Cl. 128-76.00R.

Boudreau, Robert A.; and Rideout, William C., to GTE Laboratories Incorporated. Uptapered single-mode optical fiber package for optoelectronic components. 5,011,247, Cl. 350-96.200.

Bourland, Joe D.; Barbs, Charles F.; Geddes, Leslie A.; Tacker, Willis A., Jr.; and Graber, George P., to Purdue Research Foundation. Pressure mapping system with capacitive measuring pad. 5,010,772, Cl. 73-862.040.

Bowen, Charles G.; and Dolce, Anthony B., to Transkrit Corporation. Continuous mailer assembly. 5,011,069, Cl. 229-69.000.

Bowen, Sandy W. Putting practice device. 5,011,154, Cl. 273-192.000.

Bowen, Terry P.; and Rowlette, John R., to AMP Incorporated. Holographic optical fiber coupler. 5,011,255, Cl. 350-96.190.

Bowman, Robert G.; Hartwell, George E.; Molzahn, David C.; Ramirez, Enrique G.; and Lastovica, John E., Jr., to Dow Chemical Company, The. Process of preparing non-cyclic polyalkylenepolyamines employing group VB metal catalysts. 5,011,999, Cl. 564-479.000.

Boyce Thompson Institute for Plant Research, Inc.: *See*—
Granados, Robert R., 5,011,685, Cl. 424-93.000.

Boyd, Bruce D.; Geoghegan, Robert J.; Metz, Barbara A.; Rosen, Karen L.; Rosen, Richard D.; Bally, Alex; and Sears, Ronald J., to Amos Press, Inc. Protective coin holder. 5,011,005, Cl. 206-0.810.

Boyd, Gary L., to Allied-Signal Inc. High temperature turbine engine structure. 5,011,353, Cl. 411-383.000.

Boyer, Gregory J. Lightweight insulating partition. 5,010,943, Cl. 160-351.000.

Boze, Ronald A.: *See*—
Canzoneri, Anthony S.; and Boze, Ronald A., 5,011,597, Cl. 210-104.000.

Bradbury, Roy, to Imperial Chemical Industries. Thermal transfer printing. 5,011,812, Cl. 503-227.000.

Bradbury, Roy; Gemmell, Peter A.; and Hann, Richard A., to Imperial Chemical Industries PLC. Thermal transfer printing. 5,011,813, Cl. 503-227.000.

Braden Industries: *See*—
Braden, Joe T., 5,010,847, Cl. 119-18.000.

Braden, Joe T., to Braden Industries. Calf feeder bottle for dry feed. 5,010,847, Cl. 119-18.000.

Bradley, Eric M.; and Mathis, Ronald F., to General Dynamics Corp., Electronics Divn. Wide linear dynamic range optical modulator. 5,011,264, Cl. 350-162.240.

Braemert, Peter; and Britzke, Ingo, to Hubner Gummi - und Kunststoff GmbH. Articulated bridge gangway between railroad cars. 5,010,614, Cl. 14-71.100.

Branemark, Per-Ingvar: *See*—
Persson, Jan-Ove; and Branemark, Per-Ingvar, 5,011,497, Cl. 623-21.000.

Branson Ultrasonics Corporation: *See*—
Sager, Thomas B., 5,011,555, Cl. 156-73.100.

Braun, Dietrich: *See*—
Meier, Helmut-Martin; Pielartzik, Harald; Morbitzer, Leo; Muller, Hanns-Peter; and Braun, Dietrich, 5,011,972, Cl. 560-66.000.

Braun, Hans-Georg: *See—*
Rosenau, Bernhard, Hisgen, Bernd, Heinz, Gerhard; Braun, Hans-Georg; Lausberg, Dietrich; and Zeiner, Hartmut, 5,011,884, Cl. 524-537.000.

Braymen, Steven D.; Paulson, Bradley A.; and Goedken, Kenneth D., to Iowa State University Research Foundation, Inc. Use of sol-gel derived tantalum oxide as a protective coating for etching silicon. 5,011,568, Cl. 156-647.000.

Brazell, James R.: *See—*
Adkins, Charles M.; Brazell, James R.; Mayer, Gerard T.; and Stacey, Henry C., 5,012,174, Cl. 318-649.000

Breard, Francis H. Surgical implant for restricting the relative movement of vertebrae. 5,011,484, Cl. 606-61.000.

Breckner, Raymond A.: *See—*
Henriksson, Kurt K. G.; and Breckner, Raymond A., 5,011,376, Cl. 417-145.000.

Bredesen, Mark S.; and Schmerler, Elliott D., to Bloodline Technology. Intelligent stethoscope. 5,010,889, Cl. 128-715.000.

Breed, Allen K.: *See—*
Husby, Harald S.; Breed, Allen K.; and Thuen, Ted, 5,011,182, Cl. 280-735.000.

Breed Automotive Technology, Inc.: *See—*
Husby, Harald S.; Breed, Allen K.; and Thuen, Ted, 5,011,182, Cl. 280-735.000.

Breipohl, Gerhard: *See—*
Konig, Wolfgang; Breipohl, Gerhard, Geiger, Rolf; Knolle, Jochen; and Hropot, Max, 5,011,825, Cl. 514-18.000.

Bryskiewicz, Barbara G.; Bryskiewicz, Tadeusz R.; Dabkowski, Ferdynand P.; Lacowski, Jacek; and Gatos, Harry C., to Massachusetts Institute of Technology. Epitaxial growth. 5,011,564, Cl. 156-624.000.

Bryskiewicz, Tadeusz R.: *See—*
Bryskiewicz, Barbara G.; Bryskiewicz, Tadeusz R.; Dabkowski, Ferdynand P.; Lacowski, Jacek; and Gatos, Harry C., 5,011,564, Cl. 156-624.000.

BTS Broadcast Television Systems GmbH: *See—*
Kirschenstein, Reinhard, 5,012,340, Cl. 358-150.000.

Buchan, William R.; Moore, Robert A.; Caley, Wendell J., Jr.; Gilmore, Mark A.; and Hudson, David M., to Delphax Systems. Powder transport, fusing and imaging apparatus. 5,012,291, Cl. 355-271.000.

Buchel, Karl H.: *See—*
Elbe, Hans-Ludwig; Regel, Erik; Buchel, Karl H.; Schaller, Klaus; and Plempel, Manfred, 5,011,850, Cl. 514-383.000.

Buchs, Peter; and Brossi, Arnold, to World Health Organization. Synthesis of artemisininelactol derivatives. 5,011,951, Cl. 549-348.000.

Buchser, William J., to Whirlpool Corporation. Surface mounting spring clip. 5,011,101, Cl. 248-27.300.

Buckberg, Gerald D.; Maloney, James V., Jr.; Jones, Kenneth A.; and West, Weldon D., to Shiley, Inc. Peripheral cardiopulmonary bypass and coronary reperfusion system. 5,011,469, Cl. 604-4.000.

Budd Company, The: *See—*
Mott, David M.; and Rosiek, Frank C., 5,011,302, Cl. 384-448.000.

Bueschl, Rainer; Echte, Adolf; Schulte, Konrad; and Mittnacht, Hans, to BASF Aktiengesellschaft. Impact resistant thermoplastic molding composition and use thereof. 5,011,871, Cl. 523-436.000.

Buffo, Flavio, to Uteco S.p.A. Flexo & Converting Machinery. Multicolor flexographic machine with a device for automatically loading and unloading block-holding rollers. 5,010,813, Cl. 101-178.000.

Bugni, Anthony R., to North American Philips Corporation. Artificial front porch insertion circuit. 5,012,330, Cl. 358-34.000.

Buhler, Marcel; and Martin, Jean-Michel, to Nestec S.A. Preparation of shaped agglomerated particulate material. 5,011,641, Cl. 264-109.000.

Buhrke, Rolfe E.; Dianda, Robert B.; Katzenstein, Leo R.; McClurkan, Michael B.; and Tsai, John S., to AT&T Bell Laboratories. Call service initialization arrangement. 5,012,466, Cl. 370-62.000.

Bujese, David P.: *See—*
Detig, Robert H.; and Bujese, David P., 5,011,758, Cl. 430-100.000.

Bukoschek, Romuald L.: *See—*
Bertram, Leo; Schemmann, Hugo; and Bukoschek, Romuald L., 5,012,147, Cl. 310-80.000.

Bulgrien, Garth H.; Goodbar, Jim E.; and Johnson, Paul W., to Ford New Holland, Inc.; and Deere & Company. Medium speed transmission shuttle shifting. 5,012,416, Cl. 364-424.100.

Buliga, Gregory S.: *See—*
Baer, Cynthia C.; Buliga, Gregory S.; Hassenheutti, Gerard L.; Henry, George A.; Heth, Alice A.; Jackson, Linda K.; Kennedy-Tolstedt, Jill M.; Kerwin, Phillip J.; Miller, Mark S.; Parker, Elizabeth M.; Paul, Neela K., Pechak, David G.; Smith, Gary F.; and Witte, Vernon C., 5,011,701, Cl. 426-573.000.

Bull, S.A.: *See—*
Dehaine, Gerard, 5,010,949, Cl. 165-76.000.

Bullock, Robert L., to Standard Car Truck Company. Universal wheel restraining cleat and strap assembly for wheel chocks. 5,011,347, Cl. 410-9.000.

Bunce, Martin C.; Helps, David W.; Jenkins, Leonard A.; and Noke, Adrian C., to CMB Foodcan plc. Vending systems for hot foods. 5,011,042, Cl. 221-150.00A.

Bunge, Eric L.: *See—*
Horton, James M.; and Bunge, Eric L., 5,011,241, Cl. 312-330.100.

Bunney, Leroy R. Rotary log sorter. 5,011,024, Cl. 209-517.000.

Burgess, Alan G., to GEC Alsthom Limited. Adjustment of disposition of rotation axis in moving coil measuring instruments to correct for their non-ideal operation. 5,012,184, Cl. 324-146.000.

Burke, John T., to Lanxide Technology Company, LP. Investment casting technique for the formation of metal matrix composite bodies and products produced thereby. 5,010,945, Cl. 164-97.000.

Burlington Industries, Inc.: *See—*
Coltrane, Jack D.; and Kushner, Joseph R., 5,011,021, Cl. 206-620.000.

Burn, Ian: *See—*
Bergna, Horacio E.; and Burn, Ian, 5,011,804, Cl. 501-138.000.

Burns, Gordon P., to U.S. Philips Corporation. Method of manufacturing a semiconductor device. 5,011,789, Cl. 437-81.000.

Burri, Michel, to Motorola, Inc. Sensor arrangement with amplifier offset cancellation. 5,012,436, Cl. 364-571.020.

Burton, Richard J.; Copeland, John A., III; Jerrim, John W.; Nixon, Toby L.; Sauser, Martin H., Jr.; Weatherford, Robert E., Jr.; Becker, Larry D.; and Strawn, David F., to Hayes Microcomputer Products, Inc. Method for sending a plurality of data channels over a single communications line. 5,012,489, Cl. 375-8.000.

Buschfeld, Adolf; Lattekamp, Matthias; Ripkens, Gerd; and Schittek, Hans, to Rwe-Dea Aktiengesellschaft fur Mineraloel und Chemie. Process for producing modified phenolic resin bonding agents and use thereof for producing particle board. 5,011,886, Cl. 524-596.000.

Bush, Ira J.: *See—*
Cole, James H.; and Bush, Ira J., 5,012,088, Cl. 250-227.190.

Busker, L. H.; and Wight, E. W., to Beloit Corporation. Short dwell coater apparatus. 5,010,840, Cl. 118-421.000.

Bussani, Carlo R.: *See—*
Auchinleck, Geoffrey F.; McEwen, James A.; Osborne, John C.; and Bussani, Carlo R., 5,010,900, Cl. 128-855.000.

Busse, Oswald, to Passavant-Werke AG. Filter plates for plate filter presses. 5,011,601, Cl. 210-229.000.

Bussert, Althea J. Vertically foldable window covering and retaining clip. 5,010,944, Cl. 160-354.000.

Butler, Lawrence: *See—*
Adamson, Arthur P.; Butler, Lawrence; and Wall, Robert A., 5,010,729, Cl. 60-226.100.

Butterfield, John; Moorhouse, Stephen; and Marlow, Stewart, to Microvitec plc. Horizontal deflection and EHT generator circuit. 5,012,164, Cl. 315-411.000.

Buxton, John P., to Shell Oil Company. Fuel compositions. 5,011,503, Cl. 44-322.000.

Byers, Gary W.; and Chapman, Derek D., to Eastman Kodak Company. Receiver for thermally-transferable fluorescent europium complexes. 5,011,816, Cl. 503-227.000.

C. H. Masland & Sons: *See—*
Smith, Rayna W.; and Miller, Gerald W., 5,011,737, Cl. 428-409.000.

Cabasso, Israel: *See—*
Manassen, Joost; and Cabasso, Israel, 5,011,749, Cl. 429-101.000.

Cage, Brian R.; and Drinkwine, Arbor D., to Midwest Research Institute. Sampler for chemical vapors. 5,011,517, Cl. 55-92.000.

Cagnin, Tarcisio; and Ferraris, Giampiero, to Siemens Telecomunicazioni S.p.A. Process for making metallized holes in a dielectric substrate by vacuum deposition of metals and the product obtained thereby. 5,011,761, Cl. 430-312.000.

Cailly, Francinet; and Mottot, Yves, to Rhone-Poulenc Chimie. Non-polluting recovery of rare earth values from rare earth minerals/ores. 5,011,665, Cl. 423-21.500.

Calam, Henry D.; and Schaeffer, Hans A. Liquid composition for the relief of premenstrual and menstrual discomforts. 5,011,688, Cl. 424-195.100.

Caldwell, Henry C.: *See—*
Park, Moo K.; and Caldwell, Henry C., 5,011,852, Cl. 514-419.000.

Caley, Wendell J., Jr.: *See—*
Buchan, William R.; Moore, Robert A.; Caley, Wendell J., Jr.; Gilmore, Mark A.; and Hudson, David M., 5,012,291, Cl. 355-271.000.

California Biotechnology Inc.: *See—*
Wang, Yu-chang J.; Lee, William A.; and Narog, Blair, 5,011,678, Cl. 424-45.000.

Callahan, Robert M.; Hempel, Bruce C.; and Liang, Bob C., to International Business Machines Corporation. Multistage clipping method. 5,012,433, Cl. 364-518.000.

Cam-Stat, Inc.: *See—*
Izaguirre, Lowell F., Sr.; and Perotti, Jose M., 5,011,073, Cl. 236-11.000.

Cameron, Robert E. Twin carriage system. 5,011,001, Cl. 198-468.200.

Campana, Thomas J., Jr.: *See—*
Andros, Andrew A.; and Campana, Thomas J., Jr., 5,012,235, Cl. 340-825.440.

Campbell, Arthur L.; Behling, James R.; John, Sau-hoi N.; and Babiak, Kevin A., to G. D. Searle & Co. Process for preparing higher order cuprate complexes. 5,011,958, Cl. 556-110.000.

Campbell, Bruce D., to Wavelength Lasers, Inc. Analog compensation system for linear lasers. 5,012,475, Cl. 372-29.000.

Campbell, Craig E.: *See—*
von Recum, Andreas F.; and Campbell, Craig E., 5,011,494, Cl. 623-11.000.

Campo, Juan M., to Michigan Brake Manufacturing, Inc. Bolt retaining hydraulic end fitting assembly. 5,011,192, Cl. 285-23.000.

Cancre, Fabrice: *See—*
Fink, Mathias; Cancre, Fabrice; and Pesque, Patrick, 5,010,885, Cl. 128-660.070.

Candore, Amedeo, to Morton International, Inc. High lamination speed automatic laminator. 5,010,999, Cl. 198-456.000.

Canon Kabushiki Kaisha: *See—*
Haruta, Masahiro; Munakata, Hirohide; Yuasa, Satoshi; and Yoshinaga, Yoko, 5,011,644, Cl. 264-184.000.
Higashihara, Masaki, 5,012,267, Cl. 354-402.000.
Ikkatai, Masatoshi; Yoshizawa, Atsutomo; and Honma, Toshio, 5,012,295, Cl. 355-311.000.
Maeda, Masaya, 5,012,374, Cl. 360-109.000.
Nagano, Masatoshi; and Kawamoto, Kenichi, 5,012,264, Cl. 354-286.000.
Naito, Masataka; Hiroi, Masakazu; and Hayakawa, Kimiaki, 5,011,130, Cl. 271-288.000.
Nakayama, Hiroki; Kitagishi, Nozomu; Hattori, Jun; Suda, Shigeyuki; and Horiuchi, Akihisa, 5,011,272, Cl. 350-427.000.
Nishimura, Akimasa; Ogura, Shigeo; Miyamoto, Ryosuke; Tezuka, Nobuo; and Fukushima, Nobuo, 5,012,271, Cl. 354-456.000.
Sakurai, Masaaki; Yamamoto, Iichiro; Goto, Masahiro; Kuge, Tsukasa; and Shigenobu, Michio, 5,011,401, Cl. 432-60.000.
Sekine, Masayoshi; Nakajima, Toshiyuki; Kai, Takashi; Yoshimura, Katsuji; and Toyama, Masamichi, 5,012,270, Cl. 354-430.000.
Tosaka, Yoichi; and Kaihara, Shoji, 5,012,269, Cl. 354-419.000.
Watanabe, Yutaka; Fukuda, Yasuaki; and Ogura, Shigetaro, 5,012,500, Cl. 378-35.000.
Yoshimura, Katsuji; Nagasawa, Kenichi; Kashida, Motokazu; and Shikakura, Akihiro, 5,012,352, Cl. 358-343.000.
Yoshimura, Shigeru; Suzuki, Tetsuo; and Takemura, Makoto, 5,012,260, Cl. 346-139.00R.
Yoshinaga, Kazuo; Kai, Takashi; Egara, Koichi; Toshida, Yomishi; Mitsutake, Hideaki; Sato, Koichi; and Miyazaki, Takeshi, 5,011,623, Cl. 252-299.500.

Canzoneri, Anthony S.; and Boze, Ronald A. Single cell vertical static flow flotation unit. 5,011,597, Cl. 210-104.000.

Cap, Heinrich, to Papst-Motoren GmbH & Co. KG. Sealing device especially for hard disk drives. 5,011,165, Cl. 277-80.000.

Capelli, Umberto: *See—*
Clavarino, Amedio, 5,011,331, Cl. 405-149.000.

Caplan, Don B.: *See—*
Cohen, Bernard; Caplan, Don B.; and Edwards, Edward G., 5,010,761, Cl. 73-40.700.

Daar, Yair, and Yahav, Shimon. Depilatory device. 5,011,485, Cl. 606-133.000

Dabbs, Timothy P. *See—*
Thorncraft, David A.; Kennedy, David R.; Rashleigh, Scott C.; and Dabbs, Timothy P., 5,011,252, Cl. 350-96.150.

Dabkowski, Ferdynand P. *See—*
Bryskiewicz, Barbara G.; Bryskiewicz, Tadeusz R.; Dabkowski, Ferdynand P.; Lacowski, Jacek; and Gatos, Harry C., 5,011,564, Cl. 156-624.000.

Dabuzhsky, Leonid V.; and Lerner, Moisey M. Sole for reactive distribution of stress on the foot. 5,010,662, Cl. 36-28.000.

Dai-Ichi Kogyo Seiyaku Co., Ltd *See—*
Matsumoto, Shusaku; Hatakawa, Yoshio; and Nakajima, Akihiko, 5,011,922, Cl. 536-119.000.

Dai Nippon Insatsu Kabushiki Kaisha: *See—*
Suzuki, Daiji; and Sudo, Yasuhiro, 5,011,126, Cl. 271-227.000.

Daichi Canada Inc.: *See—*
Suzuki, Toshimitsu, 5,011,522, Cl. 62-12.000.

Daiei Chemical Co., Ltd.: *See—*
Terao, Masanobu, Maegawa, Yuzo; Ueda, Yasuyoshi; Hashimoto, Kiyoyasu; and Omura, Takashi, 5,012,015, Cl. 568-709.000.

Daiichi Denshi Kogyo Kabushiki Kaisha: *See—*
Takeda, Mitsuru, 5,011,258, Cl. 350-96.200.

Daiki Co., Ltd.: *See—*
Nakamori, Haruka; and Ito, Hiroshi, 5,011,731, Cl. 428-222.000.

Daimatsu Kagaku Kogyo Co., Ltd.: *See—*
Matsuguchi, Noboru; and Matsuguchi, Tadaski, 5,011,190, Cl. 283-101.000.

Daimler-Benz AG *See—*
Toepfer, Bernhard; and Reiner, Michael, 5,011,236, Cl. 303-100.000
Zweigart, Gerhard, Greiner, Ferdinand; Baumert, Heinz; Scheiffele, Peter, and Nowak, Manfred, 5,011,213, Cl. 296-97.130.

Daimler-Benz Aktiengesellschaft *See—*
Jurgens, Gunter, Pickard, Jurgen, and Sell, Werner, 5,010,986, Cl. 188-250.00H

Dainippon Screen Mfg. Co., Ltd. *See—*
Kurusu, Yasuo; Cho, Masamichi; Nagata, Shinichi, Tomohisa, Kunio; and Shirota, Hiroyuki, 5,012,089, Cl. 250-235.000.

Daiwa Can Company *See—*
Shishikura, Toshibumi, 5,010,814, Cl. 101-211.000.

Dale, George L., and Brown, Robert E., to Dale, George L. Telephone handset cover. 5,012,513, Cl. 379-451.000

Dalrymple, Monte J.; Brubaker, Lois F.; and Smith, Don, to Zilog, Inc. System for testing internal nodes. 5,012,180, Cl. 324-73.100.

D'Amato, Mark, to D.E.M. Controls of Canada. Conveyor drive assembly. 5,011,004, Cl. 198-791.000

Damjanovic, Dragana. Biogenic amine assay using HPLC-ECD. 5,011,608, Cl. 210-656.000

Dammeyer, Ned E. *See—*
Conley, Walter, III; Dammeyer, Ned E.; and Klopfleisch, Kim A., 5,011,363, Cl. 414-666.000

Damon, Victor A. Hand-held soap-holder. 5,011,316, Cl. 401-6.000.

Dana Corporation *See—*
Love, Mickey L.; and Massey, Douglas V., 5,011,320, Cl. 403-132.000

Danner, Edward L.; and Picken, Alan D., to Van Dresser Corporation. Headliner. 5,011,218, Cl. 296-214.000

Danno, Yoshiaki *See—*
Ishida, Tetsuro, Danno, Yoshiaki, Akishino, Katsuo, and Fukui, Toyoaki, 5,010,863, Cl. 123-339.000

Dara, Paul C.; Mitchell, Clair E.; and Rutkowksi, David J., to Ford Motor Company. Method and apparatus for detecting stall current in an energized electric motor. 5,012,168, Cl. 318-434.000.

Darmont, Maurice *See—*
Brochot, Jean-Pierre, Pillias, Danielle, Wuest, Isabelle, Beaufays, Jean-Pierre, and Darmont, Maurice, 5,011,585, Cl. 204-192.130.

D'Arrigo, Sebastiano *See—*
Gill, Manzur, D'Arrigo, Sebastiano, and Lin, Sung-Wei, 5,012,307, Cl. 357-23.500

Das Chaklander, Asoke C., and Das Gupta, Sankar. In situ production of silicon carbide reinforced ceramic composites. 5,011,799, Cl. 501-89.000.

Das Gupta, Sankar *See—*
Das Chaklander, Asoke C.; and Das Gupta, Sankar, 5,011,799, Cl. 501-89.000

Datta, Pabitra; Friel, Ronald N.; and Thompson, Robert P., to RCA Licensing Corp. Surface treatment of phosphor particles and method for a CRT screen. 5,012,155, Cl. 313-461.000.

Daughton, John W.; and Sklut, Robert L., to Xerox Corporation. Magnification adjustment for computer forms. 5,012,284, Cl. 355-243.000

Daverio AG *See—*
Maier, Willy, and Bachmann, Thomas, 5,011,131, Cl. 271-289.000

David Sarnoff Research Center, Inc. *See—*
Lee, Swye N., 5,012,497, Cl. 377-118.000.

Davidoff of Geneva, Inc. *See—*
Scheurer, Raymond, 5,011,009, Cl. 206-270.000.

Davies, Andrew K., to U.S. Philips Corporation. Teletext decoders. 5,012,338, Cl. 358-147.000.

Davies, Donald C. Glove support apparatus. 5,011,053, Cl. 223-78.000.

Davis, Gerald E., to Merichem Company. Neutral oil recovery process for the production of naphthenic acids. 5,011,579, Cl. 203-37.000.

Davis, Robert F. *See—*
Kong, Hua-Shuang; Glass, Jeffrey T.; and Davis, Robert F., 5,011,549, Cl. 148-33.100

Davis, Ruth A.; Nicholas, David M.; Smith, Dale D.; Wang, Shoou-I; and Wright, Richard A., to Air Products and Chemicals, Inc. Integrated reformer process for the production of carbon black. 5,011,670, Cl. 423-450.000.

Davydov, Anatoly B. *See—*
Belykh, Sergei I.; Gigauri, Vladimir S.; Davydov, Anatoly B.; Keshelava, Viktor V.; Mlynchik, Vyacheslav E.; Utyamyshev, Rustam I.; and Firsova, Elizaveta V., 5,011,493, Cl. 606-215.000.

Daw Technologies, Inc.: *See—*
Daw, Terry L., and Procter, David F., 5,010,702, Cl. 52-241.000.

Daw, Terry L., and Procter, David F., to Daw Technologies, Inc. Modular wall system. 5,010,702, Cl. 52-241.000.

Dawson, John A. *See—*
Strong, David S., and Dawson, John A., 5,011,747, Cl. 429-27.000.

Day, Delbert E., and Ehrhardt, Gary J., to University of Missouri, The Curators of the. Radioactive glass microspheres. 5,011,677, Cl. 424-1.100.

Day, Delbert E.; and Ehrhardt, Gary J., to University of Missouri, The Curators of the. Composition and method for radiation synovectomy of arthritic joints. 5,011,797, Cl. 501-33.000.

Day, Derek J. *See—*
Xu, Jingming; Sweeney, Mark A.; and Day, Derek J., 5,012,301, Cl. 357-4.000

Deamicis, Ferdinando. Portable garbage container. 5,011,168, Cl. 280-47.260

Dean, Douglas C., to Allegheny Ludlum Corporation. Composition for deboronizing grain-oriented silicon steel. 5,011,548, Cl. 148-27.000.

Dean, John W.; and Beers, Melvin D., to General Electric Company. Self-leveling silicone sealant compositions and methods for making same. 5,011,869, Cl. 523-213.000.

De Angelo, Nelson J.; and Theriault, Kenneth T., to Lori Corporation. Lock actuator with removable operator. 5,010,754, Cl. 70-389.000.

Decker, Alain: *See—*
Sadoun, Michael; and Decker, Alain, 5,011,403, Cl. 433-8.000.

Decker, Owen H.; and Mumford, Neal A., to Thiokol Corporation. Chemorheologically tailored matrix resin formulations and their use in making pre-impregnated fibers and in fabricating composite parts. 5,011,721, Cl. 428-36.900.

Deckner, George E.: *See—*
Ciotti, Susan L.; Spengler, Eric G.; and Deckner, George E., 5,011,681, Cl. 424-81.000.

Deere & Company: *See—*
Boe, Thomas E.; Bergene, Mark A.; Kittle, Carl E.; and Sparks, Gregory E., 5,012,415, Cl. 364-424.070.
Bulgrien, Garth H.; Goodbar, Jim E.; and Johnson, Paul W., 5,012,416, Cl. 364-424.100
Jeffries, Dennis L.; Marquart, Gordon L.; and Mattson, Timothy J., 5,011,465, Cl. 475-279.000

de Fay, Stefan G. Method and portable device for detection, storage and for eventual processing and reproduction of graphic symbols appearing on any type of carrier. 5,012,349, Cl. 358-296.000.

Defour, Martin: *See—*
Razeghi, Manijeh; Defour, Martin; Omnes, Franck; Maurel, Philippe; Blondeau, Robert; and Krakowski, Michel, 5,012,476, Cl. 372-45.000.

Degawa, Junji, and Tsuji, Kazuwo, to Sumitomo Electric Industries, Ltd. Method of manufacturing cubic boron nitride p-n junction body. 5,011,790, Cl. 437-134.000.

Degenhardt, Charles R.: *See—*
Benedict, James J.; Degenhardt, Charles R.; and Poser, James W., 5,011,913, Cl. 530-390.000.

DeGroff, Morton S., to Aro Corporation, The. Two speed gear system for power tool. 5,011,341, Cl. 408-124.000.

Degussa Aktiengesellschaft: *See—*
Kriechbaum, Gangolf; Kleinschmit, Peter, and Peuckert, Doris, 5,011,673, Cl. 423-608.000.
Lutz, Klaus; Baer, Hans-Joachim; Starz, Karl-Anton; Leske, Werner; and Mueller, Harry, 5,011,627, Cl. 252-512.000.

Dehaine, Gerard, to Bull, S.A. Device for fastening together under pressure two pieces, one to the other. 5,010,949, Cl. 165-76.000.

Deibele, Steven: *See—*
Beyer, James B.; and Deibele, Steven, 5,012,203, Cl. 330-286.000.

DeJager, Donald; Kurtz, Andrew F.; Kessler, David; and Moore, Leslie G., Jr., to Eastman Kodak Company. Illumination system for a film scanner. 5,012,346, Cl. 358-214.000.

de Kanawati, Gisleine C.; and Philot, George G., to Mara Teixeira De Freitas. Head supporting and sustaining apparatus. 5,010,898, Cl. 128-845.000.

Delco Electronics Corporation: *See—*
Nakanishi, Todd G.; and Taylor, Matthew F., 5,011,062, Cl. 228-1.100.
Rada, Mark Z.; Willis, John W.; and Stewart, Marta E., 5,012,054, Cl. 200-314.000.

Del Giudice, David M.: *See—*
Bilimers, Robert L.; Del Giudice, David M.; and Tessler, Martin M., 5,011,918, Cl. 536-18.700

DeLorme, Dale J. Can disposal apparatus. 5,010,810, Cl. 100-49.000.

Deloy, Joseph T.: *See—*
Simelunas, William; and Deloy, Joseph T., 5,010,838, Cl. 118-19.000.

Delphax Systems: *See—*
Buchan, William R.; Moore, Robert A.; Caley, Wendell J., Jr.; Gilmore, Mark A.; and Hudson, David M., 5,012,291, Cl. 355-271.000.

Del Signore, Bruce P.: *See—*
Wellard, David R.; Kerth, Donald A.; Del Signore, Bruce P.; and Swanson, Eric J., 5,012,244, Cl. 341-143.000.

Delvinquiere, Francois: *See—*
Carolus, Jean-Claude; and Delvinquiere, Francois, 5,011,561, Cl. 156-495.000.

DeMatteis, Robert B.; and Pflueger, Wayne A., to Cupples Paper Bag Company. Method of making a T-shirt grocery bag having a coupon. 5,011,466, Cl. 493-188.000.

Demeyer, David M.: *See—*
Jones, Robert D.; and Demeyer, David M., 5,012,398, Cl. 362-250.000.

DeMichele, Glenn A.: *See—*
Troyk, Philip R.; and DeMichele, Glenn A., 5,012,236, Cl. 340-825.540.

Dennison Stationery Products Company: *See—*
Stonehouse, David R., 5,010,671, Cl. 40-594.000.

Depraetere, Raymond: *See—*
Sabatier, Andre; and Depraetere, Raymond, 5,011,196, Cl. 285-367.000

Depuydt, Kent T.; and Tikalsky, Joseph S., to Zimpro Passavant Environmental Systems, Inc. Control valve with displacement-compensating seal. 5,011,114, Cl. 251-144.000.

Derman, Jay S. Stud or bolt locking device. 5,010,748, Cl. 70-164.000.

Desai, Praful C., to Smith International, Inc. Milling apparatus with replaceable blades. 5,010,967, Cl. 175-406.000.

DeSantis, Raymond P., to PTX-Pentronix, Inc. Linearly movable tool or work handling unit. 5,010,824, Cl. 104-23.001.

Design Research, Inc *See*—
Evans, John, 5,010,987, Cl. 190-26.000

DeSoto, Inc *See*—
Murphy, Edward J., Krajewski, John J., and Ansel, Robert E., 5,011,635, Cl. 264-22.000

Despins, Maurice, and Carveth, William, to Omnimart Distributions Inc. Seam cutter. 5,010,650, Cl. 30-304.000

Dessau, Ralph M., to Mobil Oil Corporation. Dehydrogenation, dehydrocyclization and reforming catalyst. 5,011,805, Cl. 502-66.000

De Stena, Nicolo *See*—
Marconi, Franco, and De Stena, Nicolo. 5,012,210, Cl. 333-209.000

Detig, Robert H., and Bujese, David P., to Olin Hunt Specialty Products Inc. Use of a liquid electrophotographic toner with an overcoated permanent master in electrostatic transfer. 5,011,758, Cl. 430-100.000

Deutsche Gesellschaft fur Wiederaufarbeitung von Kernbrennstoffen mbH *See*—
Hardt, Norbert, Sterner, Hakan, Wetzka, Gerhard, and Schulte, Burkart, 5,011,651, Cl. 376-261.000

Deutsche Thomson-Brandt GmbH *See*—
Storz, Dieter, and Baas, Dieter, 5,012,204, Cl. 331-11.000

Dexter, James L. *See*—
Reintjes, John F., Tankersley, Lawrence L., Cooper, David G., and Dexter, James L., 5,012,483, Cl. 372-95.000

Dhyanchand, P. John, Patel, Sunil, Ng, Chai-Nam, and Nguyen, Vietson, to Sundstrand Corporation. Power conversion system using a switched reluctance motor/generator. 5,012,177, Cl. 322-10.000

Diamond Occidental Forest, Inc. *See*—
Halsey, Brenton S., Jr., and Larson, Arthur C., 5,010,701, Cl. 52-233.000

Dianda, Robert B. *See*—
Buhrke, Rolfe E., Dianda, Robert B., Katzenstein, Leo R., McClurkan, Michael B., and Tsai, John S., 5,012,466, Cl. 370-62.000

Diaz, Stephen H., to Raychem Corp. Circuit for the transmission of optical signals. 5,011,249, Cl. 350-96.110

Diaz, Victor B. *See*—
Fussi, Fernando, Diaz, Victor B., and Domanico, Richardo H., 5,011,919, Cl. 536-21.000

Dichtelmuller, Herbert, and Stephan, Wolfgang, to Biotest Pharma GmbH. Sterilization of blood and its derivatives with vitamins. 5,011,695, Cl. 424-529.000

Diehl GmbH & Co. *See*—
Schuster, Manfred, and Wich, Harald, 5,012,253, Cl. 342-203.000

Diels, Gaston, S. M. *See*—
Janssens, Frans E., Sommen, Francois M., Torremans, Joseph I. G., and Diels, Gaston, S. M., 5,011,842, Cl. 514-253.000

Dietrich, Anton, Hartig, Klaus, Schaefer, Hans-Christian, and Szczyrbowski, Joachim, to Leybold Aktiengesellschaft. Glazing having contact strips on a substrate. 5,011,745, Cl. 428-630.000

Digicourse, Inc. *See*—
Fowler, John T., 5,010,653, Cl. 33-356.000

Digital Equipment Corporation *See*—
Conroy, David G., 5,012,408, Cl. 364-200.000
Keller, James B., Ladd, Kevin L., and Reisert, James J., 5,012,403, Cl. 364-200.000

Dillman, Norman G., to Hewlett-Packard Company. Switched-capacitor analog-to-digital converter with autocalibration. 5,012,247, Cl. 341-172.000.

Dininno, Frank P., and Salzmann, Thomas N., to Merck & Co., Inc. 2-biphenyl-carbapenem antibacterial agents. 5,011,832, Cl. 514-210.000

Dinnissen, Johannes H. T., and Lambregts, Augustinus W. M., to OCE-Nederland B.V. Method of and copying machine for copying originals in order on both sides of receiving sheets. 5,012,296, Cl. 355-320.000

Diomed Developments Limited *See*—
Whitefield, Martin, 5,011,693, Cl. 424-455.000

Dishart, Kenneth T., and Wolff, Mark C., to Du Pont de Nemours, E. I., and Company. Cleaning composition of dibasic ester and hydrocarbon solvent. 5,011,620, Cl. 252-118.000

Dismukes, Edward B. *See*—
Altman, Ralph A., Gooch, John P., and Dismukes, Edward B., 5,011,516, Cl. 55-5.000.

Divisi, Gualtiero, to Dropsa S.p.A. Modular device for measuring the volumetric flow rate of a liquid, particularly a lubricant fluid, in a hydraulic circuit. 5,010,767, Cl. 73-253.000

Dixon, Gerald *See*—
Bower, Maurice H., and Dixon, Gerald, 5,012,368, Cl. 360-104.000

Dixon, Robert, Kaveh, Golnaz, and Seelbach, Walter, to Motorola, Inc. High speed ECL to CMOS translator having reduced power consumption. 5,012,136, Cl. 307-475.000

DNA Plant Technology Corporation *See*—
Whitaker, Robert J., 5,012,040, Cl. 800-200.000

Dobkin, Robert C. *See*—
Khadder, Wadie N., Vokac, James P., and Dobkin, Robert C., 5,012,305, Cl. 357-22.000

Dr. Ing. h.c.F. Porsche AG *See*—
Heireth, Hermann, and Messerschmidt, Dieter, 5,010,994, Cl. 192-103.00B

Dr. Karl Thomae GmbH *See*—
Eberlein, Wolfgang, Engel, Wolfhard, Mihm, Gerhard, Rudolf, Klaus, Doods, Henri, and Mayer, Norbert, 5,011,836, Cl. 514-217.000

Dodd, Robert E. *See*—
Noormohammadi, Akbar, Dodd, Robert E., Beckett, Arnold H., and Geeves, Grahame K. J., 5,011,662, Cl. 422-68.100

Dodson, David W., to Honeywell Inc. Multiple sensor system and method. 5,012,424, Cl. 364-449.000

Doduco GmbH and Co. Dr. Eugen Durrwachter *See*—
Martin, Wolfram, and Waibel, Brigitte, 5,012,324, Cl. 357-81.000

Doherty, Niall *See*—
Ku, George, and Doherty, Niall, 5,011,857, Cl. 514-653.000

Dohse, Hans-Peter *See*—
Schierling, Roland, and Dohse, Hans-Peter, 5,010,858, Cl. 123-179.00P

Dohya, Akihiro, to NEC Corporation. Multilayer wiring substrate. 5,012,047, Cl. 174-250.000

Dolee, Anthony B. *See*—
Bowen, Charles G., and Dolee, Anthony B., 5,011,069, Cl. 229-69.000

Dolgoff, Eugene. Active matrix LCD image projection system. 5,012,274, Cl. 340-702.000

Dolphin Imaging Systems *See*—
Lemchen, Marc S., 5,011,405, Cl. 433-24.000

Dom-Sicherheitstechnik GmbH & Co. KG *See*—
Boser, Werner, Sieg, Giselher, and Wedekind, Robert, 5,010,750, Cl. 70-276.000

Domanico, Richardo H. *See*—
Fussi, Fernando, Diaz, Victor B., and Domanico, Richardo H., 5,011,919, Cl. 536-21.000

Dombrowski, Kenneth J., and Ergun, Joseph, to Chamberlain Group, Inc., The. Garage door operator with plastic drive belt. 5,010,688, Cl. 49-362.000

Dominguez, Ramon *See*—
Gaddy, Edward M., and Dominguez, Ramon, 5,011,544, Cl. 136-246.000

Dominguez, Ramon P., to Mikalor, S.A. Hose clamp with flanged captive tensioning nut and pivoted bridging element. 5,010,626, Cl. 24-279.000

Dompe Farmaceutici S.p.A. *See*—
Roberto, Gian, Ettore, Parini, Massimiliano, Borsa, and Antonio, Lavezzo, 5,011,838, Cl. 514-234.200

Donahoe, Patricia K., and Swann, David A., to General Hospital Corporation, The. Purified Mullerian inhibiting substance and process for treating human ovarian cancer cells. 5,011,687, Cl. 424-559.000

Donnell, Kenneth D. Microphone mount. 5,010,803, Cl. 84-743.000

Doods, David R. *See*—
Farnsworth, Stephen W., Doods, David R., Perera, Slobodan R., and Stahl, K. John, 5,012,463, Cl. 369-100.000

Doods, Henri *See*—
Eberlein, Wolfgang, Engel, Wolfhard, Mihm, Gerhard, Rudolf, Klaus, Doods, Henri, and Mayer, Norbert, 5,011,836, Cl. 514-217.000

Doshi, Kishore J., Mitariten, Michael J., and Whysall, Michael, to UOP. Integrated thermal swing-pressure swing adsorption process for hydrogen and hydrocarbon recovery. 5,012,037, Cl. 585-822.000

Doskocil, Walter *See*—
Staiger, Gerhard, Muller, Johann, and Doskocil, Walter, 5,011,962, Cl. 556-453.000

Dossel, Olaf H., to U.S. Philips Corporation. Apparatus for multi-channel measurement of weak magnetic fields with squids and superconducting gradiometers on individual detachable assemblies, and method of manufacture. 5,012,190, Cl. 324-248.000

Dougherty, Edmond J. *See*—
Policastro, Charles J., Dougherty, Edmond J., and Dowling, Martin J., 5,012,411, Cl. 364-413.060

Dow Chemical Company, The *See*—
Bowman, Robert G., Hartwell, George E., Molzahn, David C., Ramirez, Enrique G., and Lastovica, John E., Jr., 5,011,999, Cl. 564-479.000
Cavitt, Michael B., Steele, Dennis L., and Duncan, David J., 5,011,904, Cl. 528-103.000
Langhorst, Martin A., 5,011,606, Cl. 210-635.000
Meyer, Louis W., Carswell, Robert, and Vanderhider, J. Alan, 5,011,647, Cl. 264-300.000
Overman, Dana C., III, Kau, Jee I., and Mahoney, Robert D., 5,011,637, Cl. 264-41.000
Suh, Kyung W., 5,011,866, Cl. 521-97.000

Dow Corning Corporation *See*—
Peterson, Adam L., 5,011,870, Cl. 523-220.000
Tarhay, Leo, and Sharp, Kenneth G., 5,011,706, Cl. 427-39.000

Dow Corning Limited *See*—
Bortolin, Roberto, and Parbhoo, Bhukandas, 5,011,961, Cl. 556-431.000

Dow Corning Toray Silicone *See*—
Fukutani, Yoshimi, 5,011,901, Cl. 528-42.000

Dowd, Patrick F. *See*—
Bartelt, Robert J., and Dowd, Patrick F., 5,011,683, Cl. 424-84.000

Dowdy, Clifford A. *See*—
Henley, Gary D., Milner, Larry B., and Dowdy, Clifford A., 5,010,876, Cl. 128-6.000.

DowElanco *See*—
Orvik, Jon A., Pearson, Norman R., Haag, Anthony P., Adaway, Timothy J., Kershner, Larry D., and Kende, Andrew S., 5,012,017, Cl. 568-803.000.

Dowling, Martin J. *See*—
Policastro, Charles J., Dougherty, Edmond J., and Dowling, Martin J., 5,012,411, Cl. 364-413.060.

Doyama, Kazuo: *See*—
Uesaka, Toshio; Niki, Akihiro, Ohsuga, Makoto; Saito, Toranosuke; Tsunomachi, Hiroki; Yamaguchi, Makoto; Doyama, Kazuo; and Kishimoto, Daishiro, 5,011,879, Cl. 524-290.000.

Doyle, James R. Log skidding vehicle. 5,010,933, Cl. 144-336.000.

Doyle, Walter M.; and Hughes, Norman S., to Laser Precision Corporation. Reflectance infrared microscope having high radiation throughput. 5,011,243, Cl. 350-1.200.

Drago, Raffaele: *See*—
Pasquali, Renato; and Drago, Raffaele, 5,011,431, Cl. 439-540.000.

Drago, Russell S.; Barnes, Mark J.; and Naughton, Michael J. Supported amorphous phase heterogeneous catalysts for biphasic hydroformylation. 5,012,008, Cl. 568-454.000.

Dreher, Andreas W.: *See*—
Weinreb, Robert N.; Lewak, Jerzy J.; and Dreher, Andreas W., 5,012,496, Cl. 377-21.000.

Dresser-Rand Company: *See*—
Bennitt, Robert A., 5,011,383, Cl. 417-534.000.

Driesen, Manfred; and Itgenshorst, Dieter, to Eduard Kusters Maschinenfabrik GmbH & Co. KG. Method for treating a web of material in a jig. 5,010,613, Cl. 8-151.000.

Drinkwine, Arbor D.: *See*—
Cage, Brian R.; and Drinkwine, Arbor D., 5,011,517, Cl. 55-92.000.

Driskill, Paul. *See*—
Uribe, Diego; Driskill, Paul; and Hantscho, Rolf, 5,010,819, Cl. 101-425.000.

Driver, Brian S.: *See*—
Span, Francis J.; and Driver, Brian S., 5,012,506, Cl. 378-152.000.

Dropsa S.p.A. *See*—
Divisi, Gualtiero, 5,010,767, Cl. 73-253.000.

Drucker, Alan S.: *See*—
Backus, Robert J.; Chopko, Robert A.; Drucker, Alan S.; and Ripka, Chester D., 5,010,740, Cl. 62-217.000.

Drucker, Frank, to Sensormatic Electronics Corporation. Audible tag for magnetic electronic article surveillance systems. 5,012,224, Cl. 340-551.000.

Druskoczi, Sue. Surgical collar and liner therefor. 5,010,877, Cl. 128-87.00B.

DSP Group, Inc., The: *See*—
Adlersberg, Shabtai, Stettiner, Yoram; Aizner, Mendel; and Berstein, Alberto, 5,012,519, Cl. 381-47.000.

Du Pont Canada Inc.: *See*—
Barnett, Richard I.; and Knapp, William C., 5,010,608, Cl. 5-453.000.

Dube, Christopher E.; and Gonsiorawski, Ronald C., to Mobil Solar Energy Corporation. Dotted contact solar cell and method of making same. 5,011,565, Cl. 156-643.000.

Dubner Computer Systems, Inc.: *See*—
Etra, William, 5,012,334, Cl. 358-102.000.
Lang, Stuart E., and Fairhurst, Jon, 5,012,329, Cl. 358-31.000.

Duck, Peter; and Bender, Robert, to Meiogenics U.S. Limited Partnership. Methods for detecting nucleic acid sequences. 5,011,769, Cl. 435-6.000.

Duckworth, Allen; Barnes, Derek; and Gennings, Thomas L., to Teleco Oilfield Services Inc. Method of monitoring core sampling during borehole drilling. 5,010,765, Cl. 73-153.000.

Duesenberg, William H.: *See*—
Nelson, Ned; and Duesenberg, William H., 5,010,707, Cl. 52-605.000.

Dugas, Michael R.: *See*—
Stoutenburg, Robert R.; Dugas, Michael R.; and Hazelton, Mark W., 5,011,068, Cl. 228-4.100

Duke, Jonathan W., and Richards, Barry R., to Westinghouse Electric Corp. Plane change connector assembly. 5,011,421, Cl. 439-213.000.

Dulaney, Randi L.; and Rakolta, Pamela A., to Motorola, Inc. User activated memory programming authorization in a selective call receiver. 5,012,234, Cl. 340-825.440.

Duncan, David J.: *See*—
Cavitt, Michael B.; Steele, Dennis L.; and Duncan, David J., 5,011,904, Cl. 528-103.000.

Dunn Thompson, Kathleen D., to Colorado Instruments, Inc. Accordion mount for solar cells including point-of-purchase display with leds. 5,012,160, Cl. 315-149.000.

Dunwoody, Andrew B., to University of British Columbia, The. Digital suspension system. 5,011,180, Cl. 280-707.000.

Du Pont de Nemours, E. I., and Company *See*—
Bergna, Horacio E.; and Burn, Ian, 5,011,804, Cl. 501-138.000
Chao, Tze, and Senkler, George H., Jr., 5,011,666, Cl. 423-82.000.
Corradetti, Anthony A.; Gargiulo, Edward P., Krauss, Leland L.; and Hooley, Robert W., 5,011,246, Cl. 350-96.200.
Dishart, Kenneth T., and Wolff, Mark C., 5,011,620, Cl. 252-118.000.
Foss, Robert P., 5,011,898, Cl. 526-234.000.
Henry, Cyrus P.; and West, Michael W. J., 5,011,504, Cl. 44-392.000.
Hung, Ming-Hong; and Resnick, Paul R., 5,011,954, Cl. 549-548.000
Johnson, Melvin H.; Krauss, Leland L.; and Landman, Dirk, 5,011,256, Cl. 350-96.200.
Kawasaki, Sadanobu; Koishikawa, Jun; and Kuty, Donald W., 5,011,391, Cl. 445-24.000.
Leech, Danny R., 5,011,541, Cl. 134-34.000.
Novak, Ernest R., 5,011,890, Cl. 525-154.000.
Sakamoto, Haruo, 5,011,420, Cl. 439-152.000.
Thompson, Alfred H., Jr., 5,011,645, Cl. 264-210.700.
Van Zanten, Albertus; and Van Woensel, Johannes M. B., 5,011,425, Cl. 439-353.000.
Wexler, Barry A., 5,011,527, Cl. 71-93.000.
Yang, Hung H., 5,011,643, Cl. 264-171.000.

Durkin-Reed, Inc.: *See*—
Reed, Mark E., 5,012,070, Cl. 219-202.000.

Dutta, Ranjan, to AT&T Bell Laboratories. Method of making ohmic low resistance W, Sb, In, contacts to III-V semiconductor materials. 5,011,792, Cl. 437-184.000.

Duwel, Dieter: *See*—
Kretzschmar, Gerhard; Duwel, Dieter; Grabley, Susanne; Hammann, Peter; Seibert, Gerhard, Voelskow, Hartmut; and Giant, Carlo, 5,011,827, Cl. 514-32.000.

Dwyer, Stephen H.: *See*—
Hunder, Ray A.; Bettenhausen, Larry A., Miles, Alden R.; Mittelstadt, William A.; Dwyer, Stephen H.; and Hanson, Gary R., 5,011,187, Cl. 281-15.100.

Dwyer, Stephen M.: *See*—
Spenadel, Lawrence; Grosser, Joel H.; and Dwyer, Stephen M., 5,011,891, Cl. 525-211.000.

Dyer, Stanley: *See*—
Aldrich, Charles S.; Dyer, Stanley; and Ream, Gregory L., 5,012,293, Cl. 355-274.000.

Dykaar, Douglas R.; and Levi, Anthony F. J., to AT&T Bell Laboratories. Integrated electronic assembly comprising a transmission line. 5,012,319, Cl. 357-55.000.

Dynamit Nobel AG: *See*—
Gresser, Wilhelm, Schelhase, Klaus; Frisch, Heinz; Kaschel, Klaus; Reinecke, Berent; and Trautmann, Wilhelm H., 5,011,614, Cl. 210-761.000.

E.P.B. Emile Pfalzgraf, Societe Anonyme: *See*—
Pfalzgraf, Emile, 5,011,346, Cl. 409-234.000

E. R. Squibb & Sons, Inc.: *See*—
Atwal, Karnail; McCullough, John R.; and Grover, Gary J., 5,011,837, Cl. 514-227.800.

Eagle Electric Mfg. Co. Inc.: *See*—
Munroe, Ronald G.; and Sedlmayr, Christopher J., 5,012,495, Cl. 337-3.000.

Eagle Industry Co., Ltd.: *See*—
Sakamaki, Hiroshi; Horikoshi, Yukio, Jinnouchi, Takeshi; and Tanzawa, Kenji, 5,011,390, Cl. 418-256.000

Eagle-Picher Industries, Inc.: *See*—
Oriola, Ralph; Romine, Charles F., and Meisner, Edward O., 5,011,121, Cl. 267-64.110.

Eastern Company, The: *See*—
Clark, Carl A.; and Wright, Raymond L., 5,011,337, Cl. 405-261.000.

Eastman Kodak Company: *See*—
Byers, Gary W.; and Chapman, Derek D., 5,011,816, Cl. 503-227.000.
Columbus, Richard L., 5,010,930, Cl. 141-1.000.
DeJager, Donald; Kurtz, Andrew F.; Kessler, David; and Moore, Leslie G., Jr., 5,012,346, Cl. 358-214.000.
Harissis, Peter J.; and Serbicki, Jeffrey P., 5,012,380, Cl. 360-135.000.
Harrison, Daniel J., 5,011,814, Cl. 503-227.000.
Illig, Carl R.; and Weis, Alexander L., 5,012,000, Cl. 564-489.000
Irick, Gether, Jr.; Mercer, Patricia N.; and Simmons, Kenneth E., 5,011,806, Cl. 502-202.000.
Jones, Glenn C.; and Nottingham, William D., 5,011,977, Cl. 560-187.000.
Lee, Hsien-Che; Kaplan, Martin C.; and Goodwin, Robert M., 5,012,333, Cl. 358-80.000.
McLeod, Andrew E.; Fields, Gaines C.; and Sanders, Donald J., 5,010,908, Cl. 134-168.00C
Morris, John C.; and Jackson, Winston J., Jr., 5,011,877, Cl. 524-115.000.
Morris, John C.; and Jackson, Winston J., Jr., 5,011,878, Cl. 524-115.000.
Nielsen, Paul L.; and Wilson, John C., 5,011,739, Cl. 428-425.800.
Shuttleworth, Leslie; and McManus, Michael J., 5,011,811, Cl. 503-201.000.

Eberlein, Wolfgang; Engel, Wolfhard; Mihm, Gerhard; Rudolf, Klaus; Doods, Henri; and Mayer, Norbert, to Dr. Karl Thomae GmbH. Agents for the treatment of acute and chronic obstructive respiratory passage diseases. 5,011,836, Cl. 514-217.000.

EBW, Inc.: *See*—
Johnson, Bruce; and Whitney, Robert, 5,010,915, Cl. 137-423.000.

EC Erdoelchemie GmbH: *See*—
Schleppinghoff, Bernhard; Niederberger, Hans-Ludwig, Gabel, Christian; Lange, Peter M., and Mitschker, Alfred, 5,012,031, Cl. 585-639.000.

Eccleston, Larry E., to John Fluke Mfg. Co., Inc. Apparatus for and method of internally calibrating an electrical calibrator. 5,012,181, Cl. 324-74.000.

Echte, Adolf: *See*—
Bueschl, Rainer; Echte, Adolf, Schulte, Konrad; and Mittnacht, Hans, 5,011,871, Cl. 523-436.000.

Eckler, Christopher. Exercise control system. 5,011,142, Cl. 272-130.000.

Economidis, Minas: *See*—
Shih, Jenn S.; Smith, Terry E.; Zamora, John, and Economidis, Minas, 5,011,895, Cl. 526-88.000.

Eder, Thomas. *See*—
Lieber, Winfried; and Eder, Thomas, 5,011,259, Cl. 350-96.210.

Edhag, Knut O. Intravascular electrode lead usable for cardiac defibrillation. 5,010,894, Cl. 128-785.000.

Eduard Kusters Maschinenfabrik GmbH & Co. KG. *See*—
Driesen, Manfred, and Itgenshorst, Dieter, 5,010,613, Cl. 8-151.000.

Educational Testing Service. *See*—
Ferris, John J.; Kraft, William; Manning, Winton H.; and Martinez, Michael, 5,011,413, Cl. 434-358.000.

Edwards, Christopher A.; and Presby, Herman M., to AT&T Bell Laboratories. Coupling of optical devices to optical fibers by means of microlenses. 5,011,254, Cl. 350-96.180.

Edwards, Edward G.: *See*—
Cohen, Bernard; Caplan, Don B.; and Edwards, Edward G., 5,010,761, Cl. 73-40.700.

Edwards, Karl, to Lucas Industries Public Limited Company. Variable reluctance transducer processing circuit for providing an output unaffected by low frequency components. 5,012,207, Cl. 324-166.000.

Edwards, Michael L. *See*—
Jarvi, Esa T.; Edwards, Michael L.; and McCarthy, James R., 5,011,859, Cl. 514-739.000.

EerNisse, Errol P.; and Ward, Roger W., to Halliburton Company. Thermally matched strip mounted resonator and related mounting method. 5,012,151, Cl. 310-346.000.

Efner, Howard F., to Phillips Petroleum Company. Antimony mercaptide esters and methods of preparing the same. 5,011,957, Cl. 556-77.000.

Egara, Koichi. *See*—
Yoshinaga, Kazuo; Kai, Takashi; Egara, Koichi; Toshida, Yomishi; Mitsutake, Hideaki; Sato, Koichi; and Miyazaki, Takeshi, 5,011,623, Cl. 252-299.500.

Egelhof, Dieter, to J. M. Voith GmbH. Breast box nozzle for a paper machine. 5,011,576, Cl. 162-344.000.

Ehrhardt, Gary J. *See*—
Day, Delbert E.; and Ehrhardt, Gary J., 5,011,677, Cl. 424-1.100.
Day, Delbert E.; and Ehrhardt, Gary J., 5,011,797, Cl. 501-33.000.

Ehrhart, Peter; Grundel, Andreas; Heidelberg, Gotz; and Weck, Wener, to Heidelberg Motor GmbH Gesellschaft fur Energiekonverter. Superconducting current accumulator with pulsed output. 5,011,820, Cl. 505-1.000.

Eide, Ralph M. *See*—
Foley, John J.; Eide, Ralph M.; and Maedonell, Ranald I., 5,011,441, Cl. 440-30.000.

Eiermann, Dankwart, to Wankel GmbH. Bearing- and drive arrangement of a rotary piston internal combustion engine. 5,011,385, Cl. 418-61.200.

Eisterhold, Charles A. Surface marking method to obtain uniform coating. 5,011,078, Cl. 239-1.000.

Eiszner, William H., Jr. *See*—
Huttema, Thomas W.; Eiszner, William H., Jr.; Heeres, Stanley D.; and Vanderlaan, Robert D., 5,012,144, Cl. 310-14.000.

Eklund, Dan, and Grasten, Markku, to Valmet Paper Machinery Inc. Coater for selectively coating a running web either on one side or on both sides. 5,010,839, Cl. 118-122.000.

Ekpo, Bassey O. *See*—
Spanier, Henry C., and Ekpo, Bassey O., 5,011,679, Cl. 424-57.000.

Elango, Varadaraj. Method for producing 1-indanone derivatives. 5,012,007, Cl. 508-311.000.

Elbe, Hans-Ludwig; Regel, Erik; Buchel, Karl H.; Schaller, Klaus; and Plempel, Manfred, to Bayer Aktiengesellschaft. Substituted diazolylalkyl-carbinols, a process for their preparation and their use as antimycotic agents. 5,011,850, Cl. 514-383.000.

Electric Power Research Institute. *See*—
Lamb, Walter R.; and Griffin, Darrell, 5,011,782, Cl. 437-2.000.

Electric Power Research Institute, Inc. *See*—
Altman, Ralph A.; Gooch, John P.; and Dismukes, Edward B., 5,011,516, Cl. 55-5.000.

Electrolux Northern Limited. *See*—
Gobin, Barry, 5,012,046, Cl. 174-135.000.

Electron Microscope Supplies Corporation. *See*—
Bess, Coleman, 5,011,781, Cl. 436-57.000.

El-Hamamsy, Sayed-Amr. *See*—
Borowiec, Joseph C.; and El-Hamamsy, Sayed-Amr, 5,012,161, Cl. 315-247.000.

Eli Lilly and Company. *See*—
Barnett, Charles J.; Holmes, Richard E.; Jungheim, Louis N.; Sigmund, Sandra K.; and Ternansky, Robert J., 5,011,938, Cl. 548-359.000.

Ell, Manfred. *See*—
Borck, Gerald-Wolfgang; Ell, Manfred; and Erhardt, Hans-Dieter, 5,011,014, Cl. 206-387.000.

Ellames, George J. *See*—
Cordes, Eugene H.; Ellames, George J.; Herbert, John M.; and Smith, David I., 5,011,985, Cl. 562-469.000.
Cordes, Eugene H.; Ellames, George J.; Herbert, John M.; and Smith, David I., 5,011,986, Cl. 562-469.000.

Elliott, David L.; Howie, Catherine L.; and Montague, Peter G., to Conopco, Inc. Hypophosphite-containing cotelomers as antitartar agents. 5,011,682, Cl. 424-52.000.

Elliott, Robert S., and Gauen, Kim R., to Motorola, Inc. Motor drive circuit with reverse-battery protection. 5,012,381, Cl. 361-84.000.

Elscint Ltd. *See*—
Palkovich, Alex; Bird, John M.; and Morad, Ratson, 5,012,217, Cl. 335-301.000.

Elworthy, Trevor P., to Protocol Engineering PLC. Film registration apparatus and method. 5,012,345, Cl. 358-214.000.

Ema, Taji, to Fujitsu Limited. Semiconductor static ram including load resistors formed on different layers. 5,012,443, Cl. 365-51.000.

Emeric, Dario A.; Miller, Christopher E.; and Westich, Bryan, to United States of America, Army. Protective coating for steel surfaces and method of application. 5,011,551, Cl. 148-248.000.

Emmel, Eckhard. *See*—
Bischoff, Gilbert; Breitwieser, Karl; and Emmel, Eckhard, 5,011,234, Cl. 303-4.000.

Empi, Inc. *See*—
Maurer, Donald D.; and Mattson, Stacy D., 5,010,895, Cl. 128-788.000.

Empteezy Limited. *See*—
Abram, David A. S.; and Wishart, Bruce W., 5,011,360, Cl. 414-424.000.

Endo, Yasuo, Akimichi, Shinji, Hirose, Tadayoshi, Furukawa, Motonori, and Yoshida, Kyoko, to Takenaka Corporation. Context-base input/output system. 5,012,521, Cl. 382-1.000.

Endo, Yoshinori, and Sakakibara, Kenji, to Brother Kogyo Kabushiki Kaisha. Image recording apparatus. 5,012,276, Cl. 355-27.000.

Endou, Mikio. *See*—
Ogawa, Kazufumi; Tamura, Hideharu; Ishihara, Toshinobu; Tanaka, Yasuhisa; and Endou, Mikio, 5,011,963, Cl. 556-485.000.

Engel, Wolfhard. *See*—
Eberlein, Wolfgang; Engel, Wolfhard; Mihm, Gerhard; Rudolf, Klaus; Doods, Henri; and Mayer, Norbert, 5,011,836, Cl. 514-217.000.

Engelhard Corporation. *See*—
Berube, Richard R.; Babiec, John S., Jr.; Jameson, M. Phillip; Negele, Andrew R.; and Willis, Mitchell J., 5,011,534, Cl. 106-416.000.
Kuznicki, Steven M., 5,011,591, Cl. 208-46.000.
Kuznicki, Steven M.; and Whyte, John R., Jr., 5,011,667, Cl. 423-118.000.

Engelhardt, Friedrich, and Riegel, Ulrich, to Cassella AG. Hydrophilic swellable graft copolymers, their preparation and use. 5,011,892, Cl. 525-404.000.

Engst, Ernst. *See*—
Zietlow, Kurt; and Engst, Ernst, 5,012,434, Cl. 364-523.000.

Eno Electronic GmbH. *See*—
Aalderink, Friedrich, 5,010,721, Cl. 57-11.000.

Entrelec S.A. *See*—
Heng, Jean-Paul; Guernet, Henri; and Marmonier, Andre, 5,011,428, Cl. 439-394.000.

Envicon Luft- und Wassertechnik GmbH & Co. KG. *See*—
Pape, Stefan; and Bassfeld, Hans-Joachim, 5,011,605, Cl. 210-615.000.

Eppinette, Horace, to Flexi-Hitch, Inc. Adjustable trailer coupling. 5,011,176, Cl. 280-479.300.

Erbele, Kurt, to ANT Nachrichtentechnik GmbH. Mounting and connection system for electrical communications equipment. 5,012,390, Cl. 361-413.000.

Ercegovac, Milos. *See*—
Nash, J. Gregory; Ercegovac, Milos; and Lang, Thomas, 5,012,439, Cl. 364-766.000.

Ergun, Joseph. *See*—
Dombrowski, Kenneth J.; and Ergun, Joseph, 5,010,688, Cl. 49-362.000.

Erhardt, Hans-Dieter. *See*—
Borck, Gerald-Wolfgang; Ell, Manfred; and Erhardt, Hans-Dieter, 5,011,014, Cl. 206-387.000.

Esoteric Audio USA, Inc. *See*—
Awbrey, Jerry R., 5,011,438, Cl. 439-825.000.

Esparza, Raymond R. *See*—
Teehter, Ronald R.; Mangialardi, Gregg M.; and Esparza, Raymond R., 5,010,651, Cl. 30-376.000.

Establecimientos Industriales Quimicos Oxiquim S.A. *See*—
Saphores, Eugenio A.; Gleisner, Arturo G.; Vega, Juan C.; and Mardones, Wladimir A., 5,011,965, Cl. 558-245.000.

Etec Systems, Inc. *See*—
Young, Lydia J., 5,012,104, Cl. 250-396.0ML.

Etou, Kouichi. *See*—
Oka, Tateki; Toyoshi, Naoki; Yokoyama, Tomoaki; Mizuno, Hiroshi; Murasaki, Hiroshi; Ikegawa, Akihito; Etou, Kouichi; and Nakagawa, Shuichi, 5,012,285, Cl. 355-245.000.

Etra, William, to Dubner Computer Systems, Inc. Video image bank for storing and retrieving video image sequences. 5,012,334, Cl. 358-102.000.

Ettore, Parini. *See*—
Roberto, Giani; Ettore, Parini; Massimiliano, Borsa; and Antonio, Lavezzo, 5,011,838, Cl. 514-234.200.

Evans, Harold H., and Bruchu, Todd W., to Anderson Corporation. Corner lock. 5,010,708, Cl. 52-656.000.

Evans, John, to Design Research, Inc. Garment bag cover. 5,010,987, Cl. 190-26.000.

Exar Corporation. *See*—
Ratnakumar, Kola N., 5,011,784, Cl. 437-34.000.

Exxon Chemical Patents Inc. *See*—
Lewtas, Kenneth; and Bland, Jacqueline D., 5,011,505, Cl. 44-393.000.

Exxon Production Research Company. *See*—
Bednar, John M., 5,010,956, Cl. 166-344.000.

Exxon Research and Engineering Company. *See*—
Sartori, Guido; Ho, W. S. Winston; and Noone, Robert E., 5,012,035, Cl. 585-819.000.
Sartori, Guido; Ho, W. S. Winston; and Noone, Robert E., 5,012,036, Cl. 585-819.000.
Spenadel, Lawrence; Grosser, Joel H.; and Dwyer, Stephen M., 5,011,891, Cl. 525-211.000.

Eyecare One Corp. *See*—
Van Slett, Peter J., 5,011,027, Cl. 211-13.000.

Fabrica Espanola de Productos Quimicos y Farmeceuti Cos S.A. (FAES): *See*—
Venero, Aurelio O.; and Avello, Antonio T., 5,011,928, Cl. 544-373.000.

Fadem, Richard J., to NCR Corporation. Bit mapped memory plane with character attributes for video display. 5,012,232, Cl. 340-750.000.

Faffart, Andre, to Telemecanique. Lock mechanism for a limiting contact maker. 5,012,214, Cl. 335-6.000.

FAG Kugelfischer Georg Schafer (KGaA): *See*—
Breuer, Bernhard; and Schottdorf, Johannes, 5,011,305, Cl. 384-572.000.

Fagan, Gian L., to Chevron Research and Technology Company. Complex tolylene polurea grease composition and process. 5,011,617, Cl. 252-18.000.

Fairclough, Gordon F., Jr.: *See*—
Mynarcik, Dennis C.; Griffith, Owen W.; and Fairclough, Gordon F., Jr., 5,011,964, Cl. 558-179.000.

Fairhurst, Jon: *See*—
Lang, Stuart E.; and Fairhurst, Jon, 5,012,329, Cl. 358-31.000.

Falcoz, Marc: *See*—
Carneiro, Armadno; Falcoz, Marc; and Michel, Robert, 5,010,993, Cl. 192-84.00R.

Falk, David O., to Marathon Oil Company. Gel composition and method of treatment. 5,010,954, Cl. 166-295.000.

Falter, Diedre D.: *See*—
Valentine, Kenneth H.; Falter, Diedre D.; and Galter, Kelly G., 5,012,113, Cl. 250-493.100.

Fang, Roger C., to Tatung Company of America, Inc. Adjustable frame. 5,011,104, Cl. 248-125.000.

Fanshtein, Valentin N. *See*—
Neroznikov, Jury I.; Rudakov, Ivan P.; Fanshtein, Valentin N.; Medyanik, Vladimir A.; and Gavrilova, Valentina V., 5,010,963, Cl. 173-105.000.

Fanuc Ltd.: *See*—
Arai, Takeji, 5,012,069, Cl. 219-121.620.
Fujioka, Yoshiki; and Shinohara, Tatsuo, 5,012,173, Cl. 318-727.000.

Farina, Vittorio, Benigni, Daniel A.; and Brodfuehrer, Paul R., to Bristol-Myers Squibb Co. Dideoxyinosine by enzymatic deamination of dideoxyadenosine. 5,011,774, Cl. 435-87.000.

Farley, David L. Anatomically conformable foam support pad. 5,010,609, Cl. 5-464.000.

Farnsworth, Stephen W.; Doods, David R.; Perera, Slobodan R.; and Stahl, K. John, to Bernoulli Optical Systems Company. Optical read/write storage system for flexible media having bernoulli stabilization at the optical head. 5,012,463, Cl. 369-100.000.

Farnworth, Warren M., to Micron Technology, Inc. Double-die semiconductor package having a back-bonded die and a face-bonded die interconnected on a single leadframe. 5,012,323, Cl. 357-75.000.

Farrell, John J., to BM Corp. High capacity injection molding apparatus. 5,011,399, Cl. 425-557.000.

Farrell, Patrick V., to Wisconsin Alumni Research Foundation. Optical correlator method and apparatus for particle image velocimetry processing. 5,011,278, Cl. 356-28.000.

Fassauer, Arthur L. Air-floated cutting apparatus with overhead grass catcher. 5,010,716, Cl. 56-12.100.

Fassnacht, Francis B. *See*—
Hammond, Russell E.; Northup, Robert L.; Shimp, Alan G.; and Fassnacht, Francis B., 5,012,121, Cl. 307-64.000.

Faulkner, Alistair R., to GEC Avionics Limited. Methods of recognizing targets. 5,012,252, Cl. 342-192.000.

Fauteux, Denis G. *See*—
Shackle, Dale R.; Fauteux, Denis G.; and Lundsgaard, Jorgen S., 5,011,501, Cl. 29-623.100.

Fearnot, Neal E. *See*—
Goode, Louis; Shipko, Frederick J.; and Fearnot, Neal E., 5,011,482, Cl. 606-1.000.

Federowsky, Robert: *See*—
Roncato, Giordano; and Federowsky, Robert, 5,011,523, Cl. 65-2.000.

Fee, David M. *See*—
Lammers, Bryan G.; and Fee, David M., 5,010,984, Cl. 188-71.500.

Fehr, Theodor, to Sandoz Ltd. Substituted 4-azatricyclo(22.3.1.0^{4,9})octacos-18-ene derivatives, their preparation and pharmaceutical compositions containing them. 5,011,844, Cl. 514-291.000.

Feild, Alexander R. *See*—
Kapolnek, Michael R.; Feild, Alexander R.; Hartle, Robert T.; and Holmes, Hillard R., 5,010,951, Cl. 165-104.260.

Feinberg, Alec. Transparent toy house. 5,011,446, Cl. 446-85.000.

Feldbaumer, David W.; and Heim, Barry B., to Motorola, Inc. High speed CMOS multiplexer having reduced propagation delay. 5,012,126, Cl. 307-243.000.

Felix, Raymond A. Process for the preparation of N-allylamides from O-allylimidates. 5,011,990, Cl. 564-161.000.

Felix, Willi, to Jos. Hunkeler Ltd. Process for the manufacture of sheets or pages with separable self-adhesive labels. 5,011,559, Cl. 156-257.000.

Felsenstein, Lee, to Golemics, Inc. Method and apparatus for cursor motion having variable response. 5,012,231, Cl. 340-709.000.

Feray, Cathy, and Hubele, Conrad, to Lyonnaise des Eaux. Method for regulating the residual free chlorine in water. 5,011,613, Cl. 210-739.000.

Ferguson Limited: *See*—
Walton, David W.; and Harrison, Roger, 5,012,516, Cl. 381-3.000.

Fernandez, Miguel C., to ITW-Mapri Industria e Comercio LTDA. Panel fastener. 5,011,356, Cl. 411-553.000.

Fero, Arnold H., to Westinghouse Electric Corp. Nuclear power generating station equipment qualification apparatus. 5,011,650, Cl. 376-247.000.

Ferranti O.R.E. Inc.: *See*—
Todd, John D., 5,012,449, Cl. 367-89.000.

Ferrara, Daniel A. Potato chip maker including apparatus for centrifugally removing cooking oil from any product. 5,010,805, Cl. 99-353.000.

Ferraris, Giampiero: *See*—
Cagnin, Tarcisio; and Ferraris, Giampiero, 5,011,761, Cl. 430-312.000.

Ferris, John J.; Kraft, William; Manning, Winton H.; and Martinez, Michael, to Educational Testing Service. Machine-interpretable figural response testing. 5,011,413, Cl. 434-358.000.

Ferry, James N.: *See*—
Giroux, D. William; Ferry, James N.; Kelly, Kendall J.; Bell, Thomas G.; Narby, Conway P.; and Patburg, Gary L., 5,011,338, Cl. 405-268.000.

Fields, Gaines C.: *See*—
McLeod, Andrew E.; Fields, Gaines C.; and Sanders, Donald J., 5,010,908, Cl. 134-168.00C.

Fife, James A.; and Hard, Robert A. Article for controlling the oxygen content in tantalum material. 5,011,742, Cl. 428-558.000.

Filsinger, Karl-Heinz: *See*—
Spiegel, Nikolaus; Filsinger, Karl-Heinz; and Hirth, Roland, 5,011,125, Cl. 271-183.000.

Filzen, Scott E.: *See*—
Lange, David V.; and Filzen, Scott E., 5,011,578, Cl. 162-358.000.

Findlay, Melvin W.: *See*—
Stetter, Joseph R.; Findlay, Melvin W.; and Yue, Chongshan, 5,012,432, Cl. 364-557.000.

Fink, Mathias; Cancre, Fabriee, and Pesque, Patrick, to U.S. Philips Corporation. Ultrasonic echograph with controllable phase coherence. 5,010,885, Cl. 128-660.070.

Fink, Ronald G. Ultrasorb system. 5,011,609, Cl. 210-665.000.

Finn, Charles A. Computer system which accesses operating system information and command handlers from optical storage via an auxiliary processor and cache memory. 5,012,407, Cl. 364-200.000.

Finney, John D.; and Finney, Michael J., to MJ Research, Inc. Constrained uniform field gel electrophoresis. 5,011,586, Cl. 204-299.00R.

Finney, Michael J.: *See*—
Finney, John D.; and Finney, Michael J., 5,011,586, Cl. 204-299.00R.

Firmenich SA: *See*—
Whitaker, Robert J., 5,012,040, Cl. 800-200.000.

Firsova, Elizaveta V.: *See*—
Belykh, Sergei I.; Gigauri, Vladimir S.; Davydov, Anatoly B.; Keshelava, Viktor V.; Mlynchik, Vyacheslav E.; Utyamyshev, Rustam I.; and Firsova, Elizaveta V., 5,011,493, Cl. 606-215.000.

Fischell, Robert E.; and Fischell, Tim A., to Medical Innovative Technologies R&D Limited Partnership. Endoluminal tissue excision catheter system and method. 5,011,490, Cl. 606-159.000.

Fischell, Tim A. *See*—
Fischell, Robert E.; and Fischell, Tim A., 5,011,490, Cl. 606-159.000.

Fischer, Walter. *See*—
Kvita, Vratislav; Baumann, Marcus; Fischer, Walter; Mayer, Carl W.; and Allmendinger, Thomas, 5,011,944, Cl. 549-214.000.

Fischerwerke Artur Fischer GmbH & Co. KG. *See*—
Ziegler, Manfred; and Koerner, Edmund, 5,011,015, Cl. 206-387.000.

Fishman, David A.; and Hone, Jon D., to United States of America, Air Force. Method of forming dimples in a conductive substrate. 5,010,757, Cl. 72-60.000.

Fitzinger, Klaus: *See*—
Baumann, Karl; and Fitzinger, Klaus, 5,011,971, Cl. 560-38.000.

Fjeld, Svein, to Norwegian Contractos A/S. Method for making foundation for a jackable platform, and means for carrying out the method. 5,011,335, Cl. 405-204.000.

Fleet, George W. J.; and Bruce, Ian, to Monsanto Company. Synthesis of mannojirimycin derivatives. 5,011,929, Cl. 546-14.000.

Fleischer, Robert L., to General Electric Company. Ruthenium aluminum intermetallic compounds. 5,011,554, Cl. 148-430.000.

Fletcher, Mitchell S.; and Semma, Richard P. Operating system for a multi-tasking operating environment. 5,012,409, Cl. 364-200.000.

Flexi-Hitch, Inc.: *See*—
Eppinette, Horace, 5,011,176, Cl. 280-479.300.

Flexible Steel Lacing Company. *See*—
Gladding, Alfred E., 5,011,003, Cl. 198-728.000.

Flint, Graham W.; Papazian, Harold A.; and Wolfert, Ludwig G., to Martin Marietta Corporation. Infrared scene projector. 5,012,112, Cl. 250-493.100.

Floc'h, Noel, to Telemecanique. Protected switch contactor apparatus. 5,012,215, Cl. 335-132.000.

Fluck, Rene, to SIG Schweizerische-Industrie-Gesellschaft. Method and apparatus for conveying articles, particularly wafer-shaped food products. 5,010,715, Cl. 53-447.000.

Flynn, David P., and Oretti, John E., to Britax Child-Care Products Pty. Ltd. Safety helmet. 5,010,598, Cl. 2-410.000.

Flynn, Edward J.; Ketelsen, Leonard J.; and Roxlo, Charles B., to AT&T Bell Laboratories. Analog optical fiber communication system, and laser adapted for use in such a system. 5,012,484, Cl. 372-96.000.

FMC Corporation: *See—*
Hoare, John H., and Halfon, Marc, 5,011,933, Cl 548-263.200.
Parthasarathy, V. R., Sundaram, Meenakshi, Jameel, Hasan, Gratzl, Josef S., and Klein, Ronald J., 5,011,572, Cl. 162-56.000.
Foisy, Robert L., to Sprague Electric Company. Method for attaching a fuse wire to a lead frame. 5,011,067, Cl. 228-241.000.
Foley, John J., Eide, Ralph M., and Macdonell, Ranald L., to Recreation Industries Company. Pedal operated water cycle. 5,011,441, Cl. 440-30.000.
Foley, Kenny B., to United States of America, Navy. Radiator of microwave and infrared energy to simulate target. 5,012,250, Cl. 342-53.000.
Folkers, Karl A. *See—*
Langsjoen, Per H., Folkers, Karl A., and Langsjoen, Peter H., 5,011,858, Cl. 514-690.000.
Folsom, Mark, to Whittaker Ordnance, Inc. Explosive initiator with angled fiber optic input. 5,010,822, Cl. 102-201.000.
Folz, Sylvester D. *See—*
Rector, Douglas L.; Conder, George A., and Folz, Sylvester D., 5,011,932, Cl. 546-268.000.
Forbes, Alexander D., and Forbes, Sheena C. Pedal cycle and motorcycle trailer. 5,011,170, Cl. 280-204.000.
Forbes, Sheena C. *See—*
Forbes, Alexander D.; and Forbes, Sheena C., 5,011,170, Cl. 280-204.000.
Ford Motor Company. *See—*
Dara, Paul C., Mitchell, Clair E., and Rutkowksi, David J., 5,012,168, Cl. 318-434.000.
Logothetis, Eleftherios, and Soltis, Richard E., 5,010,762, Cl. 73-116.000.
Ojala, William K., 5,010,856, Cl. 123-90.360.
Ford New Holland, Inc.: *See—*
Bulgrien, Garth H., Goodbar, Jim E., and Johnson, Paul W., 5,012,416, Cl. 364-424.100.
Ford, Warren T., Chandran, Rama S., Hassanein, Mahmoud, and Turk, Hayrettin. Polymer latexes containing metal ions and complexes. 5,011,956, Cl. 552-304.000.
Foresight Industries, Inc.: *See—*
Gray, Daniel W., and Jewett, Thomas E., 5,010,710, Cl. 52-742.000.
Forschungszentrum Juelich GmbH. *See—*
Rao, Nagaraj N., Wandrey, Christian, Petersen, Maike, and Alfermann, August W., 5,011,775, Cl. 435-135.000.
Forschungszentrum Julich GmbH: *See—*
Mallek, Heinz, 5,010,828, Cl. 110-256.000.
Forte, Mark R., and Noiles, Douglas G., to Joint Medical Products Corporation. Prosthetic joint. 5,011,496, Cl. 623-20.000.
Fortunato, Michael, and Fortunato, Michael A. Method of playing a chess game. 5,011,159, Cl. 273-260.000.
Fortunato, Michael A.: *See—*
Fortunato, Michael; and Fortunato, Michael A., 5,011,159, Cl. 273-260.000.
Foss, Robert P., to Du Pont de Nemours, E. I., and Company. Acrylic amphoteric polymers. 5,011,898, Cl. 526-234.000.
Foster, Brian C., to Ceramics Process Systems Corp. Substrates with dense metal vias produced as co-sintered and porous back-filled vias. 5,011,725, Cl. 428-137.000.
Foster, Robert J. C. Single fill and use syringe. 5,011,476, Cl. 604-110.000.
Foster Wheeler Energy Corporation: *See—*
Vatsky, Joel, 5,011,400, Cl. 431-4.000.
Foucht, Millard E., to Georgia-Pacific Resins, Inc. Co-catalyst system for preparing polyurethane based plywood-patch compositions. 5,011,902, Cl. 528-55.000.
Fourcadier, Chantal. *See—*
Grollier, Jean F.; and Fourcadier, Chantal, 5,011,500, Cl. 8-410.000.
Fournier, Antoine. Image stabilizing apparatus for a portable video camera. 5,012,347, Cl. 358-222.000.
Fowler, John T., to Digicourse, Inc. Apparatus and method for determining azimuth, pitch and roll. 5,010,653, Cl. 33-356.000.
Fozard, John R.: *See—*
Gittos, Maurice W.; Miller, Francis P.; Sorensen, Stephen M.; Fozard, John R.; Moser, Paul, Palfreyman, Michael G.; and Cheng, Hsien, 5,011,846, Cl. 514-294.000.

Fujii, Yasuhiro; Mitsuji, Masaru; and Kajima, Junichi, to Kansai Paint Company, Limited. Aqueous thermoplastic coating composition for plastics materials and coating method using same. 5,011,881, Cl. 524-457.000.
Fujii, Yasuhiro: *See—*
Hiraki, Tadayoshi; Iwase, Osamu; Oosumimoto, Hirosi; Sugiura, Shinji; Tabushi, Ichiro; Kume, Masafumi; Udagawa, Takashi; Matsui, Komaharu; and Fujii, Yasuhiro, 5,011,733, Cl. 428-336.000.
Fujikawa, Yoshihiro; Suzuki, Mikio; Iwasaki, Hiroshi; Sakashita, Mitsuaki, and Kitahara, Masaki, to Nissan Chemical Industries Ltd. Quinoline type mevalonolactones. 5,011,930, Cl. 546-101.000.
Fujiki, Toshisada; Kondo, Taikichi; Furukawa, Yoshinari; Kato, Kazuaki; Okimoto, Akimichi; and Tsuge, Kenji, to NGK Insulators, Ltd. Electrical measuring device. 5,012,182, Cl. 324-96.000.
Fujimaki, Tatsuo: *See—*
Tsutsumi, Fumio; Morikawa, Akihiko; Sakakibara, Mitsuhiko; Oshima, Noboru; Hamada, Tatsuro; Fujimaki, Tatsuo; and Ohashi, Masayuki, 5,011,888, Cl. 525-98.000.
Fujimori, Yuji: *See—*
Nakamura, Hirofumi; Nakamoto, Yuichi; and Fujimori, Yuji, 5,012,012, Cl. 568-618.000.

Fujimoto, Hideo, Hirano, Masakazu, Hashiura, Mituo; and Murao, Toshiaki, to Kabushiki Kaisha Kobe Seiko Sho; and Nippondenso Company, Ltd. Aluminum alloy composite material for brazing. 5,011,547, Cl. 148-24.000.
Fujimoto, Hiroaki. *See—*
Takahashi, Junya, Nishida, Sumio, Fujimoto, Izumi; Shono, Yoshinori; and Fujimoto, Hiroaki, 5,012,004, Cl. 568-53.000.
Fujimoto, Izumi. *See—*
Takahashi, Junya, Nishida, Sumio, Fujimoto, Izumi; Shono, Yoshinori; and Fujimoto, Hiroaki, 5,012,004, Cl. 568-53.000.
Fujimoto, Junichi. *See—*
Kanda, Katsumi, Fujimoto, Junichi, Ichishima, Masashi; Nishimura, Takao, and Kondo, Yoshikazu, 5,011,711, Cl. 427-334.000.
Fujimoto, Shusaku. *See—*
Watanabe, Takashi, Fujimoto, Shusaku, and Sakai, Kazunori, 5,012,417, Cl. 364-426.020.
Fujioka, Fumio. *See—*
Takahashi, Shoichi, Ichiki, Sayohiko; Yorozu, Masatoshi, Kunishige, Seiji; Shibagaki, Taro, Shimizu, Fumihiko; Fujioka, Fumio; and Kondo, Toshinori, 5,012,240, Cl. 341-101.000.
Fujioka, Keiji; Sato, Shigeji, Takada, Yoshihiro; Sasaki, Yoshio; and Tamura, Nobuhiko, to Sumitomo Pharmaceuticals Company, Limited. Sustained pulsewise release pharmaceutical preparation. 5,011,692, Cl. 424-426.000.
Fujioka, Yoshiki, and Shinohara, Tatsuo, to Fanuc Ltd. Casing structure for an amplifier unit for an AC spindle. 5,012,173, Cl. 318-727.000.
Fujisaki, Yasumasa. *See—*
Nose, Kazuo, Yamamoto, Hiroyuki, Koike, Shiro, Shimomura, Masakazu; Tsubono, Hajime, Kitagawa, Soichi; Fujisaki, Yasumasa, Maeda, Yasushi; Wakebe, Tetsuya, and Katayama, Yasuyuki, 5,010,756, Cl. 72-9.000.
Fujishima, Kazuyasu: *See—*
Mutsuda, Yoshio; and Fujishima, Kazuyasu, 5,012,447, Cl. 365-206.000.
Fujita, Nobuhiko. *See—*
Hitotsuyanagi, Hajime; Fujita, Nobuhiko, Itozaki, Hideo, Nakagama, Syoji; Tanaka, Saburo, and Fukushima, Kazuhiko, 5,011,759, Cl. 430-128.000.
Fujita, Yoshihiro. *See—*
Morimoto, Kiyoshi, and Fujita, Yoshihiro, 5,011,763, Cl. 430-393.000.
Fujitsu Limited: *See—*
Ando, Moritoshi, Oka, Hiroshi, and Iwata, Satoshi, 5,011,960, Cl. 356-376.000.
Ema, Taiji, 5,012,443, Cl. 365-51.000.
Hewitt, Donald W., and Seibel, David D., 5,012,073, Cl. 235-375.000.
Hosokawa, Yoshiaki, Kanoh, Masaki; Maekawa, Takashi, and Nakayasu, Hirofumi, 5,011,312, Cl. 400-225.000.
Kobayashi, Kenichi, and Matsui, Shougo, 5,012,523, Cl. 382-8.000.
Ogawa, Tsutomu, Kamioka, Hajime, Kawamura, Seiichiro, and Sakurai, Junji, 5,011,783, Cl. 437-19.000.
Owe, Takeshi; and Mizoshita, Yoshifumi, 5,012,369, Cl. 360-104.000.
Shirato, Takehide, 5,012,311, Cl. 357-23.700.
Takeda, Shiro, Namiki, Fumihiro, Sugiyama, Yuuichi; Iwase, Nobuhiro, Tadaki, Shinji; and Koshino, Nagaaki, 5,012,096, Cl. 250-327.200.
Tamura, Hirotaka, 5,012,303, Cl. 357-5.000.
Wanou, Masahiro, Kimura, Masatoshi, and Nakajima, Junzo, 5,012,282, Cl. 355-219.000.
Fujiwara, Takuji. *See—*
Yoshimura, Hiroshi, Fujiwara, Takuji; Ishi, Kozo, and Takemoto, Kazuo, 5,010,990, Cl. 192-3.300.
Fukada, Isao: *See—*
Nakanishi, Takehisa, Koga, Eiji, and Fukada, Isao, 5,011,953, Cl. 549-529.000.
Fukae, Kenneth: *See—*
Ream, Stanley L.; Lee, C. S., Lim, G. C., and Fukae, Kenneth, 5,011,282, Cl. 356-153.000.
Fukatsu, Shunzo. *See—*
Satoh, Toyomi, Hosoi, Kiyonori; Kinoshita, Katsuji; Murata, Shinjiro; Fukatsu, Shunzo, and Ichikawa, Tooru, 5,011,019, Cl. 206-530.000.
Fukuda, Yasuaki: *See—*
Watanabe, Yutaka, Fukuda, Yasuaki; and Ogura, Shigetaro, 5,012,500, Cl. 378-35.000.
Fukui, Toyoaki: *See—*
Ishida, Tetsuro; Danno, Yoshiaki, Akishino, Katsuo; and Fukui, Toyoaki, 5,010,863, Cl. 123-339.000.
Fukui, Wataru, and Iwata, Toshio, to Mitsubishi Denki Kabushiki Kaisha. Ignition timing controller for an internal combustion engine. 5,010,865, Cl. 123-424.000.
Fukui, Wataru: *See—*
Matsuoka, Atsuko, and Fukui, Wataru, 5,010,864, Cl. 123-414.000.
Fukumoto, Toshiyuki. *See—*
Akihama, Shigeyuki; Kobayashi, Mikio; Suenaga, Tatsuo; Fukumoto, Toshiyuki, Taniguchi, Yoshikazu, and Nakagawa, Hiroaki, 5,010,705, Cl. 52-477.000.
Fukuoka, Daisuke; Takahashi, Katsuya; and Hashimoto, Isao, to Mitsui Petrochemical Industries, Ltd. Aromatic amine derivatives. 5,011,950, Cl. 549-336.000.
Fukuoka, Kazuhiko. *See—*
Nishikado, Takashi, Kondo, Megumu, Fukuoka, Kazuhiko, and Murata, Fumiya, 5,012,405, Cl. 364-200.000.
Fukushi, Yasuo. *See—*
Hakomori, Sen-itiroh; Fukushi, Yasuo; Nudelman, Edward D., and Levery, Steven B., 5,011,920, Cl. 536-53.000.

Garvey, Michael J.; Griffiths, Ian C.; and Rennie, John H. S., 5,011,690, Cl. 424-401.000.

Grim, Karen A.; Singh, Shobha; Van Uttert, LeGrand G.; and Zydzik, George J., to AT&T Bell Laboratories. Procedure for rapid thermal annealing of implanted semiconductors. 5,011,794, Cl. 437-247.000.

Griscom, Daniel T. Directional particle filter. 5,012,080, Cl. 250-505.100.

Grollier, Jean F.; and Fourcadier, Chantal, to L'Oreal. Process for dyeing keratinous fibres and dye composition employing indole derivatives and direct nitro dyes. 5,011,500, Cl. 8-410.000.

Gross, William. *See*—
Olsen, Richard; and Gross, William, 5,012,342, Cl. 358-181.000.

Grosse Webereimaschinen GmbH. *See*—
Keim, Walter, 5,010,927, Cl. 139-89.000.

Grosser, Joel H. *See*—
Spenadel, Lawrence; Grosser, Joel H.; and Dwyer, Stephen M., 5,011,891, Cl. 525-211.000.

Grosshauser, Heinrich K., to Koenig & Bauer Aktiengesellschaft. Method and apparatus for flexographic printing. 5,010,817, Cl. 101-350.000.

Grossinger, Israel. *See*—
Levanon, Moshe; Grossinger, Israel; Adam, Yossi; and Landa, Benzion, 5,012,300, Cl. 355-328.000.

Grossman, Mark W., to GTE Products Corporation. Axi-symmetrical flow reactor for ^{196}Hg photochemical enrichment. 5,012,106, Cl. 250-438.000.

Grote & Hartmann GmbH & Co. KG. *See*—
Reuter, Werner, 5,011,423, Cl. 439-341.000.

Groussin, Bernard. *See*—
Mesquida, Guy; and Groussin, Bernard, 5,012,477, Cl. 372-50.000.

Grovender, Steven L. *See*—
Bodziak, Douglas P.; Hunder, Ray A.; Roth, Steven P.; Grovender, Steven L.; and Molenda, Robert P., 5,011,186, Cl. 281-12.000.

Grover, Gary J. *See*—
Atwal, Karnail; McCullough, John R.; and Grover, Gary J., 5,011,837, Cl. 514-227.800.

Grube, Louis L. *See*—
Chich, Adem; Lalwani, Steven S.; Bettoli, Steven C.; Grube, Louis L.; and Bondoc, Alfredo A., 5,011,726, Cl. 428-141.000.

Gruenberg, Eric I.; Stewart, James R.; and Halicho, James J., to Apple Computer, Inc. Handle latch assembly. 5,011,198, Cl. 292-41.000.

Gruhn, William D. *See*—
Colleran, Stephen A.; Plocek, Edward J.; Ponn, Timothy R.; and Gruhn, William D., 5,011,426, Cl. 439-357.000.

Grundel, Andreas. *See*—
Ehrhart, Peter; Grundel, Andreas; Heidelberg, Gotz; and Weck, Wener, 5,011,820, Cl. 505-1.000.

Grunwald, Stefan H., and Fraser, Howard H., Jr., to Carrier Corporation. Slider block radial compliance mechanism for a scroll compressor. 5,011,384, Cl. 418-55.500.

Gsellmann, Josef. *See*—
Kordesch, Karl; Gsellmann, Josef; and Tomantschger, Klaus, 5,011,752, Cl. 429-206.000.

GTE Laboratories Incorporated. *See*—
Boudreau, Robert A.; and Rideout, William C., 5,011,247, Cl. 350-96.200.

GTE Products Corporation. *See*—
Barakitis, Nikolaos, 5,011,444, Cl. 445-26.000.
Grossman, Mark W., 5,012,106, Cl. 250-438.000.

Gueret, Jean-Louis, to L'Oreal. Dispenser including a translatable piston. 5,011,317, Cl. 401-66.000.

Guerin, Georges, to Sogal Industrie Franchise Industrielle Societe Anonyme S.I.F.I.S.A. Device for suspended storage. 5,011,239, Cl. 312-248.000.

Guernet, Henri. *See*—
Heng, Jean-Paul; Guernet, Henri; and Marmonier, Andre, 5,011,428, Cl. 439-394.000.

Guiberteau, Christian; Ruggeri, Stephane; and Le Path, Michele, to Thomson Composants Microondes. Microwave sample-and-hold unit with transistor. 5,012,084, Cl. 250-211.00R.

Guillotte, Paul A.; Panaccione, Paul; Martiska, Thomas J.; and Gagnon, Jay J., to Allegro Microsystems, Inc. Semiconductor die and mounting assembly. 5,012,322, Cl. 357-72.000.

Guironnet, Louis, to Framatome; and Cogema. Device for extracting foreign pieces or particles from fuel assemblies of a nuclear reactor. 5,011,206, Cl. 294-86.410.

Gupta, Victor; Bodolus, Christopher L.; Paparizos, Christos; and Shaw, Wilfrid G., to Standard Oil Company, The. Process for upgrading light hydrocarbons using oxidative coupling and pyrolysis. 5,012,028, Cl. 585-500.000.

Gustafson, Keith W.; Kalet, George W.; and Taylor, Martin S. Syrup delivery system for carbonated beverages. 5,011,700, Cl. 426-477.000.

Gustavsson, Tord G.; Myren, Harry I.; and Silja, Karl T.I., to Valmet Paper Machinery, Inc. Creping doctor with two suction chambers in the support beam. 5,011,574, Cl. 162-281.000.

Gutag Innovations AG. *See*—
Guttinger, Kurt, 5,011,386, Cl. 418-59.000.

Guttinger, Kurt, to Gutag Innovations AG. Rotary positive displacement machine for incompressible media. 5,011,386, Cl. 418-59.000.

Guttinger, Peter; and Langen, Marinus J.M. Load accumulator having positive drive conveyor. 5,011,132, Cl. 271-315.000.

Guyard, Jean-Claude, to Norsk Hydro A.S. Assembly including a light alloy profiled member having one or more insulated electrical conductors and process for formation thereof. 5,012,044, Cl. 174-98.000.

Gvaryahu, Gadi; and Cunningham, Danis L., to Cornell Research Foundation, Inc. Methods of raising commercial animals. 5,010,851, Cl. 119-174.000.

H. Krantz GmbH & Co. *See*—
Cramer, Hans, 5,011,060, Cl. 226-15.000.

Haas, Gerhard J.; and Heller, Karen G., to Kraft General Foods, Inc. Malt flavor material and preparation thereof. 5,011,696, Cl. 426-28.000.

Haas, Richard C. *See*—
Stokley, Charles O.; and Haas, Richard C., 5,010,966, Cl. 175-66.000.

Haber, William; and Takeshita, Jack. Visor-cap. 5,010,590, Cl. 2-12.000.

Haeck, Paul J. *See*—
Lowe, Peter E.; Muller, Peter H.; Coleman, Michael D.; and Haeck, Paul J., 5,011,199, Cl. 292-92.000.

Haeffner, Eckhard; Ben-Nasr, Hedi; Knuth, Bernd; Jasper, Hubert; and Reimann, Klaus, to Fried. Krupp GmbH. Process for the continuous extraction of mixtures of organic substances with supercritical solvents. 5,011,594, Cl. 208-320.000.

Hager, Stanley L., to Arco Chemical Technology, Inc. Polymer polyol compositions and their use in the preparation of polyurethane foams. 5,011,908, Cl. 528-392.000.

Hagiwara, Hiroshi. *See*—
Ishida, Takao; Hagiwara, Hiroshi; and Kakumu, Ichizo, 5,010,692, Cl. 51-283.00R.

Hahn, Roger. *See*—
Haug, Robert; He, Zhong-Jun; and Hahn, Roger, 5,012,218, Cl. 336-174.000.

Hattmanek, Louis, to Thomas & Betts Corporation. Electrical connector having cable strain relief. 5,011,430, Cl. 439-456.000.

Hakomori, Sen-itiroh, Fukushi, Yasuo; Nudelman, Edward D.; and Levery, Steven B., to Fred Hutchinson Cancer Research Center. Disialofucoganglioside immunogen and fucoganglioside monosialosyl Le^a II. 5,011,920, Cl. 536-53.000.

Hale Fire Pump Company. *See*—
Laskaris, Michael A.; Broitman, Kalman; Teske, Richard E.; Miller, David L.; and Sulmone, Michael, 5,010,870, Cl. 123-576.000.

Hale, Phillip L., to Glaser, Richard E., a part interest. Test fitting adapter for refrigerant lines. 5,010,743, Cl. 62-292.000.

Halferty, Patricia J. *See*—
Hamilton, Daniel; Hoyt, Robert M.; Halferty, Patricia J.; and Odom, J. Thomas, 5,011,336, Cl. 405-230.000.

Halfhide, Frans L. Particulate fuel burner and method of operation. 5,010,831, Cl. 110-347.000.

Halfon, Marc. *See*—
Hoare, John H.; and Halfon, Marc, 5,011,933, Cl. 548-263.200.

Halicho, James J. *See*—
Gruenberg, Eric I.; Stewart, James R.; and Halicho, James J., 5,011,198, Cl. 292-41.000.

Hall, Charles E.; and Roop, Stevie C., to Medeco Security Locks, Inc. High security post lock. 5,010,745, Cl. 70-32.000.

Hall, Erich; and Schorwerth, Helmut, to Audi AG. Method for preconditioning belts on belt drives. 5,010,636, Cl. 29-446.000.

Halliburton Company. *See*—
EerNisse, Errol P.; and Ward, Roger W., 5,012,151, Cl. 310-346.000.

Halliburton Logging Services, Inc. *See*—
Moake, Gordon L., 5,012,091, Cl. 250-266.000.

Halsey, Brenton S., Jr.; and Larson, Arthur C., to Diamond Occidental Forest, Inc. Corner system for log cabin siding. 5,010,701, Cl. 52-233.000.

Hamada, Tatsuro. *See*—
Tsutsumi, Fumio; Morikawa, Akihiko; Sakakibara, Mitsuhiko; Oshima, Noboru; Hamada, Tatsuro; Fujimaki, Tatsuo; and Ohashi, Masayuki, 5,011,888, Cl. 525-98.000.

Hamada, Tetsuro; Sano, Shoichi; and Furukawa, Yoshimi, to Honda Giken Kogyo Kabushiki Kaisha. Steering system for vehicles. 5,010,971, Cl. 180-140.000.

Hamade, Thomas A. Electrostatic charging apparatus and method. 5,012,094, Cl. 250-324.000.

Hamamatsu Photonics K.K. *See*—
Watanabe, Mitsuo, 5,012,082, Cl. 250-208.200.

Hamamatsu Photonics Kabushiki Kaisha. *See*—
Tanaka, Eiichi; and Uchida, Hiroshi, 5,012,103, Cl. 250-368.000.

Hamane, Tokuhito. *See*—
Kabeshita, Akira; Hamane, Tokuhito; and Kitayama, Yoshifumi, 5,012,388, Cl. 361-400.000.

Hambleton, Larry G.; Sears, Claude L.; and Offutt, Elmer B., to Labconco Corporation. Method and apparatus for drying glassware. 5,010,660, Cl. 34-92.000.

Hamersma, Wilhelmus, Avakian, Roger W.; and Bailly, Christian, to General Electric Co. Polymer, mixture comprising polyphenylene ether, polyester, and styrene polymer. 5,011,889, Cl. 525-133.000.

Hamilton, Daniel, Hoyt, Robert M.; Halferty, Patricia J.; and Odom, J. Thomas, to A. B. Chance Company. Underpinning anchor system. 5,011,336, Cl. 405-230.000.

Hamilton, Douglas N. Clothing with improved camouflage. 5,010,589, Cl. 2-1.000.

Hamilton, Herbert E. *See*—
Jensen, Tom M.; and Hamilton, Herbert E., 5,011,348, Cl. 410-79.000.

Hamilton, Thomas A.; Kerrigan, Michael M.; and Wilson, John A., to Unisys Corporation. Multiple document detector. 5,011,127, Cl. 271-262.000.

Hammann, Peter. *See*—
Kretzschmar, Gerhard; Duwel, Dieter; Grabley, Susanne; Hammann, Peter; Seibert, Gerhard; Voelskow, Hartmut; and Giani, Carlo, 5,011,827, Cl. 514-32.000.

Hammond, John A., to Frazier Simplex, Inc. Suspended furnace wall. 5,011,402, Cl. 432-238.000.

Hammond, Russell E.; Northup, Robert L.; Shimp, Alan G.; and Fassnacht, Francis B., to United States of America, Navy. Electrical power supply for short term power interruptions. 5,012,121, Cl. 307-64.000.

Hamprecht, Gerhard, to BASF Aktiengesellschaft. Preparation of 2-amino-4-fluoropyrimidine derivatives. 5,011,927, Cl. 544-320.000.

Han, Scott; Martenak, Daniel J.; Palermo, Robert E.; and Walsh, Dennis E., to Mobil Oil Corp. Conversion of methane. 5,012,029, Cl. 585-500.000.

Hanada, Shuji. *See*—
Ikeda, Senri; Saito, Sakae; Hanada, Shuji; and Hoshi, Hironobu, 5,011,545, Cl. 148-11.50F.

Hand Held Products, Inc. *See*—
Perry, Richard A., 5,012,389, Cl. 361-409.000.

Handy, John N.; and Spector, Sterling S., to Mattel, Inc. Appendage motion responsive doll. 5,011,449, Cl. 446-297.000.

Hanle, John P.; and Curry, James E., to Bell Atlantic Network Services, Inc. Method of and system for control of special services by remote access. 5,012,511, Cl. 379-211.000.

Hann, Richard A. *See*—
Beck, Nicholas C.; Gemmell, Peter A.; and Hann, Richard A., 5,011,815, Cl. 503-227.000.
Bradbury, Roy; Gemmell, Peter A.; and Hann, Richard A., 5,011,813, Cl. 503-227.000.

Hansen, George P. *See*—
Krishnan, Shankar; Hansen, George P.; Hauge, Robert H.; Margrave, John L.; and Rey, Charles A., 5,011,295, Cl. 374-126.000.

Hansen, Merlin D. *See*—
Meek, Dale E.; and Hansen, Merlin D., 5,010,958, Cl. 166-382.000.

Hansen, Randall S. *See*—
Basso, Richard J.; Hansen, Randall S.; Kolasa, Edward P.; Reynolds, Mark L.; and Tam, Chun P., 5,012,512, Cl. 379-218.000.

Hansen, Victor E., Smith, David T., McPherson, Douglas R.; and Pitt, Richard E., to JWI Ltd. Pressure control forming section. 5,011,577, Cl. 162-352.000.

Hanson, Gary R. *See*—
Hunder, Ray A.; Bettenhausen, Larry A.; Miles, Alden R.; Mittelstadt, William A.; Dwyer, Stephen H.; and Hanson, Gary R., 5,011,187, Cl. 281-15.100.

Hantscho, Rolf. *See*—
Uribe, Diego; Driskill, Paul; and Hantscho, Rolf, 5,010,819, Cl. 101-425.000.

Hanzawa, Kohtaro. *See*—
Tanaka, Kikuji; and Hanzawa, Kohtaro, 5,010,799, Cl. 84-627.000.

Harada, Susumu; and Kumazaki, Hiroshi, to Toshiba Kikai Kabushiki Kaisha. Method and apparatus for controlling injection compression molding. 5,012,426, Cl. 364-476.000.

Harada, Toshihiko. *See*—
Takahashi, Mineo; Nakayama, Susumu; Yamashima, Osamu; Suzuki, Satoshi; Harada, Toshihiko; and Aiso, Keiji, 5,010,642, Cl. 29-868.000.

Harandi, Mohsen N.; and Owen, Hartley, to Mobil Oil Corporation. Integrated etherification and alkene hydration process. 5,011,506, Cl. 44-447.000.

Harborg, Rudolph W. Kite with self induced dihedral adjustable keel and stabilizing sail turbines. 5,011,099, Cl. 244-153.00R.

Hard, Robert A. *See*—
Fife, James A.; and Hard, Robert A., 5,011,742, Cl. 428-558.000.

Hardt, Norbert; Sterner, Hakan, Wetzka, Gerhard, and Schulte, Burkart, to Deutsche Gesellschaft fur Wiederaufarbeitung von Kernbrennstoffen mbH. Arrangement for transferring fuel rods from a first receptacle to a second receptacle. 5,011,651, Cl. 376-261.000.

Harigaya, Makoto, Ide, Yukio; Yamada, Katsuyuki; and Iwasaki, Hiroko, to Ricoh Company, Ltd. Optical information recording medium. 5,011,723, Cl. 428-64.000.

Harissis, Peter J., and Serbicki, Jeffrey P., to Eastman Kodak Company. Article surveillance protection of flexible magnetic computer data storage disks. 5,012,380, Cl. 360-135.000.

Harita, Yasuhiro. *See*—
Kunitake, Yoshikuni; and Harita, Yasuhiro, 5,010,835, Cl. 114-66.000.

Harrington, Robert L. Conveniently attached hydraulic trailer jack. 5,011,119, Cl. 254-420.000.

Harris, Brian C.; and Cook, Raymond. Dental alloy. 5,011,311, Cl. 400-208.000.

Harris, Eric W., to Research Equipment Corporation. Humidification and cloud chamber block for particle concentration detection. 5,011,281, Cl. 356-37.000.

Harris, James E. *See*—
Robeson, Lloyd M.; and Harris, James E., 5,011,894, Cl. 525-437.000.

Harrison, Albert E. *See*—
MacLean, Lachlan, Roberts, David L.; Barron, Kenneth; Nichol, Kenneth J.; and Harrison, Albert E., 5,011,931, Cl. 546-155.000.

Harrison, Daniel J., to Eastman Kodak Company. Thermal dye transfer receiving element with polyethylene oxide backing layer. 5,011,814, Cl. 503-227.000.

Harrison, Danny E. *See*—
Assaad, Mahmoud C.; and Harrison, Danny E., 5,010,938, Cl. 152-539.000.

Harrison, John F. Bridge maintenance method and equipment. 5,011,710, Cl. 427-142.000.

Harrison, Roger. *See*—
Walton, David W.; and Harrison, Roger, 5,012,516, Cl. 381-3.000.

Harrold, Ronald T., to ABB Power T&D Company, Inc. Method for improving the electrical strength of vapor-mist dielectrics. 5,012,195, Cl. 324-553.000.

Hartig, Klaus. *See*—
Dietrich, Anton; Hartig, Klaus; Schaefer, Hans-Christian; and Szczyrbowski, Joachim, 5,011,745, Cl. 428-630.000.

Hartle, Robert T. *See*—
Kapolnek, Michael R.; Feild, Alexander R.; Hartle, Robert T.; and Holmes, Hillard R., 5,010,951, Cl. 165-104.260.

Hartwell, George E. *See*—
Bowman, Robert G.; Hartwell, George E.; Molzahn, David C.; Ramirez, Enrique G.; and Lastovica, John E., Jr., 5,011,999, Cl. 564-479.000.

Harumatsu, Mitsuo. *See*—
Hirayama, Hiromichi; Mihara, Masato; and Harumatsu, Mitsuo, 5,012,364, Cl. 360-94.000.

Haruna, Toshiyuki. *See*—
Ushijima, Nobuyoshi; Masuda, Hiroshi; Ishibashi, Akira; Satou, Masahiko; Haruna, Toshiyuki; Takayama, Norikazu; and Kudou, Yoshinobu, 5,012,166, Cl. 318-254.000.

Haruta, Masahiro; Munakata, Hirohide; Yuasa, Satoshi; and Yoshinaga, Yoko, to Canon Kabushiki Kaisha. Process for producing gel fiber. 5,011,644, Cl. 264-184.000.

Hasegawa, Mitsumasa. *See*—
Katoh, Yoshihisa; Ogawa, Takashi; and Hasegawa, Mitsumasa, 5,011,603, Cl. 210-490.000.

Hashida, Shigeru. *See*—
Ono, Yutaka; Muramatsu, Yasuhiko; Banzai, Hideo; Kikukawa, Yoichi; Hashida, Shigeru; Shindo, Shotaro; Higuchi, Haruo; Shinomiya, Hiroyuki; Nikaido, Mitsuhiro; and Sato, Koichi, 5,012,169, Cl. 318-568.000.

Hashimoto, Atsuki, to Nitto Kohki Co., Ltd. Electromagnetic diaphragm pump. 5,011,379, Cl. 417-360.000.

Hashimoto, Isao. *See*—
Fukuoka, Daisuke; Takahashi, Katsuya; and Hashimoto, Isao, 5,011,950, Cl. 549-336.000.

Hashimoto, Kiyoyasu. *See*—
Terao, Masanobu; Maegawa, Yuzo; Ueda, Yasuyoshi; Hashimoto, Kiyoyasu; and Omura, Takashi, 5,012,015, Cl. 568-709.000.

Hashimoto, Shusa. *See*—
Yano, Hisato, Hashimoto, Shusa, and Horiyama, Tsuyoshi, 5,011,632, Cl 261-81.000.

Hashimoto, Toru; Kamura, Hitoshi; Yoshida, Katutoshi; Jimbo, Takeshi, and Inuzuka, Tokushige, to Mitsubishi Jidosha Kogyo Kabushiki Kaisha. Method for controlling the quantity of intake air supplied to an internal combustion engine. 5,010,862, Cl 123-339.000

Hashiura, Mituo. *See*—
Fujimoto, Hideo, Hirano, Masakazu, Hashiura, Mituo, and Murao, Toshiaki, 5,011,547, Cl 148-24.000.

Hassanein, Mahmoud. *See*—
Ford, Warren T.; Chandran, Rama S., Hassanein, Mahmoud, and Turk, Hayrettin, 5,011,956, Cl. 552-304.000.

Callahan, Robert M., Hempel, Bruce C.; and Liang, Bob C., 5,012,433, Cl. 364-518.000

Hempelmann, Heinrich J., and Manier, Eugene P., to NI Industries, Inc. Rocker arm. 5,010,857, Cl. 123-90.390.

Henderson, Harold, and Henderson, Larry. Human power shopping cart propulsion device. 5,011,169, Cl. 280-202.000

Henderson, Larry. *See*—
Henderson, Harold; and Henderson, Larry, 5,011,169, Cl 280-202.000

Hendricks, Howard F., to Penn Engineering & Manufacturing Corp. Sinusoidal signal decoder for 12-step motor commutation. 5,012,167, Cl. 318-254.000

Hendrickson, Susan K. *See*—
Lucero, Daniel P., and Hendrickson, Susan K., 5,010,776, Cl 73-863.230

Heng, Jean-Paul, Guernet, Henri, and Marmonier, Andre, to Entrelec S.A. Tapping connector for a screened electric cable. 5,011,428, Cl 439-394.000.

Henke, Mitchell C., to Lincoln Foodservice Products, Inc. Grease splatter capture shield. 5,012,071, Cl. 219-400.000.

Henkel Corporation. *See*—
Broadbent, Ronald W., 5,011,715, Cl. 427-443.100.

Henkel Research Corporation. *See*—
Schulte, Heinz-Guenther, Narum, Jeffrey L.; and Johnson, Michael R., 5,011,934, Cl. 548-335.000

Henley, Gary D.; Milner, Larry B., and Dowdy, Clifford A., to Smith & Nephew Dyonics, Inc. Arthroscopic surgical practice. 5,010,876, Cl. 128-6.000

Hennen, William J. *See*—
Goodman, Michael, Weigle, William, Bell, Stanley, Chen, Robert; Robins, Roland K., and Hennen, William J., 5,011,828, Cl. 514-45.000

Henning, Rainer. *See*—
Urbach, Hansjorg, and Henning, Rainer, 5,011,940, Cl. 548-452.000.

Henriksson, Kurt K.G., and Breckner, Raymond A. Valve control system for an air displacement type pump. 5,011,376, Cl. 417-145.000.

Henry, Beth. Pet bed. 5,010,843, Cl. 119-28.500

Henry, Courtney S., to Motorola, Inc. Message reminder alert for selective call receiver. 5,012,219, Cl. 340-311.100.

Henry, Cyrus P., and West, Michael W.J., to Du Pont de Nemours, E.I., and Company. Fuel oil additives. 5,011,504, Cl. 44-392.000.

Henry, George A. *See*—
Baer, Cynthia C., Buliga, Gregory S.; Hassenheutti, Gerard L., Henry, George A., Heth, Alice A., Jackson, Linda K., Kennedy-Tolstedt, Jill M., Kerwin, Phillip J.; Miller, Mark S., Parker, Elizabeth M., Paul, Neela K., Pechak, David G., Smith, Gary F.; and Witte, Vernon C., 5,011,701, Cl. 426-573.000.

Hense, Karl R. *See*—
Chung, Paul W.; Hense, Karl R., and Nguyen, Kim Y., 5,012,246, Cl. 341-160.000

Henson, Kenneth C., and Barron, Michael K., to General Dynamics Corporation. Mobile enclosure for allowing access to a vehicle in an unsafe environment. 5,010,907, Cl. 134-94.000.

Herbert, John M. *See*—
Cordes, Eugene H., Ellames, George J., Herbert, John M., and Smith, David I., 5,011,985, Cl. 562-469.000
Cordes, Eugene H., Ellames, George J., Herbert, John M., and Smith, David I., 5,011,986, Cl. 562-469.000

Hercules Incorporated. *See*—
Antoon, Mitchell K., Jr., and Hill, David J., 5,011,698, Cl 426-395.000

Hereher, Patrick. *See*—
Almeras, Roland, and Hereher, Patrick, 5,010,811, Cl. 101-3.100

Hermann, Dietmar, and Schmidt, Helmbrecht, to Continental Aktiengesellschaft. Flame-resistant elastic sealing member. 5,011,163, Cl 277-26.000

Hermann Hemscheidt Maschinenfabrik GmbH & Co. *See*—
Pfeiffer, Otmar, Geuns, Guy, and Welzel, Josef, 5,011,433, Cl 439-589.000

Herpichboehm, Bernd G. *See*—
Terada, Takao, Ota, Hiroyuki, Makita, Shigeru, Herpichboehm, Bernd G., Sierra, George H., Summers, Robert B.; and Watlington, Thomas M., 5,011,290, Cl. 356-423.000

Herrington, Fox J., and Goncarovs, Alex, to Mobil Oil Corporation. Foldable plastic slider and method of assembly with a plastic reclosable fastener. 5,010,627, Cl. 24-400.000

Herron, Ross W., and Beard, Garry E., to Ultra Precision Manufacturing, Ltd. Automatic steering wheel pivoting mechanism. 5,010,779, Cl. 74-493.000

Hertzog, Lewis R. Modular above ground swimming pool. 5,010,603, Cl. 4-506.000

Herzog, Klaus, Boehning, Karl-Heinz, Aichinger, Heinrich; Plueckhan, Juergen, Mross, Wolf D., and Schwarzmann, Matthias, to BASF Aktiengesellschaft. Preparation of a silver catalyst. 5,011,809, Cl 502-348.000

Hesch, Harold E., to Trinity Industries, Inc. Rail car end assembly. 5,010,825, Cl. 105-378.000

Hess, Joachim, Muller, Klaus R., and Muller, Manfred, to Boehringer Ingelheim GmbH. Process for preparing D,L-Lactide. 5,011,946, Cl 549-274.000

Heth, Alice A. *See*—
Baer, Cynthia C., Buliga, Gregory S., Hassenheutti, Gerard L., Henry, George A., Heth, Alice A., Jackson, Linda K., Kennedy-Tolstedt, Jill M., Kerwin, Phillip J., Miller, Mark S., Parker, Elizabeth M., Paul, Neela K., Pechak, David G., Smith, Gary F., and Witte, Vernon C., 5,011,701, Cl. 426-573.000

Heuft-Qualiplus B.V. *See*—
Swart, Nicholaas C., 5,011,289, Cl. 356-394.000.

Hewitt, Donald W., and Seibel, David D., to Fujitsu Limited. Data card and mailer data match/inserter system. 5,012,073, Cl. 235-375.000

Hewlett-Packard Co. *See*—
Alcorn, Byron A., Cherry, Robert W., Coleman, Mark D., Rauchfuss, Brian D., and Taylor, Gary L., 5,012,163, Cl. 315-383.000
Dillman, Norman G., 5,012,247, Cl. 341-172.000
Kimura, Robert B., 5,012,134, Cl. 307-446.000
Lai, Benny W.H., and Walker, Richard C., 5,012,494, Cl 375-120.000
Leibovitz, Jacques, 5,011,819, Cl. 505-1.000
Lowe, David J., and Pritchard, Thomas B., 5,012,257, Cl 346-1.100

Hi-Shear Corporation. *See*—
Hatter, Edwin E., 5,011,352, Cl. 411-271.000

Hickey, Patrick J., to Mobil Oil Corporation. Steam distribution manifold. 5,010,910, Cl. 137-1.000

Hickman, John I. *See*—
Powell, Theo J.; Hickman, John I., and Crowley, Jeri J., 5,012,471, Cl. 371-27.000.

Hida, George T. *See*—
Abramovici, Rudolf; and Hida, George T., 5,011,800, Cl. 501-96.000.

Hidaka, Yasuharu; and Inoue, Takashi, to NEC Corporation. Magnetic memory using superconductor ring. 5,011,817, Cl. 505-1.000

Hieda, Katsuhiko, to Kabushiki Kaisha Toshiba. Semiconductor memory device. 5,012,308, Cl. 357-23.600.

Higashihara, Masaki, to Canon Kabushiki Kaisha. Focus adjusting apparatus. 5,012,267, Cl. 354-402.000.

Higuchi, Haruo. *See*—
Ono, Yutaka; Muramatsu, Yasuhiko; Banzai, Hideo; Kikukawa, Yoichi; Hashida, Shigeru; Shindo, Shotaro; Higuchi, Haruo, Shinomiya, Hiroyuki, Nikaido, Mitsuhiro; and Sato, Koichi, 5,012,169, Cl. 318-568.000.

Hikichi, Tooru; and Ogasawara, Junichi, to Sony Corporation. Head lifting and damper mechanism for disc drive unit. 5,012,370, Cl 360-105.000.

Hill, David J. *See*—
Antoon, Mitchell K., Jr.; and Hill, David J., 5,011,698, Cl 426-395.000

Hill, Francis U., and Crosswhite, Lola E., to Sorrento Engineering Corporation. Method of improving foam fire resistance through the introduction of inorganic particles thereinto. 5,011,558, Cl 156-307.500.

Hill, James L. *See*—
Hunter, Orville, Jr., Hill, James L., and Potts, David E., 5,011,802, Cl. 501-100.000

Hinks, Raymond W., to Terratech Mining Services (PTY) Ltd. Double-disk, spring-biased mechanical seal assembly. 5,011,164, Cl 277-40.000

Hioki, Toshiaki. *See*—
Isono, Haruo, Yasuda, Minoru, Watanabe, Hiroshi, Toyama, Tateo, Hioki, Toshiaki; Morita, Yoshihiko, and Yamada, Makoto, 5,012,351, Cl. 358-342.000

Hirabayashi, Shigeto. *See*—
Kida, Shuji, Kita, Hiroshi, Hirabayashi, Shigeto, and Kaneko, Yutaka, 5,011,766, Cl. 430-558.000

Hirai, Ichiro, and Amano, Toru, to NEC Corporation. Phase difference-adjusting circuit. 5,012,493, Cl. 375-100.000

Hirai, Isamu, to Asaha Kogaku Kogyo Kabushiki Kaisha. Exposure control device for interchangeable lens camera. 5,012,268, Cl 354-410.000

Hirakami, Kiyomi. *See*—
Takahashi, Hisao, Yamane, Kaoru; Hirakami, Kiyomi, and Ikeda, Kazuo, 5,011,201, Cl. 296-203.000

Hiraki, Tadayoshi, Iwase, Osamu, Oosumimoto, Hirosi, Sugiura, Shinji, Tabushi, Ichiro, Kume, Masafumi, Udagawa, Takashi, Matsui, Komaharu; and Fujii, Yasuhiro, to Kansai Paint Co., Ltd. Process for coating metallic substrate. 5,011,733, Cl. 428-336.000.

Hiramatsu, Takeo, and Niiyama, Tsunefumi. Automatic transmission control pressure regulator having speed sensitive valve arrangement. 5,010,786, Cl. 74-867.000.

Hiramitsu, Tokiyuki, and Sakamoto, Ken-ichi, to Nippon Miktron Limited. Novel (trans 1-propenyl)disulfide derivative and process for preparing the same. 5,011,975, Cl. 560-147.000.

Hirano, Masakazu. *See*—
Fujimoto, Hideo, Hirano, Masakazu, Hashiura, Mituo, and Murao, Toshiaki, 5,011,547, Cl. 148-24.000.

Hiratsuka, Katsuo, Odaka, Yoshiyuki, and Yoshida, Takeshi, to SSMC Inc. Quick feed drive unit having an electromagnetic clutch, a worm, worm wheel, and pattern wheel for feeding a sewn cloth in a perforating sewing machine. 5,010,832, Cl. 112-68.000

Hirayama, Hiromichi; Mihara, Masato, and Harumatsu, Mitsuo, to Victor Company of Japan, Ltd. Tape-loading mechanism for a magnetic recording/reproducing apparatus for selective use of tape cassettes of two different sizes. 5,012,364, Cl. 360-94.000

Hirmann, Georg. Drive system. 5,010,969, Cl. 180-8.100.

Hiroi, Masakazu. *See*—
Naito, Masataka; Hiroi, Masakazu, and Hayakawa, Kimiaki, 5,011,130, Cl. 271-288.000

Hirose, Tadayoshi. *See*—
Endo, Yasuo; Akimichi, Shinji; Hirose, Tadayoshi, Furukawa, Motonori, and Yoshida, Kyoko, 5,012,521, Cl. 382-1.000.

Hirose, Tokuzo. Floating raceway, floating water storage tank, composite floating raceway, marine paddy farming device, floating hydroponic farming device, and vessel. 5,010,837, Cl. 114-256.000.

Hirose, Toshifumi. *See*—
Yukimoto, Sadao, Hirose, Toshifumi, Wakabayashi, Hiroshi, and Isayama, Katsuhiko, 5,011,900, Cl. 525-477.000

Hiroshima Kasei Ltd.. *See*—
Yamamoto, Yuji, Shigematsu, Hideyuki, Tanaka, Hiroshi, Ashikawa, Ryo, and Ishida, Tatsuo, 5,011,875, Cl. 524-45.000

Hirsch, Martin S.; and Johnson, Victoria A., to G.D. Searle & Co. Pharmaceutical composition and method of inhibiting virus. 5,011,829, Cl. 514-50.000.

Hirschfeld, Klaus. *See*—
Abel, Thomas; and Hirschfeld, Klaus, 5,012,056, Cl. 200-519.000

Hirth, Roland. *See*—
Spiegel, Nikolaus, Filsinger, Karl-Heinz, and Hirth, Roland, 5,011,125, Cl. 271-183.000

Hirzel, Suzy C. Paper clip with vertical panel. 5,010,629, Cl. 24-67.900

Hisgen, Bernd *See*—
Rosenau, Bernhard; Hisgen, Bernd; Heinz, Gerhard; Braun, Hans-Georg; Lausberg, Dietrich; and Zeiner, Hartmut, 5,011,884, Cl. 524-537.000.

Hitachi Engineering Co., Ltd. *See*—
Tominaga, Kenji; Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo; Morishima, Hideo; Nakayama, Takashi; Moriya, Kumiaki; Matsumoto, Masaki; Akita, Minoru; Niino, Tsuyoshi; Ochiai, Kanehiro; Shiozawa, Akihiko; Uchiyama, Yuichi; Yasuno, Toyoharu; Moriya, Kenji; Kinoshita, Shouichirou; Kage, Kazuo; and Kubota, Ryuji, 5,011,652, Cl. 376-283.000.

Hitachi, Ltd. *See*—
Aoki, Masakazu; and Suzuki, Akira, 5,011,388, Cl. 418-95.000.
Kawaji, Mikinori; Takakura, Toshihiko; Uchida, Akihisa; Kuroda, Shigeo; Tamaki, Youichi; Shiba, Takeo; Sagara, Kazuhiko; and Kawamura, Masao, 5,011,788, Cl. 437-67.000.
Kawamoto, Yoshifumi, 5,012,312, Cl. 357-23.110.
Kazuaki, Ujiie; and Nabetani, Shinji, 5,012,445, Cl. 365-189.060.
Kimura, Shinichiro; Kawamoto, Yoshifumi; Kaga, Toru; and Sunami, Hideo, 5,012,310, Cl. 357-23.600.
Kobayashi, Hiroyuki, Izawa, Shigeru; and Ukiana, Motohide, 5,012,092, Cl. 250-311.000.
Kohno, Takashi; Matsushita, Osami; Ida, Michiaki; Kikuchi, Katsuaki; Sonoda, Taro; and Yamaguchi, Yuzo, 5,012,359, Cl. 360-71.000.
Nakamura, Koozoo; and Maruo, Seizi, 5,012,509, Cl. 379-53.000.
Nishikado, Takashi, Kondo, Megumu; Fukuoka, Kazuhiko; and Murata, Fumiya, 5,012,405, Cl. 364-200.000.
Ogino, Masanori, Iwahara, Yoshiaki, Tamura, Yuzo; and Kuroda, Shoji, 5,011,277, Cl. 353-94.000.
Sakurai, Akito, 5,012,430, Cl. 364-513.000.
Shichi, Hiroyasu; Nomura, Setsuo; and Mitani, Eisuke, 5,012,109, Cl. 250-491.100.
Shiomi, Makoto; Ozeki, Kosuke; Ohsawa, Michitaka; Matsumi, Kuninori; and Kawagishi, Tadahiro, 5,012,332, Cl. 358-64.000.
Takahashi, Shinsuke; Sekozawa, Teruji; and Funabashi, Motohisa, 5,012,422, Cl. 364-431.050.
Tominaga, Kenji; Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo; Morishima, Hideo; Nakayama, Takashi; Moriya, Kumiaki; Matsumoto, Masaki; Akita, Minoru; Niino, Tsuyoshi; Ochiai, Kanehiro; Shiozawa, Akihiko; Uchiyama, Yuichi; Yasuno, Toyoharu; Moriya, Kenji; Kinoshita, Shouichirou; Kage, Kazuo; and Kubota, Ryuji, 5,011,652, Cl. 376-283.000.
Tsukushi, Masanori; Koyanagi, Osamu; Seki, Yasuharu; Goto, Tokio; and Kurosawa, Yukio, 5,012,051, Cl. 200-148.00B.
Ushijima, Nobuyoshi, Masuda, Hiroshi; Ishibashi, Akira; Satou, Masahiko; Haruna, Toshiyuki; Takayama, Norikazu; and Kudou, Yoshinobu, 5,012,166, Cl. 318-254.000.
Yoshida, Yasuhisa, 5,012,076, Cl. 235-379.000.
Yoshino, Eiji, Matsuda, Yasumasa; and Yamada, Takahiro, 5,012,353, Cl. 358-401.000.

Hitachi Metals, Ltd. *See*—
Nogami, Shingo, Yashiro, Toshinori, Okitsu, Toshio, Furushima, Kiyoshi; and Korenaga, Itsuo, 5,010,946, Cl. 164-312.000.

Hitachi Seiko Co., Ltd. *See*—
Nishigai, Masao; Otani, Tamio, Kanaya, Yasuhiko; and Murakami, Tetsuo, 5,011,345, Cl. 409-132.000.

Hitachi Video Engineering, Inc. *See*—
Shiomi, Makoto, Ozeki, Kosuke, Ohsawa, Michitaka, Matsumi, Kuninori; and Kawagishi, Tadahiro, 5,012,332, Cl. 358-64.000.

Hitachi VLSI Engineering Co. *See*—
Kazuaki, Ujiie; and Nabetani, Shinji, 5,012,445, Cl. 365-189.060.

Hitotsuyanagi, Hajime, Fujita, Nobuhiko, Itozaki, Hideo, Nakagama, Syoji, Tanaka, Saburo, and Fukushima, Kazuhiko, to Sumitomo Electric Industries, Ltd. Semiconductor element and method of forming same and article in which said element is used. 5,011,759, Cl. 430-128.000.

Hittite Microwave, Inc. *See*—
Ayasli, Yalcin, and Katzin, Peter J., 5,012,123, Cl. 307-112.000.

Hmiel, Luke A. *See*—
Barcza, William K., Berger, Curtis W., and Hmiel, Luke A., 5,011,080, Cl. 239-265.390.

Ho, Kwang S., to Goldstar Co., Ltd. Cooling system for a stirling engine. 5,010,734, Cl. 60-517.000.

Ho, W. S. Winston *See*—
Sartori, Guido; Ho, W. S. Winston; and Noone, Robert E., 5,012,035, Cl. 585-819.000.
Sartori, Guido; Ho, W. S. Winston; and Noone, Robert E., 5,012,036, Cl. 585-819.000.

Hoare, John H., and Halfon, Marc, to FMC Corporation. Nitration of phenyl triazolinones. 5,011,933, Cl. 548-263.200.

Hochstein, Peter A. Automatic battery powered video light. 5,012,392, Cl. 362-4.000.

Hochtemperatur-Reaktorbau GmbH. *See*—
Wachholz, Winfried, 5,011,653, Cl. 376-313.000.

Hodgson, William H., Stanworth, Colin G., and Thompson, David J., to British Steel plc, and British Railways Board. Railways. 5,011,077, Cl. 238-283.000.

Hoechst Aktiengesellschaft. *See*—
Clauss, Karl, Linkies, Adolf, and Reuschling, Dieter, 5,011,982, Cl. 562-38.000.
Konig, Wolfgang; Breipohl, Gerhard; Geiger, Rolf; Knolle, Jochen; and Hropot, Max, 5,011,825, Cl. 514-18.000.
Kretzschmar, Gerhard; Duwel, Dieter; Grabley, Susanne; Hammann, Peter; Seibert, Gerhard; Voelskow, Hartmut; and Giani, Carlo, 5,011,827, Cl. 514-32.000.
Opitz, Konrad; and Segal, Marcos, 5,011,917, Cl. 534-583.000.
Urbach, Hansjorg; and Henning, Rainer, 5,011,940, Cl. 548-452.000.

Hoechst Celanese Corp. *See*—
Hazen, James R.; and Lee, William R., 5,011,997, Cl. 564-335.000.
Mueller, Werner H.; and Khanna, Dinesh N., 5,011,753, Cl. 430-4.000.
Nielsen, Steven F.; and Kim, Dai W., 5,011,864, Cl. 521-70.000.
Nikles, David E., 5,011,756, Cl. 430-19.000.

Hoelderich, Wolfgang; and Merger, Franz. Conversion of 1,3-dioxanes to 4-oxaaldehydes. 5,012,005, Cl. 568-427.000.

Hoffman, Roger P., to Green Bay Packaging, Inc. Linerboard containing recycled newsprint. 5,011,741, Cl. 428-503.100.

Hoffman, Wesley P., to United States of America, Air Force. Method of manufacturing microscopic tube material. 5,011,566, Cl. 156-643.000.

Hoffmann, Joachim, to Andreas Stihl. Cutterhead for a vegetation cutter apparatus. 5,010,649, Cl. 30-276.000.

Hoffmann-La Roche Inc. *See*—
Gassner, Walter; Imhof, Rene; and Kyburz, Emilio, 5,011,849, Cl. 514-365.000.

Hogue, Kathryn E. Swaroop, Srinivas H., and Wusirika, Raja R., to Corning Incorporated. Cured surfaces and a process of curing. 5,011,529, Cl. 75-235.000.

Holbrook, Russell W., to Pitney Bowes Inc. Jam clearance apparatus for sheetfeeding device. 5,011,129, Cl. 271-274.000.

Holloway, Jerrell P. Touch sensitive control panel. 5,012,124, Cl. 307-116.000.

Holler, Roger A. *See*—
Travor, Bruce W., and Holler, Roger A., 5,011,097, Cl. 244-3.210.

Hollinger, Jeffrey O., to United States of America, Army. Unique bone regeneration tricalcium phosphate. 5,011,495, Cl. 623-16.000.

Holmes, Hillard R. *See*—
Kapolnek, Michael R.; Feild, Alexander R.; Hartle, Robert T.; and Holmes, Hillard R., 5,010,951, Cl. 165-104.260.

Holmes, Richard F. *See*—
Barnett, Charles J.; Holmes, Richard E.; Jungheim, Louis N.; Sigmund, Sandra K.; and Ternansky, Robert J., 5,011,938, Cl. 548-359.000.

Holtter, Eugene S., to Those Characters From Cleveland, Inc. Music box subassembly and a vehicle structure including the same. 5,011,451, Cl. 446-409.000.

Holub, Fred F. *See*—
Abolins, Visvaldis; Betts, Joseph E.; Holub, Fred F.; and Lee, Gim F., Jr., 5,011,736, Cl. 428-407.000.

Honda Giken Kogyo Kabushiki Kaisha. *See*—
Hamada, Tetsuro; Sano, Shoichi; and Furukawa, Yoshimi, 5,010,971, Cl. 180-140.000.
Nakajima, Toyohei; and Mieno, Toshiyuki, 5,011,590, Cl. 204-425.000.
Noji, Akio; Kamimura, Kenji; and Tsuzuki, Sadachika, 5,011,288, Cl. 356-375.000.

Honda, Satoshi. *See*—
Kano, Akiko; Honda, Satoshi; and Nakano, Kuniaki, 5,012,107, Cl. 250-484.100.

Hone, Jon D. *See*—
Fishman, David A.; and Hone, Jon D., 5,010,757, Cl. 72-60.000.

Honeywell Inc. *See*—
Dodson, David W., 5,012,424, Cl. 364-449.000.
Hurst, Allan T., Jr.; and Pohm, Arthur V., 5,012,444, Cl. 365-173.000.

Honjo, Kazuhiko, to NEC Corporation. Hybrid semiconductor device implemented by combination of heterojunction bipolar transistor and field effect transistor. 5,012,318, Cl. 357-43.000.

Honma, Mikio. *See*—
Takarabe, Isamu; Honma, Mikio; and Hayakawa, Hatsuo, 5,011,209, Cl. 296-65.100.

Honma, Toshio. *See*—
Ikkatai, Masatoshi; Yoshizawa, Atsutomo; and Honma, Toshio, 5,012,295, Cl. 355-311.000.

Hooley, Robert W. *See*—
Corradetti, Anthony A.; Gargiulo, Edward P.; Krauss, Leland L.; and Hooley, Robert W., 5,011,246, Cl. 350-96.200.

Hooser, Steven M. Portable stump remover. 5,010,931, Cl. 144-2.00N.

Hopp, Thomas P.; and Prickett, Kathryn S., to Immunex Corporation. Hybridoma and monoclonal antibody for use in an immunoaffinity purification system. 5,011,912, Cl. 530-387.000.

Hoppe, Lutz; Koch, Wolfgang; Luhmann, Erhard; and Piepho, Michael, to Wolff Walsrode Aktiengesellschaft. Cellulose ester/-polymer combinations, and their preparation and use. 5,011,874, Cl. 524-30.000.

Hopper, Clayton I., to Astro-Tec Manufacturing, Inc. Perforate projection screen. 5,011,263, Cl. 350-125.000.

Hora, Peter. *See*—
Laucht, Horst; Baur, Richard; Werner, Bernd; Nilsson, Karl E.; and Hora, Peter, 5,011,181, Cl. 280-731.000.

Horibe, Tatsutake. *See*—
Kawasaki, Yoshio; Horibe, Tatsutake; Morita, Takayuki; Nakamura, Haruyoshi; Ohashi, Kengo; and Miyazaki, Tsutomu, 5,011,000, Cl. 198-465.100.

Horikawa, Kazuo; and Miyagawa, Ichirou, to Fuji Photo Film Co., Ltd. Radiation image recording and read-out apparatus. 5,012,095, Cl. 250-327.200.

Horikoshi, Yukio. *See*—
Sakamaki, Hiroshi; Horikoshi, Yukio; Jinnouchi, Takeshi; and Tanzawa, Kenji, 5,011,390, Cl. 418-256.000.

Horiuchi, Akihisa. *See*—
Nakayama, Hiroki; Kitagishi, Nozomu; Hattori, Jun; Suda, Shigeyuki; and Horiuchi, Akihisa, 5,011,272, Cl. 350-427.000.

Horiuchi, Tetsuo. *See*—
Tominaga, Kenji; Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo; Morishima, Hideo; Nakayama, Takashi; Moriya, Kumiaki; Matsumoto, Masaki; Akita, Minoru; Niino, Tsuyoshi; Ochiai, Kanehiro; Shiozawa, Akihiko; Uchiyama, Yuichi; Yasuno, Toyoharu; Moriya, Kenji; Kinoshita, Shouichirou; Kage, Kazuo; and Kubota, Ryuji, 5,011,652, Cl. 376-283.000.

Horiyama, Tsuyoshi *See*—
Yano, Hisato; Hashimoto, Shusa; and Horiyama, Tsuyoshi, 5,011,632, Cl. 261-81.000.

Horn, Dieter. *See*—
Auweter, Helmut; Horn, Dieter; Lilge, Dieter; and Wortmann, Juergen, 5,011,279, Cl. 356-28.500.

Horton, Don. Spring actuated safety cartridge. 5,010,674, Cl. 42-70.110.

Horton, James M., and Bunge, Eric L. Adjustable storage system for audio and/or video media. 5,011,241, Cl. 312-330.100.

Hoshi, Hironobu: *See*—
Ikeda, Senri; Saito, Sakae; Hanada, Shuji; and Hoshi, Hironobu, 5,011,545, Cl. 148-11.50F.

Hosoi, Kiyonori *See*—
Satoh, Toyomi; Hosoi, Kiyonori; Kinoshita, Katsuji; Murata, Shinjiro; Fukatsu, Shunzo; and Ichikawa, Tooru, 5,011,019, Cl. 206-530.000.

Hosokawa, Yoshiaki; Kanoh, Masaki; Maekawa, Takashi; and Nakayasu, Hirofumi, to Fujitsu Limited. Printer having an ink ribbon shift apparatus. 5,011,312, Cl. 400-225.000.

Hougard, Erling, to OS Plastic A/S. Flowerpot. 5,010,687, Cl. 47-79.000.

Houston Advanced Research Center. *See*—
Krishnan, Shankar; Hansen, George P.; Hauge, Robert H.; Margrave, John L.; and Rey, Charles A., 5,011,295, Cl. 374-126.000.

Howell, William J., to Motorola, Inc. Balanced spurious free oscillator. 5,012,205, Cl. 331-117.00R.

Howie, Catherine L.: *See*—
Elliott, David L.; Howie, Catherine L.; and Montague, Peter G., 5,011,682, Cl. 424-52.000.

Howland, John J.: *See*—
Trapasso, Timothy; and Howland, John J., 5,011,292, Cl. 366-161.000.

Hoyle, Jack W. Solar energy intensifier and collector system. 5,010,873, Cl. 126-440.000.

Hoyt, Robert M.: *See*—
Hamilton, Daniel; Hoyt, Robert M.; Halferty, Patricia J.; and Odom, J. Thomas, 5,011,336, Cl. 405-230.000.

Hropot, Max: *See*—
Konig, Wolfgang; Breipohl, Gerhard; Geiger, Rolf; Knolle, Jochen; and Hropot, Max, 5,011,825, Cl. 514-18.000.

Hrubetz Exploration Company. *See*—
Nelson, Joseph M.; and Rau, Garland R., 5,011,329, Cl. 405-128.000.

Hsu, George, to 501 Greenfield Industries, Inc. Twist drill. 5,011,342, Cl. 408-224.000.

Hsu, Shyiguei *See*—
Zador, Eugene; Hsu, Shyiguei; Kaczmarek, Wesley R.; Ravipati, Sitaramaiah; Supkis, Stanley; and Vogel, Richard H., 5,011,513, Cl. 51-295.000.

Hubele, Conrad. *See*—
Feray, Cathy; and Hubele, Conrad, 5,011,613, Cl. 210-739.000.

Hubner Gummi - und Kunststoff GmbH: *See*—
Braemert, Peter; and Britzke, Ingo, 5,010,614, Cl. 14-71.100.

Hudgins, Robert R.: *See*—
Haure, Patricia; Silveston, Peter L.; Hudgins, Robert R.; and Bellut, Maxime, 5,011,675, Cl. 423-659.000.

Hudson, David M. *See*—
Buchan, William R.; Moore, Robert A.; Caley, Wendell J., Jr.; Gilmore, Mark A.; and Hudson, David M., 5,012,291, Cl. 355-271.000.

Hug, William F.; and Otto, Manfred R. Ultraviolet metal vapor laser having hard sealed internal mirrors. 5,012,479, Cl. 372-56.000.

Hughes Aircraft Company. *See*—
Miller, Leroy J.; Smith, Willis H., Jr.; Lackner, Anna M.; and Margerum, J. David, 5,011,267, Cl. 350-340.000.
Nash, J. Gregory; Ercegovac, Milos; and Lang, Thomas, 5,012,439, Cl. 364-766.000.
Smith, Ronald T.; and Hegg, Ronald G., 5,011,244, Cl. 350-3.750.
Thompson, James D., 5,012,254, Cl. 342-373.000.
Vali, Victor; and Chang, David B., 5,012,499, Cl. 378-84.000.
Young, Frederick A.; and Rikimaru, Roy K., 5,012,211, Cl. 333-212.000.

Hughes, John B., to U.S. Philips Corporation. Circuit arrangement for processing sampled analog electrical signals. 5,012,133, Cl. 307-352.000.

Hughes, Norman S.: *See*—
Doyle, Walter M.; and Hughes, Norman S., 5,011,243, Cl. 350-1.200.

Hugron, Denis P. Anchoring post assembly. 5,010,698, Cl. 52-160.000.

Hugunin, Harvey W. Stall enclosure for all-weather golf driving range. 5,011,152, Cl. 273-176.00R.

Huitema, Thomas W.; Eiszner, William H., Jr.; Heeres, Stanley D.; and Vanderlaan, Robert D., to Pneumo Abex Corporation. Linear direct drive motor. 5,012,144, Cl. 310-14.000.

Huls America Inc.: *See*—
Arena, Arthur A., 5,011,660, Cl. 422-22.000.

Hunder, Ray A., Bettenhausen, Larry A., Miles, Alden R.; Mittelstadt, William A.; Dwyer, Stephen H.; and Hanson, Gary R., to Minnesota Mining and Manufacturing Company. Binding system for connected fan folded sheets. 5,011,187, Cl. 281-15.100.

Hunder, Ray A.: *See*—
Bodziak, Douglas P.; Hunder, Ray A.; Roth, Steven P.; Grovender, Steven L.; and Molenda, Robert P., 5,011,186, Cl. 281-12.000.

Hung, Ming-Hong, and Resnick, Paul R., to Du Pont de Nemours, E. I., and Company. Epoxides and their preparation. 5,011,954, Cl. 549-548.000.

Hung, Wu-Hu. Hooking frame of a window/bathroom curtain. 5,010,942, Cl. 160-349.100.

Hung, Yau Y. Method of measuring displacement between points on a test object. 5,011,280, Cl. 356-35.500.

Hunter, Orville, Jr.; Hill, James L.; and Potts, David E., to A.P. Green Industries, Inc. Coking tar impregnated refractory products. 5,011,802, Cl. 501-100.000.

Huntley, Peter, to Borg-Warner Automotive, Inc. Clutch control for high-response continuously variable transmission. 5,010,989, Cl. 192-0.033.

Hurst, Allan T., Jr.; and Pohm, Arthur V., to Honeywell Inc. Opposed field magnetoresistive memory sensing. 5,012,444, Cl. 365-173.000.

Husby, Harald S.; Breed, Allen K.; and Thuen, Ted, to Breed Automotive Technology, Inc. Velocity change sensor with contact retainer. 5,011,182, Cl. 280-735.000.

Husky Injection Molding Systems Ltd.: *See*—
Bertschi, Rene, 5,011,646, Cl. 264-297.200.
Cosman, John; and Silaghi, Victor, 5,011,396, Cl. 425-190.000.

Huss, Albin, Jr.: *See*—
Child, Jonathan E.; Huss, Albin, Jr.; Kennedy, Clinton R.; Marler, David O.; and Tabak, Samuel A., 5,012,033, Cl. 585-722.000.

Hutchins, Harry L.: *See*—
Youngblood, Dale; and Hutchins, Harry L., 5,011,117, Cl. 254-30.000.

Hutchison, Brian G.; and Gahan, Ian, to NCR Corporation. Portable container for valuable items. 5,012,075, Cl. 235-379.000.

Hwang, Sean. Turbo-jet aerator. 5,011,631, Cl. 261-30.000.

Hyodo, Haruhiro; and Kurahashi, Hideyuki, to Minolta Camera Kabushiki Kaisha. Image exposure device. 5,012,277, Cl. 355-55.000.

Hyzak, Daniel L.; and Gray, Reed A., to ICI Americas Inc. Herbicide compositions of extended soil life. 5,011,526, Cl. 71-87.000.

I-Flow Corporation: *See*—
Brown, Eric W.; and Kienholz, Charles M., 5,011,378, Cl. 417-360.000.

I.P.R.S.: *See*—
Cruysberghs, Rudiger, 5,011,047, Cl. 222-396.000.

Iame, Eiji; and Imura, Yasuo, to Suehiro Industrial Co., Ltd. Molding method for manufacture of a resin molded part. 5,011,728, Cl. 428-156.000.

Ibata, Koichi: *See*—
Tanaka, Yasuyuki; Ibata, Koichi; Mizuno, Masao, Ninagawa, Yoichi; and Nishida, Takashi, 5,012,018, Cl. 508-909.500.

Ichikawa, Shunji. *See*—
Masada, Tomoaki; Ueno, Yasuhiko; Hayakawa, Eiji; Naganuma, Hirotake; Terajima, Mitsuru; Kuroda, Tokuyuki; Shuto, Katsuichi; and Ichikawa, Shunji, 5,011,824, Cl. 514-13.000.

Ichikawa, Tooru: *See*—
Satoh, Toyomi; Hosoi, Kiyonori; Kinoshita, Katsuji; Murata, Shinjiro; Fukatsu, Shunzo; and Ichikawa, Tooru, 5,011,019, Cl. 206-530.000.

Ichiki, Sayohiko: *See*—
Takahashi, Shoichi; Ichiki, Sayohiko; Yorozu, Masatoshi; Kunishige, Seiji; Shibagaki, Taro; Shimizu, Fumihiko; Fujioka, Fumio; and Kondo, Toshinori, 5,012,240, Cl. 341-101.000.

Ichishima, Masashi: *See*—
Kanda, Katsumi; Fujimoto, Junichi; Ichishima, Masashi; Nishimura, Takao; and Kondo, Yoshikazu, 5,011,711, Cl. 427-334.000.

ICI Americas Inc.: *See*—
Aksman, Igor, 5,011,883, Cl. 524-513.000.
Hyzak, Daniel L., and Gray, Reed A., 5,011,526, Cl. 71-87.000.

Ida, Masatoshi, to Olympus Optical Co., Ltd. Apparatus for positioning a transducer for recording, reproducing or erasing information on a medium. 5,012,362, Cl. 360-77.040.

Ida, Michiaki: *See*—
Kohno, Takashi; Matsushita, Osami; Ida, Michiaki; Kikuchi, Katsuaki; Sonoda, Taro; and Yamaguchi, Yuzo, 5,012,359, Cl. 360-71.000.

Ide, Yukio: *See*—
Harigaya, Makoto; Ide, Yukio; Yamada, Katsuyuki, and Iwasaki, Hiroko, 5,011,723, Cl. 428-64.000.

Idemoto, Morito: *See*—
Miyazaki, Kazuoki; Noguchi, Yasuo; Inoue, Naohiko; and Idemoto, Morito, 5,011,471, Cl. 604-22.000.

Ideyama, Hiroyuki: *See*—
Kusumoto, Keiji; Yamada, Hirokazu; and Ideyama, Hiroyuki, 5,012,281, Cl. 355-206.000.

Iggulden, Jerry R.: *See*—
Streck, Donald A.; and Iggulden, Jerry R., 5,012,350, Cl. 358-335.000.

Ihlenfeld, Gerd: *See*—
Seiffert, Volkhard; Ihlenfeld, Gerd; and Bienert, Klaus, 5,012,197, Cl. 324-696.000.

IHT, Inc.: *See*—
Miller, Archie M., 5,010,604, Cl. 4-519.000.

Mine, Shingi; Miwa, Yoichi; and Ono, Hiroyuki, 5,012,363, Cl. 360-77.050
Niedrich, Daniel S., 5,011,658, Cl. 420-558.000
International Computers Limited *See*—
McVittie, David G., 5,012,515, Cl. 380-49.000
InterTherapy, Inc *See*—
Passafaro, James D.; and Griffith, James M., 5,010,886, Cl. 128-660.030
Inuyama, Tsutomu; to Omron Tateisi Electronics Co. Trigger switch 5,012,057, Cl. 200-522.000
Inuzuka, Tokushige *See*—
Hashimoto, Toru; Kamura, Hitoshi; Yoshida, Katutoshi; Jimbo, Takeshi; and Inuzuka, Tokushige, 5,010,862, Cl. 123-339.000
Iolab Corporation *See*—
Shell, John W., 5,011,843, Cl. 514-259.000
Iowa State University Research Foundation, Inc *See*—
Braymen, Steven D.; Paulson, Bradley A.; and Goedken, Kenneth D., 5,011,568, Cl. 156-647.000
Iles, David C., 5,012,189, Cl. 324-209.000
Iqbal, Muhammad; to Kohler Co. Fluid control valve 5,010,917, Cl. 137-454.600
Irick, Gether, Jr.; Mercer, Patricia N.; and Simmons, Kenneth E.; to Eastman Kodak Company Catalyst composition for the hydrogenation of carboxylic acid esters 5,011,806, Cl. 502-202.000.
IRT Corporation *See*—
Battin, John; and Stroebel, Thomas, 5,012,502, Cl. 378-58.000

Isayama, Katsuhiko *See*—
Yukimoto, Sadao; Hirose, Toshifumi; Wakabayashi, Hiroshi; and Isayama, Katsuhiko, 5,011,900, Cl. 525-477.000
Ishi, Kozo: *See*—
Yoshimura, Hiroshi; Fujiwara, Takuji; Ishi, Kozo; and Takemoto, Kazuo, 5,010,990, Cl. 192-3.300
Ishibashi, Akira *See*—
Ushijima, Nobuyoshi; Masuda, Hiroshi; Ishibashi, Akira; Satou, Masahiko; Haruna, Toshiyuki; Takayama, Norikazu; and Kudou, Yoshinobu, 5,012,166, Cl. 318-254.000
Ishibashi, Hiroshi *See*—
Odaka, Kentaro; Ozaki, Shinya; Yamada, Masaki; Inazawa, Yoshizumi; and Ishibashi, Hiroshi, 5,012,459, Cl. 360-32.000
Ishida, Kouji: *See*—
Kawano, Hisaaki; Tanimoto, Yasufumi; and Ishida, Kouji, 5,012,286, Cl. 355-246.000
Ishida, Nobuyoshi *See*—
Michimoto, Takashi; Nakamoto, Yukinari; Kuwada, Kazuhiko; and Ishida, Nobuyoshi, 5,011,810, Cl. 502-439.000
Ishida, Takao; Hagiwara, Hiroshi; and Kakumu, Ichizo, to Sintobrator, Ltd Polishing device 5,010,692, Cl. 51-283.00R
Ishida, Tatsuo *See*—
Yamamoto, Yuji; Shigematsu, Hideyuki; Tanaka, Hiroshi; Ashikawa, Ryo; and Ishida, Tatsuo, 5,011,875, Cl. 524-45.000
Ishida, Tetsuro; Danno, Yoshiaki; Akishino, Katsuo; and Fukui, Toyoaki, to Mitsubishi Jidosha Kogyo Kabushiki Kaisha Apparatus for preventing engine from stalling 5,010,863, Cl. 123-339.000.
Ishida, Tsuyoshi *See*—
Matsuo, Yukito; and Ishida, Tsuyoshi, 5,010,997, Cl. 198-349.700
Ishiguro, Satoshi; to Sony Corporation Television receiver which includes a memory for storing a field image which can be periodically displayed as a still picture 5,012,328, Cl. 358-22.000
Ishihara, Toshinobu *See*—
Ogawa, Kazufumi; Tamura, Hideharu; Ishihara, Toshinobu; Tanaka, Yasuhisa; and Endou, Mikio, 5,011,963, Cl. 556-485.000
Ishii, Haruo: *See*—
Nakamura, Susao; Nishio, Etsuro; and Ishii, Haruo, 5,012,273, Cl. 354-485.000.
Ishii, Mitsuaki; and Miyazaki, Masaaki; to Mitsubishi Denki K K Vehicle control apparatus 5,012,414, Cl. 364-424.030
Ishii, Mitsuaki; to Mitsubishi Denki K K Vehicle control apparatus 5,012,421, Cl. 364-431.100
Ishii, Shinjiro *See*—
Murakami, Yasuo; Matsumoto, Yoichi; Ishii, Shinjiro; Kurahashi, Ryurou; and Nakamura, Mitsuru, 5,011,304, Cl. 384-492.000
Ishikawa, Kazunori *See*—
Tsukamoto, Kazumasa; Ishikawa, Kazunori; Taniguchi, Takuji; Iwatsuki, Kunihiro; and Taga, Yutaka, 5,010,991, Cl. 192-3.300
Ishikawa, Masayasu *See*—
Takeuchi, Yukihisa; Ishikawa, Masayasu; and Kimura, Koji, 5,011,732, Cl. 428-209.000
Isobe, Keijiro *See*—
Moriya, Hideshige; Kitahara, Hiroshi; Minami, Shohei; Isobe, Keijiro; Nakata, Yoshinori; and Tanaka, Chiaki, 5,010,879, Cl. 128-69.000.
Isoda, Satoru; Tomisawa, Osamu; and Kawakubo, Hiroaki, to Mitsubishi Denki K.K. Method of manufacturing a hybrid circuit element 5,011,786, Cl. 437-51.000
Isomura, Akihiro; and Sugaya, Toshihiro, to Kabushiki Kaisha Toshiba Head access mechanism for moving heads 5,012,372, Cl. 360-106.000
Isono, Haruo, Yasuda, Minoru; Watanabe, Hiroshi; Toyama, Tateo; Hioki, Toshiaki; Morita, Yoshihiko; and Yamada, Makoto, to Nippon Hoso Kyokai; and Sanyo Electric Co., Ltd. Stereoscopic video disc record and recording and reproducing apparatus therefor. 5,012,351, Cl. 358-342.000
Isshiki, Masao; and Kumazawa, Takeshi, to Kabushiki Kaisha Toshiba Air conditioning apparatus having audible sound level control function 5,010,739, Cl. 62-158.000
Isuzu Motors Limited *See*—
Kurabayashi, Ken; Tsuchiya, Yoshinobu; and Nuda, Yoriaki, 5,012,385, Cl. 361-328.000.

Johnston Pump/General Valve Inc.: *See—*
Smith, Gordon M.; and Van Der Wiel, Hans M., 5,011,115, Cl. 251-161.000.

Johstoneaux, Raphael B., to S.O.F.O. Engineering & Distributing Co. Fuel economizer. 5,010,867, Cl. 123-511.000.

Joint Medical Products Corporation: *See—*
Forte, Mark R., and Noiles, Douglas G., 5,011,496, Cl. 623-20.000.

Jones, Glenn C., and Nottingham, William D., to Eastman Kodak Company. Transesterification of alkoxyesters. 5,011,977, Cl. 560-187.000.

Jones, Kenneth A. *See—*
Buckberg, Gerald D.; Maloney, James V., Jr.; Jones, Kenneth A.; and West, Weldon D., 5,011,469, Cl. 604-4.000.

Jones, Lorianne: *See—*
Bridger, Keith; Jones, Lorianne; and Winzer, Stephen R., 5,011,796, Cl. 501-12.000.

Jones, Raymond. Tennis training device. 5,011,143, Cl. 273-29.00A.

Jones, Robert D., and Demeyer, David M., to Musco Corp. Light bar leveler. 5,012,398, Cl. 362-250.000.

Jones, Ronald C., and Weisburger, John H., to American Health Foundation. Inhibiting development of mutagens and carcinogens. 5,011,697, Cl. 426-92.000.

Jordan, Paul T., to Jacobs Chuck Technology Corporation. Chuck jaw. 5,011,167, Cl. 279-62.000.

Jorgensen, Terje; Strand, Oddbjorn E.; and Asbjornsen, Odd A., to Norsk Hydro A.S. Method and apparatus for performing automatic particle analysis. 5,011,285, Cl. 356-335.000.

Jos. Hunkeler Ltd.: *See—*
Felix, Willi, 5,011,559, Cl. 156-257.000.

Jost, William R.: *See—*
Munro, John R.; Jost, William R.; and Ash, Francis M., Jr., 5,012,248, Cl. 342-22.000.

Jow, Taiguang R.: *See—*
Shacklette, Lawrence W.; Townsend, Linda B.; and Jow, Taiguang R., 5,011,748, Cl. 429-50.000.

Joy, John R., to Williams International Corporation. Solid fuel turbine engine. 5,010,728, Cl. 60-39.464.

Joy Technologies Inc.: *See—*
O'Neill, Michael L.; Moore, Stephen P.; and Pendolino, Eugene F., 5,011,229, Cl. 299-91.000.

Joyce, David L.: *See—*
Walker, Roger C.; Reese, Scott P., Joyce, David L.; and Kastrup, David A., 5,012,420, Cl. 364-431.020.

Joyer, Richard A. Screw-on button. 5,010,625, Cl. 24-90.00R.

Juki Corporation: *See—*
Iimuro, Ikuro; Matsushita, Toshiki; and Furuya, Toshihiro, 5,010,834, Cl. 112-302.000.

Jung, Chou K. Warning device for liquid level in dripping bottle. 5,012,227, Cl. 340-618.000.

Jungheim, Louis N.: *See—*
Barnett, Charles J.; Holmes, Richard E.; Jungheim, Louis N.; Sigmund, Sandra K., and Ternansky, Robert J., 5,011,938, Cl. 548-359.000.

Jungwirth, Douglas R., Simpson, A. Phillip; Kawahara, Mitsuo; Levine, Seymour; and Kennel, John M., to Northrop Corporation. Strapdown stellar sensor and holographic lens therefor. 5,012,081, Cl. 250-203.600.

Jurgens, Gunter; Pickard, Jurgen; and Sell, Werner, to Daimler-Benz Aktiengesellschaft. Brakeband. 5,010,986, Cl. 188-250.00H.

JWI Ltd.: *See—*
Hansen, Victor E.; Smith, David T.; McPherson, Douglas R.; and Pitt, Richard E., 5,011,577, Cl. 162-352.000.

Kabata, Toshiyuki: *See—*
Yoneyama, Sachiko; Ohsawa, Toshiyuki; Kimura, Okitoshi; and Kabata, Toshiyuki, 5,011,751, Cl. 429-192.000.

Kabeshita, Akira; Hamane, Tokuhito, and Kitayama, Yoshifumi, to Matsushita Electric Industrial Co., Ltd. Electrode structure of a chip type electronic component. 5,012,388, Cl. 361-400.000.

Kabushiki Kaisha Cubic Engineering: *See—*
Nakanishi, Motoyasu, 5,011,393, Cl. 425-89.000.

Kabushiki Kaisha Hosokawa Yoko. *See—*
Satoh, Toyomi; Hosoi, Kiyonori; Kinoshita, Katsuji, Murata, Shinjiro; Fukatsu, Shunzo; and Ichikawa, Tooru, 5,011,019, Cl. 206-530.000.

Kabushiki Kaisha Kobe Seiko Sho: *See—*
Fujimoto, Hideo, Hirano, Masakazu; Hashiura, Mituo; and Murao, Toshiaki, 5,011,547, Cl. 148-24.000.
Nose, Kazuo; Yamamoto, Hiroyuki; Koike, Shiro; Shimomura, Masakazu; Tsubono, Hajime; Kitagawa, Soichi, Fujisaki, Yasumasa; Maeda, Yasushi; Wakebe, Tetsuya; and Katayama, Yasuyuki, 5,010,756, Cl. 72-9.000.

Kabushiki Kaisha Nippon Conlux: *See—*
Kobayashi, Osamu; Mikami, Mitsugu; Nishiumi, Kenji; and Nakajima, Kenji, 5,011,456, Cl. 453-32.000.

Kabushiki Kaisha Sanko Kaihatsu Kagaku Kenkyusho: *See—*
Uesaka, Toshio; Niki, Akihiro; Ohsuga, Makoto; Sato, Toranosuke; Tsunomachi, Hiroki; Yamaguchi, Makoto; Doyama, Kazuo; and Kishimoto, Daishiro, 5,011,879, Cl. 524-290.000.

Kabushiki Kaisha Tokai Denki Seisakusho: *See—*
Itoh, Toshio; and Narita, Yasuhide, 5,011,232, Cl. 301-37.00P.

Kabushiki Kaisha Toshiba: *See—*
Amemiya, Isao; Sakai, Tadashi; and Uno, Shigeki, 5,011,589, Cl. 204-416.000.
Goto, Hiroshige, 5,012,344, Cl. 358-213.110.
Hieda, Katsuhiko, 5,012,308, Cl. 357-23.600.
Isomura, Akihiro; and Sugaya, Toshihiro, 5,012,372, Cl. 360-106.000.
Isshiki, Masao, and Kumazawa, Takeshi, 5,010,739, Cl. 62-158.000.
Kawano, Hisaaki; Tanimoto, Yasufumi; and Ishida, Kouji, 5,012,286, Cl. 355-246.000.
Kohsaka, Yoshiaki, 5,012,358, Cl. 360-70.000.
Kuribayashi, Mototaka, 5,012,427, Cl. 364-490.000.
Matsuo, Yukito; and Ishida, Tsuyoshi, 5,010,997, Cl. 198-349.700.
Sakamoto, Noriya, Kawai, Kiyoyuki; and Yasuki, Seijiro, 5,012,326, Cl. 358-11.000.
Shimono, Mamoru; Asada, Tomoyuki; Kawaguchi, Taiichi; Taya, Yoichi; Yukinaga, Kouji, Nomura, Susumu; and Tagawa, Hajime, 5,012,283, Cl. 355-229.000.
Takahashi, Shoichi; Ichiki, Sayohiko; Yorozu, Masatoshi; Kunishige, Seiji; Shibagaki, Taro; Shimizu, Fumihiko; Fujioka, Fumio, and Kondo, Toshinori, 5,012,240, Cl. 341-101.000.
Yamaguchi, Akira, 5,012,438, Cl. 364-765.000.
Yasuda, Nobuyuki, 5,012,400, Cl. 363-95.000.

Kabushiki Kaisha Toyda Jidoshokki Seisakusho: *See—*
Kawasaki, Yoshio; Horibe, Tatsutake; Morita, Takayuki; Nakamura, Haruyoshi; Ohashi, Kengo; and Miyazaki, Tsutomu, 5,011,000, Cl. 198-465.100.

Kabushiki Kaisha Toyoda Jidoshokki Seisakusho: *See—*
Yasui, Yoshiharu, Nakane, Katsumi; Suzuki, Osamu; and Kimbara, Masahiko, 5,010,725, Cl. 57-281.000.

Kabushiki Kaisha Ueno Seiyaku Oyo Kenkyujo: *See—*
Ueno, Ryuzo; Masada, Yoshiyasu; and Mori, Toru, 5,011,984, Cl. 562-425.000.

Kabushiki Kaisha Universal. *See—*
Okada, Kazuo, 5,010,995, Cl. 194-219.000.

Kaczmarek, Wesley R.: *See—*
Zador, Eugene; Hsu, Shyiguei; Kaczmarek, Wesley R.; Ravipati, Sitaramaiah; Supkis, Stanley; and Vogel, Richard H., 5,011,513, Cl. 51-295.000.

Kadokura, Hidekimi; Yoshitake, Hiroshi; and Tanahashi, Masayoshi, to Sumitomo Chemical Company, Limited. Dispersion-type electroluminescence device. 5,012,156, Cl. 313-509.000.

Kadomatsu, Sigenari: *See—*
Kobayashi, Keiichi, Moriwaki, Masazumi; Kadomatsu, Sigenari; Fujie, Yuji; and Kawamoto, Masanobu, 5,010,601, Cl. 4-236.000.

Kaga, Toru: *See—*
Kimura, Shinichiro; Kawamoto, Yoshifumi; Kaga, Toru; and Sunami, Hideo, 5,012,310, Cl. 357-23.600.

Kaganowicz, Grzegorz, to General Electric Company. Inorganic alignment layer for liquid crystal devices and method of forming. 5,011,268, Cl. 350-341.000.

Kagawa, Hitoshi: *See—*
Hattori, Ryo; Kagawa, Hitoshi; and Mori, Masaki, 5,012,478, Cl. 372-50.000.

Kage, Kazuo: *See—*
Tominaga, Kenji; Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo; Morishima, Hideo; Nakayama, Takashi; Moriya, Kumiaki; Matsumoto, Masaki, Akita, Minoru; Niino, Tsuyoshi; Ochiai, Kanehiro; Shiozawa, Akihiko, Uchiyama, Yuichi, Yasuno, Toyoharu; Moriya, Kenji, Kinoshita, Shouichirou, Kage, Kazuo, and Kubota, Ryuji, 5,011,652, Cl. 376-283.000.

Kai, Takashi. *See—*
Sekine, Masayoshi; Nakajima, Toshiyuki; Kai, Takashi; Yoshimura, Katsuji; and Toyama, Masamichi, 5,012,270, Cl. 354-430.000.
Yoshinaga, Kazuo, Kai, Takashi; Egara, Koichi; Toshida, Yomishi, Mitsutake, Hideaki; Sato, Koichi, and Miyazaki, Takeshi, 5,011,623, Cl. 252-299.500.

Kaihara, Shoji: *See—*
Tosaka, Yoichi; and Kaihara, Shoji, 5,012,269, Cl. 354-419.000.

Kaiser Optical Systems: *See—*
Tedesco, James M.; Owen, Harry, and Chang, Byung J., 5,011,284, Cl. 356-301.000.

Kajima Corporation: *See—*
Akihama, Shigeyuki; Kobayashi, Mikio, Suenaga, Tatsuo, Fukumoto, Toshiyuki; Tamiguchi, Yoshikazu; and Nakagawa, Hiroaki, 5,010,705, Cl. 52-477.000

Kajima, Junichi. *See—*
Fujii, Yasuhiro, Mitsuji, Masaru; and Kajima, Junichi, 5,011,881, Cl. 524-457.000.

Kajimura, Kazuo: *See—*
Nakamura, Masaharu; and Kajimura, Kazuo, 5,010,717, Cl. 56-17.600.

Kakegawa, Hisao: *See—*
Satoh, Toshio; Niiro, Yasunori, Kakegawa, Hisao; and Matsumoto, Hitoshi, 5,011,949, Cl. 549-315.000.

Kakizaki Mfg. Co., Ltd.: *See—*
Kakizaki, Takeyoshi, 5,011,041, Cl. 220-507.000.

Kakizaki, Takeyoshi, to Kakizaki Mfg. Co., Ltd. Basket for processing thin plates. 5,011,041, Cl. 220-507.000.

Kakumu, Ichizo: *See—*
Ishida, Takao, Hagiwara, Hiroshi; and Kakumu, Ichizo, 5,010,692, Cl. 51-283.00R.

Kalaam, Shaik M., to Safeco Mfg. Limited. Fire fighter's coat having improved sleeve construction. 5,010,591, Cl. 2-93.000.

Kalet, George W.: *See—*
Gustafson, Keith W.; Kalet, George W.; and Taylor, Martin S., 5,011,700, Cl. 426-477.000.

Kalina, Benjamin F. Escape door system. 5,011,215, Cl. 296-146.000.

Kallmann, Jurgen, to Palitex Project Company GmbH. Method of random doffing wound packages from two sides of a textile yarn processing machine. 5,011,092, Cl. 242-35.50A.

Kamei, Hideyuki: *See—*
Sano, Kenichi; Maki, Kenichiro; and Kamei, Hideyuki, 5,011,980, Cl. 560-245.000.

Kamimura, Kenji: *See—*
Noji, Akio; Kamimura, Kenji; and Tsuzuki, Sadachika, 5,011,288, Cl. 356-375.000.

Kamioka, Hajime. *See—*
Ogawa, Tsutomu; Kamioka, Hajime; Kawamura, Seiichiro; and Sakurai, Junji, 5,011,783, Cl. 437-19.000.

Kamura, Hitoshi: *See—*
Hashimoto, Toru; Kamura, Hitoshi, Yoshida, Katutoshi; Jimbo, Takeshi; and Inuzuka, Tokushige, 5,010,862, Cl. 123-339.000.

Kanakura, Akihiro: *See—*
Kuwajima, Teruaki; Nagahata, Satoshi; and Kanakura, Akihiro, 5,011,533, Cl. 106-404.000.

Kanamori, Katsuhiko: *See—*
Kikuo, Kanaya; Kanamori, Katsuhiko, and Masuda, Ryosuke, 5,010,774, Cl. 73-862.040.

Kanaya, Kouichi: *See—*
Tsutsumi, Takashi; Miyawaki, Shozo, and Kanaya, Kouichi, 5,012,280, Cl. 355-206.000.

Kanaya, Yasuhiko: *See—*
Nishigai, Masao; Otani, Tamio; Kanaya, Yasuhiko; and Murakami, Tetsuo, 5,011,345, Cl. 409-132.000.

Kanda, Katsumi; Fujimoto, Junichi, Ichishima, Masashi; Nishimura, Takao; and Kondo, Yoshikazu, to Toyo Kohan Co., Ltd. Method for post-treatment of electroplated steel sheets for soldering. 5,011,711, Cl. 427-334.000.

Kanegafuchi Kagaku Kogyo Kabushiki Kaisha: *See—*
Kido, Masaro, and Yoshioka, Tetsuo, 5,011,727, Cl. 428-141.000.
Yukimoto, Sadao; Hirose, Toshifumi; Wakabayashi, Hiroshi, and Isayama, Katsuhiko, 5,011,900, Cl. 525-477.000.

Kaneko, Yutaka: *See—*
Kida, Shuji; Kita, Hiroshi; Hirabayashi, Shigeto; and Kaneko, Yutaka, 5,011,766, Cl. 430-558.000.
Tachibana, Kimie; and Kaneko, Yutaka, 5,011,765, Cl. 430-548.000.

Kania, Jozef. Apparatus for cutting metal and plastic sheet. 5,010,795, Cl. 83-607.000.

Kano, Akiko; Honda, Satoshi; and Nakano, Kuniaki, to Konica Corporation. Radiation image storage panel. 5,012,107, Cl. 250-484.100.

Kanoh, Masaki: *See—*
Hosokawa, Yoshiaki; Kanoh, Masaki; Maekawa, Takashi; and Nakayasu, Hirofumi. 5,011,312, Cl. 400-225.000.

Kansai Paint Company, Limited: *See—*
Fujii, Yasuhiro; Mitsuji, Masaru; and Kajima, Junichi. 5,011,881, Cl. 524-457.000.
Hiraki, Tadayoshi; Iwase, Osamu; Oosummoto, Hiroshi; Sugiura, Shinji; Tabushi, Ichiro; Kume, Masafumi; Udagawa, Takashi; Matsui, Komaharu; and Fujii, Yasuhiro. 5,011,733, Cl. 428-336.000.

Kao Corporation: *See—*
Suzuki, Toshiyuki; Nohta, Masahide; Shigeta, Akira; Ina, Yoshimitsu; and Nozawa, Manami. 5,011,680, Cl. 424-64.000.

Kaplan, Martin C.: *See—*
Lee, Hsien-Che; Kaplan, Martin C.; and Goodwin, Robert M. 5,012,333, Cl. 358-80.000.

Kaplinsky, Cecil H., to Plus Logic, Inc. Logic gates with a programmable number of inputs. 5,012,135, Cl. 307-465.000.

Kapolnek, Michael R.; Feild, Alexander R.; Hartle, Robert T.; and Holmes, Hillard R., to Lockhead Missiles & Space Company, Inc. Graded-groove heat pipe. 5,010,951, Cl. 165-104.260.

Karafa, Nandor, and Liebers, Lutz, to Alfred Teves GmbH. Process and apparatus for the automatic non-contact surface inspection of cylindrical parts. 5,012,117, Cl. 250-572.000.

Karasawa, Yonenobu: *See—*
Shiina, Toshio; Miyamoto, Keiko; Izumi, Kouji; Hayashi, Yasuro; Karasawa, Yonenobu; Uematsu, Satoru; and Sei, Naoki. 5,010,605, Cl. 4-542.000.

Kardos, Thomas J.: *See—*
Lundquist, Ingemar H.; Tarczy-Hornoch, Zoltan; and Kardos, Thomas J. 5,011,468, Cl. 600-18.000.

Karna, Toivo, and Lind, Kalevi, to Neste Oy. Means for acid-filling and forming. 5,012,175, Cl. 320-2.000.

Karosseriewerke Weinsberg GmbH: *See—*
Bauhof, Karl. 5,011,219, Cl. 296-221.000.

Kasai, Masaji: *See—*
Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi; Kasai, Masaji; Kawamoto, Isao; Iida, Takao; Sano, Hiroshi; Saito, Hiromitsu; Yamada, Koji; and Murakata, Chikara. 5,011,854, Cl. 514-541.000.

Kasai, Mitsuo: *See—*
Asuka, Masahiro; Yokota, Shinjiro; Tonegouchi, Makoto; and Kasai, Mitsuo. 5,010,830, Cl. 110-347.000.

Kaschel, Klaus: *See—*
Gresser, Wilhelm; Schelhase, Klaus; Frisch, Heinz; Kaschel, Klaus; Reinecke, Berent; and Trautmann, Wilhelm H. 5,011,614, Cl. 210-761.000.

Kase, Hiroshi: *See—*
Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi; Kasai, Masaji; Kawamoto, Isao; Iida, Takao; Sano, Hiroshi; Saito, Hiromitsu; Yamada, Koji; and Murakata, Chikara. 5,011,854, Cl. 514-541.000.

Kash, Kathleen, and Worlock, John M., to Bell Communications Research, Inc. Semiconductor devices having strain-induced lateral confinement of charge carriers. 5,012,304, Cl. 357-007.000.

Kashida, Motokazu: *See—*
Yoshimura, Katsuji; Nagasawa, Kenichi; Kashida, Motokazu; and Shikakura, Akihiro. 5,012,352, Cl. 358-343.000.

Kastanek, Frantisek: *See—*
Jerabek, Karel; Setinek, Karel; and Kastanek, Frantisek. 5,011,611, Cl. 210-674.000.

Kastrup, David A.: *See—*
Walker, Roger C.; Reese, Scott P.; Joyce, David L.; and Kastrup, David A. 5,012,420, Cl. 364-431.020.

Katagiri, Hiroyuki; Mizuno, Hisayoshi; and Mori, Masami, to Ikeda Bussan Co., Ltd. Mold for skin covered foamed plastic molding. 5,011,394, Cl. 425-117.000.

Kataoka, Yoshihiro: *See—*
Ohori, Manabu; Koshizuka, Noriaki; Kataoka, Yoshihiro; and Ueda, Shuzo. 5,011,656, Cl. 420-109.000.

Kataumi, Yoshimasa: *See—*
Asano, Yasushi; and Kataumi, Yoshimasa. 5,010,782, Cl. 74-512.000.

Katayama, Hideaki; Murakami, Toshifumi; Soeda, Koji; Kubota, Yoshiya; Okamoto, Shoji; Kubota, Akinori; Kobayashi, Michihito; and Ijiri, Masaaki, to Mitsubishi Jukogyo Kabushiki Kaisha; and Sumitomo Rubber Industries Ltd. Drain ejector in a tire vulcanizing machine. 5,011,392, Cl. 425-35.000.

Katayama, Yasuyuki: *See—*
Nose, Kazuo; Yamamoto, Hiroyuki; Koike, Shiro; Shimomura, Masakazu; Tsubono, Hajime; Kitagawa, Seiichi; Fujisaki, Yasumasa; Maeda, Yasushi; Wakebe, Tetsuya; and Katayama, Yasuyuki. 5,010,756, Cl. 72-9.000.

Kato, Kazuaki: *See—*
Fujiki, Toshisada; Kondo, Taikichi; Furukawa, Yoshinari; Kato, Kazuaki; Okimoto, Akimichi; and Tsuge, Kenji. 5,012,182, Cl. 324-96.000.

Kato, Sakae, to Tachi-S Co., Ltd. Lumbar support device for vehicle seat. 5,011,223, Cl. 297-284.000.

Kato, Shinichi, to Olympus Optical Co., Ltd. Intravascular endoscope apparatus. 5,010,875, Cl. 128-6.000.

Kato, Yuichi; and Miyagawa, Masazumi, to Ohi Seisakusho Co., Ltd. Handle assembly for use with door locking device. 5,011,202, Cl. 292-336.300.

Katoh, Masashi: *See—*
Taga, Yuji; and Katoh, Masashi. 5,012,355, Cl. 360-31.000.

Katoh, Yoshihisa; Ogawa, Takashi; and Hasegawa, Mitsumasa, to Toshiba Ceramics Co., Ltd. Ceramic filter. 5,011,603, Cl. 210-490.000.

Katoka, Shoei; Tsuchimoto, Shuhei; Nojima, Hideo; Kita, Ryusuke; and Nagata, Masaya, to Sharp Kabushiki Kaisha. Sensing a magnetic field with a super conductive material that exhibits magneto resistive properties. 5,011,818, Cl. 324-248.000.

Kattleman, Harry C., to Motorola, Inc. Tolerance compensating end plug. 5,011,012, Cl. 206-328.000.

Katz, Lewis J. Inverse vertical seismic profiling while drilling. 5,012,453, Cl. 367-57.000.

Katzenstein, Leo R.: *See—*
Buhrke, Rolfe E.; Dianda, Robert B.; Katzenstein, Leo R.; McClurkan, Michael B.; and Tsai, John S. 5,012,466, Cl. 370-62.000.

Katzin, Peter J.: *See—*
Ayashi, Yalcin; and Katzin, Peter J. 5,012,123, Cl. 307-112.000.

Kau, Jee I.: *See—*
Overman, Dana C., III; Kau, Jee I.; and Mahoney, Robert D. 5,011,637, Cl. 264-41.000.

Kaveh, Golnaz: *See—*
Dixon, Robert; Kaveh, Golnaz; and Seelbach, Walter. 5,012,136, Cl. 307-475.000.

Kawabata, Mikio: *See—*
Suzuki, Yasuyuki; Takagawa, Noboru; Kawabata, Mikio; Hayashi, Mariko; Takagi, Akiko; Wakamiya, Takako; and Saikawa, Isamu. 5,011,973, Cl. 560-185.000.

Kawada, Susumu: *See—*
Uemura, Satoshi; Kawada, Susumu; Sekine, Yoshitada; and Miyauchi, Tatsuo. 5,010,634, Cl. 29-407.000.

Kawada, Tousuke: *See—*
Asai, Koichi; Tsuda, Mamoru; Muto, Yasuo; Suhara, Sinsuke; and Kawada, Tousuke. 5,012,115, Cl. 250-561.000.

Kawagishi, Tadahiro: *See—*
Shiomi, Makoto; Ozeki, Kosuke; Ohsawa, Michitaka; Matsumi, Kuninori; and Kawagishi, Tadahiro. 5,012,332, Cl. 358-64.000.

Kawaguchi, Hiroichi: *See—*
Yoshizawa, Yasuo; Kawaguchi, Hiroichi; and Seto, Kazunari. 5,011,414, Cl. 434-431.000.

Kawaguchi, Tauchi: *See—*
Shimono, Mamoru; Asada, Tomoyuki; Kawaguchi, Tauchi; Taya, Yoichi; Yukinaga, Kouji; Nomura, Susumu; and Tagawa, Hajime. 5,012,283, Cl. 355-229.000.

Kawahara, Mitsuo: *See—*
Jungwirth, Douglas R.; Simpson, A. Phillip; Kawahara, Mitsuo; Levine, Seymour; and Kennel, John M. 5,012,081, Cl. 250-203.600.

Kawai, Kiyoyuki: *See—*
Sakamoto, Noriya; Kawai, Kiyoyuki; and Yasuki, Seijiro. 5,012,326, Cl. 358-11.000.

Kawaji, Mikinori; Takakura, Toshihiko; Uchida, Akihisa; Kuroda, Shigeo; Tamaki, Yoichi; Shiba, Takeo; Sagara, Kazuhiko; and Kawamura, Masao, to Hitachi, Ltd. Process of manufacturing semiconductor integrated circuit device and product formed thereby. 5,011,788, Cl. 437-67.000.

Kawakubo, Hiroaki: *See—*
Iseda, Satoru; Tomisawa, Osamu; and Kawakubo, Hiroaki. 5,011,786, Cl. 437-51.000.

Kawamata, Toshio, to Fuji Photo Film Co., Ltd. Surface smoothing apparatus for magnetic recording medium. 5,011,395, Cl. 425-143.000.

Kawamoto, Isao: *See—*
Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi; Kasai, Masaji; Kawamoto, Isao; Iida, Takao; Sano, Hiroshi; Saito, Hiromitsu; Yamada, Koji; and Murakata, Chikara. 5,011,854, Cl. 514-541.000.

Kawamoto, Kenichi: *See—*
Nagano, Masatoshi; and Kawamoto, Kenichi. 5,012,264, Cl. 354-286.000.

Kawamoto, Masanobu: *See—*
Kobayashi, Keiichi; Moriwaki, Masazumi; Kadomatsu, Sigenari; Fujie, Yuji; and Kawamoto, Masanobu. 5,010,601, Cl. 4-236.000.

Kawamoto, Yoshifumi, to Hitachi, Ltd. Semiconductor integrated circuit and a process for producing the same. 5,012,312, Cl. 357-23.110.

Kawamoto, Yoshifumi: *See—*
Kimura, Shinichiro; Kawamoto, Yoshifumi; Kaga, Toru; and Sunami, Hideo. 5,012,310, Cl. 357-23.600.

Kawamura, Masao: *See—*
Kawaji, Mikinori; Takakura, Toshihiko; Uchida, Akihisa; Kuroda, Shigeo; Tamaki, Yoichi; Shiba, Takeo; Sagara, Kazuhiko; and Kawamura, Masao. 5,011,788, Cl. 437-67.000.

Kawamura, Seiichiro: *See—*
Ogawa, Susumu; Kamioka, Hajime; Kawamura, Seiichiro; and Sakurai, Junji. 5,011,783, Cl. 437-19.000.

Kawamura, Yoshimi: *See—*
Yoshida, Tadashi; Inoue, Keizo; Arita, Hitoshi; Matsutani, Shigeru; Shoji, Junichi; and Kawamura, Yoshimi. 5,011,952, Cl. 549-393.000.

Kawanabe, Tasuku, and Kuriyama, Juzo, to Brother Kogyo Kabushiki Kaisha. Taper machining device in wire-cut electrical discharge apparatus. 5,012,063, Cl. 219-69.120.

Kawano, Hisaaki; Tanimoto, Yasufumi; and Ishida, Kouji, to Kabushiki Kaisha Toshiba. Image forming apparatus having device for detecting concentration of developing agent. 5,012,286, Cl. 355-246.000.

Kawano, Youzo; Takahashi, Tadashi; Shimura, Yasuhiko; and Takahashi, Yukihiro, to Anritsu Corporation. Electrooptic effect element and electrical signal waveform measuring apparatus using the same. 5,012,183, Cl. 324-96.000.

Kawasaki Jukogyo Kabushiki Kaisha: *See—*
Nitta, Shigemitsu. 5,011,194, Cl. 285-41.000.
Sagawa, Toyoaki; Sonoda, Makoto; and Umeda, Tokihiko. 5,011,377, Cl. 417-269.000.

Kawasaki, Mikio: *See—*
Sato, Kiyoshi; Ohtani, Shinichi; and Kawasaki, Mikio. 5,012,266, Cl. 354-319.000.

Kawasaki, Sadanobu; Koishikawa, Jun; and Kuty, Donald W., to Du Pont de Nemours, E. I., and Company. Method of manufacturing gas discharge display device. 5,011,391, Cl. 445-24.000.

Kawasaki Steel Corporation: *See—*
Takahashi, Kiyoshi; Takashiba, Nobuyoshi; Kojima, Shinji; Okuda, Haruji; Ohmiya, Shigeru; and Ikeda, Ryuichi. 5,011,531, Cl. 75-511.000.
Yukumoto, Masao; Ozawa, Michiharu; and Yamane, Hiroshi. 5,010,947, Cl. 164-428.000.

Kawasaki, Yoshio; Horibe, Tatsutake; Morita, Takayuki; Nakamura, Haruyoshi, Ohashi, Kengo; and Miyazaki, Tsutomu, to Kabushiki Kaisha Toyda Jidoshokki Seisakusho; and Nisshinbo Industries, Inc. Bobbin carrier in spinning machine. 5,011,000, Cl. 198-465.100.

Kawase, Shinji; and Yorisue, Shyozo, to Precision Fukuhara Works, Ltd. Method of constructing plating pile knit fabric and sinker therefor. 5,010,744, Cl. 66-93.000.

Kawaski Steel Corporation: *See—*
Ohori, Manabu; Koshizuka, Noriaki; Kataoka, Yoshihiro; and Ueda, Shuzo. 5,011,656, Cl. 420-109.000.

Kazmierczak, Irvin J.: *See—*
Sardano, Peter A.; and Kazmierczak, Irvin J. 5,011,124, Cl. 271-35.000.

Kazuaki, Ujiie; and Nabetani, Shinji, to Hitachi, Ltd.; and Hitachi VLSI Engineering Co. Programmable read only memory being capable of controlling internal writing voltage of external voltage. 5,012,445, Cl. 365-189.060.

Kazuno, Kenji: *See—*
Kise, Masahiro; Kitano, Masahiko; Ozaki, Masakuni; Kazuno, Kenji; Matsuda, Masahito, Shirahase, Ichiro; and Tomii, Yoshifumi. 5,011,831, Cl. 514-210.000.

Keana, John F. W.: *See—*
Weber, Eckard; Keana, John F. W.; and Barmettler, Peter. 5,011,834, Cl. 514-212.000.

Kearney, Philip C.; Muldoon, Mark T.; and Somich, Cathleen J., to United States of America, Agriculture. Simple system for decomposing atrazine in wastewater. 5,011,599, Cl. 210-130.000.

Keddy, Rex J.: *See—*
Nam, Tom L.; Keddy, Rex J.; and Sellschop, Jacques P. 5,012,108, Cl. 250-484.100.

Keegan, James J., to Warner-Lambert Company. Denture stabilizer. 5,011,868, Cl. 523-120.000.

Keeney, Mark, to Industrial Minerals Research & Development Pty. Ltd.; and Nabalco Pty. Ltd. Dewatering of alumina trihydrate. 5,011,612, Cl. 210-712.000.

Keffeler, Paul J. Medication dispenser with removable liner. 5,011,018, Cl. 206-532.000.

Keim, Walter, to Grosse Webereimaschinen GmbH. Hold-down device for Jacquard-controlled looms. 5,010,927, Cl. 139-89.000.

Keller, James B.; Ladd, Kevin L.; and Reisert, James J., to Digital Equipment Corporation. Apparatus and method for replaying decoded instructions. 5,012,403, Cl. 364-200.000.

Keller, Martin B., to Sandy Hill Corporation. Inclined multiplyformer. 5,011,575, Cl. 162-299.000.

Kelley, James O.; and Goodman, Steven F., to Milcare, Inc. Segmented side wall cart. 5,011,240, Cl. 312-250.000.

Kelly, James L.; and Reda, Ralph J., to University of Virginia Alumni Patents Foundation. Use of radioactive nickel-63 to inhibit microbially induced corrosion. 5,011,708, Cl. 427-443.100.

Kelly, Kendall J.: *See—*
Giroux, D. William; Ferry, James N.; Kelly, Kendall J.; Bell, Thomas G.; Narby, Conway P.; and Patburg, Gary L. 5,011,338, Cl. 405-268.000.

Kelly, Toby. Breathable brassiere with adjustable drawstring. 5,011,452, Cl. 450-69.000.

Kemble, David: *See—*
Kurth, Herman; Kemble, David; and Ubungen, Romeo N. 5,010,926, Cl. 138-149.000.

Kemet Electronics Corporation: *See—*
Park, Hyun D.; and Nance, Joseph D. 5,011,803, Cl. 501-136.000.

Kemp, Raymond J.: *See—*
Leighton, Suzanne E.; Kemp, Raymond J.; and Hawkins, Philip D. 5,012,507, Cl. 379-37.000.

Kende, Andrew S.: *See—*
Orvik, Jon A.; Pearson, Norman R.; Haag, Anthony P.; Adaway, Timothy J.; Kershner, Larry D.; and Kende, Andrew S. 5,012,017, Cl. 568-803.000.

Kenimer, Barry K. Absorbent replenishable garage mat. 5,011,007, Cl. 206-205.000.

Kennedy, Clinton R.: *See—*
Child, Jonathan E.; Huss, Albin, Jr.; Kennedy, Clinton R.; Marler, David O.; and Tabak, Samuel A. 5,012,033, Cl. 585-722.000.

Kennedy, David R.: *See—*
Thorncraft, David A.; Kennedy, David R.; Rashleigh, Scott C.; and Dabbs, Timothy P. 5,011,252, Cl. 350-96.150.

Kennedy, Paul G., to CFPI Inc. Hand guard for firearms. 5,010,676, Cl. 42-71.010.

Kennedy, Peter D.; and Blasi, Wayne M., to United States of America, Air Force. Radar capability display apparatus. 5,012,251, Cl. 342-176.000.

Kennedy-Tolstedt, Jill M.: *See—*
Baer, Cynthia C.; Buliga, Gregory S.; Hassenheutti, Gerard L.; Henry, George A.; Heth, Alice A.; Jackson, Linda K.; Kennedy-Tolstedt, Jill M.; Kerwin, Phillip J.; Miller, Mark S.; Parker, Elizabeth M.; Paul, Neela K.; Pechak, David G.; Smith, Gary F.; and Witte, Vernon C. 5,011,701, Cl. 426-573.000.

Kennel, John M.: *See—*
Jungwirth, Douglas R.; Simpson, A. Phillip; Kawahara, Mitsuo; Levine, Seymour; and Kennel, John M. 5,012,081, Cl. 250-203.600.

Kenner, Donald A. Environmental monitoring well housing and protection method. 5,010,957, Cl. 166-379.000.

Keoshkerian, Barkev: *See—*
Ong, Beng S.; Keoshkerian, Barkev; and Baranyi, Giuseppa. 5,011,906, Cl. 528-176.000.

Kerrigan, Michael M.: *See—*
Hamilton, Thomas A.; Kerrigan, Michael M.; and Wilson, John A. 5,011,127, Cl. 271-262.000.

Kershner, Larry D.: *See—*
Orvik, Jon A.; Pearson, Norman R.; Haag, Anthony P.; Adaway, Timothy J.; Kershner, Larry D.; and Kende, Andrew S. 5,012,017, Cl. 568-803.000.

Kerth, Donald A.: *See—*
Wellard, David R.; Kerth, Donald A.; Del Signore, Bruce P.; and Swanson, Eric J. 5,012,244, Cl. 341-143.000.

Kerwin, Phillip J.: *See—*
Baer, Cynthia C.; Buliga, Gregory S.; Hassenheutti, Gerard L.; Henry, George A.; Heth, Alice A.; Jackson, Linda K.; Kennedy-Tolstedt, Jill M.; Kerwin, Phillip J.; Miller, Mark S.; Parker, Elizabeth M.; Paul, Neela K.; Pechak, David G.; Smith, Gary F.; and Witte, Vernon C. 5,011,701, Cl. 426-573.000.

Keshelava, Viktor V.: *See—*
Belykh, Sergei I.; Gigauri, Vladimir S.; Davydov, Anatoly B.; Keshelava, Viktor V.; Mlynchik, Vyacheslav E.; Utyamyshev, Rustam I.; and Firsova, Elizaveta V. 5,011,493, Cl. 606-215.000.

Kessler, David: *See—*
DeJager, Donald; Kurtz, Andrew F.; Kessler, David; and Moore, Leslie G., Jr. 5,012,346, Cl. 358-214.000.

Ketelsen, Leonard J.: *See—*
Flynn, Edward J.; Ketelsen, Leonard J.; and Roxlo, Charles B. 5,012,484, Cl. 372-96.000.

Kettelson, Ernest S.: *See—*
Narcisi, Henry R.; and Kettelson, Ernest S. 5,010,806, Cl. 99-357.000.

Keystone International Holdings Corp.: *See—*
Alberts, Jack B.; and McNeely, Michael D. 5,011,116, Cl. 251-334.000.

Khadder, Wadie N.; Vokac, James P.; and Dobkin, Robert C., to Linear Technology Corporation. High speed junction field effect transistor for use in bipolar integrated circuits. 5,012,305, Cl. 357-22.000.

Khanna, Dinesh N.: *See—*
Mueller, Werner H.; and Khanna, Dinesh N. 5,011,753, Cl. 430-4.000.

Khokhar, Abdul R.; Newman, Robert A.; and Krakoff, Irwin H., to Board of Regents, The University of Texas System, The. 1,2-diaminocyclohexane-platinum complexes with antitumor activity. 5,011,959, Cl. 556-137.000.

Kida, Shuji; Kita, Hiroshi; Hirabayashi, Shigeto; and Kaneko, Yutaka, to Konica Corporation. Silver halide color photographic light-sensitive material. 5,011,766, Cl. 430-558.000.

Kidd, Garry B., to Chrysler Corporation. Tray for transporting vehicle turbochargers. 5,011,011, Cl. 206-319.000.

Kido, Masaro; and Yoshioka, Tetsuo, to Kanegafuchi Kagaku Kogyo Kabushiki Kaisha. Polyimide resin laminate improved in slidability. 5,011,727, Cl. 428-141.000.

Kidokoro, Susumu, to Gotoh Seisakusho Co., Ltd. Ball joint for stabilizer. 5,011,321, Cl. 403-140.000.

Kiefer, Walter J. Magnetic knife holder. 5,011,102, Cl. 248-37.300.

Kiel, Wolfgang; and Ziemann, Heinz, to Bayer Aktiengesellschaft. Process for the preparation of amines. 5,011,996, Cl. 564-321.000.

Kienholz, Charles M.: *See—*
Brown, Eric W.; and Kienholz, Charles M. 5,011,378, Cl. 417-360.000.

Kikuchi, Katsuaki: *See—*
Kohno, Takashi; Matsushita, Osami; Ida, Michiaki; Kikuchi, Katsuaki; Sonoda, Taro; and Yamaguchi, Yuzo. 5,012,359, Cl. 360-71.000.

Kikukawa, Yoichi: *See—*
Ono, Yutaka; Muramatsu, Yasuhiko; Banzai, Hideo; Kikukawa, Yoichi; Hashida, Shigeru; Shindo, Shotaro; Higuchi, Haruo; Shinomiya, Hiroyuki; Nikaido, Mitsuhiro; and Sato, Koichi. 5,012,169, Cl. 318-568.000.

Kikuo, Kanaya; Kanamori, Katsuhiko; and Masuda, Ryosuke, to Yokohama Rubber Co., Ltd., The. Distribution type tactile sensor. 5,010,774, Cl. 73-862.040.

Kim, Dai W.: *See—*
Nielsen, Steven F.; and Kim, Dai W. 5,011,864, Cl. 521-70.000.

Kim, Yong J.: *See—*
Gehrke, Russell P.; Johnson, Richard E., Jr.; and Kim, Yong J. 5,011,719, Cl. 428-35.700.

Kim, Young-cheol: *See—*
An, Hyeong-keun; Kim, Young-cheol; Lee, Seok-jeong; and Yu, Jung-jae. 5,012,451, Cl. 365-230.050.

Kimbara, Masahiko *See*—
Yasui, Yoshiharu; Nakane, Katsumi; Suzuki, Osamu; and Kimbara, Masahiko, 5,010,725, Cl. 57-281.000

Kimberly-Clark Corporation *See*—
Gossens, Anthonette A.; and Schwer, Mary L., 5,011,480, Cl. 604-385.100

Kimbrough, Gregory L. *See*—
Garver, Lawrence E.; and Kimbrough, Gregory L., 5,011,648, Cl. 264-521.000

Kimura, Hiroshi *See*—
Yamaguchi, Hiroshi; and Yamaguchi, Masashi, 5,010,722, Cl. 57-124.000

Kimura, Kazuo *See*—
Masuda, Kiyoshi; Kohda, Shigeto; Sakai, Shigenobu; Kimura, Kazuo; and Nomura, Tomoyoshi, 5,012,228, Cl. 340-702.000

Kimura, Koji *See*—
Takeuchi, Yukihisa; Ishikawa, Masayasu; and Kimura, Koji, 5,011,732, Cl. 428-209.000

Kimura, Masatoshi *See*—
Wanou, Masahiro; Kimura, Masatoshi; and Nakajima, Junzo, 5,012,282, Cl. 355-219.000

Kimura, Okitoshi *See*—
Yoneyama, Sachiko; Ohsawa, Toshiyuki; Kimura, Okitoshi; and Kabata, Toshiyuki, 5,011,751, Cl. 429-192.000

Kimura, Robert B., to Hewlett-Packard Company DC bootstrapped unity gain buffer 5,012,134, Cl. 307-446.000

Kimura, Shinichiro; Kawamoto, Yoshifumi; Kaga, Toru; and Sunami, Hideo, to Hitachi, Ltd. Semiconductor memory having stacked capacitor 5,012,310, Cl. 357-23.600

Kimast, Leonard L. Radiator safety cap 5,011,040, Cl. 220-375.000

King, Ian J., and Chow, Michael P., to Westinghouse Electric Corp. Automatic pseudokeyphasor generator 5,010,769, Cl. 73.660.000

King, William J. Blind for arched windows 5,010,939, Cl. 160-84.100

Kinoshita, Katsuji *See*—
Satoh, Toyomi; Hosoi, Kiyonori; Kinoshita, Katsuji; Murata, Shinjiro; Fukatsu, Shunzo; and Ichikawa, Tooru, 5,011,019, Cl. 206-530.000

Kinoshita, Keiichi *See*—
Yamashita, Hiroki; Kinoshita, Keiichi; Matsui, Toshio; Kurahashi, Wataru; and Yasuda, Katsuya, 5,012,297, Cl. 355-321.000

Kinoshita, Shouichirou *See*—
Tominaga, Kenji; Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo; Morishima, Hideo; Nakayama, Takashi; Moriya, Kumiaki; Matsumoto, Masaki; Akita, Minoru; Sano, Tsuyoshi; Ochiai, Kanehiro; Shiozawa, Akihiko; Uchiyama, Yuichi; Yasuno, Toyoharu; Moriya, Kenji; Kinoshita, Shouichirou; Kage, Kazuo; and Kubota, Ryuji, 5,011,652, Cl. 376-283.000

Kinoshita, Yoshimi *See*—
Oda, Masao; Kinoshita, Yoshimi; and Hayama, Masahiro, 5,010,842, Cl. 118-723.000

Kirin Beer Kabushiki Kaisha *See*—
Sakamoto, Yuji; Umeda, Seiichi; and Ogishima, Hiroaki, 5,010,685, Cl. 47-57.600

Kirk, Michael P., and Good, Blake W., to Chrysler Corporation Retaining assembly for throttle and speed control cables 5,010,781, Cl. 74-502.400

Kirk, Robert S. *See*—
Wild, Vernon M.; and Kirk, Robert S., 5,011,508, Cl. 51-293.000

Kirkpatrick, Terence *See*—
Brown, Darryl L.; and Kirkpatrick, Terence, 5,010,596, Cl. 2-228.000

Kirschenstein, Reinhard, to BTS Broadcast Television Systems GmbH Method and circuit for deriving H and V synchronizing pulses from a tri-level HDTV synchronizing signal 5,012,340, Cl. 358-150.000

Kirschner Medical Corporation *See*—
Boudreau, Michael P.; Jacoby, Randall W.; and Laughlin, James L., 5,010,881, Cl. 128-76.00R

Kiryu, Masato *See*—
Nagai, Harushige; Kiryu, Masato; Sasaki, Takeshi; and Saotome, Akira, 5,011,096, Cl. 242-199.000

Kise, Masahiro; Kitano, Masahiko; Ozaki, Masakuni; Kazuno, Kenji; Matsuda, Masahito; Shirahase, Ichiro; and Tomii, Yoshifumi, to Nippon Shinyaku Co. Ltd. Derivatives of quinolinecarboxylic acid 5,011,831, Cl. 514-210.000

Kish, Edward J., and Smith, Joseph E. Steam-producing orchard heater 5,010,872, Cl. 126-59.500

Kishida, Takahito *See*—
Shingo, Naohito; and Kishida, Takahito, 5,011,882, Cl. 524-504.000

Kishimoto, Daishiro *See*—
Uesaka, Toshio; Niki, Akihiro; Ohsuga, Makoto; Saito, Toranosuke; Tsunomachi, Hiroki; Yamaguchi, Makoto; Doyama, Kazuo; and Kishimoto, Daishiro, 5,011,879, Cl. 524-290.000

Kissau, Gerd *See*—
Vock, Friedrich; Kissau, Gerd; and Warnke, Klaus, 5,011,089, Cl. 241-21.000

Kita, Hiroshi *See*—
Kida, Shuji; Kita, Hiroshi; Hirabayashi, Shigeto; and Kaneko, Yutaka, 5,011,766, Cl. 430-558.000

Kita, Ryusuke *See*—
Kateoka, Shoei; Tsuchimoto, Shuhei; Nojima, Hideo; Kita, Ryusuke; and Nagata, Masaya, 5,011,818, Cl. 324-248.000

Kitagawa, Soichi *See*—
Nose, Kazuo; Yamamoto, Hiroyuki; Koike, Shiro; Shimomura, Masakazu; Tsubono, Hajime; Kitagawa, Soichi; Fujisaki, Yasumasa; Maeda, Yasushi; Wakebe, Tetsuya; and Katayama, Yasuyuki, 5,010,756, Cl. 72-9.000

Kitagawa, Toshiharu; Nishiyama, Ryuji; Takita, Masaaki; and Tsuru, Yoshikazu, to Matsushita Electric Industrial Co., Ltd. Printer 5,011,315, Cl. 400-624.000

Kitagishi, Nozomu *See*—
Nakayama, Hiroki; Kitagishi, Nozomu; Hattori, Jun; Suda, Shigeyuki; and Horiuchi, Akihisa, 5,011,272, Cl. 350-427.000

Kitahara, Hiroshi *See*—
Moriya, Hideshige; Kitahara, Hiroshi; Minami, Shohei; Isobe, Keijiro; Nakata, Yoshinori; and Tanaka, Chiaki, 5,010,879, Cl. 128-69.000

Kitahara, Masaki *See*—
Fujikawa, Yoshihiro; Suzuki, Mikio; Iwasaki, Hiroshi; Sakashita, Mitsuaki; and Kitahara, Masaki, 5,011,930, Cl. 546-101.000

Kitamura, Shigeto *See*—
Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi; Kasai, Masaji; Kawamoto, Isao; Iida, Takao; Sano, Hiroshi; Sato, Hiromitsu; Yamada, Koji; and Murakata, Chikara, 5,011,854, Cl. 514-541.000

Kitamura, Yoshiharu, to NHK Spring Co., Ltd. Shaft locking device 5,010,983, Cl. 188-67.000

Kitano, Hirohisa *See*—
Saito, Itaru; Matsubara, Ken; Shingaki, Kouichi; Masuda, Tomohiko; and Kitano, Hirohisa, 5,011,271, Cl. 350-356.000

Kitano, Masahiko *See*—
Kise, Masahiro; Kitano, Masahiko; Ozaki, Masakuni; Kazuno, Kenji; Matsuda, Masahito; Shirahase, Ichiro; and Tomii, Yoshifumi, 5,011,831, Cl. 514-210.000

Kitayama, Yoshifumi *See*—
Kabeshita, Akira; Hamane, Tokuhito; and Kitayama, Yoshifumi, 5,012,388, Cl. 361-400.000

Kitechnology B.V. *See*—
Barnoach, Itzhak, 5,011,562, Cl. 156-498.000

Kito, Tsutomu *See*—
Nakasuji, Norikazu; Kito, Tsutomu; and Shibahashi, Yutaka, 5,011,445, Cl. 446-14.000

Kittle, Carl F. *See*—
Boe, Thomas E.; Bergene, Mark A.; Kittle, Carl F.; and Sparks, Gregory F., 5,012,415, Cl. 364-424.070

Kittle, Paul A. and Manlowe, David, to Rusmar Incorporated Foam distribution apparatus 5,011,330, Cl. 405-129.000

Kittler, Wilfred C., Jr.; Czukor, Janos; and Stoddard, Darrell, to Andus Corporation Thin film artwork compounds 5,011,569, Cl. 156-656.000

Klager, Earl F. Hydrostatic spindle device 5,010,794, Cl. 82-147.000

Kleeblatt, Schmuel, to Cerafer S.A.R.L. Co. Metallurgical vessel slide valve 5,011,051, Cl. 222-600.000

Klein, Ronald J. *See*—
Parthasarathy, V. R. Sundaram; Meenakshi, Jameel; Hasan; Gratzl, Josef S.; and Klein, Ronald J., 5,011,572, Cl. 162-56.000

Kleinsasser, Jonathan R., to Crystal Spring Colony Farms Ltd. Feeder for animals 5,010,849, Cl. 119-53.000

Kleinschmit, Peter *See*—
Kriechbaum, Gangolf; Kleinschmit, Peter; and Peuckert, Doris, 5,011,673, Cl. 423-608.000

Kline, Joel I. and Armstrong, Mindy S. Apparatus for mobilizing a patient's toes 5,010,878, Cl. 128-25.00R

Kline, Kevin B., to Lawler Manufacturing Co., Inc. Thermostatic mixing valve with thermostat failure compensation 5,011,074, Cl. 236-12.130

Kline, William M. *See*—
Colvin, David P.; Whitney, Raymond A.; Marsh, Bernard R.; Kline, William M.; Rizzo, Ronald R.; and Orlosky, Mark E., 5,010,892, Cl. 128-774.000

Klopfleisch, Kim A. *See*—
Conley, Walter, III; Dammeyer, Ned E.; and Klopfleisch, Kim A., 5,011,363, Cl. 414-666.000

Knapp, John F., to Xerox Corporation Compact two-component development system with zonal toner dispenser control 5,012,287, Cl. 355-253.000

Knapp, Ralph F., to Cooper Industries, Inc. Tape measure end hook 5,010,657, Cl. 33-770.000

Knapp, William C. *See*—
Barnett, Richard I. and Knapp, William C., 5,010,608, Cl. 5-453.000

Knierim, Daniel G. *See*—
Weiss, Frederick G.; and Knierim, Daniel G., 5,012,178, Cl. 323-269.000

Knifton, John F., to Texaco Chemical Company Nickel-based dual catalyst systems effective in suppressing carbon dioxide formation during diethylene glycol amination 5,011,926, Cl. 544-106.000

Knipe, Earl A. and Knipe, Jan B. Base for bottle lamp 5,012,393, Cl. 362-163.000

Knipe, Jan B. *See*—
Knipe, Earl A.; and Knipe, Jan B., 5,012,393, Cl. 362-163.000

Knittel, Richard D. Roof gutter attachment 5,010,696, Cl. 52-12.000

Knoll International, Inc. *See*—
van Hekken, Hendrik R.; and Latone, Thomas L., 5,011,227, Cl. 297-434.000

Knolle, Jochen *See*—
Konig, Wolfgang; Breipohl, Gerhard; Geiger, Rolf; Knolle, Jochen; and Hropot, Max, 5,011,825, Cl. 514-18.000

Knuth, Bernd *See*—
Haeffner, Eckhard; Ben-Nasr, Hedi; Knuth, Bernd; Jasper, Hubert; and Reimann, Klaus, 5,011,594, Cl. 208-320.000

Knuth, William H., and Beveridge, John H., to Acurex Corporation Gas-fed hybrid propulsion system 5,010,730, Cl. 60-246.000

Knutson, Dale A. *See*—
Stobbs, Thomas J.; Patel, Kishor J.; Fritz, Frank M.; Knutson, Dale A.; and Janecke, James P., 5,011,113, Cl. 251-129.160.

Koba, Masayoshi *See*—
Konushi, Fumihiro; Seki, Akinori; Kudo, Jun; and Koba, Masayoshi, 5,011,550, Cl. 148-33.500

Kobayashi, Hiroyuki; Izawa, Shigeru; and Ukiana, Motohide, to Hitachi, Ltd. Method and apparatus for fine movement of specimen stage of electron microscope 5,012,092, Cl. 250-311.000.

Kobayashi, Kazuhiro, Koboshi, Shigeharu; Goto, Nobutaka; Kurematsu, Masayuki; and Takabayashi, Naoki, to Konica Corporation. Method for treating photographic process waste liquor through concentration by evaporation and apparatus therefor. 5,011,571, Cl. 159-47.300.

Kobayashi, Keiichi; Moriwaki, Masazumi; Kadomatsu, Sigenari; Fujie, Yuji; and Kawamoto, Masanobu, to Toto Ltd.; and Nifco Inc. Mechanism for opening and closing toilet seat and cover. 5,010,601, Cl. 4-236.000.

Kobayashi, Kenichi; and Matsui, Shougo, to Fujitsu Limited. Dimension checking method. 5,012,523, Cl. 382-8.000.

Kobayashi, Michihito *See*—
Katayama, Hideaki, Murakami, Toshifumi; Soeda, Koji; Kubota, Yoshiya, Okamoto, Shoji, Kubota, Akinori, Kobayashi, Michihito, and Ijiri, Masaaki, 5,011,392, Cl. 425-35.000.

Kobayashi, Mikio *See*—
Akihama, Shigeyuki; Kobayashi, Mikio; Suenaga, Tatsuo, Fukumoto, Toshiyuki; Taniguchi, Yoshikazu; and Nakagawa, Hiroaki, 5,010,705, Cl. 52-477.000.

Kobayashi, Osamu, Mikami, Mitsugu; Nishiumi, Kenji; and Nakajima, Kenji, to Kabushiki Kaisha Nippon Conlux Coin receiving and discharging apparatus 5,011,456, Cl. 453-32.000

Kobayashi, Tadashi, Wada, Mitsuo, Obuchi, Shouzi; and Takayanagi, Hiroshi, to Mitsui Toatsu Chemicals, Inc. Process for refining 1,3-dimethyl-2-imidazolidinone. 5,011,936, Cl. 548-343.000.

Kobayashi, Takeo *See*—
Tabata, Yasushi, Kobayashi, Takeo; Numako, Norio, and Nagai, Katsutoshi, 5,012,272, Cl. 354-465.000

Kobler, Norbert *See*—
Weisbrod, Norbert, and Kobler, Norbert, 5,010,815, Cl. 101-217.000

Koboshi, Shigeharu *See*—
Kobayashi, Kazuhiro; Koboshi, Shigeharu, Goto, Nobutaka; Kurematsu, Masayuki, and Takabayashi, Naoki, 5,011,571, Cl. 159-47.300

Koch, Wolfgang *See*—
Hoppe, Lutz, Koch, Wolfgang, Luhmann, Erhard, and Piepho, Michael, 5,011,874, Cl. 524-30.000.

Koeffer, Dieter *See*—
Bertleff, Werner, and Koeffer, Dieter, 5,012,006, Cl. 568-451.000

Koenig & Bauer Aktiengesellschaft *See*—
Grosshauser, Heinrich K., 5,010,817, Cl. 101-350.000.

Koerner, Edmund *See*—
Ziegler, Manfred; and Koerner, Edmund, 5,011,015, Cl. 206-387.000

Koester, Hubert *See*—
Coull, James M.; Rappin, Darryl J.; Koester, Hubert; Pluskal, Malcolm G.; Steuck, Michael J.; and Bonner, Alex G., 5,011,861, Cl. 521-53.000

Koga, Eiji *See*—
Nakanishi, Takehisa; Koga, Eiji, and Fukada, Isao, 5,011,953, Cl. 549-529.000

Kohda, Shigeto *See*—
Masuda, Kiyoshi, Kohda, Shigeto, Sakai, Shigenobu, Kimura, Kazuo, and Nomura, Tomoyoshi, 5,012,228, Cl. 340-702.000

Kohler Co. *See*—
Iqbal, Muhammad, 5,010,917, Cl. 137-454.600.

Kohno, Takashi; Matsushita, Osami, Ida, Michiaki; Kikuchi, Katsuaki, Sonoda, Taro; and Yamaguchi, Yuzo, to Hitachi, Ltd. Magnetic disk apparatus 5,012,359, Cl. 360-71.000

Kohr, William J. *See*—
Levinson, Arthur D.; Pennica, Diane; Kohr, William J.; Vehar, Gordon A.; Goeddel, David V.; Yelverton, Elizabeth M.; and Simonsen, Christian C., 5,011,795, Cl. 435-69.200

Kohsaka, Yoshiaki, to Kabushiki Kaisha Toshiba Tracking control apparatus for use with magnetic tape having video track and control track 5,012,358, Cl. 360-70.000.

Koike, Shiro *See*—
Nose, Kazuo, Yamamoto, Hiroyuki, Koike, Shiro; Shimomura, Masakazu, Tsubono, Hajime, Kitagawa, Soichi; Fujisaki, Yasumasa, Maeda, Yasushi; Wakebe, Tetsuya; and Katayama, Yasuyuki, 5,010,756, Cl. 72-9.000

Koshikawa, Jun *See*—
Kawasaki, Sadanobu, Koshikawa, Jun, and Kuty, Donald W., 5,011,391, Cl. 445-24.000

Kojima, Fumiyo *See*—
Sawamura, Tadahide, Nakamura, Yoko, and Kojima, Fumiyo, 5,012,299, Cl. 355-326.000

Kojima, Shinji *See*—
Takahashi, Kiyoshi, Takashiba, Nobuyoshi; Kojima, Shinji; Okuda, Haruji; Ohmiya, Shigeru; and Ikeda, Ryuichi, 5,011,531, Cl. 75-511.000

Kolasa, Edward P. *See*—
Basso, Richard J.; Hansen, Randall S.; Kolasa, Edward P.; Reynolds, Mark L.; and Tam, Chun P., 5,012,512, Cl. 379-218.000

Komatsu Zenoah Company: *See*—
Nakamura, Masaharu; and Kajimura, Kazuo, 5,010,717, Cl. 56-17.600.

Komori, Hiroshi: *See*—
Morita, Yoichi; Komori, Hiroshi; and Yokoyama, Akio, 5,012,201, Cl. 330-252.000.

Kondo, Kazuo; and Morikawa, Asao, to NGK Spark Plug Co. Ltd. Metallizing composition for use with ceramics. 5,011,530, Cl. 106-1.130.

Kondo, Kazuo; and Morikawa, Asao, to NGK Spark Plug Co., Ltd. Ceramic substrate. 5,011,734, Cl. 428-336.000.

Kondo, Megumu: *See*—
Nishikado, Takashi; Kondo, Megumu; Fukuoka, Kazuhiko; and Murata, Fumiya, 5,012,405, Cl. 364-200.000.

Kondo, Taikichi: *See*—
Fujiki, Toshisada; Kondo, Taikichi; Furukawa, Yoshinari; Kato, Kazuaki; Okimoto, Akimichi; and Tsuge, Kenji, 5,012,182, Cl. 324-96.000.

Kondo, Toshinori: *See*—
Takahashi, Shoichi; Ichiki, Sayohiko, Yorozu, Masatoshi; Kunishige, Seiji; Shibagaki, Taro, Shimizu, Fumihiko, Fujioka, Fumio; and Kondo, Toshinori, 5,012,240, Cl. 341-101.000.

Kondo, Yoshikazu: *See*—
Kanda, Katsumi; Fujimoto, Junichi; Ichishima, Masashi; Nishimura, Takao; and Kondo, Yoshikazu, 5,011,711, Cl. 427-334.000.

Kone Elevator GmbH: *See*—
Heikkinen, Urho J., 5,010,981, Cl. 187-20.000.

Kong, Hua-Shuang; Glass, Jeffrey T.; and Davis, Robert F., to North Carolina State University Homoepitaxial growth of Alpha-SiC thin films and semiconductor devices fabricated thereon. 5,011,549, Cl. 148-33.100.

Konica Corporation: *See*—
Hattori, Tsuyoshi; Tanaka, Masanao; and Matsuzaka, Syoji, 5,012,259, Cl. 346-108.000.
Kano, Akiko; Honda, Satoshi; and Nakano, Kuniaki, 5,012,107, Cl 250-484.100.
Kida, Shuji; Kita, Hiroshi; Hirabayashi, Shigeto; and Kaneko, Yutaka, 5,011,766, Cl. 430-558.000
Kobayashi, Kazuhiro; Koboshi, Shigeharu, Goto, Nobutaka; Kurematsu, Masayuki; and Takabayashi, Naoki, 5,011,571, Cl. 159-47.300.
Ohbayashi, Keiji, 5,011,570, Cl. 156-310.000.
Sato, Kiyoshi; Ohtani, Shinichi; and Kawasaki, Mikio, 5,012,266, Cl. 354-319.000
Tachibana, Kimie; and Kaneko, Yutaka, 5,011,765, Cl. 430-548.000.

Konig, Wolfgang; Breipohl, Gerhard, Geiger, Rolf, Knolle, Jochen; and Hropot, Max, to Hoechst Aktiengesellschaft Peptides influencing diuresis and natriuresis, a process for their preparation, agents containing them, and their use. 5,011,825, Cl. 514-18.000.

Konstant, Anthony N. Crossbar system for rack. 5,011,031, Cl. 211-191.000.

Konushi, Fumihiro; Seki, Akinori, Kudo, Jun, and Koba, Masayoshi, to Sharp Kabushiki Kaisha. Laminated structure of compound semiconductors. 5,011,550, Cl. 148-33.500.

Kopecky, Ivyl D., to Haybuster Manufacturing Inc. Cellulose fiberization apparatus. 5,011,091, Cl. 241-259.100

Kordesch, Karl; Gsellmann, Josef, and Tomantschger, Klaus, to Battery Technologies Inc. Rechargeable alkaline manganese dioxide-zinc cell having improved cumulative capacity. 5,011,752, Cl 429-206.000.

Korenaga, Itsuo. *See*—
Nogami, Shingo; Yashiro, Toshinori, Okitsu, Toshio; Furushima, Kiyoshi; and Korenaga, Itsuo, 5,010,946, Cl. 164-312.000

Korthuis, Scott A., to Korvan Industries, Inc. Method and system for automatically steering along row crops. 5,010,719, Cl. 56-10.200

Korvan Industries, Inc.. *See*—
Korthuis, Scott A., 5,010,719, Cl. 56-10.200

Kosaka, Daisuke *See*—
Matsuoka, Shigeki; Okubo, Hiizu, and Kosaka, Daisuke, 5,012,448, Cl. 365-208.000.

Kosaka, Yositeru, to Victor Company of Japan, Limited. Switching circuit. 5,012,356, Cl. 360-61.000

Koshino, Nagaaki *See*—
Takeda, Shiro, Namiki, Fumihiro, Sugiyama, Yuuichi, Iwase, Nobuhiro, Tadaki, Shinji, and Koshino, Nagaaki, 5,012,096, Cl 250-327.200

Koshizuka, Noriaki. *See*—
Ohori, Manabu; Koshizuka, Noriaki, Kataoka, Yoshihiro, and Ueda, Shuzo, 5,011,656, Cl. 420-109.000

Kouda, Masanori, Suzuki, Minoru, Okamura, Tetsuya, and Tobisawa, Toshihisa, to Atsugi Motor Parts Company, Limited Structure of an electromagnetic valve for opening and closing a fluid flow passage. 5,010,923, Cl. 137-625.340.

Kovacs, Kerry *See*—
Chen, Jing-Den; Kovacs, Kerry, Thomas, Margaret T.; and Liang, Rong-Chang, 5,011,885, Cl. 524-591.000

Kovacs, Steven G., to University of South Florida Magnetically actuated positive displacement pump 5,011,380, Cl. 417-413.000.

Koyanagi, Osamu *See*—
Tsukushi, Masanori; Koyanagi, Osamu, Seki, Yasuharu, Goto, Tokio; and Kurosawa, Yukio, 5,012,051, Cl. 200-148.00B.

Kraft General Foods, Inc.: *See*—
Baer, Cynthia C.; Buliga, Gregory S.; Hassenheutti, Gerard L.; Henry, George A.; Heth, Alice A.; Jackson, Linda K.; Kennedy-Tolstedt, Jill M.; Kerwin, Phillip J.; Miller, Mark S.; Parker,

Elizabeth M.; Paul, Neela K., Pechak, David G., Smith, Gary F.; and Witte, Vernon C., 5,011,701, Cl. 426-573.000.
Haas, Gerhard J., and Heller, Karen G., 5,011,696, Cl. 426-28.000.
Smagula, Michael S.; and Tancredi, Michael R., 5,011,704, Cl. 426-660.000.

Kraft, William: *See—*
Ferris, John J.; Kraft, William; Manning, Winton H., and Martinez, Michael, 5,011,413, Cl. 434-358.000.

Krajewski, John J.: *See—*
Murphy, Edward J.; Krajewski, John J.; and Ansel, Robert E., 5,011,635, Cl. 264-22.000.

Krakoff, Irwin H.: *See—*
Khokhar, Abdul R.; Newman, Robert A., and Krakoff, Irwin H., 5,011,959, Cl. 556-137.000.

Krakowski, Michel: *See—*
Razeghi, Manijeh, Defour, Martin; Omnes, Franck; Maurel, Philippe, Blondeau, Robert; and Krakowski, Michel, 5,012,476, Cl. 372-45.000.

Krauss, Leland L.: *See—*
Corradetti, Anthony A.; Gargiulo, Edward P.; Krauss, Leland L.; and Hooley, Robert W., 5,011,246, Cl. 350-96.200.
Johnson, Melvin H.; Krauss, Leland L.; and Landman, Dirk, 5,011,256, Cl. 350-96.200.

Krenn, Hans: *See—*
Vedder, Hans J.; and Krenn, Hans, 5,012,464, Cl. 369-116.000.

Kretzschmar, Gerhard; Duwel, Dieter; Grabley, Susanne, Hammann, Peter; Seibert, Gerhard; Voelskow, Hartmut, and Giani, Carlo, to Hoechst Aktiengesellschaft. Elaiophyline derivatives, compositions containing them and the use thereof as anthelmintic agents. 5,011,827, Cl. 514-32.000.

Kriechbaum, Gangolf; Kleinschmit, Peter; and Peuckert, Doris, to Degussa Aktiengesellschaft. Zirconium oxide powder. 5,011,673, Cl. 423-608.000.

Krishnan, Shankar; Hansen, George P., Hauge, Robert H.; Margrave, John L.; and Rey, Charles A., to Houston Advanced Research Center. Method and apparatus to simultaneously measure emissivities and thermodynamic temperatures of remote objects. 5,011,295, Cl. 374-126.000.

Kropp, Konrad E. W. Substrate and process and apparatus for the production therefor. 5,012,110, Cl. 250-492.100.

Krueger, Hans; and Welsch, Wolfgang, to Siemens Aktiengesellschaft. Gas laser. 5,012,480, Cl. 372-61.000.

Krumeich, Jorg H.; and Quast, Norbert. Cutting apparatus for the cutting of a round corneal disc. 5,011,498, Cl. 606-166.000.

Krummen, Raymond S.: *See—*
Carr, William J.; and Krummen, Raymond S., 5,011,520, Cl. 55-228.000.

Kryptonite Corporation: *See—*
Zane, Michael S.; and Zane, Peter L., 5,010,746, Cl. 70-39.000.

Ku, George; and Doherty, Niall, to Merrell Dow Pharmaceuticals Inc. Method of inhibiting interleukin-1 release. 5,011,857, Cl. 514-653.000.

Ku, Hai-Yung. Connection terminal plate. 5,011,429, Cl. 439-409.000.

Kuberasampath, Thangavel: *See—*
Oppermann, Hermann; Kuberasampath, Thangavel, Rueger, David C.; and Ozkaynak, Engin, 5,011,691, Cl. 424-423.000.

Kubis, Heribert; and Winter, Josef, to MAN Nutzfahrzeuge Aktiengesellschaft. Cylinder head sealing element for reciprocating piston engines. 5,010,853, Cl. 123-41.840.

Kubo, Keishi; Nagano, Hiroyuki; and Kubota, Saburo, to Matsushita Electric Industrial Co., Ltd. Velocity detector for detecting velocity from position detector outputting a pair of orthogonal signals. 5,012,188, Cl. 324-160.000.

Kubota, Akinori: *See—*
Katayama, Hideaki; Murakami, Toshifumi; Soeda, Koji; Kubota, Yoshiya; Okamoto, Shoji; Kubota, Akinori; Kobayashi, Michihito; and Ijiri, Masaaki, 5,011,392, Cl. 425-35.000.

Kubota, Ryuji: *See—*
Tominaga, Kenji; Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo; Morishima, Hideo; Nakayama, Takashi; Moriya, Kumiaki; Matsumoto, Masaki; Akita, Minoru; Niino, Tsuyoshi; Ochiai, Kanehiro; Shiozawa, Akihiko; Uchiyama, Yuichi; Yasuno, Toyoharu; Moriya, Kenji, Kinoshita, Shouichirou; Kage, Kazuo; and Kubota, Ryuji, 5,011,652, Cl. 376-283.000

Kubota, Saburo: *See—*
Kubo, Keishi, Nagano, Hiroyuki; and Kubota, Saburo, 5,012,188, Cl. 324-160.000.

Kubota, Tsutomu *See—*
Nakai, Yoshikazu; and Kubota, Tsutomu, 5,011,560, Cl. 156-273.300.

Kubota, Yoshiya: *See—*
Katayama, Hideaki; Murakami, Toshifumi; Soeda, Koji; Kubota, Yoshiya; Okamoto, Shoji, Kubota, Akinori, Kobayashi, Michihito; and Ijiri, Masaaki, 5,011,392, Cl. 425-35.000

Kudlac, Barbara L. Platform having a notch and plug member therefor. 5,010,826, Cl. 108-25.000.

Kudo, Jun: *See—*
Konushi, Fumihiro; Seki, Akinori; Kudo, Jun; and Koba, Masayoshi, 5,011,550, Cl. 148-33.500.

Kudou, Yoshinobu: *See—*
Ushijima, Nobuyoshi; Masuda, Hiroshi; Ishibashi, Akira; Satou, Masahiko; Haruna, Toshiyuki, Takayama, Norikazu, and Kudou, Yoshinobu, 5,012,166, Cl. 318-254.000.

Kuge, Tsukasa: *See—*
Sakurai, Masaaki; Yamamoto, Iichiro; Goto, Masahiro; Kuge, Tsukasa; and Shigenobu, Michio, 5,011,401, Cl. 432-60.000.

Kulkarni, Prabhakar Method and apparatus for treatment of hazardous waste in absence of oxygen. 5,010,829, Cl. 110-346.000.

Kumar, Anand *See—*
Cram, Donald J., Chapoteau, Eddy, Czech, Bronislaw P., Gebauer, Carl R., Helgeson, Roger C., Kumar, Anand, and Leong, Koon-Wah, 5,011,924, Cl. 540-469.000.

Kumazaki, Hiroshi: *See—*
Harada, Susumu, and Kumazaki, Hiroshi, 5,012,426, Cl. 364-476.000

Kumazawa, Takeshi. *See—*
Isshiki, Masao, and Kumazawa, Takeshi, 5,010,739, Cl. 62-158.000.

Kume, Masafumi *See—*
Hiraki, Tadayoshi; Iwase, Osamu; Oosumimoto, Hiroshi; Sugiura, Shinji, Tabushi, Ichiro; Kume, Masafumi, Udagawa, Takashi, Matsui, Komaharu; and Fujii, Yasuhiro, 5,011,733, Cl. 428-336.000

Kumm, Emerson L., to Kumm Industries, Inc. Continuously variable transmission using planetary gearing with regenerative torque transfer and employing belt slip to measure and control pulley torque 5,011,458, Cl. 474-49.000

Kumm Industries, Inc. *See—*
Kumm, Emerson L., 5,011,458, Cl. 474-49.000.

Kummer Freres SA Fabrique de machines *See—*
Leiber, Hans J., 5,010,793, Cl. 82-19.000.

Kumobayashi, Hidenori, and Taketomi, Takanao, to Takasago International Corporation. 2,2'-bis(di-(m-tolyl)phosphino)-1,1'-binaphthyl 5,012,002, Cl. 568-17.000.

Kung, Viola T., Nagainis, Peter A.; and Sheldon, Edward L., III, to Molecular Devices, Inc. DNA detection method. 5,011,770, Cl. 435-6.000

Kunishige, Seiji: *See—*
Takahashi, Shoichi, Ichiki, Sayohiko; Yorozu, Masatoshi, Kunishige, Seiji; Shibagaki, Taro; Shimizu, Fumihiko, Fujioka, Fumio, and Kondo, Toshinori, 5,012,240, Cl. 341-101.000.

Kunitake, Yoshikuni; and Harita, Yasuhiro, to Mitsui Engineering & Shipbuilding Co., Ltd. Semi-submerged glass boat. 5,010,835, Cl. 114-66.000

Kunze, Dieter; and Giebel, Wolfgang, to Siemens Aktiengesellschaft. Apparatus and method for introducing a cable-like element into a pipe and elements suitable therefor. 5,011,332, Cl. 405-158.000.

Kurabayashi, Ken, Tsuchiya, Yoshinobu; and Niida, Yoriaki, to Isuzu Motors Limited. Structure for arranging electrical double-layer capacitor cells 5,012,385, Cl. 361-328.000.

Kurahashi, Hideyuki *See—*
Hyodo, Haruhiro; and Kurahashi, Hideyuki, 5,012,277, Cl. 355-55.000.

Kurahashi, Ryurou *See—*
Murakami, Yasuo, Matsumoto, Yoichi, Ishii, Shinjiro; Kurahashi, Ryurou, and Nakamura, Mitsuru, 5,011,304, Cl. 384-492.000.

Kurahashi, Wataru *See—*
Yamashita, Hiroki; Kinoshita, Keichi; Matsui, Toshio; Kurahashi, Wataru, and Yasuda, Katsuya, 5,012,297, Cl. 355-321.000.

Kuraray Co., Ltd.. *See—*
Tanaka, Yasuyuki; Ibata, Koichi; Mizuno, Masao; Ninagawa, Yoichi; and Nishida, Takashi, 5,012,018, Cl. 568-909.500.

Kurashiki Boseki Kabushiki Kaisha: *See—*
Tsugita, Hiroshi; and Shimizu, Takao, 5,011,557, Cl. 156-180.000.

Kurata, Takatsugu, and Nishide, Takuya, to Matsushita Electric Industrial Co., Ltd. Field discrimination circuit. 5,012,339, Cl. 358-148.000.

Kurematsu, Masayuki: *See—*
Kobayashi, Kazuhiro; Koboshi, Shigeharu; Goto, Nobutaka; Kurematsu, Masayuki; and Takabayashi, Naoki, 5,011,571, Cl. 159-47.300

Kuribayashi, Mototaka, to Kabushiki Kaisha Toshiba. Semiconductor integrated circuit and method of manufacturing the same. 5,012,427, Cl. 364-490.000.

Kurihara, Yasuo. *See—*
Totani, Tuyoshi; Yamamoto, Tatuo; and Kurihara, Yasuo, 5,011,602, Cl. 210-484.000.

Kuriyama, Juzo: *See—*
Kawanabe, Tasuku; and Kuriyama, Juzo, 5,012,063, Cl. 219-69.120.

Kuroda, Shigeo: *See—*
Kawaji, Mikinori; Takakura, Toshihiko; Uchida, Akihisa; Kuroda, Shigeo; Tamaki, Yoichi; Shiba, Takeo; Sagara, Kazuhiko; and Kawamura, Masao, 5,011,788, Cl. 437-67.000.

Kuroda, Shoji: *See—*
Ogino, Masanori; Iwahara, Yoshiaki; Tamura, Yuzo; and Kuroda, Shoji, 5,011,277, Cl. 353-94.000.

Kuroda, Tokuyuki. *See—*
Masada, Tomoaki; Ueno, Yasuhiko; Hayakawa, Eiji; Naganuma, Hirotake; Terajima, Mitsuru, Kuroda, Tokuyuki, Shuto, Katsuchi, and Ichikawa, Shunji, 5,011,824, Cl. 514-13.000.

Kurosawa, Yukio: *See—*
Tsukushi, Masanori; Koyanagi, Osamu; Seki, Yasuharu; Goto, Tokio; and Kurosawa, Yukio, 5,012,051, Cl. 200-148.00B.

Kurth, Herman; Kemble, David; and Ubungen, Romeo N. Insulation access aperture liner. 5,010,926, Cl. 138-149.000.

Kurtz, Andrew F. *See—*
DeJager, Donald; Kurtz, Andrew F.; Kessler, David; and Moore, Leslie G., Jr., 5,012,346, Cl. 358-214.000.

Kurtz, Robert J.; and LiCausi, Joseph, to BioResearch, Inc. Combined surgical drainage and autotransfusion apparatus. 5,011,470, Cl. 604-4.000.

Kurusu, Yasuo; Cho, Masamichi; Nagata, Shinichi; Tomohisa, Kunio; and Shirota, Hiroyuki, to Dainippon Screen Mfg. Co., Ltd. Scanning

beam control system and optical scale structure useful thereto 5,012,089, Cl. 250-235.000

Kushner, Joseph R. *See—*
Coltrane, Jack D.; and Kushner, Joseph R., 5,011,021, Cl. 206-620.000

Kusumoto, Keiji; Yamada, Hirokazu, and Ideyama, Hiroyuki, to Minolta Camera Kabushiki Kaisha. Image forming apparatus having a jam counter adapted to be disabled until a ready for copy state is confirmed 5,012,281, Cl. 355-206.000

Kuttner, Franz, to Siemens Aktiengesellschaft. Method for determining and processing correction values for self-calibrating A/D and D/A converters, and calculating register for performing the method. 5,012,241, Cl. 341-120.000

Kuty, Donald W. *See—*
Kawasaki, Sadanobu, Koishikawa, Jun, and Kuty, Donald W., 5,011,391, Cl. 445-24.000.

Kuwada, Kazuhiko. *See—*
Michimoto, Takashi; Nakamoto, Yukinari; Kuwada, Kazuhiko; and Ishida, Nobuyoshi, 5,011,810, Cl. 502-439.000

Kuwajima, Teruaki, Nagahata, Satoshi; and Kanakura, Akihiro, to Nippon Paint Co., Ltd. Metallic pigment composition. 5,011,533, Cl. 106-404.000.

Kuwana, Minoru. *See—*
Ueyama, Masayuki; and Kuwana, Minoru, 5,011,273, Cl. 350-429.000

Kuznicki, Steven M., to Engelhard Corporation. Large-pored crystalline titanium molecular sieve zeolites. 5,011,591, Cl. 208-46.000.

Kuznicki, Steven M., and Whyte, John R., Jr., to Engelhard Corporation Self-bound sodium chabazite aggregates and methods for preparation thereof. 5,011,667, Cl. 423-118.000

Kvita, Vratislav, Baumann, Marcus; Fischer, Walter; Mayer, Carl W.; and Allmendinger, Thomas, to Ciba-Geigy Corporation. Substituted α-pyrones 5,011,944, Cl. 549-214.000

Kyburz, Emilio *See—*
Gassner, Walter; Imhof, Rene, and Kyburz, Emilio, 5,011,849, Cl. 514-365.000.

Kychakoff, George; and Ort, Gene P., to Wyerehaeuser Company. Apparatus for detecting carryover particles in the interior of a furnace 5,010,827, Cl. 110-185.000

Kyi, Ben-I. Self adaptive and shadow sensitive electronic musical instrument 5,012,085, Cl. 250-221.000.

Kyoritsu Gokin Mfg. Co., Ltd *See—*
Matsumoto, Kozo; and Asakawa, Hiroyoshi, 5,011,083, Cl. 239-590.500.

Kyowa Hakko Kogyo Co., Ltd. *See—*
Masada, Tomoaki, Ueno, Yasuhiko; Hayakawa, Eiji; Naganuma, Hirotake, Terajima, Mitsuru, Kuroda, Tokuyuki, Shuto, Katsuchi, and Ichikawa, Shunji, 5,011,824, Cl. 514-13.000
Takahashi, Mitsuru, Kitamura, Shigeto; Kase, Hiroshi; Kasai, Masaji, Kawamoto, Isao, Iida, Takao, Sano, Hiroshi; Saito, Hiromitsu, Yamada, Koji, and Murakata, Chikara, 5,011,854, Cl. 514-541.000

La-Z-Boy Chair Company *See—*
LaPointe, Larry P., 5,011,220, Cl. 297-89.000.

Laboratori Guidotti: *See—*
Sbarbaro, Franco, 5,011,974, Cl. 560-118.000

Labrum, Randall C. Resilient door knob 5,011,204, Cl. 292-347.000

Lacey, Edward H. Feeder for seed cleaner. 5,011,025, Cl. 209-618.000.

LaChance, Nancy: *See—*
LaChance, Robert J., Jr., and LaChance, Nancy, 5,011,156, Cl. 273-237.000

LaChance, Robert J., Jr., and LaChance, Nancy. Board game apparatus 5,011,156, Cl. 273-237.000.

Lackner, Anna M.. *See—*
Miller, Leroy J.; Smith, Willis H., Jr.; Lackner, Anna M.; and Margerum, J. David, 5,011,267, Cl. 350-340.000.

Lacowski, Jacek *See—*
Bryskiewicz, Barbara G., Bryskiewicz, Tadeusz R.; Dabkowski, Ferdynand P.; Lacowski, Jacek; and Gatos, Harry C., 5,011,564, Cl. 156-624.000

Lacza, Joseph. Method of playing a probability game. 5,011,160, Cl. 273-268.000.

Ladd, Kevin L.: *See—*
Keller, James B., Ladd, Kevin L.; and Reisert, James J., 5,012,403, Cl. 364-200.000.

LaForge, David H., to Baxter International, Inc. Apparatus and method for calorimetrically determining battery charge state. 5,012,176, Cl. 320-31.000.

Lai, Benny W. H., and Walker, Richard C., to Hewlett-Packard Company Method and apparatus for clock recovery and data retiming for random NRZ data. 5,012,494, Cl. 375-120.000.

Laitram Corporation, The. *See—*
Lapeyre, James M.; and Lapeyre, George C., 5,011,453, Cl. 452-10.000

Lakhani, Kishor M.: *See—*
Fulton, Alfred L., Lakhani, Kishor M.; Sampson, Scott D.; and Lowman, Kent, 5,012,261, Cl. 346-159.000.

Lalwani, Steven S.. *See—*
Chich, Adem; Lalwani, Steven S., Bettoli, Steven C.; Grube, Louis L.; and Bondoc, Alfredo A., 5,011,726, Cl. 428-141.000.

Lamb, Mark A. Home traction device. 5,010,880, Cl. 128-71.000.

Lamb, Walter R.; and Griffin, Darrell, to Electric Power Research Institute. Method of making passivated antireflective coating for photovoltaic cell. 5,011,782, Cl. 437-2.000

Lambert, Laurence C., to United States of America, Air Force. Autonomous face recognition machine. 5,012,522, Cl. 382-2.000.

Lambregts, Augustinus W. M.. *See—*
Dinnissen, Johannes H. T.; and Lambregts, Augustinus W. M., 5,012,296, Cl. 355-320.000.

Lamle, Stewart M. Video card game. 5,011,146, Cl. 273-85.0CP.

Lammers, Bryan G.; and Fee, David M., to Caterpillar Inc. Power transfer assembly with one-piece retainer ring. 5,010,984, Cl. 188-71.500.

Lanan, Glenn A., to Intec Engineering, Inc. Underwater pipe laying apparatus. 5,011,333, Cl. 405-166.000

Landa, Benzion: *See—*
Levanon, Moshe; Grossinger, Israel, Adam, Yossi, and Landa, Benzion, 5,012,300, Cl. 355-328.000

Landbeck, Friedrich. *See—*
Rathfelder, Paul; Sagala, Jozef; Landbeck, Friedrich; and Matschkal, Heinz, 5,011,499, Cl. 8-94.330.

Landberg, Jakob: *See—*
Jensen, Aage, Stingsen, Jeppe; and Landberg, Jakob, 5,010,612, Cl. 8-149.100

Landesman, Robert E.: *See—*
Mitchell, Thomas R., and Landesman, Robert E., 5,012,457, Cl. 367-175.000

Landman, Dirk: *See—*
Johnson, Melvin H.; Krauss, Leland L., and Landman, Dirk, 5,011,256, Cl. 350-96.200.

Lane, Kelley R.; and Schammel, Wayne P., to Amoco Corporation. Process for preparing polybutenes with increased reactivity. 5,012,030, Cl. 585-527.000.

Lanfranco, Antonello, to Aspera S.r.l. Method for the assembly of small electrical machines. 5,010,638, Cl. 29-596.000

Lang, Stuart E., and Fairhurst, Jon, to Dubner Computer Systems, Inc.; and Grass Valley Group, Inc., The. Method of encoded video decoding. 5,012,329, Cl. 358-31.000.

Lang, Thomas: *See—*
Nash, J. Gregory; Ercegovac, Milos, and Lang, Thomas, 5,012,439, Cl. 364-766.000.

Lange, David V., and Filzen, Scott E., to Beloit Corporation. Extended nip press apparatus with blanket edge seals. 5,011,578, Cl. 162-358.000.

Lange, Peter M.: *See—*
Schleppinghoff, Bernhard; Niederberger, Hans-Ludwig; Gabel, Christian; Lange, Peter M., and Mitschker, Alfred, 5,012,031, Cl. 585-639.000.

Langen, Marinus J. M.: *See—*
Guttinger, Peter, and Langen, Marinus J. M., 5,011,132, Cl. 271-315.000.

Langer, Eberhard: *See—*
Wettengel, Lothar; and Langer, Eberhard, 5,012,395, Cl. 362-222.000.

Langford, Frederick. Waterslide with uphill run and flotation device therefor. 5,011,134, Cl. 272-56.50R

Langhorst, Martin A., to Dow Chemical Company, The. Hydrodynamic chromatography method 5,011,606, Cl. 210-635.000

Langsjoen, Per H.; Folkers, Karl A.; and Langsjoen, Peter H., to Board of Regents, The University of Texas System, The. Therapy with coenzyme Q_{10} of patients having AIDS or other retroviral diseases. 5,011,858, Cl. 514-690.000.

Langsjoen, Peter H.. *See—*
Langsjoen, Per H.; Folkers, Karl A., and Langsjoen, Peter H., 5,011,858, Cl. 514-690.000.

Lanham, Terry M. Electro-acoustic connector for amplified musical instruments. 5,010,802, Cl. 84-743.000.

Lanham, William E., to APV Baker Inc. Spiral conveyor oven. 5,010,808, Cl. 99-443.00C.

Lantagne, John A.; Johnson, Edward G.; and Virostko, Michael J., to Raytheon Company. Broadband stripline coupler. 5,012,209, Cl. 333-116.000.

Lantz, Joel B., to Neundorfer, Inc. Method and apparatus for optimization of feedwater heater liquid level. 5,012,429, Cl. 364-509.000.

Lanxide Technology Company, LP. *See—*
Burke, John T., 5,010,945, Cl. 164-97.000.
Claar, Terry D., 5,011,063, Cl. 228-122.000.

Lapeyre, George C.: *See—*
Lapeyre, James M.; and Lapeyre, George C., 5,011,453, Cl. 452-10.000.

Lapeyre, James M.; and Lapeyre, George C., to Laitram Corporation, The. Centrifugal crab meat extraction apparatus. 5,011,453, Cl. 452-10.000.

LaPointe, Larry P., to La-Z-Boy Chair Company. Chair mechanism. 5,011,220, Cl. 297-89.000.

Larreategui, Fred E. Inflatable child holder 5,011,056, Cl. 224-159.000.

Larson, Arthur C.: *See—*
Halsey, Brenton S., Jr.; and Larson, Arthur C., 5,010,701, Cl. 52-233.000.

Laser Precision Corporation *See—*
Doyle, Walter M.; and Hughes, Norman S., 5,011,243, Cl. 350-1.200

Laskaris, Michael A.; Broitman, Kalman, Teske, Richard E.; Miller, David L., and Sulmone, Michael, to Hale Fire Pump Company. Portable engine-pump assembly. 5,010,870, Cl. 123-576.000.

Lassiter, Wallace R., to R. J. Reynolds Tobacco Company. Method and apparatus for detecting loose ends of cigarettes. 5,010,904, Cl. 131-280.000.

Lastovica, John E., Jr.: *See*—
Bowman, Robert G., Hartwell, George E., Molzahn, David C., Ramirez, Enrique G., and Lastovica, John E., Jr., 5,011,999, Cl. 564-479.000.

Latham, Carol A.; and McGuigan, Michael F., to Carborudum Company, The. Thermally conductive ceramic/polymer composites. 5,011,872, Cl. 523-440.000.

Latone, Thomas L.: *See*—
van Hekken, Hendrik R.; and Latone, Thomas L., 5,011,227, Cl. 297-434.000.

Lattekamp, Matthias: *See*—
Buschfeld, Adolf; Lattekamp, Matthias; Ripkens, Gerd, and Schittek, Hans, 5,011,886, Cl. 524-596.000.

Laucht, Horst, Baur, Richard, Werner, Bernd; Nilsson, Karl E.; and Hora, Peter, to Messerschmitt-Boelkow-Blohm GmbH, and Bayern-Chemie Gesellschaft fuer Flugchemische Antriebe. Steering wheel mounted air bag module including electromagnetically shielded sensor. 5,011,181, Cl. 280-731.000.

Laughlin, James L.: *See*—
Boudreau, Michael P.; Jacoby, Randall W., and Laughlin, James L., 5,010,881, Cl. 128-76.00R.

Laurel Bank Machines Co., Ltd.: *See*—
Tsuji, Keiji, 5,011,128, Cl. 271-263.000.

Lausberg, Dietrich: *See*—
Rosenau, Bernhard; Hisgen, Bernd; Heinz, Gerhard; Braun, Hans-Georg; Lausberg, Dietrich; and Zeiner, Hartmut, 5,011,884, Cl. 524-537.000.

Lautzenhiser, John L.: *See*—
Lautzenhiser, Lloyd L., and Lautzenhiser, John L., 5,012,165, Cl. 318-53.000.

Lautzenhiser, Lloyd L.; and Lautzenhiser, John L. Conveyance with electronic control for left and right motors. 5,012,165, Cl. 318-53.000.

Lawler Manufacturing Co., Inc.: *See*—
Kline, Kevin B., 5,011,074, Cl. 236-12.130.

Layton, Michael R., to Litton Systems, Inc. Fiber optic sensor array. 5,011,262, Cl. 350-96.290.

LazerData Corporation: *See*—
Singh, Ishwar, and Senkevich, William, 5,012,079, Cl. 235-467.000.

Le, Son; and Yang, Phillip. Cover and connector for hypodermic needle. 5,011,479, Cl. 604-198.000.

Le, Tri C., to Baroid Technology, Inc. BOP seal with improved metal inserts. 5,011,110, Cl. 251-1.100.

Leander, Leif, to VMK Fish Machinery AB. Apparatus for packaging fishes in cans. 5,010,713, Cl. 53-142.000.

Le Baud, Patrice, to Societe d'Etudes Techniques et d'Entreprises Generales-Sodeteg. Device for multimeasurement of vertical position variation and a level-setting system equipped with said device. 5,010,768, Cl. 73-299.000.

Le Beau, Christopher J., to Motorola, Inc. Automatic inspection method. 5,012,524, Cl. 382-8.000.

Le Blanc, Joseph R., to M W Kellogg Company, The. Autothermal steam reforming process. 5,011,625, Cl. 252-376.000.

Leco Corporation: *See*—
Verel, Edward A., 5,011,050, Cl. 222-600.000.

Lee, C. S.: *See*—
Ream, Stanley L., Lee, C. S., Lim, G. C., and Fukae, Kenneth, 5,011,282, Cl. 356-153.000.

Lee, Chein-Dhau: *See*—
Lee, Rong-Jer, Lee, Chein-Dhau; and Shen, Wen-Shin, 5,011,762, Cl. 430-281.000.

Lee, Chun-Te: Wire connector. 5,011,440, Cl. 439-857.000.

Lee, Eva Y. P.: *See*—
Lee, Wen-Hwa; and Lee, Eva Y. P., 5,011,773, Cl. 435-69.100.

Lee, Gim F., Jr.: *See*—
Abolins, Visvaldis, Betts, Joseph E., Holub, Fred F., and Lee, Gim F., Jr., 5,011,736, Cl. 428-407.000.

Lee, Gregory S., to TRW Inc. Superconducting analog-to-digital converter with floating four-junction squid bidirectional counter. 5,012,243, Cl. 341-133.000.

Lee, Hsien-Che; Kaplan, Martin C.; and Goodwin, Robert M., to Eastman Kodak Company. Interactive dynamic range adjustment system for printing digital images. 5,012,333, Cl. 358-80.000.

Lee, Jimmy L., to Zenion Industries, Inc. Air ionization system for internal combustion engines. 5,010,869, Cl. 123-539.000.

Lee, Rong-Jer, Lee, Chein-Dhau; and Shen, Wen-Shin, to Industrial Technology Research Institute. Photosensitive compositions having enhanced photopolymerization rate. 5,011,762, Cl. 430-281.000.

Lee, Seok-jeong: *See*—
An, Hyeong-keun; Kim, Young-cheol; Lee, Seok-jeong; and Yu, Jung-jae, 5,012,451, Cl. 365-230.050.

Lee, Swye N., to David Sarnoff Research Center, Inc. High speed frequency divider circuit. 5,012,497, Cl. 377-118.000.

Lee, Wen-Hwa; and Lee, Eva Y. P., to Reagents of the University of California, The. Human esterase D, its uses and a process of purification. 5,011,773, Cl. 435-69.100.

Lee, William A.: *See*—
Wang, Yu-chang J.; Lee, William A., and Narog, Blair, 5,011,678, Cl. 424-45.000.

Lee, William R.: *See*—
Hazen, James R., and Lee, William R., 5,011,997, Cl. 564-335.000.

Lee, Woodrow W., to United States of America, Navy. Launching projectiles with hydrogen gas generated from titanium-water reactions. 5,010,804, Cl. 89-7.000.

Leech, Danny R., to Du Pont de Nemours, E. I., and Company. Cleaning of fouled spinneret parts. 5,011,541, Cl. 134-34.000.

Leever, Richard: *See*—
Myers, David J.; Leever, Richard; Gibbs, Mary; and Wright, John T. M., 5,011,481, Cl. 606-1.000.

Leiber, Hans J., to Kummer Freres SA Fabrique de machines. Machining apparatus for precise turning of an outside surface. 5,010,793, Cl. 82-19.000.

Leibovitz, Jacques, to Hewlett-Packard Company. Process using supercritical conditions for producing highly accurate and homogeneous powder mixture useful in fabrication of high quality ceramic superconductors. 5,011,819, Cl. 505-1.000.

Leighton, Suzanne E., Kemp, Raymond J., and Hawkins, Philip D., to Kemp, Raymond J.; and Leighton, Suzanne E. Telephone activated emergency light system. 5,012,507, Cl. 379-37.000.

Le Loarer, Jean-Luc, to Rhone-Poulenc Chimie. Ceric oxide with new morphological characteristics and method for obtaining same. 5,011,671, Cl. 423-592.000.

Lemchen, Marc S., to Dolphin Imaging Systems. Method for determining orthodontic bracket placement. 5,011,405, Cl. 433-24.000.

Lennon, Charles A., and Lowe, George, to Lennon, Charles A. User wearable personal/medical information device. 5,012,229, Cl. 340-706.000.

Lenselink, Willem, to PFW(Nederland)B.V. Nitriles useful in perfume. 5,011,970, Cl. 558-430.000.

Lenti, Daria, and Visca, Mario, to Ausimont S.r.l. Use of perfluoropolyether derivatives in the form of an aqueous emulsion for protecting stony materials from atmospheric agents. 5,011,713, Cl. 427-393.600.

Lentini, Salvatore; and Patti, Giuseppe, to Italtel Societa Italiana Telecomunicazioni S.p.A. Circuit to inhibit voltage and current returns to the electric power distribution line in an inverter-type power plant. 5,012,122, Cl. 307-66.000.

Leonard, Giles J.; and Marberry, Michael L., to Proctor & Gamble Company, The. Oral compositions having improved anticalculus properties containing pyrophosphate and an acrylic acid polymer. 5,011,830, Cl. 424-57.000.

Leong, Koon-Wah: *See*—
Cram, Donald J.; Chapoteau, Eddy; Czech, Bronislaw P., Gebauer, Carl R., Helgeson, Roger C., Kumar, Anand; and Leong, Koon-Wah, 5,011,924, Cl. 540-469.000.

Leopold Kostal GmbH & Co. KG, Firma: *See*—
Abel, Thomas, and Hirschfeld, Klaus, 5,012,056, Cl. 200-519.000.

Le Path, Michele: *See*—
Guiberteau, Christian, Ruggeri, Stephane; and Le Path, Michele, 5,012,084, Cl. 250-211.00R.

Lerner, Michael I.: *See*—
Bernstein, Michael S.; Crossley, David W.; and Lerner, Michael I., 5,010,606, Cl. 4-572.000.

Lerner, Moisey M.: *See*—
Dabuzhsky, Leonid V., and Lerner, Moisey M., 5,010,662, Cl. 36-28.000.

Leske, Werner: *See*—
Lutz, Klaus, Baer, Hans-Joachim; Starz, Karl-Anton; Leske, Werner, and Mueller, Harry, 5,011,627, Cl. 252-512.000.

Lesser, Emmett H. Microwave safety lid. 5,012,061, Cl. 219-10.55E.

Leutz, Reiner: *See*—
Heimerl, Albert; Schulte, Dietrich; Gotz, Gabriela; and Leutz, Reiner, 5,011,492, Cl. 606-215.000.

Levanon, Moshe; Grossinger, Israel; Adam, Yossi, and Landa, Benzion, to Spectrum Sciences B.V. Two-color imaging system and process. 5,012,300, Cl. 355-328.000.

Levar, Robert E.: *See*—
Zupancic, Anton Z.; Palermo, Anthony; and Levar, Robert E., 5,012,505, Cl. 378-130.000.

Leveen, Harry H. Apparatus for deep heating of cancer. 5,010,897, Cl. 128-804.000.

Lever Brothers Company, division of CONOPCO, Inc.: *See*—
Schepers, Frederik J., 5,011,622, Cl. 252-174.150.

Levery, Steven B.: *See*—
Hakomori, Sen-itiroh; Fukushi, Yasuo; Nudelman, Edward D.; and Levery, Steven B., 5,011,920, Cl. 536-53.000.

Levi, Anthony F. J.: *See*—
Dykaar, Douglas R.; and Levi, Anthony F. J., 5,012,319, Cl. 357-55.000.

Levi, Avraham Y.; and Quarberg, Craig D., to A C Innovations, Inc. Locking mechanism for telescoping tubular poles. 5,011,319, Cl. 403-109.000.

Levine, Seymour: *See*—
Jungwirth, Douglas R.; Simpson, A. Phillip; Kawahara, Mitsuo; Levine, Seymour; and Kennel, John M., 5,012,081, Cl. 250-203.600.

Levinson, Arthur D.; Pennica, Diane; Kohr, William J.; Vehar, Gordon A.; Goeddel, David V.; Yelverton, Elizabeth M.; and Simonsen, Christian C., to Genentech, Inc. Human tPA production using vectors coding for DHFR protein. 5,011,795, Cl. 435-69.200.

Lewak, Jerzy J.: *See*—
Weinreb, Robert N.; Lewak, Jerzy J.; and Dreher, Andreas W., 5,012,496, Cl. 377-21.000.

Lewallen, Sandra, to General Motors Corporation. Concealed integrated seat cargo screen. 5,011,208, Cl. 296-37.160.

Lewis, Paul: *See*—
Chen, Hsiang M.; Lewis, Paul; and Wilson, Donald S., 5,011,108, Cl. 248-550.000.

Lewtas, Kenneth; and Bland, Jacqueline D., to Exxon Chemical Patents Inc. Flow improvers and cloud point depressants. 5,011,505, Cl. 44-393.000.

Leybold Aktiengesellschaft: *See*—
Dietrich, Anton; Hartig, Klaus; Schaefer, Hans-Christian; and Szczyrbowski, Joachim, 5,011,745, Cl. 428-630.000.
Stenzel, Otto W., 5,012,488, Cl. 373-156.000.

Li, Simon M. K., to Shell Oil Company. Process for preparing tetraphenolic compounds. 5,012,016, Cl. 568-720.000.

Liang, Bob C.: *See*—
Callahan, Robert M.; Hempel, Bruce C., and Liang, Bob C., 5,012,433, Cl. 364-518.000.

Liang, Rong-Chang: *See*—
Chen, Jing-Den; Kovacs, Kerry; Thomas, Margaret T., and Liang, Rong-Chang, 5,011,885, Cl. 524-591.000.

Libman Company, The: *See*—
Berti, Enzo, 5,010,616, Cl. 15-159.00R.

LiCausi, Joseph: *See*—
Kurtz, Robert J., and LiCausi, Joseph, 5,011,470, Cl. 604-4.000.

Licter, Philip L.; and Waterman, John K., to Raytheon Company. Method testing electron discharge tubes. 5,012,194, Cl. 324-405.000.

Lieber, Winfried, and Eder, Thomas, to Siemens Aktiengesellschaft. Method for aligning two waveguide fiber ends and an apparatus for performing the method. 5,011,259, Cl. 350-96.210.

Liebers, Lutz: *See*—
Karafa, Nandor; and Liebers, Lutz, 5,012,117, Cl. 250-572.000.

Lilge, Dieter: *See*—
Auweter, Helmut, Horn, Dieter, Lilge, Dieter; and Wortmann, Juergen, 5,011,279, Cl. 356-28.500.

Lim, G. C.: *See*—
Ream, Stanley L., Lee, C. S.; Lim, G. C.; and Fukae, Kenneth, 5,011,282, Cl. 356-153.000.

Limburg, William W., Yanus, John F.; Renfer, Dale S.; Schank, Richard L., and Ong, Beng S., to Xerox Corporation. Hydroxy functionalized arylamine compounds. 5,011,939, Cl. 548-440.000.

Lin, Jui C., to Taiwan Fu Hsing Industry Co., Ltd. Locking device for an auxiliary lock. 5,010,749, Cl. 70-190.000.

Lin, Leu-Fen: *See*—
Collins, Franklin D., and Lin, Leu-Fen, 5,011,914, Cl. 530-399.000.

Lin, Paul: *See*—
McShane, Michael B.; and Lin, Paul, 5,012,386, Cl. 361-386.000.

Lin, Ruey J., to Taiwan Fu Hsing Industry Co., Ltd. Structure for controlling the dead bolt in an electronic lock. 5,010,752, Cl. 70-277.000.

Lin, Sung-Wei: *See*—
Gill, Manzur, D'Arrigo, Sebastiano, and Lin, Sung-Wei, 5,012,307, Cl. 357-23.500.

Lincoln Foodservice Products, Inc.: *See*—
Henke, Mitchell C., 5,012,071, Cl. 219-400.000.

Lind, Kalevi: *See*—
Karna, Toivo, and Lind, Kalevi, 5,012,175, Cl. 320-2.000.

Lindmayer, Joseph, to Quantex Corporation. Photomultiplier with infrared sensitivity. 5,012,098, Cl. 250-339.000.

Linear Technology Corporation: *See*—
Khadder, Wadie N., Vokac, James P. and Dobkin, Robert C., 5,012,305, Cl. 357-22.000.

Linkies, Adolf: *See*—
Clauss, Karl; Linkies, Adolf; and Reuschling, Dieter, 5,011,982, Cl. 562-38.000.

Linton, Richard S.: *See*—
White, Ian H., and Linton, Richard S., 5,012,474, Cl. 372-27.000.

Lion Corporation: *See*—
Nakamura, Hirofumi; Nakamoto, Yuichi; and Fujimori, Yuji, 5,012,012, Cl. 568-618.000.

Lisec, Peter. Nozzle for drying sheet glass. 5,010,619, Cl. 15-307.000.

Litman, Alan M.: *See*—
Martin, Robert G.; and Litman, Alan M., 5,012,072, Cl. 219-469.000.

Littlebury, Hugh W., to Motorola, Inc. Method for parallel testing of semiconductor devices. 5,012,187, Cl. 324-158.00P.

Litton Systems, Inc.: *See*—
Layton, Michael R., 5,011,262, Cl. 350-96.290.

Liu, Kou-Chang; and Taylor, Paul D., to GAF Chemicals Corporation. Fluorinated vinyl ether. 5,012,011, Cl. 568-610.000.

Liu, Shiu-Yen. Telescopically-operated safety vehicle bumper. 5,011,205, Cl. 293-5.000.

Liu, Yu J.; and Rothweiler, Joseph, to ITT Corporation. Low-bit-rate speech coder using LPC data reduction processing. 5,012,518, Cl. 381-42.000.

Liuo, Chih C. Angle coupling structure for knockdown cabinets. 5,011,323, Cl. 403-172.000.

Lloyd, David K.: *See*—
Goodall, David M.; and Lloyd, David K., 5,012,101, Cl. 250-343.000.

Lo, I-Huan: *See*—
Siddio, Mohammed; and Lo, I-Huan, 5,012,377, Cl. 360-128.000.

Lockhead Missiles & Space Company, Inc.: *See*—
Kapolnek, Michael R.; Feild, Alexander R., Hartle, Robert T.; and Holmes, Hillard R., 5,010,951, Cl. 165-104.260.

Lockheed Corporation: *See*—
Munro, John R.; Jost, William R.; and Ash, Francis M., Jr., 5,012,248, Cl. 342-22.000.

Lockheed Missiles & Space Company, Inc.: *See*—
Blain, Jim W., 5,010,821, Cl. 102-275.800.

Loewy, Andreas F. Method of making a non-repetitive modular design. 5,011,411, Cl. 434-96.000.

Loffler, Gerhard, to Heidelberger Druckmaschinen AG. Process for the defined production of an ink distribution appropriate to a production run in the inking unit of rotary printing presses. 5,010,820, Cl. 101-484.000.

Login, Robert B.: *See*—
Chaudhuri, Ratan K.; Tracy, David J.; and Login, Robert B., 5,011,941, Cl. 548-550.000.

Logothetis, Eleftherios; and Soltis, Richard E., to Ford Motor Company. Measurement and control of exhaust gas recirculation with an oxygen pumping device. 5,010,762, Cl. 73-116.000.

Long Island Jewish Medical Center: *See*—
Maimon, Jonathan, 5,011,779, Cl. 435-293.000.

Loof, Ingemar, to AC Greiff Ytbehandling AB. Apparatus in a powder sprayer. 5,011,085, Cl. 239-690.000.

Lopez, Louis. Carton. 5,011,071, Cl. 229-117.000.

Lopp, Loran C., Jr.: *See*—
Bonko, Mark L.; and Lopp, Loran C., Jr., 5,010,935, Cl. 152-209.00B.

L'Oreal: *See*—
Grollier, Jean F.; and Fourcadier, Chantal, 5,011,500, Cl. 8-410.000.
Gueret, Jean-Louis, 5,011,317, Cl. 401-66.000.

Lorenz, Robert D.; and Jackson, Gregory T., to Wisconsin Alumni Research Foundation. Sensor tip for a robotic gripper and method of manufacture. 5,010,773, Cl. 73-862.040.

Loreth, Andrzej: *See*—
Torok, Vilmos; and Loreth, Andrzej, 5,012,159, Cl. 315-111.910.

Lori Corporation: *See*—
Boris, Frederick, Jr., 5,010,753, Cl. 70-371.000.
De Angelo, Nelson J.; and Theriault, Kenneth T., 5,010,754, Cl. 70-389.000.

Losacco, Anthony R.: *See*—
Schell, Russell W.; and Losacco, Anthony R., 5,011,707, Cl. 427-39.000.

Losi, Enrico, to Losi, Franca, a part interest. Appliance for correcting dental malpositions. 5,011,404, Cl. 433-19.000.

Losi, Franca: *See*—
Losi, Enrico, 5,011,404, Cl. 433-19.000.

Lostoski, Douglas A., to Automatic Sprinkler Corporation of America. Automatic sprinkler head. 5,010,959, Cl. 169-37.000.

Loudon, Robert W. Stabilizer system. 5,011,184, Cl. 280-766.100.

Love, Mickey L.; and Massey, Douglas V., to Dana Corporation. Bearing for a ball and socket joint. 5,011,320, Cl. 403-132.000.

Love, Samuel D. Safety alertness monitoring system. 5,012,226, Cl. 340-576.000.

Lovell, John G., Sr.; and Owens, Garry W., to Bonus Games. Electronic game display device. 5,011,157, Cl. 273-238.000.

Lowe, David J.; and Pritchard, Thomas B., to Hewlett-Packard Company. Ink jet color graphics printing. 5,012,257, Cl. 346-1.100.

Lowe, George: *See*—
Lennon, Charles A.; and Lowe, George, 5,012,229, Cl. 340-706.000.

Lowe, Peter E.; Muller, Peter H.; Coleman, Michael D., and Haeck, Paul J., to Von Duprin, Inc. Panic exit device having an exit-delaying mechanism. 5,011,199, Cl. 292-92.000.

Lowman, Kent: *See*—
Fulton, Alfred L.; Lakhani, Kishor M.; Sampson, Scott D.; and Lowman, Kent, 5,012,261, Cl. 346-159.000.

Lowrance, Arlen J. Racing gate for kites. 5,012,458, Cl. 368-10.000.

Lowry, Alan B.: *See*—
Joannou, Kyriacos; Wilson, Kenneth; and Lowry, Alan B., 5,012,376, Cl. 360-128.000.

LTV Aerospace and Defense Company: *See*—
Griffith, Jerry T.; and Pleva, Scott J., 5,010,658, Cl. 33-784.000.

Lubowitz, Hyman R.; and Sheppard, Clyde H., to Boeing Company, The. Polyimide oligomers and blends. 5,011,905, Cl. 528-170.000.

Lucas Industries Public Limited Company: *See*—
Basten, Mark J., 5,012,129, Cl. 307-270.000.
Edwards, Karl, 5,012,207, Cl. 324-166.000.
Russell, David F.; and Mungo, Keith, 5,010,985, Cl. 188-218.0XL.

Lucero, Daniel P.; and Hendrickson, Susan K., to IIT Research Institute. Environmental contamination detection and analyzing system and method. 5,010,776, Cl. 73-863.230.

Ludwig, Gerhard: *See*—
Schafer, Horst; Ludwig, Gerhard, and Sunderdiek, Rainer, 5,011,661, Cl. 422-30.000.

Ludwig, Henry F., to Morris Reisman. Sport card stabilizer. 5,011,072, Cl. 229-120.230.

Luhmann, Erhard: *See*—
Hoppe, Lutz; Koch, Wolfgang; Luhmann, Erhard; and Piepho, Michael, 5,011,874, Cl. 524-30.000.

Lumex, Inc.: *See*—
Towley, Carl K., III, 5,011,139, Cl. 272-118.000.
Towley, Carl K., III; and Johnson, Dennis C., 5,011,141, Cl. 272-123.000.

Lundquist, Ingemar H.; Tarczy-Hornoch, Zoltan; and Kardos, Thomas J., to Retroperfusion Systems, Inc. Retroperfusion and retroinfusion control apparatus, system and method. 5,011,468, Cl. 600-18.000.

Lundsgaard, Jorgen S.: *See*—
Shackle, Dale R.; Fauteux, Denis G., and Lundsgaard, Jorgen S., 5,011,501, Cl. 29-623.100.

Luryi, Sergey; and Xie, Ya-Hong, to AT&T Bell Laboratories. Vertical cavity semiconductor laser with lattice-mismatched mirror stack. 5,012,486, Cl. 372-45.000.

Lutz, Klaus; Baer, Hans-Joachim; Starz, Karl-Anton; Leske, Werner; and Mueller, Harry, to Degussa Aktiengesellschaft. Screen-printable paste for manufacturing electrically conductive coatings. 5,011,627, Cl. 252-512.000.

Luzzi, John J.: *See—*
Steinberg, David H.; and Luzzi, John J., 5,012,003, Cl. 568-123.000.

Lymburner, Frank M.; and Peterson, Charles M., to Peterson Elastomers, Inc. Encapsulating and patching elastomer for concrete repairs and method of making the same. 5,011,903, Cl. 528-76.000.

Lyonnaise des Eaux: *See—*
Feray, Cathy; and Hubele, Conrad, 5,011,613, Cl. 210-739.000.

Lytle, Robert C. Fish hook extraction device. 5,010,680, Cl. 43-53.500

M. W. Kellogg Company, The: *See—*
Le Blanc, Joseph R., 5,011,625, Cl. 252-376.000.

Ma, Kong; and Pinder, John T., to Rolls-Royce Inc. Barrier materials for laser drilling. 5,011,626, Cl 252-582.000.

Maan, Jack. Safety socket. 5,011,419, Cl. 439-145.000.

Maben, James W.; and Brown, Raymond G., to Sanders Associates. Power supply noise compensation for a high frequency phase detector. 5,012,131, Cl. 307-296.400.

MacDonald, Lindsay: *See—*
McGonigal, Stephen G.; and MacDonald, Lindsay, 5,012,048, Cl. 178-18.000.

Macdonell, Ranald I.: *See—*
Foley, John J.; Eide, Ralph M.; and Macdonell, Ranald I., 5,011,441, Cl 440-30.000

Machinenfabrik Schweiter AG: *See—*
Rebsamen, Arthur, 5,010,724, Cl. 57-270.000.

MacLean, Lachlan, Roberts, David L., Barron, Kenneth, Nichol, Kenneth J.; and Harrison, Albert E., to Boots Company PLC. The Process for the preparation of 1-methyl-3-methylthio-4-quinolone and the sulfinyl, and sulfonyl analogs thereof. 5,011,931, Cl. 546-155.000.

MacMillan, Colin G., to Post Office, The. Diverter. 5,010,998, Cl 198-372.000

Maddocks, Mark C. D., to British Broadcasting Corporation. Array antenna. 5,012,256, Cl. 343-754.000

Maeda, Masaya, to Canon Kabushiki Kaisha. Recording and/or reproducing apparatus in which the position of head means relative to the record bearing medium is controlled between two positions 5,012,374, Cl. 360-109.000.

Maeda, Sadao, to Maeda Shell Service Co., Ltd., and J & M Co., Ltd. In-line filter and trap structure device for compressed air 5,011,519, Cl 55-216.000

Maeda Shell Service Co., Ltd: *See—*
Maeda, Sadao, 5,011,519, Cl 55-216.000

Maeda, Yasushi: *See—*
Nose, Kazuo; Yamamoto, Hiroyuki, Koike, Shiro, Shimomura, Masakazu; Tsubono, Hajime, Kitagawa, Soichi; Fujisaki, Yasumasa, Maeda, Yasushi, Wakebe, Tetsuya, and Katayama, Yasuyuki, 5,010,756, Cl. 72-9.000

Maegawa, Yuzo: *See—*
Terao, Masanobu, Maegawa, Yuzo, Ueda, Yasuyoshi, Hashimoto, Kiyoyasu, and Omura, Takashi, 5,012,015, Cl. 568-709.000

Maekawa, Takashi: *See—*
Hosokawa, Yoshiaki; Kanoh, Masaki, Maekawa, Takashi, and Nakayasu, Hirofumi, 5,011,312, Cl 400-225.000

Magarshack, John, to Thomson-CSF. Interconnection device between the cells of a pre-implanted hyperfrequency integrated circuit 5,012,321, Cl 357-71.000.

Magne, Francois: *See—*
Paturel, Serge; and Magne, Francois, 5,012,099, Cl 250-342.000

Magni Systems, Inc: *See—*
Schuster, Daniel L., 5,012,331, Cl 358-37.000

Mahoney, Robert D: *See—*
Overman, Dana C., III, Kau, Jee I., and Mahoney, Robert D., 5,011,637, Cl 264-41.000

Maier, Willy; and Bachmann, Thomas, to Daverio AG. Sorting apparatus. 5,011,131, Cl. 271-289.000

Maimon, Jonathan, to Long Island Jewish Medical Center. Apparatus for rapid deposition of test samples on an absorbent support 5,011,779, Cl 435-293.000.

Maiuccoro, John V., and Gardenier, John, to Saratoga Spa & Bath. Modular stair support fixtures having alternate packaging usage 5,010,699, Cl 52-169.800.

Maki, Kenichiro: *See—*
Sano, Kenichi, Maki, Kenichiro, and Kamei, Hideyuki, 5,011,980, Cl 560-245.000.

Makinen, Jarmo; and Talarmo, Reino, to Telenokia Oy. Quadrature modulator having compensation for local oscillator leak 5,012,208, Cl 332-103.000.

Makita, Shigeru: *See—*
Terada, Takao; Ota, Hiroyuki, Makita, Shigeru, Herpichboehm, Bernd G., Sierra, George H., Summers, Robert B., and Watlington, Thomas M., 5,011,290, Cl. 356-423.000

Mallek, Heinz, to Forschungszentrum Julich GmbH. Gasification reactor for combustible solid material 5,010,828, Cl. 110-256.000.

Mallett, Sarah. Fitted safety crib sheet with integral bumper liner 5,010,611, Cl. 5-497.000.

Mallinckrodt, Inc.: *See—*
Rajagopalan, Raghavan, and Periasamy, Muthunadar P., 5,011,925, Cl 544-58.100

Mallya, Prakash, Plamthottam, Sebastian S.; and Ozari, Yehuda, to Avery International Corporation. Electron-beam cured emulsion pressure-sensitive adhesives. 5,011,867, Cl 522-109.000

Malmark, Inc: *See—*
Malta, Jacob H., 5,010,798, Cl. 84-406.000

Maloney, James V., Jr: *See—*
Buckberg, Gerald D., Maloney, James V., Jr.; Jones, Kenneth A.; and West, Weldon D., 5,011,469, Cl. 604-4.000

Malta, Jacob H., to Malmark, Inc. Handbell anti-roll clip. 5,010,798, Cl. 84-406.000.

MAN Nutzfahrzeuge Aktiengesellschaft: *See—*
Kubis, Heribert, and Winter, Josef, 5,010,853, Cl 123-41.840.

Manassen, Joost; and Cabasso, Israel, to Yeda Research and Development Co., Ltd. Thin ribbonlike flexible rechargeable zinc/halide cell. 5,011,749, Cl. 429-101.000.

Mangialardi, Gregg M.: *See—*
Techter, Ronald R.; Mangialardi, Gregg M.; and Esparza, Raymond R., 5,010,651, Cl. 30-376.000.

Manier, Eugene P.: *See—*
Hempelmann, Heinrich J.; and Manier, Eugene P., 5,010,857, Cl. 123-90.390.

Mankins, William L., to INCO Alloys International, Inc. Process of forming a composite structure. 5,011,655, Cl 419-8.000

Manlowe, David: *See—*
Kittle, Paul A., and Manlowe, David, 5,011,330, Cl. 405-129.000

Colvin, David P., Whitney, Raymond A., Marsh, Bernard R.; Kline, William M., Rizzo, Ronald R., and Orlosky, Mark E., 5,010,892, Cl 128-774.000

Marshall, Garland R., and Toth, Mihaly V., to Washington University. Reagent and method for determining activity of retroviral protease 5,011,910, Cl 530-329.000

Marshall, Robert M., Raybon, James C., Jr.; and Medeiros, Robert W., to Allied-Signal Inc. Finish composition for fine denier polyamide yarn 5,011,616, Cl. 252-8.700.

Martenak, Daniel J: *See—*
Han, Scott, Martenak, Daniel J., Palermo, Robert E., and Walsh, Dennis E., 5,012,029, Cl 585-500.000.

Martin, Eugene Z. Cord protector. 5,011,427, Cl 439-373.000

Martin, Frank S., and Silver, Gary L., to United States of America, Energy. Water treatment method 5,011,610, Cl 210-667.000

Martin, Jean-Michel: *See—*
Buhler, Marcel; and Martin, Jean-Michel, 5,011,641, Cl 264-109.000

Martin Marietta Corporation: *See—*
Bridger, Keith; Jones, Lorianne; and Winzer, Stephen R., 5,011,796, Cl. 501-12.000.
Casteleiro, Carlos A., 5,012,481, Cl. 372-72.000.
Flint, Graham W.; Papazian, Harold A.; and Wolfert, Ludwig G., 5,012,112, Cl. 250-493.100.

Martin Marietta Energy Systems, Inc.: *See—*
Valentine, Kenneth H., Falter, Diedre D.; and Galter, Kelly G., 5,012,113, Cl. 250-493.100.

Martin, Pierre J., to Power Card Supply. Line of power interruption in predetermined area of internal permanent memory. 5,012,406, Cl. 364-200.000.

Martin, Robert G.; and Litman, Alan M., to Xerox Corporation. Conformable fusing system 5,012,072, Cl. 219-469.000.

Martin, Wolfram; and Waibel, Brigitte, to Doduco GmbH and Co. Dr. Eugen Durrwachter. Flat body, particularly for use as a heat sink for electronic power components. 5,012,324, Cl. 357-81.000.

Martinez, Michael: *See—*
Ferris, John J.; Kraft, William; Manning, Winton H.; and Martinez, Michael, 5,011,413, Cl 434-358.000

Martinie, Howard M., to Reliance Electric Industrial Company. Apparatus for mounting a bearing or other device and tapered adapter onto a shaft. 5,011,306, Cl. 384-585.000.

Martinie, Howard W., to Reliance Electric Company. Auxiliary sealing system. 5,011,301, Cl. 384-140.000.

Martino, Gary T.; and Tessler, Martin M., to National Starch and Chemical Investment Holding Corporation. Emulsifiable triglyceride compositions. 5,011,630, Cl. 260-410.700.

Martiska, Thomas J: *See—*
Guillotte, Paul A.; Panaccione, Paul; Martiska, Thomas J.; and Gagnon, Jay J., 5,012,322, Cl. 357-72.000.

Marunaka Tekkosho, Inc: *See—*
Mochizuki, Toshihei; and Ikeda, Shigeru, 5,010,934, Cl. 144-175.000.

Maruo, Seizi: *See—*
Nakamura, Koozoo; and Maruo, Seizi, 5,012,509, Cl. 379-53.000.

Maruta, Jiyunitirow: *See—*
Urasato, Nobuaki, Takamizawa, Minoru; Hayashida, Akira; Ohsaki, Hiromi; and Maruta, Jiyunitirow, 5,011,639, Cl. 264-65.000.

Marx, M. Fred, to AT&T Bell Laboratories. Buffered optical fiber having a strippable buffer layer. 5,011,260, Cl. 350-96.230.

Marzoli, Pietro B., and Vezzoli, Emilio. Textile fibre mixing apparatus. 5,010,623, Cl. 19-145.500.

Masada, Shigeo, to Mitsubishi Denki Kabushiki Kaisha. Apparatus for securing an IC-card issuing station. 5,012,074, Cl. 235-379.000

Masada, Tomoaki, Ueno, Yasuhiko; Hayakawa, Eiji; Naganuma, Hirotake; Terajima, Mitsuru; Kuroda, Tokuyuki; Shuto, Katsuichi; and Ichikawa, Shunji, to Kyowa Hakko Kogyo Co., Ltd. Rectal motilin preparation. 5,011,824, Cl. 514-13.000.

Masada, Yoshiyasu: *See—*
Ueno, Ryuzo, Masada, Yoshiyasu; and Mori, Toru, 5,011,984, Cl. 562-425.000.

Masayuki, Honma: *See—*
Suehiro, Urabe; Masayuki, Honma; and Tohru, Kamibeppu, 5,010,854, Cl 123-52.0MV.

Mashiko, Koichiro: *See—*
Arimoto, Kazutami; Furutani, Kiyohiro; and Mashiko, Koichiro, 5,012,472, Cl 371-40.100.

Mason, Robert W., Imm, Peter C.; Craney, Paul J.; Offill, Thomas W., and Brooker, Robert T., to Olin Corporation. Process for purifying aromatic nitration products. 5,012,019, Cl. 568-934.000.

Masonry Design Plus, Inc.: *See—*
Funes, Horacio C., Jr., 5,010,654, Cl 33-526.000.

Massachusetts Institute of Technology: *See—*
Bryskiewicz, Barbara G.; Bryskiewicz, Tadeusz R.; Dabkowski, Ferdynand P., Lacowski, Jacek, and Gatos, Harry C., 5,011,564, Cl. 156-624.000.

Massey, Douglas V: *See—*
Love, Mickey L.; and Massey, Douglas V., 5,011,320, Cl. 403-132.000.

Massimiliano, Borsa: *See—*
Roberto, Giani, Ettore, Parini, Massimiliano, Borsa; and Antonio, Lavezzo, 5,011,838, Cl. 514-234.200.

Masson, Richard A: *See—*
Wald, Vernon M., Masson, Richard A.; Brown, Fredrick D.; and Broberg, David E., 5,011,512, Cl 51-295.000.

Mastroianni, Sal T., to Motorola, Inc. Fusible link with built-in redundancy 5,011,791, Cl. 437-180.000.

Masuda, Hiroshi: *See—*
Ushijima, Nobuyoshi; Masuda, Hiroshi, Ishibashi, Akira, Satou, Masahiko, Haruna, Toshiyuki, Takayama, Norikazu; and Kudou, Yoshinobu, 5,012,166, Cl. 318-254.000

Masuda, Kiyoshi; Kohda, Shigeto; Sakai, Shigenobu; Kimura, Kazuo; and Nomura, Tomoyoshi, to Nippon Telegraph and Telephone. Method of operation for an active matrix type display device. 5,012,228, Cl 340-702.000.

Masuda, Ryosuke: *See—*
Kikuo, Kanaya; Kanamori, Katsuhiko; and Masuda, Ryosuke, 5,010,774, Cl. 73-862.040.

Masuda, Tomohiko: *See—*
Saito, Itaru; Matsubara, Ken; Shingaki, Kouichi; Masuda, Tomohiko; and Kitano, Hirohisa, 5,011,271, Cl. 350-356.000.

Mathers, Roy. Production of flat products. 5,011,654, Cl. 419-3.000.

Mathews, Charles L.: *See—*
Blanyer, Richard J.; and Mathews, Charles L., 5,010,637, Cl. 29-505.000.

Mathieu, Luc: *See—*
Frindel, Sebastien; and Mathieu, Luc, 5,011,368, Cl. 415-90.000.

Mathis, Ronald F.: *See—*
Bradley, Eric M.; and Mathis, Ronald F., 5,011,264, Cl. 350-162.240.

Matouka, Michael F.; Rajput, Yudh V.; Wilkey, Paul D.; and Bright, James A., to General Motors Corporation. Anti-lock braking system 5,011,237, Cl. 303-115.000.

Matschkal, Heinz: *See—*
Rathfelder, Paul, Sagala, Jozef; Landbeck, Friedrich; and Matschkal, Heinz, 5,011,499, Cl. 8-94.330.

Matsubara, Ken: *See—*
Saito, Itaru; Matsubara, Ken; Shingaki, Kouichi, Masuda, Tomohiko; and Kitano, Hirohisa, 5,011,271, Cl. 350-356.000.

Matsuda, Masahito: *See—*
Kise, Masahiro; Kitano, Masahiko; Ozaki, Masakuni, Kazuno, Kenji; Matsuda, Masahito; Shirahase, Ichiro; and Tomii, Yoshifumi, 5,011,831, Cl. 514-210.000

Matsuda, Teruo; Miki, Masayoshi; and Ochi, Hiromu, to Sumitomo Chemical Company, Limited. Descaling of jacket of glass-lined instruments. 5,011,539, Cl. 134-22.140.

Matsuda, Toshiro, to Nissan Motor Co., Ltd. 4WD vehicle with driving force distribution control. 5,010,974, Cl. 180-233.000.

Matsuda, Yasumasa: *See—*
Yoshino, Eiji; Matsuda, Yasumasa; and Yamada, Takahiro, 5,012,353, Cl. 358-401.000.

Matsuda, Yoshio; and Fujishima, Kazuyasu, to Mitsubishi Denki Kabushiki Kaisha. Bit line structure for a dynamic type semiconductor memory device. 5,012,447, Cl. 365-206.000

Matsugawa, Minoru: *See—*
Takeuchi, Toru; and Matsugawa, Minoru, 5,010,844, Cl 119-14.250.

Matsuguchi, Noboru; and Matsuguchi, Tadaski, to Daimatsu Kagaku Kogyo Co., Ltd. Temporarily sticking material 5,011,190, Cl 283-101.000.

Matsuguchi, Tadaski: *See—*
Matsuguchi, Noboru; and Matsuguchi, Tadaski, 5,011,190, Cl 283-101.000.

Matsui, Komaharu. *See—*
Hiraki, Tadayoshi, Iwase, Osamu, Oosumimoto, Hiroshi; Sugiura, Shinji; Tabushi, Ichiro; Kume, Masafumi, Udagawa, Takashi; Matsui, Komaharu; and Fujii, Yasuhiro, 5,011,733, Cl. 428-336.000

Matsui, Shougo: *See—*
Kobayashi, Kenichi; and Matsui, Shougo, 5,012,523, Cl. 382-8.000

Matsui, Toshiaki; and Araki, Kenichi, to Communications Research Laboratory Ministry of Posts and Telecommunications. Open resonator for electromagnetic waves having a polarized coupling region. 5,012,212, Cl. 333-227.000.

Matsui, Toshimasa, to Alps Electric Co., Ltd. Spring loaded push-button switch having predictable switching time despite varying spring characteristics. 5,012,055, Cl. 200-408.000

Matsui, Toshio: *See—*
Johdai, Akiyoshi; Ozawa, Kazuhito; and Matsui, Toshio, 5,012,298, Cl. 355-323.000.
Yamashita, Hiroki; Kinoshita, Keiichi; Matsui, Toshio; Kurahashi, Wataru; and Yasuda, Katsuya, 5,012,297, Cl. 355-321.000.

Matsumi, Kuninori: *See—*
Shiomi, Makoto; Ozeki, Kosuke, Ohsawa, Michitaka, Matsumi, Kuninori; and Kawagishi, Tadahiro, 5,012,332, Cl 358-64.000.

Matsumoto, Etsuji; Araki, Mamoru, and Ozaki, Keiichi, to Yazaki Corporation. Structure of connection between bus bar and press-connecting branch terminal in electric connection box. 5,011,417, Cl 439-76.000.

Matsumoto, Hitoshi. *See—*
Satoh, Toshio, Niiro, Yasunori; Kakegawa, Hisao; and Matsumoto, Hitoshi, 5,011,949, Cl. 549-315.000.

Matsumoto, Kozo; and Asakawa, Hiroyoshi, to Kyoritsu Gokin Mfg Co., Ltd. Liquid-spraying nozzle. 5,011,083, Cl 239-590.500.

Matsumoto, Masaki: *See—*
Tominaga, Kenji; Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo; Morishima, Hideo; Nakayama, Takashi; Moriya, Kumiaki; Matsumoto, Masaki; Akita, Minoru; Niino, Tsuyoshi, Ochiai, Kanehiro; Shiozawa, Akihiko; Uchiyama, Yuichi, Yasuno, Toyoharu; Moriya, Kenji; Kinoshita, Shouichirou; Kage, Kazuo; and Kubota, Ryuji, 5,011,652, Cl. 376-283.000.

Matsumoto, Shunichi: *See—*
Tokura, Nobuyuki; Takefumi, Tadayoshi; Matsumoto, Shunichi; and Shiokawa, Yoshihiro, 5,011,987, Cl. 562-494.000

Matsumoto, Shusaku; Hatakawa, Yoshio; and Nakajima, Akihiko, to Dai-Ichi Kogyo Seiyaku Co., Ltd. Process for purifying sucrose fatty acid esters. 5,011,922, Cl. 536-119.000.

Matsumoto, Yoichi: *See—*
Murakami, Yasuo, Matsumoto, Yoichi; Ishii, Shinjiro; Kurahashi, Ryurou; and Nakamura, Mitsuru, 5,011,304, Cl 384-492.000

Matsuo, Yukito; and Ishida, Tsuyoshi, to Kabushiki Kaisha Toshiba. Transport sytstem. 5,010,997, Cl 198-349.700.

Matsuoka, Atsuko, and Fukui, Wataru, to Mitsubishi Denki Kabushiki Kaisha. Ignition timing control apparatus for an internal combustion engine. 5,010,864, Cl. 123-414.000

Matsuoka, Hiroshi, to Isuzu Motors Limited. Heat-insulating structure of swirl chamber and production method thereof. 5,010,861, Cl. 123-271.000.

Matsuoka, Shigeki; Okubo, Hiizu; and Kosaka, Daisuke, to Ricoh Company, Ltd. Sense amplifier for a ROM having a multilevel memory cell. 5,012,448, Cl. 365-208.000.

Matsushita Electric Ind., Co., Ltd. *See*—
Ogawa, Kazufumi, Tamura, Hideharu, Ishihara, Toshinobu, Tanaka, Yasuhisa, and Endou, Mikio, 5,011,963, Cl. 556-485.000
Matsushita Electric Industrial Co., Ltd. *See*—
Funatsu, Kazuyuki, 5,011,061, Cl. 228-1.100
Kabeshita, Akira, Hamane, Tokuhito, and Kitayama, Yoshifumi, 5,012,388, Cl. 361-400.000
Kitagawa, Toshiharu, Nishiyama, Ryuji, Takita, Masaaki, and Tsuru, Yoshikazu, 5,011,315, Cl. 400-624.000
Kubo, Keishi, Nagano, Hiroyuki, and Kubota, Saburo, 5,012,188, Cl. 324-160.000
Kurata, Takatsugu, and Nishide, Takuya, 5,012,339, Cl. 358-148.000.
Morita, Yoichi, Komori, Hiroshi, and Yokoyama, Akio, 5,012,201, Cl. 330-252.000
Ogawa, Kazufumi, 5,011,518, Cl. 55-158.000
Omata, Yuuji, 5,011,581, Cl. 204-38.400
Sakano, Chikashi, Nakada, Seiichi, Shimizu, Masao, Ito, Shinichi, and Yamamoto, Toshiyoshi, 5,010,664, Cl. 38-77.700
Wakita, Naohide, Uemura, Tsuyoshi, Ohnishi, Hiroyuki, Ohba, Noriko, and Ota, Isao, 5,011,269, Cl. 350-350.00S
Matsushita, Osami. *See*—
Kohno, Takashi, Matsushita, Osami, Ida, Michiaki, Kikuchi, Katsuaki, Sonoda, Taro, and Yamaguchi, Yuzo, 5,012,359, Cl. 360-71.000
Matsushita, Toshiki. *See*—
Iimuro, Ikuro, Matsushita, Toshiki, and Furuya, Toshihiro, 5,010,834, Cl. 112-302.000
Matsutani, Kanji, and Otsuka, Tadashi, to Matsutani Seisakusho Co., Ltd. Method of and apparatus for manufacturing eyeless suture needle. 5,012,066, Cl. 219-121.680
Matsutani Seisakusho Co., Ltd. *See*—
Matsutani, Kanji, and Otsuka, Tadashi, 5,012,066, Cl. 219-121.680
Matsutani, Shigeru. *See*—
Yoshida, Tadashi, Inoue, Keizo, Arita, Hitoshi, Matsutani, Shigeru Shoji, Jun'ichi, and Kawamura, Yoshimi, 5,011,952, Cl. 549-393.000
Matsuura, Yasunori. *See*—
Moriya, Tsutomu, Matsuura, Yasunori, and Nakamura, Takao, 5,011,717, Cl. 428-34.400
Matsuzaka, Masaaki. *See*—
Ando, Masaaki, Matsuzaka, Masaaki, and Saita, Masahiro, 5,012,105, Cl. 250-398.000
Matsuzaka, Syoji. *See*—
Hattori, Tsuyoshi, Tanaka, Masanao, and Matsuzaka, Syoji, 5,012,259, Cl. 346-108.000
Mattausch, Hans-Juergen, Althoff, Klaus, and Neuendorf, Gerd, to Siemens Aktiengesellschaft, and Siemens Aktiengesellschaft. Read amplifier for static memories in CMOS technology. 5,012,450, Cl. 365-208.000
Mattel, Inc. *See*—
Handy, John N., and Spector, Sterling S., 5,011,449, Cl. 446-297.000
Mattis, John S. *See*—
Sucht, Gayle A., and Mattis, John S., 5,011,432, Cl. 439-584.000
Mattson, Stacy D. *See*—
Maurer, Donald D., and Mattson, Stacy D., 5,010,895, Cl. 128-788.000
Mattson, Timothy J. *See*—
Jeffries, Dennis L., Marquart, Gordon L., and Mattson, Timothy J., 5,011,465, Cl. 475-279.000
Mauffette, Claude, to Quada Internationale Ltd. Tamper proof hanger with improved ratchet arm in lock. 5,011,054, Cl. 223-88.000
Maurel, Philippe. *See*—
Razeghi, Manijeh, Defour, Martin, Omnes, Franck, Maurel, Philippe, Blondeau, Robert, and Krakowski, Michel, 5,012,476, Cl. 372-45.000
Maurer, Donald D.; and Mattson, Stacy D., to Empi, Inc. Expandable vaginal electrode. 5,010,895, Cl. 128-788.000
Maurer, Ruprecht, to Ringspann GmbH. Axially operating positioning element, particularly for a friction clutch structure. 5,010,992, Cl. 192-70.270
May, Karl-Heinz. *See*—
Rodi, Anton, Blasius, Udo, Reithofer, Jurgen, and May, Karl-Heinz, 5,010,812, Cl. 101-148.000
Mayer, Andreas, to Asea Brown Boveri Ltd. Gas-dynamic pressure-wave machine with reduced noise amplitude. 5,011,375, Cl. 417-64.000.
Mayer, Carl W. *See*—
Kvita, Vratislav, Baumann, Mareus, Fischer, Walter; Mayer, Carl W.; and Allmendinger, Thomas, 5,011,944, Cl. 549-214.000
Mayer, David M., and Cisneroz, Jay J., to Xerox Corporation. Deflectable media guides for assisting in media transport. 5,011,093, Cl. 242-56.00R
Mayer, Gerard T. *See*—
Adkins, Charles M., Brazell, James R., Mayer, Gerard T., and Stacey, Henry C., 5,012,174, Cl. 318-649.000
Mayer, Norbert. *See*—

Katayama, Hideaki, Murakami, Toshifumi; Soeda, Koji; Kubota, Yoshiya, Okamoto, Shoji; Kubota, Akinori, Kobayashi, Michihito; and Ijiri, Masaaki, 5,011,392, Cl. 425-35.000

Murakami, Yasuo; Matsumoto, Yoichi; Ishii, Shinjiro; Kurahashi, Ryurou, and Nakamura, Mitsuru, to Nippon Seiko Kabushiki Kaisha Rolling bearing. 5,011,304, Cl. 384-492.000.

Murakami, Yoshihiro: *See—*
Chiba, Nobuhiro; and Murakami, Yoshihiro, 5,012,361, Cl 360-38.100.

Murakata, Chikara. *See—*
Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi; Kasai, Masaji, Kawamoto, Isao; Iida, Takao, Sano, Hiroshi; Saito, Hiromitsu, Yamada, Koji, and Murakata, Chikara, 5,011,854, Cl 514-541.000.

Muramatsu, Yasuhiko: *See—*
Ono, Yutaka, Muramatsu, Yasuhiko; Banzai, Hideo; Kikukawa, Yoichi, Hashida, Shigeru; Shindo, Shotaro; Higuchi, Haruo, Shinomiya, Hiroyuki; Nikaido, Mitsuhiro; and Sato, Koichi, 5,012,169, Cl. 318-568.000.

Murao, Toshiaki. *See—*
Fujimoto, Hideo; Hirano, Masakazu; Hashiura, Mituo; and Murao, Toshiaki, 5,011,547, Cl. 148-24.000.

Murasaki, Hiroshi: *See—*
Oka, Tateki; Toyoshi, Naoki; Yokoyama, Tomoaki; Mizuno, Hiroshi, Murasaki, Hiroshi, Ikegawa, Akihito; Etou, Kouichi; and Nakagawa, Shuichi, 5,012,285, Cl. 355-245.000.

Murata, Fumiya: *See—*
Nishikado, Takashi; Kondo, Megumu; Fukuoka, Kazuhiko; and Murata, Fumiya, 5,012,405, Cl. 364-200.000.

Murata Kikai Kabushiki Kaisha: *See—*
Akiyama, Yasuo, 5,012,402, Cl 364-192.000.

Murata Manufacturing Co., Ltd.: *See—*
Okumura, Mitunao, 5,012,179, Cl. 323-355.000.
Takemura, Hiroshi; and Okamoto, Yasuji, 5,012,399, Cl. 363-18.000.

Murata, Shinjiro: *See—*
Satoh, Toyomi; Hosei, Kiyonori; Kinoshita, Katsuji; Murata, Shinjiro; Fukatsu, Shunzo; and Ichikawa, Tooru, 5,011,019, Cl. 206-530.000

Murata, Toshimichi: *See—*
Saito, Katushi; Shindou, Yoshio; Murata, Toshimichi; Yamazaki, Fumio, and Shimazu, Takashi, 5,011,744, Cl. 428-623.000.

Murphy, Edward J., Krajewski, John J.; and Ansel, Robert E., to DeSoto, Inc Stereolithographic method and apparatus in which a membrane separates phases 5,011,635, Cl 264-22.000.

Murphy, Steven J. Variable resistance device for use in training swimmers. 5,011,137, Cl. 272-71.000.

Musa, Richard D.. *See—*
Mansuria, Mohanlal S.; Mosley, Joseph M.; Musa, Richard D., and Tuozzolo, Vito J., 5,012,325, Cl 357-81.000.

Musco Corp. *See—*
Jones, Robert D.; and Demeyer, David M., 5,012,398, Cl 362-250.000.

Musselmann, Walter, to J M Voith GmbH. Screen basket and method of manufacture. 5,011,065, Cl 228-170.000.

Muto, Yasuo. *See—*
Asai, Koichi; Tsuda, Mamoru; Muto, Yasuo; Suhara, Sinsuke; and Kawada, Tousuke, 5,012,115, Cl. 250-561.000

Myer, Robert E., to AT&T Bell Laboratories. Varying bandwidth digital signal detector. 5,012,490, Cl. 375-58.000.

Myers, David J.; Leever, Richard, Gibbs, Mary; and Wright, John T. M., to Medtronic, Inc. Holder for annuloplasty ring. 5,011,481, Cl. 606-1.000

Myers, Raymond T., Sr Pedal driven swivel toy. 5,011,133, Cl. 272-33.00B.

Mynarcik, Dennis C., Griffith, Owen W., and Fairclough, Gordon F., Jr., to Cornell Research Foundation, Inc. Novel diacylglycerophosphoric acid esters and use thereof as substrates in enzyme assays. 5,011,964, Cl 558-179.000.

Myren, Harry I.: *See—*
Gustavsson, Tord G.; Myren, Harry I.; and Silja, Karl T I., 5,011,574, Cl. 162-281.000.

Nabalco Pty. Ltd.. *See—*
Keeney, Mark, 5,011,612, Cl 210-712.000

Nabetani, Shinji: *See—*
Kazuaki, Ujiie, and Nabetani, Shinji, 5,012,445, Cl. 365-189.060.

Nabisco Brands, Inc. *See—*
Simelunas, William, and Deloy, Joseph T., 5,010,838, Cl. 118-19.000
Spanier, Henry C., and Ekpo, Bassey O., 5,011,679, Cl. 424-57.000.

Naddor, David J.. *See—*
Schaubs, Randolph J.; and Naddor, David J., 5,012,510, Cl. 379-92.000

Nagahata, Satoshi: *See—*
Kuwajima, Teruaki; Nagahata, Satoshi; and Kanakura, Akihiro, 5,011,533, Cl. 106-404.000

Nagai, Harushige; Kiryu, Masato; Sasaki, Takeshi, and Saotome, Akira, to Victor Company of Japan, Ltd Tape cassette. 5,011,096, Cl. 242-199.000.

Nagai, Katsutoshi: *See—*
Tabata, Yasushi; Kobayashi, Takeo; Numako, Norio; and Nagai, Katsutoshi, 5,012,272, Cl 354-465.000.

Nagaimis, Peter A.: *See—*
Kung, Viola T., Nagaimis, Peter A.; and Sheldon, Edward L., III, 5,011,770, Cl. 435-6.000.

Nagano, Hiroyuki: *See—*
Kubo, Keishi, Nagano, Hiroyuki; and Kubota, Saburo, 5,012,188, Cl. 324-160.000

Nagano, Kazuhiko: *See—*
Yoshimoto, Masafumi, Nakatsuji, Tadao, and Nagano, Kazuhiko, 5,011,674, Cl 423-610.000.

Nagano, Masatoshi; and Kawamoto, Kenichi, to Canon Kabushiki Kaisha. Coupling device and power device for supplying electrical power as the coupling is established. 5,012,264, Cl. 354-286.000.

Naganuma, Hirotake. *See—*
Masada, Tomoaki; Ueno, Yasuhiko; Hayakawa, Eiji; Naganuma, Hirotake; Terajima, Mitsuru, Kuroda, Tokuyuki; Shuto, Katsuichi; and Ichikawa, Shunji, 5,011,824, Cl. 514-13.000.

Nagasawa, Haruko. *See—*
Mitsuda, Hisateru; Ohminami, Hiroshi; and Nagasawa, Haruko, 5,011,699, Cl 426-320.000

Nagasawa, Kenichi: *See—*
Yoshimura, Katsuji, Nagasawa, Kenichi; Kashida, Motokazu; and Shikakura, Akihiro, 5,012,352, Cl 358-343.000.

Nagata, Kojiro, to Tachi-S Co., Ltd. Suspension device for seat. 5,011,109, Cl 248-564.000.

Nagata, Masaya. *See—*
Katoka, Shoei; Tsuchimoto, Shuhei; Nojima, Hideo; Kita, Ryusuke; and Nagata, Masaya, 5,011,818, Cl. 324-248.000

Nagata, Shinichi: *See—*
Kurusu, Yasuo; Cho, Masamichi; Nagata, Shinichi; Tomohisa, Kunio; and Shirota, Hiroyuki, 5,012,089, Cl 250-235.000

Naito, Masataka; Hiroi, Masakazu; and Hayakawa, Kimiaki, to Canon Kabushiki Kaisha. Sheet sorter. 5,011,130, Cl. 271-288.000.

Nakada, Seiichi: *See—*
Sakano, Chikashi; Nakada, Seiichi; Shimizu, Masao; Ito, Shinichi; and Yamamoto, Toshiyoshi, 5,010,664, Cl. 38-77.700.

Nakagama, Syoji: *See—*
Hitotsuyanagi, Hajime; Fujita, Nobuhiko; Itozaki, Hideo; Nakagama, Syoji, Tanaka, Saburo; and Fukushima, Kazuhiko, 5,011,759, Cl. 430-128.000.

Nakagawa, Hiroaki: *See—*
Akihama, Shigeyuki; Kobayashi, Mikio, Suenaga, Tatsuo; Fukumoto, Toshiyuki; Taniguchi, Yoshikazu; and Nakagawa, Hiroaki, 5,010,705, Cl. 52-477.000.

Nakagawa, Shuichi: *See—*
Oka, Tateki, Toyoshi, Naoki; Yokoyama, Tomoaki; Mizuno, Hiroshi; Murasaki, Hiroshi; Ikegawa, Akihito; Etou, Kouichi; and Nakagawa, Shuichi, 5,012,285, Cl. 355-245.000.

Nakai, Yoshikazu, and Kubota, Tsutomu, to Takeda Chemical Industries, Ltd. Method of adhesion and composition therefor. 5,011,560, Cl. 156-273.300.

Nakajima, Akihiko: *See—*
Matsumoto, Shusaku; Hatakawa, Yoshio; and Nakajima, Akihiko, 5,011,922, Cl. 536-119.000.

Nakajima, Junzo: *See—*
Wanou, Masahiro; Kimura, Masatoshi; and Nakajima, Junzo, 5,012,282, Cl. 355-219.000.

Nakajima, Kenji: *See—*
Kobayashi, Osamu; Mikami, Mitsugu; Nishiumi, Kenji; and Nakajima, Kenji, 5,011,456, Cl. 453-32.000.

Nakajima, Toshiyuki: *See—*
Sekine, Masayoshi; Nakajima, Toshiyuki; Kai, Takashi; Yoshimura, Katsuji; and Toyama, Masamichi, 5,012,270, Cl 354-430.000.

Nakajima, Toyohei; and Mieno, Toshiyuki, to Honda Giken Kogyo Kabushiki Kaisha. Temperature control device for oxygen concentration sensor. 5,011,590, Cl 204-425.000.

Nakajima, Yoshihiro, and Takada, Akihiro, to Mita Industrial Co., Ltd. Abnormality-detecting method for an electrostatic image-recording machine. 5,012,279, Cl. 355-205.000.

Nakamori, Haruka; and Ito, Hiroshi, to Daiki Co., Ltd. Sheet material. 5,011,731, Cl. 428-222.000.

Nakamoto, Yuichi: *See—*
Nakamura, Hirofumi; Nakamoto, Yuichi; and Fujimori, Yuji, 5,012,012, Cl. 568-618.000.

Nakamoto, Yukinari: *See—*
Michimoto, Takashi; Nakamoto, Yukinari; Kuwada, Kazuhiko; and Ishida, Nobuyoshi, 5,011,810, Cl. 502-439.000.

Nakamura, Haruyoshi: *See—*
Kawasaki, Yoshio; Horibe, Tatsutake; Morita, Takayuki, Nakamura, Haruyoshi, Ohashi, Kengo, and Miyazaki, Tsutomu, 5,011,000, Cl. 198-465.100

Nakamura, Hirofumi; Nakamoto, Yuichi, and Fujimori, Yuji, to Lion Corporation. Alkoxylation catalyst. 5,012,012, Cl 568-618.000.

Nakamura, Koozoo; and Maruo, Seizi, to Hitachi, Ltd. Communication conference apparatus and method for remote conferencing. 5,012,509, Cl. 379-53.000.

Nakamura, Masaharu; and Kajimura, Kazuo, to Komatsu Zenoah Company. Oscillating-type mowing apparatus. 5,010,717, Cl 56-17.600.

Nakamura, Mitsuru: *See—*
Murakami, Yasuo; Matsumoto, Yoichi, Ishii, Shinjiro; Kurahashi, Ryurou; and Nakamura, Mitsuru, 5,011,304, Cl. 384-492.000

Nakamura, Susao; Nishio, Etsuro, and Ishii, Haruo, to Asahi Kogaku Kogyo Kabushiki Kaisha. Lens shutter type of camera including zoom lens. 5,012,273, Cl. 354-485.000.

Nakamura, Takao: *See—*
Moriya, Tsutomu; Matsuura, Yasunori; and Nakamura, Takao, 5,011,717, Cl. 428-34.400.

Nakamura, Tomoyuki: *See—*
Suyama, Shuji; and Nakamura, Tomoyuki, 5,012,010, Cl 568-561.000.

Nakamura, Yoko: *See—*
Sawamura, Tadahide; Nakamura, Yoko; and Kojima, Fumiyo, 5,012,299, Cl. 355-326.000.

Nakane, Katsumi: *See—*
Yasui, Yoshiharu; Nakane, Katsumi; Suzuki, Osamu; and Kimbara, Masahiko, 5,010,725, Cl. 57-281.000.

Nakanishi, Hidemi: *See—*
Miyamoto, Masaaki; Nakanishi, Hidemi; and Tanaka, Takayoshi, 5,011,893, Cl. 525-420.500

Nakanishi, Motoyasu, to Kabushiki Kaisha Cubic Engineering Apparatus for manufacturing silicone gel sheet 5,011,393, Cl. 425-89.000

Nakanishi, Takasuke. Chuck device for dental handpiece. 5,011,408, Cl. 433-127.000.

Nakanishi, Takehisa; Koga, Eiji; and Fukada, Isao, to Mitsui Toatsu Chemicals, Incorporated. Method for preparing epichlorohydrins. 5,011,953, Cl. 549-529.000.

Nakanishi, Todd G.; and Taylor, Matthew F., to Delco Electronics Corporation. Ultrasonic welding mask. 5,011,062, Cl. 228-1.100.

Nakano, Kuniaki: *See—*
Kano, Akiko; Honda, Satoshi; and Nakano, Kuniaki, 5,012,107, Cl. 250-484.100.

Nakasugi, Nobuyasu. *See*—
Nakatani, Kenichi; and Nakasugi, Nobuyasu, 5,011,935, Cl. 548-336.000.
Nakasuji, Norikazu; Kito, Tsutomu; and Shibahashi, Yutaka, to Pilot Ink Co., Ltd., The. Color memory toy set 5,011,445, Cl 446-14.000
Nakata, Yoshinori *See*—
Moriya, Hideshige; Kitahara, Hiroshi, Minami, Shoher; Isobe, Keijiro, Nakata, Yoshinori; and Tanaka, Chiaki, 5,010,879, Cl. 128-69.000
Nakatani, Isao; and Furubayashi, Takao, to National Research Institute for Metals. Plasma CVD apparatus 5,012,158, Cl. 315-111.210
Nakatani, Kenichi, and Nakasugi, Nobuyasu, to San-Apro Limited Imidazole ether compounds 5,011,935, Cl. 548-336.000
Nakatani, Koichiro, to Velbon International Corporation Panhead 5,012,265, Cl. 354-293.000.
Nakatani, Nobuyuki. *See*—
Takatani, Ichiro, Nakatani, Nobuyuki, and Minami, Shigeru, 5,011,457, Cl 453-61.000.
Nakatsuji, Tadao *See*—
Yoshimoto, Masafumi; Nakatsuji, Tadao, and Nagano, Kazuhiko, 5,011,674, Cl 423-610.000
Nakayama, Akio, to Mitsubishi Denki Kabushiki Kaisha Semiconductor memory device comprising capacitor portions having stacked structures 5,012,309, Cl. 357-23.600
Nakayama, Hiroki, Kitagishi, Nozomu, Hattori, Jun, Suda, Shigeyuki, and Horiuchi, Akihisa, to Canon Kabushiki Kaisha Compact zoom lens 5,011,272, Cl. 350-427.000.
Nakayama, Susumu *See*—
Takahashi, Mineo, Nakayama, Susumu, Yamashima, Osamu, Suzuki, Satoshi; Harada, Toshihiko, and Aiso, Keiji, 5,010,642, Cl 29-868.000
Nakayama, Takashi *See*—
Tominaga, Kenji, Miki, Minoru, Takahashi, Tooru, Horiuchi, Tetsuo, Morishima, Hideo, Nakayama, Takashi, Moriya, Kumiaki, Matsumoto, Masaki, Akita, Minoru, Niino, Tsuyoshi, Ochiai, Kanehiro, Shiozawa, Akihiko, Uchiyama, Yuichi, Yasuno, Toyoharu, Moriya, Kenji, Kinoshita, Shouichirou, Kage, Kazuo, and Kubota, Ryuji, 5,011,652, Cl 376-283.000
Nakayama, Yojiro *See*—
Sugasawara, Seiji, Tsuneki, Ken, Ohshima, Kazuyoshi, Nakayama, Yojiro, Hayakawa, Tatsuya, and Tamura, Senichiro, 5,011,029, Cl 211-104.000
Nakayasu, Hirofumi *See*—
Hosokawa, Yoshiaki, Kanoh, Masaki, Maekawa, Takashi, and Nakayasu, Hirofumi, 5,011,312, Cl 400-225.000
Nakazato, Wataru, and Takase, Akira, to Fuji Jukogyo Kabushiki Kaisha Electrical connecting device for a steering wheel of a motor vehicle. 5,010,784, Cl 74-498.000
Nam, Tom L., Keddy, Rex J., and Sellschop, Jacques P Detection of nuclear radiation 5,012,108, Cl 250-484.100
Nambu, Masao; Onishi, Tadayuki, and Onohara, Masayuki, to Sumitomo Bakelite Company, Ltd., and Nippon Oil Company, Ltd Method for sterilization of polyvinyl alcohol gel by γ-ray 5,012,503, Cl 378-64.000
Namiki, Fumihiro *See*—
Takeda, Shiro, Namiki, Fumihiro, Sugiyama, Yuuichi, Iwase, Nobuhiro, Tadaki, Shinji, and Koshino, Nagaaki, 5,012,096, Cl 250-327.200

Matsuda, Teruo, Miki, Masayoshi, and Ochi, Hiromu, 5,011,539, Cl. 134-22.140

Ochiai, Kanehiro: *See—*
Tominaga, Kenji, Miki, Minoru, Takahashi, Tooru, Horiuchi, Tetsuo, Morishima, Hideo, Nakayama, Takashi; Moriya, Kumiaki, Matsumoto, Masaki, Akita, Minoru, Nino, Tsuyoshi, Ochiai, Kanehiro, Shiozawa, Akihiko, Uchiyama, Yuichi, Yasuno, Toyoharu, Moriya, Kenji, Kinoshita, Shouichirou, Kage, Kazuo, and Kubota, Ryuji, 5,011,652, Cl. 376-283.000

Ochiai, Kiyoshi: *See—*
Numata, Kazuki, and Ochiai, Kiyoshi, 5,010,936, Cl. 152-209.00R

Ochiai, Kuniaki: *See—*
Shimosato, Masashi, and Ochiai, Kuniaki, 5,011,308, Cl. 400-124.000

Oda, Masao, Kinoshita, Yoshimi, and Hayama, Masahiro, to Mitsubishi Denki Kabushiki Kaisha. Apparatus for forming thin film 5,010,842, Cl. 118-723.000

Oda, Minoru, to Mitsubishi Denki Kabushiki Kaisha Radiation measuring apparatus 5,012,097, Cl. 250-336.100.

Odaka, Kentaro, Ozaki, Shinya; Yamada, Masaki, Inazawa, Yoshizumi, and Ishibashi, Hiroshi, to Sony Corporation Data recorder 5,012,459, Cl. 360-32.000.

Odaka, Yoshiyuki: *See—*
Hiratsuka, Katsuo; Odaka, Yoshiyuki, and Yoshida, Takeshi, 5,010,832, Cl. 112-68.000.

Odenthal, Heinz F., to Ostma Maschinenbau GmbH Method of and apparatus for the packaging of pressure-sensitive articles. 5,010,712, Cl. 53-55.000.

Odom, J. Thomas: *See—*
Hamilton, Daniel; Hoyt, Robert M.; Halferty, Patricia J.; and Odom, J. Thomas, 5,011,336, Cl. 405-230.000.

Offill, Thomas W.: *See—*
Mason, Robert W.; Imm, Peter C.; Craney, Paul J.; Offill, Thomas W.; and Brooker, Robert T., 5,012,019, Cl. 568-934.000.

Offutt, Elmer B.: *See—*
Hambleton, Larry G.; Sears, Claude L.; and Offutt, Elmer B., 5,010,660, Cl. 34-92.000

Ofstead, Eilert A.: *See—*
Bell, Anthony J.; and Ofstead, Eilert A., 5,011,896, Cl. 526-92.000.

Ogami, Etsuo, and Iwasa, Yoshio, to Nissan Motor Company, Ltd. of No. 2. Camshaft driving arrangement for double overhead camshaft engine. 5,010,855, Cl. 123-90.310

Ogami, Etsuo; and Iwasa, Yoshio, to Nissan Motor Company, Ltd. of No. 2. Chain cover for V-type engine 5,010,859, Cl. 123-195.00C.

Ogasawara, Fumihiro: *See—*
Shobu, Toshifumi; Shibata, Hiroshi; and Ogasawara, Fumihiro, 5,012,470, Cl. 370-110.100

Ogasawara, Junichi: *See—*
Hikichi, Tooru; and Ogasawara, Junichi, 5,012,370, Cl. 360-105.000.

Ogawa, Kazufumi, to Matsushita Electric Industrial Co., Ltd. Permselective membrane and process for producing the same. 5,011,518, Cl. 55-158.000.

Ogawa, Kazufumi; Tamura, Hideharu; Ishihara, Toshinobu; Tanaka, Yasuhisa, and Endou, Mikio, to Matsushita Electric Ind., Co., Ltd.; and Shin-Etsu Chemical Co., Ltd. Terminal perfluoroalkylsilane compounds 5,011,963, Cl. 556-485.000.

Ogawa, Tadashi, to Fuji Photo Film Co., Ltd. Silver halide photographic material 5,011,768, Cl. 430-569.000

Ogawa, Takashi: *See—*
Katoh, Yoshihisa, Ogawa, Takashi; and Hasegawa, Mitsumasa, 5,011,603, Cl. 210-490.000

Ogawa, Tsutomu; Kamioka, Hajime; Kawamura, Seiichiro; and Sakurai, Junji, to Fujitsu Limited Forming selective single crystal regions in insulated pockets formed on silicon by energy beams and devices formed in the pockets 5,011,783, Cl. 437-19.000

Ogino, Masanori, Iwahara, Yoshiaki, Tamura, Yuzo, and Kuroda, Shoji, to Hitachi, Ltd. Multi-screen projector. 5,011,277, Cl. 353-94.000.

Ogishima, Hiroaki: *See—*
Sakamoto, Yuji, Umeda, Seiichi; and Ogishima, Hiroaki, 5,010,685, Cl. 47-57.600

Ogura, Shigeo: *See—*
Nishimura, Akimasa, Ogura, Shigeo, Miyamoto, Ryosuke; Tezuka, Nobuo, and Fukushima, Nobuo, 5,012,271, Cl. 354-456.000.

Ogura, Shigetaro: *See—*
Watanabe, Yutaka, Fukuda, Yasuaki, and Ogura, Shigetaro, 5,012,500, Cl. 378-35.000

Ohashi, Kengo: *See—*
Kawasaki, Yoshio; Horibe, Tatsutake; Morita, Takayuki, Nakamura, Haruyoshi, Ohashi, Kengo, and Miyazaki, Tsutomu, 5,011,000, Cl. 198-465.100.

Ohashi, Masayuki: *See—*
Tsutsumi, Fumio, Morikawa, Akihiko; Sakakibara, Mitsuhiko; Oshima, Noboru; Hamada, Tatsuro, Fujimaki, Tatsuo; and Ohashi, Masayuki, 5,011,888, Cl. 525-98.000

Ohata, Akira, to Toyota Jidosha Kabushiki Kaisha Nonlinear feedback control method and apparatus for an internal combustion engine. 5,010,866, Cl. 123-436.000.

Ohba, Noriko: *See—*
Wakita, Naohide, Uemura, Tsuyoshi; Ohnishi, Hiroyuki; Ohba, Noriko, and Ota, Isao, 5,011,269, Cl. 350-350.00S.

Ohbayashi, Keiji, to Konica Corporation. ID card, ID booklet, and manufacturing method thereof. 5,011,570, Cl. 156-310.000.

Ohfuji, Kazuyoshi, to NEC Corporation Semiconductor integrated circuit having I/O terminals allowing independent connection test. 5,012,185, Cl. 324-158.00R.

Ohi Seisakusho Co., Ltd.: *See—*
Kato, Yuichi; and Miyagawa, Masazumi, 5,011,202, Cl. 292-336.300.
Takarabe, Isamu; Honma, Mikio; and Hayakawa, Hatsuo, 5,011,209, Cl. 296-65.100.

Ohkita, Masao; Akiyama, Yasuhiro; Takikawa, Makito; and Arayama, Yoshihiko, to Alps Electric Co., Ltd. Magnetic head supporting device. 5,012,366, Cl. 360-102.000

Ohlenburger, Hans, to Bodenseewerk Geratetechnik GmbH. Printed circuit board with heat dissipating device. 5,012,387, Cl. 361-388.000.

Ohminami, Hiroshi: *See—*
Mitsuda, Hisateru; Ohminami, Hiroshi, and Nagasawa, Haruko, 5,011,699, Cl. 426-320.000.

Ohmiya, Shigeru: *See—*
Takahashi, Kiyoshi; Takashiba, Nobuyoshi; Kojima, Shinji; Okuda, Haruji; Ohmiya, Shigeru; and Ikeda, Ryuichi, 5,011,531, Cl. 75-511.000.

Ohmori, Naoto, to Minolta Camera Kabushiki Kaisha. Laser beam scanning apparatus. 5,012,485, Cl. 372-108.000.

Ohnishi, Hiroyuki: *See—*
Wakita, Naohide; Uemura, Tsuyoshi; Ohnishi, Hiroyuki; Ohba, Noriko; and Ota, Isao, 5,011,269, Cl. 350-350.00S.

Ohnishi, Yasuhiro: *See—*
Shinno, Nobuo; and Ohnishi, Yasuhiro, 5,011,563, Cl. 156-574.000.

Ohori, Manabu; Koshizuka, Noriaki; Kataoka, Yoshihiro; and Ueda, Shuzo, to Kawasaki Steel Corporation. Steels for hot working press tools. 5,011,656, Cl. 420-109.000.

Ohsaki, Hiromi: *See—*
Urasato, Nobuaki; Takamizawa, Minoru; Hayashida, Akira; Ohsaki, Hiromi; and Maruta, Jiyunitirow, 5,011,639, Cl. 264-65.000.

Ohsawa, Michitaka: *See—*
Shiomi, Makoto; Ozeki, Kosuke; Ohsawa, Michitaka; Matsumi, Kuninori; and Kawagishi, Tadahiro, 5,012,332, Cl. 358-64.000

Ohsawa, Toshiyuki: *See—*
Yoneyama, Sachiko; Ohsawa, Toshiyuki; Kimura, Okitoshi; and Kabata, Toshiyuki, 5,011,751, Cl. 429-192.000.

Ohshima, Kazuyoshi: *See—*
Sugasawara, Seiji; Tsuneki, Ken; Ohshima, Kazuyoshi; Nakayama, Yojiro; Hayakawa, Tatsuya; and Tamura, Seiichiro, 5,011,029, Cl. 211-104.000.

Ohsuga, Makoto: *See—*
Uesaka, Toshio; Niki, Akihiro; Ohsuga, Makoto; Saito, Toranosuke; Tsunomachi, Hiroki; Yamaguchi, Makoto; Doyama, Kazuo; and Kishimoto, Daishiro, 5,011,879, Cl. 524-290.000.

Ohtani, Shinichi: *See—*
Sato, Kiyoshi; Ohtani, Shinichi; and Kawasaki, Mikio, 5,012,266, Cl. 354-319.000.

Ohwada, Isao, to Alps Electric Co., Ltd. Wire dot printer head with armature guides. 5,011,307, Cl. 400-124.000.

Oishi, Kengo: *See—*
Onmori, Shozo; Takahashi, Daisuke; and Oishi, Kengo, 5,012,378, Cl. 360-132.000.
Onmori, Shozo; Takahashi, Daisuke; and Oishi, Kengo, 5,012,379, Cl. 360-132.000.

Ojala, William K., to Ford Motor Company. Engine finger follower type rocker arm assembly. 5,010,856, Cl. 123-90.360.

Oka, Hiroshi: *See—*
Ando, Moritoshi; Oka, Hiroshi; and Iwata, Satoshi, 5,011,960, Cl. 356-376.000.

Oka, Tateki; Toyoshi, Naoki; Yokoyama, Tomoaki; Mizuno, Hiroshi; Murasaki, Hiroshi; Ikegawa, Akihito, Etou, Kouichi, and Nakagawa, Shuichi, to Minolta Camera Kabushiki Kaisha. Developing apparatus including a partitioning arrangement for partitioning the toner accommodating tank. 5,012,285, Cl. 355-245.000.

Okada, Hiroshi; Saitoh, Noritaka; Akabane, Hidetomo; and Tashiro, Shintaro, to Mitsubishi Rayon Company, Ltd. Digital PLL circuit having reduced lead-in time 5,012,198, Cl. 328-155.000.

Okada, Kazuo, to Kabushiki Kaisha Universal. Slot machine. 5,010,995, Cl. 194-219.000.

Okada, Yoshio, and Takano, Toshihiko, to Sharp Kabushiki Kaisha. Optical harmonic generator. 5,011,250, Cl. 350-96.120.

Okamoto, Shoji: *See—*
Katayama, Hideaki, Murakami, Toshifumi; Soeda, Koji; Kubota, Yoshiya; Okamoto, Shoji, Kubota, Akinori, Kobayashi, Michihito; and Ijiri, Masaaki, 5,011,392, Cl. 425-35.000.

Okamoto, Yasuji: *See—*
Takemura, Hiroshi; and Okamoto, Yasuji, 5,012,399, Cl. 363-18.000.

Okamura, Tetsuya: *See—*
Kouda, Masanori; Suzuki, Minoru; Okamura, Tetsuya; and Tobisawa, Toshihisa, 5,010,923, Cl. 137-625.340.

Okazaki, Masaki: *See—*
Yamaguchi, Jun; Okazaki, Masaki; and Inagaki, Yoshio, 5,011,760, Cl. 430-281.000.

Okazaki, Tadao, to Fujie Bussan Kabushiki Kaisha Ultrasonic low range speed meter. 5,012,454, Cl. 367-89.000.

Okimoto, Akimichi: *See—*
Fujiki, Toshisada; Kondo, Taikichi, Furukawa, Yoshinari; Kato, Kazuaki; Okimoto, Akimichi; and Tsuge, Kenji, 5,012,182, Cl. 324-96.000.

Okitsu, Toshio: *See—*
Nogami, Shingo; Yashiro, Toshinori; Okitsu, Toshio; Furushima, Kiyoshi, and Korenaga, Itsuo, 5,010,946, Cl. 164-312.000.

Okubo, Hiizu: *See—*
Matsuoka, Shigeki; Okubo, Hiizu; and Kosaka, Daisuke, 5,012,448, Cl. 365-208.000.

Okuda, Haruji: *See—*
Takahashi, Kiyoshi; Takashiba, Nobuyoshi; Kojima, Shinji, Okuda, Haruji; Ohmiya, Shigeru; and Ikeda, Ryuichi, 5,011,531, Cl. 75-511.000.

Okumura, Mitunao, to Murata Manufacturing Co., Ltd. Flyback transformer with integrally formed resonance capacitor. 5,012,179, Cl. 323-355.000.

Okumura, Nobuo; and Miura, Atsuyuki, to Aisin Seiki Kabushiki Kaisha. Multi-headed cryopump apparatus 5,010,737, Cl. 62-6.000.

Olanders, Par, to Roby Teknik AB. Arrangement for the sterilization of a travelling material web. 5,011,664, Cl. 422-292.000.

Olin Corporation: *See—*
Mason, Robert W.; Imm, Peter C.; Craney, Paul J.; Offill, Thomas W.; and Brooker, Robert T., 5,012,019, Cl. 568-934.000.

Olin Hunt Specialty Products Inc.: *See—*
Dettig, Robert H.; and Bujese, David P., 5,011,758, Cl. 430-100.000.

Olney, John W., to Washington University. Compounds for treatment of cholinergic neurotoxins. 5,011,853, Cl. 514-454.000.

Olsen, Alf J.: *See—*
Babler, Egon S.; and Olsen, Alf J., 5,011,309, Cl. 400-184.000.

Olsen, Flemming. Optical system for laser marking. 5,011,253, Cl. 350-96.180.

Olsen, Richard; and Gross, William, to Prime Computer, Inc. Video prioritizer and mixer. 5,012,342, Cl. 358-181.000.

Olson, Craig W. Publication reference-aid system apparatus therefor 5,011,189, Cl. 283-81.000

Olson, Richard A. Protector for intravenous and syringe needles. 5,011,475, Cl. 604-192.000

Ol'Sonora Trading Company Inc.: *See*—
Skiles, John R., Jr., 5,010,592, Cl. 2-93.000.

Olympus Optical Co., Ltd.: *See*—
Ida, Masatoshi, 5,012,362, Cl. 360-77.040.
Kato, Shinichi, 5,010,875, Cl. 128-6.000

Omata, Yuuji, to Matsushita Electric Industrial Co., Ltd. Process for producing a thin alloy film having high saturation magnetic flux density. 5,011,581, Cl. 204-38.400.

Omen Metal Products: *See*—
Schwartz, Moshe; and Avni, Noam, 5,010,751, Cl. 70-276.000

Omnes, Franck: *See*—
Razeghi, Manijeh; Defour, Martin; Omnes, Franck, Maurel, Philippe; Blondeau, Robert; and Krakowski, Michel, 5,012,476, Cl. 372-45.000

Omnimart Distributions Inc.: *See*—
Despins, Maurice; and Carveth, William, 5,010,650, Cl. 30-304.000

Omron Tateisi Electronics Co.: *See*—
Inuyama, Tsutomu, 5,012,057, Cl. 200-522.000.
Takano, Kimio, 5,012,077, Cl. 235-380.000.

Omura, Takashi: *See*—
Terao, Masanobu; Maegawa, Yuzo, Ueda, Yasuyoshi, Hashimoto, Kiyoyasu, and Omura, Takashi, 5,012,015, Cl. 568-709.000

Oncogen: *See*—
Shoyab, Mohammed, Marquardt, Hans; and Todaro, George J., 5,011,777, Cl. 435-172.300

O'Neill, Michael L.; Moore, Stephen P., and Pendolino, Eugene F., to Joy Technologies Inc. Miner cutting bit holding apparatus. 5,011,229, Cl. 299-91.000

Ong, Beng S., Keoshkerian, Barkev, and Baranyi, Giuseppa, to Xerox Corporation. Photoconductive imaging members with N,N-bis(biarylyl)aniline charge transport polymers. 5,011,906, Cl. 528-176.000.

Ong, Beng S.: *See*—
Limburg, William W.; Yanus, John F., Renfer, Dale S., Schank, Richard L., and Ong, Beng S., 5,011,939, Cl. 548-440.000

Onishi, Kazuhiko, to Suzuki Jidosha Kogyo Kabushiki Kaisha. Exhausting apparatus of four-cycle four-cylinder engine. 5,010,731, Cl. 60-313.000.

Onishi, Tadayuki: *See*—
Nambu, Masao; Onishi, Tadayuki; and Onohara, Masayuki, 5,012,503, Cl. 378-64.000.

Onmori, Shozo; Takahashi, Daisuke, and Oishi, Kengo, to Fuji Photo Film Co., Ltd. Magnetic tape cassette having reel brake structure providing improved dust proofing. 5,012,378, Cl. 360-132.000

Onmori, Shozo; Takahashi, Daisuke, and Oishi, Kengo, to Fuji Photo Film Co., Ltd. Magnetic tape cassette having dust blocking member for preventing entry or dust through brake release lever hole. 5,012,379, Cl. 360-132.000.

Ono, Hiroyuki: *See*—
Mine, Shingi; Miwa, Yoichi; and Ono, Hiroyuki, 5,012,363, Cl. 360-77.050

Ono, Masayuki, to INAX Corporation. Pigment-transfer sheets and method for decorating heat-resistant articles. 5,011,754, Cl. 430-15.000.

Ono, Mitsunori; and Suzuki, Nobuo, to Fuji Photo Film Co., Ltd. Polyacetyl oligosaccharide derivatives. 5,011,923, Cl. 536-17.900.

Ono, Yutaka; Muramatsu, Yasuhiko, Banzai, Hideo; Kikukawa, Yoichi; Hashida, Shigeru, Shindo, Shotaro, Higuchi, Haruo; Shinomiya, Hiroyuki; Nikaido, Mitsuhiro; and Sato, Koichi, to Yokogawa Electric Corporation. Motor drive system. 5,012,169, Cl. 318-568.000

Onohara, Masayuki: *See*—
Nambu, Masao; Onishi, Tadayuki, and Onohara, Masayuki, 5,012,503, Cl. 378-64.000.

Ooms, Adrianus J.: *See*—
Stil, Jacob H., Ooms, Adrianus J., and Mink, Bernardus H., 5,011,507, Cl. 48-62.00R

Oosumimoto, Hiroshi: *See*—
Hiraki, Tadayoshi; Iwase, Osamu; Oosumimoto, Hiroshi, Sugiura, Shinji, Tabushi, Ichiro; Kume, Masafumi; Udagawa, Takashi, Matsui, Komaharu, and Fuji, Yasuhiro, 5,011,733, Cl. 428-336.000.

Opitz, Konrad, and Segal, Marcos, to Hoechst Aktiengesellschaft. Process for preparing a stabilized composition of a lithium azo compound. 5,011,917, Cl. 534-583.000

Oppermann, Hermann; Kuberasampath, Thangavel; Rueger, David C., and Ozkaynak, Engin, to Stryker Corporation. Osteogenic devices. 5,011,691, Cl. 424-423.000.

Oretti, John E.: *See*—
Flynn, David P., and Oretti, John E., 5,010,598, Cl. 2-410.000

Oriola, Ralph; Romine, Charles F.; and Meisner, Edward O., to Eagle-Picher Industries, Inc. Seal for gas spring. 5,011,121, Cl. 267-64.110

Orion Machinery Co., Ltd.: *See*—
Takeuchi, Toru; and Matsugawa, Minoru, 5,010,844, Cl. 119-14.250.

Oris: *See*—
Arbogast, Romain; and Gervie, Albert, 5,011,709, Cl. 427-56.100

Orlosky, Mark E.: *See*—
Colvin, David P., Whitney, Raymond A.; Marsh, Bernard R.; Kline, William M., Rizzo, Ronald R.; and Orlosky, Mark E., 5,010,892, Cl. 128-774.000.

Orr, William W.: *See*—
McLaren, Douglas, and Orr, William W., 5,011,098, Cl. 244-134.00B

Orsborn, Jesse H.: *See*—
Covington, Michael J., and Orsborn, Jesse H., 5,010,718, Cl. 56-40.000

Ort, Gene P.: *See*—
Kychakoff, George; and Ort, Gene P., 5,010,827, Cl. 110-185.000.

Orvik, Jon A., Pearson, Norman R., Haag, Anthony P.; Adaway, Timothy J., Kershner, Larry D., and Kende, Andrew S., to DowElanco. Phenoxyphenoxypropionates, intermediates thereof and methods of preparation. 5,012,017, Cl. 568-803.000

OS Plastic A/S: *See*—
Hougard, Erling, 5,010,687, Cl. 47-79.000.

Osaka Kongo Seito Co., Ltd.: *See*—
Sato, Junichi; and Shimizu, Minoru, 5,012,067, Cl. 219-121.720

Osborne, John C.: *See*—
Auchinleck, Geoffrey F.; McEwen, James A.; Osborne, John C.; and Bussani, Carlo R., 5,010,900, Cl. 128-855.000

Osder, Stephen S., to McDonnell Douglas Corporation. Back-up fly by wire control system. 5,012,423, Cl. 364-432.000

Oshikawa, Satoru, and Niwa, Tatsuo, to Nikon Corporation. Method for producing electrochromic device with application of AC voltage between the electrode layers. 5,011,582, Cl. 204-140.000

Oshima, Noboru: *See*—
Tsutsumi, Fumio, Morikawa, Akihiko; Sakakibara, Mitsuhiko, Oshima, Noboru, Hamada, Tatsuro, Fujimaki, Tatsuo, and Ohashi, Masayuki, 5,011,888, Cl. 525-98.000.

Ostma Maschinenbau GmbH: *See*—
Odenthal, Heinz F., 5,010,712, Cl. 53-55.000.

Ota, Hiroyuki: *See*—
Terada, Takao; Ota, Hiroyuki; Makita, Shigeru; Herpichboehm, Bernd G., Sierra, George H., Summers, Robert B., and Wathington, Thomas M., 5,011,290, Cl. 356-423.000.

Ota, Isao: *See*—
Wakita, Naohide, Uemura, Tsuyoshi, Ohnishi, Hiroyuki; Ohba, Noriko, and Ota, Isao, 5,011,269, Cl. 350-350.00S

Otani, Tamio: *See*—
Nishigai, Masao, Otani, Tamio, Kanaya, Yasuhiko, and Murakami, Tetsuo, 5,011,345, Cl. 409-132.000

Otsuka Pharmaceutical Co., Ltd.: *See*—
Newman, Walter, and Wilson, Diane O., 5,011,778, Cl. 435-240.270.

Otsuka, Tadashi: *See*—
Matsutani, Kanji, and Otsuka, Tadashi, 5,012,066, Cl. 219-121.680.

Otsuka, Tsutomu, and Otsuki, Etsuo, to Tokin Corporation. Method for producing a rare earth metal-iron-boron permanent magnet by use of a rapidly-quenched alloy powder. 5,011,552, Cl. 148-302.000.

Otsuki, Etsuo: *See*—
Otsuka, Tsutomu, and Otsuki, Etsuo, 5,011,552, Cl. 148-302.000.

Otto, Manfred R.: *See*—
Hug, William F., and Otto, Manfred R., 5,012,479, Cl. 372-56.000

Ouchi, Hideo, and Sakai, Kouichi, to Nippon Seiko Kabushiki Kaisha. Belt tensioner with elastic damping feature. 5,011,460, Cl. 474-133.000

Outboard Marine Corporation: *See*—
VanRens, Russell J., 5,011,398, Cl. 425-444.000.

Overman, Dana C., III; Kau, Jee I.; and Mahoney, Robert D., to Dow Chemical Company, The. Preparing cellulose ester membranes for gas separation. 5,011,637, Cl. 264-41.000

Owe, Takeshi, and Mizoshita, Yoshifumi, to Fujitsu Limited. Head suspension mechanism of a recording apparatus with a constant flying height. 5,012,369, Cl. 360-104.000.

Owen, Harry: *See*—
Tedesco, James M.; Owen, Harry; and Chang, Byung J., 5,011,284, Cl. 356-301.000.

Owen, Hartley; and Schipper, Paul H., to Mobil Oil Corporation. Process for control of multistage catalyst regeneration with full then partial CO combustion. 5,011,592, Cl. 208-113.000

Owen, Hartley: *See*—
Harandi, Mohsen N., and Owen, Hartley, 5,011,506, Cl. 44-447.000.

Owens, Garry W.: *See*—
Lovell, John G., Sr.; and Owens, Garry W., 5,011,157, Cl. 273-238.000

Owens-Illinois Plastic Products Inc.: *See*—
Jabarin, Saleh A., 5,011,720, Cl. 428-36.600.

Oxy-Dry Corporation: *See*—
Uribe, Diego; Driskill, Paul, and Hantscho, Rolf, 5,010,819, Cl. 101-425.000

Ozaki, Keiichi: *See*—
Matsumoto, Etsuji, Araki, Mamoru; and Ozaki, Keiichi, 5,011,417, Cl. 439-76.000

Ozaki, Masakuni: *See*—
Kise, Masahiro, Kitano, Masahiko; Ozaki, Masakuni; Kazuno, Kenji, Matsuda, Masahito; Shirahase, Ichiro; and Tomii, Yoshifumi, 5,011,831, Cl. 514-210.000

Ozaki, Shinya: *See*—
Odaka, Kentaro; Ozaki, Shinya; Yamada, Masaki; Inazawa, Yoshizumi, and Ishibashi, Hiroshi, 5,012,459, Cl. 360-32.000.

Ozari, Yehuda: *See*—
Mallya, Prakash; Plamthottam, Sebastian S., and Ozari, Yehuda, 5,011,867, Cl. 522-109.000

Ozawa, Kazuhito: *See*—
Johdai, Akiyoshi; Ozawa, Kazuhito; and Matsui, Toshio, 5,012,298, Cl. 355-323.000

Ozawa, Michiharu: *See*—
Yukumoto, Masao; Ozawa, Michiharu; and Yamane, Hiroshi, 5,010,947, Cl. 164-428.000.

Ozeki, Jiro, to Slidex Corporation. File sheet for filing information recording media. 5,011,016, Cl. 206-456.000.

Ozeki, Kosuke: *See*—
Shiomi, Makoto; Ozeki, Kosuke; Ohsawa, Michitaka; Matsumi, Kuninori; and Kawagishi, Tadahiro, 5,012,332, Cl. 358-64.000.

Ozkaynak, Engin: *See*—
Oppermann, Hermann; Kuberasampath, Thangavel; Rueger, David C.; and Ozkaynak, Engin, 5,011,691, Cl. 424-423.000.

Pacific Communication Science, Inc.: *See*—
Wilson, Philip J.; and Chhatwal, Harprit, 5,012,517, Cl. 381-31.000.

Palepu, Prakash T.; Wu, Cheng-Kuang; and Adler, Robert J. Cyclic flow slurry fractionation. 5,011,022, Cl. 209-155.000.

Palermo, Anthony: *See*—
Zupancic, Anton Z.; Palermo, Anthony; and Levar, Robert E., 5,012,505, Cl. 378-130.000.

Palermo, Robert E.: *See*—
Han, Scott; Martenak, Daniel J.; Palermo, Robert E.; and Walsh, Dennis E., 5,012,029, Cl. 585-500.000.

Pales, Jaime M. Device for preventing sucking of thumb or finger. 5,010,901, Cl. 128-880.000

Palfreyman, Michael G.: *See*—
Gittos, Maurice W.; Miller, Francis P.; Sorensen, Stephen M.; Fozard, John R.; Moser, Paul, Palfreyman, Michael G.; and Cheng, Hsien, 5,011,846, Cl. 514-294.000.

Palitex Project Company GmbH: *See*—
Kallmann, Jurgen, 5,011,092, Cl. 242-35.50A.

Palkovich, Alex; Bird, John M., and Morad, Ratson, to Elscint Ltd. Intgrated active shielded magnet system. 5,012,217, Cl. 335-301.000

Palonen, Juhani; and Purhonen, Hannu, to Instrumentarium Corp. Apparatus for producing panoramic x-ray image projections. 5,012,501, Cl. 378-38.000

Pan, Ju-Don T.; Curry, John W., II; and Schultz, Laurence D., to Microelectronics and Computer Technology Corporation. Method of reworking an electrical multilayer interconnect. 5,011,580, Cl. 204-15.000.

Panaccione, Paul: *See*—
Guillotte, Paul A.; Panaccione, Paul, Martiska, Thomas J.; and Gagnon, Jay J., 5,012,322, Cl. 357-72.000.

Pandrol Jackson, Inc.: *See*—
Sroka, Dennis A.; and Perry, William E., 5,012,413, Cl. 364-424.010.

Pang, Roy H. L., to Creative Biomolecules, Inc. Thrombus specific conjugates. 5,011,686, Cl. 424-94.100.

Pangrazi, Ronald; and Walker, James L., to National Starch and Chemical Investment Holding Corporation. Formaldehyde-free heat resistant binders for nonwovens. 5,011,712, Cl. 427-389.900.

Panol, George: *See*—
Aebischer, Patrick; Galletti, Pierre M.; Panol, George; and Miracoli, Luigi, 5,011,472, Cl. 604-50.000.

Paparizos, Christos: *See*—
Gupta, Victor, Bodolus, Christopher L.; Paparizos, Christos; and Shaw, Wilfrid G., 5,012,028, Cl. 585-500.000.

Papazian, Harold A.: *See*—
Flint, Graham W.; Papazian, Harold A.; and Wolfert, Ludwig G., 5,012,112, Cl. 250-493.100.

Pape, Stefan; and Bassfeld, Hans-Joachim, to Envicon Luft- und Wassertechnik GmbH & Co. KG. Sewage treatment plant. 5,011,605, Cl. 210-615.000.

Papierfabrik August Koehler AG: *See*—
Pietsch, Gunter; and Schrader, Karl-Heinz, 5,011,634, Cl. 264-47.000.

Papke, Brian L.; and Bartley, Leonard S., Jr., to Texaco Inc. Process for producing an overbased sulfonate. 5,011,618, Cl. 252-33.000.

Papst-Motoren GmbH & Co. KG: *See*—
Cap, Heinrich, 5,011,165, Cl. 277-80.000.

Parbhoo, Bhukandas: *See*—
Bortolin, Roberto; and Parbhoo, Bhukandas, 5,011,961, Cl. 556-431.000.

Paris, Sam: *See*—
Bartosiak, George; Siskovic, Christopher; Tap, Henry H.; Paris, Sam; and Goldberg, Arthur E., 5,011,296, Cl. 374-131.000.

Park, Hyun D.; and Nance, Joseph D., to Kemet Electronics Corporation. Lead magnesium niobate ceramic dielectrics having low sintering temperatures. 5,011,803, Cl. 501-136.000.

Park, Moo K.; and Caldwell, Henry C., to Applied Analytical Industries, Inc. Liquid oral pharmaceutical compositions of non-steroidal anti-inflammatory drugs. 5,011,852, Cl. 514-419.000

Park, Yong S., to Zenith Electronics Corporation. Cleaning of flat glass CRT faceplate with internal anti-glare surface. 5,011,443, Cl. 445-2.000.

Park, Young: *See*—
Meisner, Edward; Ballone, Michael P.; and Park, Young, 5,011,013, Cl. 206-373.000.

Parker, Elizabeth M.: *See*—
Baer, Cynthia C.; Buliga, Gregory S.; Hassenheutti, Gerard L.; Henry, George A.; Heth, Alice A.; Jackson, Linda K.; Kennedy-Tolstedt, Jill M.; Kerwin, Phillip J.; Miller, Mark S.; Parker, Elizabeth M.; Paul, Neela K.; Pechak, David G.; Smith, Gary F.; and Witte, Vernon C., 5,011,701, Cl. 426-573.000.

Parker Hannifin Corporation: *See*—
Jelinek, Jerry G., 5,011,162, Cl. 277-11.000.

Parthasarathy, V. R.; Sundaram, Meenakshi; Jameel, Hasan; Gratzl, Josef S.; and Klein, Ronald J., to FMC Corporation; and North Carolina State University. Two stage process for the oxygen delignification of lignocellulosic fibers with peroxide reinforcement in the first stage. 5,011,572, Cl. 162-56.000.

Partridge, Charles C., to Tom Wheatley Valve Co. Subsea barrier valve. 5,010,919, Cl. 137-527.400.

Pasquali, Renato; and Drago, Raffaele, to Alfa Lancia S.p.A. Baseplate for supporting a plurality of electric connectors on a motor car. 5,011,431, Cl. 439-540.000.

Passafaro, James D.; and Griffith, James M., to InterTherapy, Inc. Medical probe assembly having combined ultrasonic imaging and laser ablation capabilities. 5,010,886, Cl. 128-660.030.

Passavant-Werke AG: *See*—
Busse, Oswald, 5,011,601, Cl. 210-229.000.

Patburg, Gary L.: *See*—
Giroux, D. William; Ferry, James N.; Kelly, Kendall J.; Bell, Thomas G.; Narby, Conway P.; and Patburg, Gary L., 5,011,338, Cl. 405-268.000.

Patel, Kishor J.: *See*—
Stobbs, Thomas J.; Patel, Kishor J.; Fritz, Frank M.; Knutson, Dale A.; and Janecke, James P., 5,011,113, Cl. 251-129.160.

Patel, Sunil: *See*—
Dhyanchand, P. John; Patel, Sunil; Ng, Chai-Nam; and Nguyen, Vietson, 5,012,177, Cl. 322-10.000.

Patik, Robert M. Therapeutic hand exerciser. 5,011,135, Cl. 272-67.000.

Patterson, William H., to Monarch Products, Inc. Method and apparatus for reducing residual levels of ethylene oxide in repeatedly sterilized polymeric devices. 5,011,718, Cl. 428-35.700.

Patti, Giuseppe: *See*—
Lentini, Salvatore; and Patti, Giuseppe, 5,012,122, Cl. 307-66.000.

Paturel, Serge; and Magne, Francois, to U.S. Philips Corp. Intrusion detection and identification arrangement for land vehicles. 5,012,099, Cl. 250-342.000.

Paul, Gerald S. Arise-assist chair. 5,011,224, Cl. 297-339.000.

Paul, Neela K.: *See*—
Baer, Cynthia C.; Buliga, Gregory S.; Hassenheutti, Gerard L.; Henry, George A.; Heth, Alice A.; Jackson, Linda K.; Kennedy-Tolstedt, Jill M.; Kerwin, Phillip J.; Miller, Mark S.; Parker, Elizabeth M.; Paul, Neela K.; Pechak, David G.; Smith, Gary F.; and Witte, Vernon C., 5,011,701, Cl. 426-573.000.

Paulson, Bradley A.: *See*—
Braymen, Steven D.; Paulson, Bradley A.; and Goedken, Kenneth D., 5,011,568, Cl. 156-647.000.

Paventi, Martino: *See*—
Hay, Allan S.; and Paventi, Martino, 5,011,998, Cl. 564-384.000.

Pawley, Michael L.: *See*—
Aldrich, Charles S.; Applegate, Steven L.; Craft, James A.; Molloy, James J.; and Pawley, Michael L., 5,012,289, Cl. 355-260.000.

Pawlicki, Jeffrey J., to Molex Incorporated. Spring clip electrical connector. 5,011,439, Cl. 439-847.000.

Pawlikowski, Walter W., Jr.: *See*—
Welygan, Dennis G.; Zemke, Ronald O.; and Pawlikowski, Walter W., Jr., 5,011,642, Cl. 264-167.000.

Payne, LeRoy. Structural unit and method for molding same. 5,011,636, Cl. 264-40.700.

Paz, Felix. Bendable channel construction element. 5,010,709, Cl. 52-658.000.

Pearlman, Mort; and Valkenburg, Neal V. Wallbase molding strip. 5,010,703, Cl. 52-288.000.

Pearson, Norman R.: *See*—
Orvik, Jon A.; Pearson, Norman R.; Haag, Anthony P.; Adaway, Timothy J.; Kershner, Larry D., and Kende, Andrew S., 5,012,017, Cl. 568-803.000.

Pechak, David G.: *See*—
Baer, Cynthia C.; Buliga, Gregory S.; Hassenheutti, Gerard L.; Henry, George A.; Heth, Alice A.; Jackson, Linda K.; Kennedy-Tolstedt, Jill M.; Kerwin, Phillip J.; Miller, Mark S.; Parker, Elizabeth M.; Paul, Neela K.; Pechak, David G.; Smith, Gary F.; and Witte, Vernon C., 5,011,701, Cl. 426-573.000.

Peck, Jeffrey A.; and Thurston, William R. Bite indicators. 5,010,678, Cl. 43-17.000.

Peet, Norton P.; and Sunder, Shyam, to Merrell Dow Pharmaceuticals Inc. Substituted triazolopyridazines, pharmaceutical compositions and use. 5,011,835, Cl. 514-212.000.

Pelerin, Joseph. Custom dental impression tray. 5,011,407, Cl. 433-48.000.

Pendolino, Eugene F.: *See*—
O'Neill, Michael L.; Moore, Stephen P.; and Pendolino, Eugene F., 5,011,229, Cl. 299-91.000.

Penn Engineering & Manufacturing Corp.: *See*—
Hendricks, Howard F., 5,012,167, Cl. 318-254.000.

Pennica, Diane: *See*—
Levinson, Arthur D.; Pennica, Diane, Kohr, William J.; Vehar, Gordon A.; Goeddel, David V., Yelverton, Elizabeth M.; and Simonsen, Christian C., 5,011,795, Cl. 435-69.200.

Penny, William H.: *See*—
Voegele, Gerald G.; and Penny, William H., 5,011,537, Cl. 134-22.110.

Pennzoil Products Company: *See*—
Venier, Clifford G.; and Casserly, Edward W., 5,012,022, Cl. 585-20.000.
Venier, Clifford G.; and Casserly, Edward W., 5,012,023, Cl. 585-20.000.

Perera, Slobodan R.: *See*—
Farnsworth, Stephen W.; Doods, David R.; Perera, Slobodan R.; and Stahl, K. John, 5,012,463, Cl. 369-100.000.

Periasamy, Muthunadar P.: *See—*
Rajagopalan, Raghavan, and Periasamy, Muthunadar P., 5,011,925, Cl. 544-58.100.

Pericomp Corporation: *See—*
Joannou, Kyriacos; Wilson, Kenneth; and Lowry, Alan B., 5,012,376, Cl. 360-128.000.

Pernet, Michel, to Alcatel Cit. IC card reader having lever that bends card onto IC contacts. 5,012,078, Cl. 235-441.000.

Peron, Jean-Yves: *See—*
Helou, Didier; Peron, Jean-Yves, Coutin, Rene , and Thiebaut, Georges, 5,012,465, Cl. 370-58.100.

Perotti, Jose M.: *See—*
Izaguirre, Lowell F., Sr.; and Perotti, Jose M., 5,011,073, Cl. 236-11.000.

Perr, J. Victor, to Cummins Engine Company, Inc. Unit injector and drive train with improved push rod-plunger connection 5,011,079, Cl. 239-95.000.

Perruzza, Cathleen; and Briggs, Anne Baby carrier 5,011,057, Cl. 224-158.000.

Perry, Margaret M., to Agricultural and Food Research Council, The In vitro embryo culture technique 5,011,780, Cl. 435-317.100.

Perry, Richard A., to Hand Held Products, Inc. Board wiring pattern for a high density memory module 5,012,389, Cl. 361-409.000.

Perry, William E.: *See—*
Sroka, Dennis A.; and Perry, William E., 5,012,413, Cl. 364-424.010.

Persson, Jan-Ove; and Branemark, Per-Ingvar, to Atos Medical AB, and Institutet for Tillampad Bioteknologi Joint prosthesis 5,011,497, Cl. 623-21.000.

Perzentka, Thomas R., Jr., to AT&T Bell Laboratories. Computer terminal cover assembly. 5,011,418, Cl. 439-135.000.

Pesque, Patrick *See—*
Fink, Mathias, Cancre, Fabrice, and Pesque, Patrick, 5,010,885, Cl. 128-660.070.

Pestellini, Vittorio *See—*
Meli, Alberto; Volterra, Giovanna, Giannotti, Danilo, and Pestellini, Vittorio, 5,011,833, Cl. 511-211.000.

Peter, Gary R. *See—*
Brown, Ralph W., Beach, Sammie C., and Peter, Gary R., 5,010,738, Cl. 62-135.000.

Peter, Julius Apparatus for producing rubber mixtures 5,011,291, Cl. 366-91.000.

Petersen, Maike: *See—*
Rao, Nagaraj N., Wandrey, Christian, Petersen, Maike, and Alfermann, August W., 5,011,775, Cl. 435-135.000.

Peterson, Adam L., to Dow Corning Corporation Thermally conductive organosiloxane compositions 5,011,870, Cl. 523-220.000.

Peterson, Charles M *See—*
Lymburner, Frank M., and Peterson, Charles M., 5,011,903, Cl. 528-76.000.

Peterson, Edward A Vehicle mountable carrier for three-wheeled scooter and the like. 5,011,361, Cl. 414-462.000.

Peterson Elastomers, Inc *See—*
Lymburner, Frank M., and Peterson, Charles M., 5,011,903, Cl. 528-76.000.

Petralli, Louis J., to Met One, Inc. Multisensor particle counter utilizing a single energy source 5,011,286, Cl. 356-343.000.

Petrides, Christie *See—*
Griebell, Charles A., and Petrides, Christie, 5,012,223, Cl. 340-531.000.

Pettengill, Larry M *See—*
Mowka, Edmund J., Jr., Frakes, Thomas A., and Pettengill, Larry M., 5,011,600, Cl. 210-169.000.

Pettersson, Lars T., and Wiman, Jorgen V., to Sandvik AB Double-sided cutting insert 5,011,340, Cl. 407-114.000.

Petzold, Rainer, to Zahnradfabrik Friedrichshafen, AG Vehicle operating and speed regulating device 5,012,418, Cl. 364-426.040.

Peuckert, Doris *See—*
Kriechbaum, Gangolf, Kleinschmit, Peter, and Peuckert, Doris, 5,011,673, Cl. 423-608.000.

Peuckert, Marcellus *See—*
Vaahas, Tilo, Peuckert, Marcellus, and Bruck, Martin, 5,011,801, Cl. 501-97.000.

Pfalzgraf, Emile, to E P B Emile Pfalzgraf, Societe Anonyme Mounting device with conical shank 5,011,346, Cl. 409-234.000.

Pfeiffer, Otmar, Geuns, Guy, and Welzel, Josef, to Hermann Hemscheidt Maschinenfabrik GmbH & Co. Multipole connector for control devices in underground working 5,011,433, Cl. 439-589.000.

Pfeuffer, Josef *See—*
Nuernberg, Eberhard, and Pfeuffer, Josef, 5,011,694, Cl. 424-464.000.

Pfizer Inc *See—*
Sarges, Reinhard, 5,011,840, Cl. 514-248.000.
Scappaticci, Karen A., 5,011,841, Cl. 514-253.000.

Pflueger, Wayne A *See—*
DeMatteis, Robert B., and Pflueger, Wayne A., 5,011,466, Cl. 493-188.000.

Pfohl, Robert L., and Uphold, James D., to Vitacomm, Ltd. Vital signs monitoring system 5,010,890, Cl. 128-773.000.

PFW(Nederland)B V *See—*
Lenselink, Willem, 5,011,970, Cl. 558-430.000.

Phillips Petroleum Company *See—*
Efner, Howard F., 5,011,957, Cl. 556-77.000.

Philot, George G *See—*
de Kanawati, Gisleine C., and Philot, George G., 5,010,898, Cl. 128-845.000.

Photon Imaging Corp. *See—*
Gordon, Eugene I., 5,011,261, Cl. 350-96.250.

Pickard, Jurgen *See—*
Jurgens, Gunter, Pickard, Jurgen, and Sell, Werner, 5,010,986, Cl. 188-250.00H.

Picken, Alan D *See—*
Danner, Edward L., and Picken, Alan D., 5,011,218, Cl. 296-214.000.

Picker International, Inc *See—*
Zupancic, Anton Z., Palermo, Anthony, and Levar, Robert E., 5,012,505, Cl. 378-130.000.

Pielartzik, Harald: *See—*
Meier, Helmut-Martin, Pielartzik, Harald, Morbitzer, Leo, Muller, Hanns-Peter, and Braun, Dietrich, 5,011,972, Cl. 560-66.000.

Piepho, Michael: *See—*
Hoppe, Lutz; Koch, Wolfgang, Luhmann, Erhard, and Piepho, Michael, 5,011,874, Cl. 524-30.000.

Pieraccioli, Daniele *See—*
Semeraro, Claudio Micheli, Dino, Pieraccioli, Daniele, Gaviraghi, Giovanni; and Borthwick, Allan D., 5,011,848, Cl. 514-356.000.

Pierce & Stevens Corporation *See—*
Melber, George E.; and Wolinski, Leon, 5,011,862, Cl. 521-54.000.

Pietsch, Gunter; and Sehrader, Karl-Heinz, to Papierfabrik August Koehler AG. Microcapsules and microcapsule production process 5,011,634, Cl. 264-47.000.

Pijanowski, Joseph A Vehicle with multi-positionable flat bed 5,011,362, Cl. 414-480.000.

Pilaszek, Wincenty L S *See—*
Bartels, Tamme, and Pilaszek, Wincenty L. S., 5,011,994, Cl. 564-278.000.

Pillias, Danielle: *See—*
Brochot, Jean-Pierre, Pillias, Danielle, Wuest, Isabelle, Beaufays, Jean-Pierre, and Darmont, Maurice, 5,011,585, Cl. 204-192.130.

Pilot Ink Co., Ltd., The *See—*
Nakasuji, Norikazu, Kito, Tsutomu, and Shibahashi, Yutaka, 5,011,445, Cl. 446-14.000.

Pinder, John T *See—*
Ma, Kong, and Pinder, John T., 5,011,626, Cl. 252-582.000.

Pinkhasov, Eduard, to Vapor Technologies, Inc. Method of making open-pore structures 5,011,638, Cl. 264-59.000.

Pinnegar, Harry *See—*
Hayden, Percy, and Pinnegar, Harry, 5,011,807, Cl. 502-218.000.

Pioneer Electronic Corporation *See—*
Yoshio, Junichi, and Suzuki, Masami, 5,012,242, Cl. 341-131.000.

Pitney Bowes Inc *See—*
Brown, Nanette, 5,012,425, Cl. 364-464.020.
Holbrook, Russell W., 5,011,129, Cl. 271-274.000.

Pitt, Richard E *See—*
Hansen, Victor E., Smith, David T., McPherson, Douglas R., and Pitt, Richard E., 5,011,577, Cl. 162-352.000.

Plamthottam, Sebastian S.: *See—*
Mallya, Prakash, Plamthottam, Sebastian S., and Ozari, Yehuda, 5,011,867, Cl. 522-109.000.

Plastic Industries, Inc *See—*
Hatfield, Hugh S., 5,010,780, Cl. 74-501.50R.

Plasticos Cream, S.A *See—*
Robles, Carlos, 5,010,666, Cl. 40-154.000.

Plastiver S.A.S. Di Giovanni e Vittorio Vigano & C *See—*
Vigano, Vittorio, 5,011,123, Cl. 270-54.000.

Plempel, Manfred: *See—*
Elbe, Hans-Ludwig, Regel, Erik, Buchel, Karl H., Schaller, Klaus, and Plempel, Manfred, 5,011,850, Cl. 514-383.000.

Pleva, Scott J.: *See—*
Griffith, Jerry T., and Pleva, Scott J., 5,010,658, Cl. 33-784.000.

Plichta, Edward J.; and Behl, Wishvender K., to United States of America, Army High temperature rechargeable molten salt cell 5,011,750, Cl. 429-112.000.

Plies, Erich; and Quincke, Joerg, to Siemens Aktiengesellschaft Method and apparatus for investigating the latch-up propagation in complementary-metal-oxide semiconductor (CMOS) circuits. 5,012,100, Cl. 250-342.000.

Plocek, Edward J *See—*
Colleran, Stephen A., Plocek, Edward J., Ponn, Timothy R., and Gruhn, William D., 5,011,426, Cl. 439-357.000.

Plueckhan, Juergen *See—*
Herzog, Klaus, Boehning, Karl-Heinz, Aichinger, Heinrich, Plueckhan, Juergen, Mross, Wolf D., and Schwarzmann, Matthias, 5,011,809, Cl. 502-348.000.

Plunkett, Robert L., to Accurate Box Company, Inc. Display carton 5,011,070, Cl. 229-109.000.

Plus Logic, Inc *See—*
Kaplinsky, Cecil H., 5,012,135, Cl. 307-465.000.

Pluskal, Malcolm G *See—*
Coull, James M., Rappin, Darryl J.; Koester, Hubert, Pluskal, Malcolm G., Steuck, Michael J., and Bonner, Alex G., 5,011,861, Cl. 521-53.000.

Pneumo Abex Corporation *See—*
Huttema, Thomas W., Eiszner, William H., Jr., Heeres, Stanley D. and Vanderlaan, Robert D., 5,012,144, Cl. 310-14.000.

Pohlman, Tommy M *See—*
Richardson, Larry D., and Pohlman, Tommy M., 5,011,087, Cl. 241-5.000.

Pohm, Arthur V *See—*
Hurst, Allan T., Jr., and Pohm, Arthur V., 5,012,444, Cl. 365-173.000.

Polcz, Laszlo; and Sgro, Salvatore. Auxiliary power generation means for outboard motors. 5,011,442, Cl. 440-900.000.

Policastro, Charles J., Dougherty, Edmond J.; and Dowling, Martin J., to Policastro, Charles J. Apparatus for monitoring, storing and transmitting detected physiological information. 5,012,411, Cl. 364-413.060.

Pollard, Christopher A.; and Boeckner, James W., Jr., to MiniScribe Corporation. Disk drive crash stop/actuator latch. 5,012,371, Cl. 360-105.000.

Polyak, Mark; and Pugh, Robert W., Jr., to American Medical Systems, Inc. Implantable penile prosthesis. 5,010,882, Cl. 128-79.000.

Ponn, Timothy R.: *See—*
Colleran, Stephen A.; Plocek, Edward J.; Ponn, Timothy R.; and Gruhn, William D., 5,011,426, Cl. 439-357.000.

Ponpipom, Mitree M.. *See—*
Biftu, Tesfaye; Ponpipom, Mitree M.; and Girotra, Nirindar N., 5,011,847, Cl. 514-336.000.

Popovich, Steve S., Meyer, Russell A.; Stanis, William J.; Miller, Christopher, and Mitchell, Gary R. to Information Storage, Inc. RAM head positioning and tracking system. 5,012,460, Cl. 369-32.000.

Porte, Alain, to Societe Nationale Industrielle et Aerospatiale Device for the tight, dismantlable coupling of two tubes, particularly for a fuel transfer installation. 5,011,193, Cl. 285-31.000.

Poser, James W.. *See—*
Benedict, James J., Degenhardt, Charles R.; and Poser, James W., 5,011,913, Cl. 530-390.000.

Post Office, The *See—*
MacMillan, Colin G., 5,010,998, Cl. 198-372.000.

Potter, William D *See—*
Rawlings, David A., and Potter, William D., 5,010,883, Cl. 128-155.000.

Potts, David E *See—*
Hunter, Orville, Jr., Hill, James L.; and Potts, David E., 5,011,802, Cl. 501-100.000.

Poulsen, Stephen D., Jr., to AT&T Bell Laboratories. Communication system comprising a remotely activated switch. 5,012,233, Cl. 340-825.180.

Powell, Theo J.; Hickman, John I., and Crowley, Jeri J., to Texas Instruments Incorporated Value-strength based test pattern generator and process. 5,012,471, Cl. 371-27.000.

Power Card Supply: *See—*
Martin, Pierre J., 5,012,406, Cl. 364-200.000.

PPG Industries, Inc *See—*
Govindan, Cheruthur, 5,011,937, Cl. 548-354.000.

Precision Fukuhara Works, Ltd. *See—*
Kawase, Shinji, and Yorisue, Shyozo, 5,010,744, Cl. 66-93.000.

Preciutti, Roberto Multi-purpose dental applicator 5,010,906, Cl. 132-323.000.

Preikschat, Ekhard: *See—*
Preikschat, Fritz K., and Preikschat, Ekhard, 5,012,118, Cl. 250-574.000.

Preikschat, Fritz K., and Preikschat, Ekhard. Apparatus and method for particle analysis. 5,012,118, Cl. 250-574.000.

Presby, Herman M *See—*
Edwards, Christopher A., and Presby, Herman M., 5,011,254, Cl. 350-96.180.

Pressprich, John W., to United Technologies Corporation. Integrated circuit remote terminal stores interface for communication between CPU and serial bus. 5,012,404, Cl. 364-200.000.

Prickett, Kathryn S.: *See—*
Hopp, Thomas P., and Prickett, Kathryn S., 5,011,912, Cl. 530-387.000.

Prime Computer, Inc. *See—*
Olsen, Richard, and Gross, William, 5,012,342, Cl. 358-181.000.

Prisco, Anthony Toilet odor removal system 5,010,600, Cl. 4-217.000.

Pritchard, Thomas B *See—*
Lowe, David J., and Pritchard, Thomas B., 5,012,257, Cl. 346-1.100.

Procter, David F *See—*
Daw, Terry L., and Procter, David F., 5,010,702, Cl. 52-241.000.

Procter & Gamble Company, The *See—*
Benedict, James J., Degenhardt, Charles R., and Poser, James W., 5,011,913, Cl. 530-390.000.

Proctor & Gamble Company, The *See—*
Leonard, Giles J., and Marberry, Michael L., 5,011,830, Cl. 424-57.000.

Progressive Tool & Industries Co. *See—*
Stoutenburg, Robert R., Dugas, Michael R., and Hazelton, Mark W., 5,011,068, Cl. 228-4.100.

Protocol Engineering PLC *See—*
Elworthy, Trevor P., 5,012,345, Cl. 358-214.000.

Pruss, Kent R. *See—*
Schoeppel, Sonja L.; Weeks, Kenneth J.; and Pruss, Kent R., 5,012,357, Cl. 378-65.000.

PTX-Pentronix, Inc. *See—*
DeSantis, Raymond P., 5,010,824, Cl. 104-23.001.

Public Health Research Institute of the City of N.Y.: *See—*
Reesei, Paul A., 5,011,772, Cl. 435-69.100.

Pugh, Robert W., Jr *See—*
Polyak, Mark; and Pugh, Robert W., Jr., 5,010,882, Cl. 128-79.000.

Pugin, Benoit, Ramos, Gerardo, and Spindler, Felix, to Ciba-Geigy Corporation Process for the preparation of optically active secondary amines. 5,011,995, Cl. 564-302.000.

Purdue Research Foundation: *See—*
Bourland, Joe D., Barbs, Charles F; Geddes, Leslie A.; Tacker, Willis A., Jr.; and Graber, George P., 5,010,772, Cl. 73-862.040.

Purhonen, Hannu: *See—*
Palonen, Juhani; and Purhonen, Hannu, 5,012,501, Cl. 378-38.000.

Purnell, Victor J. Joystick. 5,011,149, Cl. 273-148.00B.

Pusch, Hans-Dieter: *See—*
Tull, Bernward; and Pusch, Hans-Dieter, 5,012,263, Cl. 354-241.000.

Putney, Gordon A., to Snap-on Tools Corporation. Detent structure having a retaining lip with a smooth continuous outer surface free from stress-concentrating corners. 5,011,324, Cl. 403-328.000.

Pyles, Robert A.: *See—*
Silva, James M.; and Pyles, Robert A., 5,011,967, Cl. 558-281.000.

Pyramid, Inc.: *See—*
Smith, Thomas R., 5,011,462, Cl. 474-255.000.

Quada Internationale Ltd. *See—*
Mauffette, Claude, 5,011,054, Cl. 223-88.000.

Quantex Corporation: *See—*
Lindmayer, Joseph, 5,012,098, Cl. 250-339.000.

Quarberg, Craig D.. *See—*
Levi, Avraham Y.; and Quarberg, Craig D., 5,011,319, Cl. 403-109.000.

Quast, Norbert: *See—*
Krumeich, Jorg H.; and Quast, Norbert, 5,011,498, Cl. 606-166.000.

Queen's University at Kingston: *See—*
Barnett, Richard I.; and Knapp, William C., 5,010,608, Cl. 5-453.000.

Quincke, Joerg: *See—*
Plies, Erich; and Quincke, Joerg, 5,012,100, Cl. 250-342.000.

R. J. Reynolds Tobacco Company. *See—*
Lassiter, Wallace R., 5,010,904, Cl. 131-280.000.

Rada, Mark Z.; Willis, John W.; and Stewart, Marta E., to Delco Electronics Corporation. Closely spaced back-lit push button array. 5,012,054, Cl. 200-314.000.

Rademacher, Loren: *See—*
Frantz, Gary A.; Aleem, Mohd A.; Rademacher, Loren; and Rateike, Lee R., 5,012,145, Cl. 310-68.00D.

Ragland, Frank R., Jr., to RCA Licensing Corporation Color picture tube having improved shadow mask-frame assembly support. 5,012,154, Cl. 313-406.000.

Ragland, Raymond E.: *See—*
Sheridan, William M., and Ragland, Raymond E., 5,011,743, Cl. 428-600.000.

Ragonese, Francis P.: *See—*
Child, Jonathan E.; Choi, Byung C.; and Ragonese, Francis P., 5,012,014, Cl. 568-695.000.

Rajagopalan, Raghavan, and Periasamy, Muthunadar P., to Mallinckrodt, Inc. Morpholinoamido EDTA derivatives. 5,011,925, Cl. 544-58.100.

Rajput, Yudh V.: *See—*
Matouka, Michael F.; Rajput, Yudh V.; Wilkey, Paul D.; and Bright, James A., 5,011,237, Cl. 303-115.000.

Rakolta, Pamela A.. *See—*
Dulaney, Randi L.; and Rakolta, Pamela A., 5,012,234, Cl. 340-825.440.

Ramanan, V. R. V., to Allied-Signal, Inc Iron-rich metallic glasses having high saturation induction and superior soft ferromagnetic properties 5,011,553, Cl. 148-403.000.

Rambo, Robert D.; and Yorke, John A., to Ace Medical Inc Compression orb. 5,010,902, Cl. 128-888.000.

Ramirez, Enrique G.: *See—*
Bowman, Robert G.; Hartwell, George E.; Molzahn, David C.; Ramirez, Enrique G.; and Lastovica, John E., Jr., 5,011,999, Cl. 564-479.000.

Ramos, Gerardo: *See—*
Pugin, Benoit; Ramos, Gerardo; and Spindler, Felix, 5,011,995, Cl. 564-302.000.

Rankin, J. Cameron. Sports device. 5,011,138, Cl. 272-117.000.

Rankin, William J. Folding travel cage. 5,010,848, Cl. 119-26.000.

Ransburg Corporation: *See—*
Sonnleitner, Adolf H.; and Bergmann, Karl H., 5,011,086, Cl. 239-691.000.

Rao, K. Jagan M.; and Rao, K. Savitri Ion selective dip electrode assembly 5,011,588, Cl. 204-409.000.

Rao, K. Savitri: *See—*
Rao, K. Jagan M.; and Rao, K. Savitri, 5,011,588, Cl. 204-409.000.

Rao, Nagaraj N.; Wandrey, Christian; Petersen, Maike; and Alfermann, August W., to Forschungszentrum Juelich GmbH. Enzymatic process for the preparation of rosmarinic acid. 5,011,775, Cl. 435-135.000.

Rappin, Darryl J.: *See—*
Coull, James M.; Rappin, Darryl J.; Koester, Hubert; Pluskal, Malcolm G.; Steuck, Michael J.; and Bonner, Alex G., 5,011,861, Cl. 521-53.000.

Rashleigh, Scott C.: *See—*
Thorncraft, David A.; Kennedy, David R.; Rashleigh, Scott C.; and Dabbs, Timothy P., 5,011,252, Cl. 350-96.150.

Rasmussen, James M., to Cummins-Allison Corporation Coin sorter with automatic bag-switching. 5,011,455, Cl. 453-010.000.

Rateike, Lee R.: *See—*
Frantz, Gary A.; Aleem, Mohd A.; Rademacher, Loren; and Rateike, Lee R., 5,012,145, Cl. 310-68.00D.

Rathfelder, Paul; Sagala, Jozef; Landbeck, Friedrich; and Matschkal, Heinz, to Schill & Seilacher GmbH & Co Tanning agent formulation for manufacture of semifinished leather products. 5,011,499, Cl. 8-94.330.

Ratnakumar, Kola N.; to Exar Corporation. Method of making a complementary BiCMOS process with isolated vertical PNP transistors. 5,011,784, Cl. 437-34.000.

Rau, Garland R. *See*—
Nelson, Joseph M.; and Rau, Garland R., 5,011,329, Cl. 405-128.000.

Rauchfuss, Brian D. *See*—
Alcorn, Byron A.; Cherry, Robert W.; Coleman, Mark D.; Rauchfuss, Brian D.; and Taylor, Gary L., 5,012,163, Cl. 315-383.000.

Ravipati, Sitaramaiah. *See*—
Zador, Eugene; Hsu, Shyiguei; Kaczmarek, Wesley R.; Ravipati, Sitaramaiah; Supkis, Stanley; and Vogel, Richard H., 5,011,513, Cl. 51-295.000.

Rawlings, David A.; and Potter, William D.; to Smith & Nephew Associated Companies plc. Surgical dressing. 5,010,883, Cl. 128-155.000.

Raybon, James C., Jr. *See*—
Marshall, Robert M.; Raybon, James C., Jr.; and Medeiros, Robert W., 5,011,616, Cl. 252-8.700.

Raychem Corp. *See*—
Diaz, Stephen H., 5,011,249, Cl. 350-96.110.
Sueht, Gayle A.; and Mattis, John S., 5,011,432, Cl. 439-584.000.

Rayson, Gary D.; and Shen, Yang; to New Mexico State University Technology Transfer Corporation. Inductively coupled plasma torch with laminar flow cooling. 5,012,065, Cl. 219-121.520.

Raytheon Company. *See*—
Lantagne, John A.; Johnson, Edward G.; and Virostko, Michael J., 5,012,209, Cl. 333-116.000.
Licter, Philip L.; and Waterman, John K., 5,012,194, Cl. 324-405.000.

Razeghi, Manijeh; Defour, Martin; Omnes, Franck; Maurel, Philippe; Blondeau, Robert; and Krakowski, Michel; to Thomson-CSF. Device of semiconductor materials formed on a substrate having a different lattice parameter and application to a laser. 5,012,476, Cl. 372-45.000.

RCA Licensing Corp. *See*—
Datta, Pabitra; Friel, Ronald N.; and Thompson, Robert P., 5,012,155, Cl. 313-461.000.
Ragland, Frank R., Jr., 5,012,154, Cl. 313-406.000.

Reagents of the University of California, The. *See*—
Lee, Wen-Hwa; and Lee, Eva Y. P., 5,011,773, Cl. 435-69.100.

Ream, Gregory L. *See*—
Aldrich, Charles S.; Dyer, Stanley; and Ream, Gregory L., 5,012,293, Cl. 355-274.000.

Ream, Stanley L.; Lee, C. S.; Lim, G. C.; and Fukae, Kenneth; to Amada Company, Limited. Laser beam path alignment apparatus for laser processing machines. 5,011,282, Cl. 356-153.000.

Rebsamen, Arthur; to Machinenfabrik Schweiter AG. Method and apparatus for producing packages. 5,010,724, Cl. 57-270.000.

Recker, Bradley J.; Roe, Derrick I.; and Rozman, Christopher J.; to Sundstrand Corporation. Digitally controlled oscillator. 5,012,437, Cl. 364-701.000.

Recreation Industries Company. *See*—
Foley, John J.; Eide, Ralph M.; and Macdonell, Ranald I., 5,011,441, Cl. 440-30.000.

Recsei, Paul A.; to Public Health Research Institute of the City of N.Y. High yield protein production system. 5,011,772, Cl. 435-69.100.

Rector, Douglas L.; Conder, George A.; and Folz, Sylvester D.; to Upjohn Company. Anthelmintic pyridinyl acylhydrazones derivatives. 5,011,932, Cl. 546-268.000.

Reda, Ralph J. *See*—
Kelly, James L.; and Reda, Ralph J., 5,011,708, Cl. 427-443.100.

Redding, Randy J. *See*—
Carpenter, William D.; Redding, Randy J.; and McLoughlin, Robert C., 5,012,382, Cl. 361-93.000.

Reece, Roger R. Post anchor apparatus. 5,011,107, Cl. 248-545.000.

Reed, Mark E.; to Durkin-Reed, Inc. Vehicle preheating system using existing vehicle heating system. 5,012,070, Cl. 219-202.000.

Reedy, Herman E.; to II-VI Incorporated. Fixed wavelength laser using multiorder halfwave plate. 5,012,473, Cl. 372-19.000.

Reedy, John S. *See*—
Nelson, Marvin I.; and Reedy, John S., 5,011,111, Cl. 251-54.000.

Reese, Scott P. *See*—
Walker, Roger C.; Reese, Scott P.; Joyce, David L.; and Kastrup, David A., 5,012,420, Cl. 364-431.020.

Refrigeration Research, Inc. *See*—
Sobieski, John L.; and Bottum, Edward W., 5,011,105, Cl. 248-219.100.

Regel, Erik. *See*—
Elbe, Hans-Ludwig; Regel, Erik; Buchel, Karl H.; Schaller, Klaus; and Plempel, Manfred, 5,011,850, Cl. 514-383.000.

Reich, Richard A. *See*—
Frazier, Janice D.; Jackson, Robert L.; and Reich, Richard A., 5,011,546, Cl. 148-23.000.

Reimann, Klaus. *See*—
Haeffner, Eckhard; Ben-Nasr, Hedi; Knuth, Bernd; Jasper, Hubert; and Reimann, Klaus, 5,011,594, Cl. 208-320.000.

Reinagel, Frederick G. *See*—
Neuhaus, Max; and Reinagel, Frederick G., 5,012,221, Cl. 340-384.00E.

Reinecke, Berent. *See*—
Gresser, Wilhelm; Schelhase, Klaus; Frisch, Heinz; Kaschel, Klaus; Reinecke, Berent; and Trautmann, Wilhelm H., 5,011,614, Cl. 210-761.000.

Reiner, Michael. *See*
Toepfer, Bernhard; and Reiner, Michael, 5,011,236, Cl. 303-100.000.

Reintjes, John F.; Tankersley, Lawrence L.; Cooper, David G.; and Dexter, James L.; to United States of America, Navy. Narrow-bandwidth diffraction-limited coupled stable-unstable resonator laser cavity. 5,012,483, Cl. 372-95.000.

Reisert, James J. *See*—
Keller, James B.; Ladd, Kevin L.; and Reisert, James J., 5,012,403, Cl. 364-200.000.

Reithofer, Jurgen. *See*—
Rodi, Anton; Blasius, Udo; Reithofer, Jurgen; and May, Karl-Heinz, 5,010,812, Cl. 101-148.000.

Reliance Electric Company. *See*—
Martinie, Howard W., 5,011,301, Cl. 384-140.000.

Reliance Electric Industrial Company. *See*—
Martinie, Howard M., 5,011,306, Cl. 384-585.000.

Remond, Michel; to Compagnie Generale des Etablissements Michelin. Apparatus for producing prevulcanized treads. 5,011,397, Cl. 425-328.000.

Renfer, Dale S. *See*—
Limburg, William W.; Yanus, John F.; Renfer, Dale S.; Schank, Richard L.; and Ong, Beng S., 5,011,939, Cl. 548-440.000.

Rennex, Brian G. Energy-efficient running brace. 5,011,136, Cl. 272-70.000.

Rennie, John H. S. *See*—
Garvey, Michael J.; Griffiths, Ian C.; and Rennie, John H. S., 5,011,690, Cl. 424-401.000.

Renton, Paul. Hard drive security system. 5,012,514, Cl. 380-4.000.

Research Equipment Corporation. *See*—
Harris, Eric W., 5,011,281, Cl. 356-37.000.

Resnick, Paul R. *See*—
Hung, Ming-Hong; and Resnick, Paul R., 5,011,954, Cl. 549-548.000.

Retroperfusion Systems, Inc. *See*—
Lundquist, Ingemar H.; Tarezy-Hornoch, Zoltan; and Kardos, Thomas J., 5,011,468, Cl. 600-18.000.

Retter, Refael; to Zoran Corporation. Apparatus for addressing memory with data word and data block reversal capability. 5,012,441, Cl. 364-900.000.

Reuschling, Dieter. *See*—
Clauss, Karl; Linkies, Adolf; and Reuschling, Dieter, 5,011,982, Cl. 562-38.000.

Reuter, Werner; to Grote & Hartmann GmbH & Co. KG. Plugging device for the electric initiation of an airbag provided with locking means to permit the opening thereof without triggering the functioning of the airbag. 5,011,423, Cl. 439-341.000.

Revolving Door Control, Inc. *See*—
Schwarz, Milan; and Mayer, Robert, 5,012,455, Cl. 367-93.000.

Rey, Charles A. *See*—
Krishnan, Shankar; Hansen, George P.; Hauge, Robert H.; Margrave, John L.; and Rey, Charles A., 5,011,295, Cl. 374-126.000.

Reynolds, Mark L. *See*—
Basso, Richard J.; Hansen, Randall S.; Kolasa, Edward P.; Reynolds, Mark L.; and Tam, Chun P., 5,012,512, Cl. 379-218.000.

Rhiner, Walter; to Ximix, Inc. Method and apparatus for monitoring particles using back-scattered light without interference by bubbles. 5,012,119, Cl. 250-574.000.

Rhone-Poulenc Chimie. *See*—
Cailly, Francinet; and Mottot, Yves, 5,011,665, Cl. 423-21.500.
Le Loarer, Jean-Luc, 5,011,671, Cl. 423-592.000.

Ricco, Mario. *See*—
Ausiello, Francesco P.; and Ricco, Mario, 5,011,082, Cl. 239-585.000.

Richards, Barry R. *See*—
Duke, Jonathan W.; and Richards, Barry R., 5,011,421, Cl. 439-213.000.

Richardson, Larry D.; and Pohlman, Tommy M. Method of and apparatus for continuously treating comminuted synthetic plastic containers and products having contaminants bonded thereto for recycling purposes. 5,011,087, Cl. 241-5.000.

Richardson-Vicks, Inc. *See*—
Ciotti, Susan L.; Spengler, Eric G.; and Deckner, George E., 5,011,681, Cl. 424-81.000.

Ricoh Company, Ltd. *See*—

Matsuoka, Shigeki; Okubo, Hiruzu; and Kosaka, Daisuke, 5,012,448, Cl. 365-208.000.
Sasaki, Eiichi, 5,012,258, Cl. 346-1.100.
Sawamura, Tadahide; Nakamura, Yoko; and Kojima, Fumiyo, 5,012,299, Cl. 355-326.000.
Shina, Toshio; Miyamoto, Keiko; Izumi, Kouji; Hayashi, Yasuro; Karasawa, Yonenobu; Uematsu, Satoru; and Sei, Naoki, 5,010,605, Cl. 4-542.000.
Shobu, Toshifumi; Shibata, Hiroshi; and Ogasawara, Fumihiro, 5,012,470, Cl. 370-110.100.
Suzuki, Takumi; and Uehara, Kiyohiro, 5,011,266, Cl. 350-335.000.
Tsuchiya, Keishin, 5,012,354, Cl. 358-474.000.
Tsutsumi, Takashi; Miyawaki, Shozo; and Kanaya, Kouichi, 5,012,280, Cl. 355-206.000.
Yoneyama, Sachiko; Ohsawa, Toshiyuki; Kimura, Okitoshi; and Kabata, Toshiyuki, 5,011,751, Cl. 429-192.000.

Riddle, Donald C. *See*—
Boatman, John M., 5,012,059, Cl. 219-10.55E.

Rideout, William C. *See*—
Boudreau, Robert A.; and Rideout, William C., 5,011,247, Cl. 350-96.200.

Riding, Richard D. Water treating device, or similar article. 5,010,912, Cl. 137-268.000.

Rieder, Heinz; and Schwaiger, Max; to Sentop Rieder und Schwaiger Gesellschaft m.b.H. Incremental measuring system. 5,010,655, Cl. 33-706.000.

Riediker, Martin. *See*—
Rohde, Ottmar; Schaffner, Armin; Riediker, Martin; and Meier, Kurt, 5,011,755, Cl. 430-18.000.

Riedl, Franz; to Wacker-Werke GmbH & Co. KG. Vibrator. 5,010,778, Cl. 74-61.000.

Riegel, Ulrich. *See*—
Engelhardt, Friedrich; and Riegel, Ulrich, 5,011,892, Cl. 525-404.000.

Rietberg, Johan; and Van Roon, Johannes C.; to Stamicarbon B.V. Coating materials curing at room temperature. 5,011,740, Cl. 428-500.000.

Rikimaru, Roy K.: *See*—
Young, Frederick A.; and Rikimaru, Roy K., 5,012,211, Cl. 333-212.000.

Ringspann GmbH. *See*—
Maurer, Ruprecht, 5,010,992, Cl. 192-70.270.

Ripka, Chester D. *See*—
Backus, Robert J.; Chopko, Robert A.; Drucker, Alan S.; and Ripka, Chester D., 5,010,740, Cl. 62-217.000.

Ripkens, Gerd. *See*—
Buschfeld, Adolf; Lattekamp, Matthias; Ripkens, Gerd; and Schittek, Hans, 5,011,886, Cl. 524-596.000.

Rito, Naotake. *See*—
Yamauchi, Shiro; and Rito, Naotake, 5,012,360, Cl. 360-97.020.

Ritter, Helmut, to Heberlein Maschinenfabrik AG. Air nozzle for the interlacing of multifilament yarns. 5,010,631, Cl. 28-274.000.

Rivest, Daniel J. Hydroponic system. 5,010,686, Cl. 47-62.000.

Riviezzo, Anthony L.; to Tracker Marine Corporation. Livewell valve for fishing boats. 5,010,836, Cl. 114-255.000.

Rizzo, Ronald R. *See*—
Colvin, David P.; Whitney, Raymond A.; Marsh, Bernard R.; Kline, William M.; Rizzo, Ronald R.; and Orlosky, Mark E., 5,010,892, Cl. 128-774.000.

Robert Bosch GmbH. *See*—
Schauwecker, Friedrich, 5,011,322, Cl. 403-141.000.
Sedlmayr, Joachim, 5,010,982, Cl. 188-4.00B.

Roberti, Lamberto. *See*—
Gregorio, Guglielmo; Roberti, Lamberto; and Strepparola, Ezio, 5,011,979, Cl. 560-223.000.

Roberto, Giani; Ettore, Parini, Massimiliano, Borsa; and Antonio, Lavezzo, to Dompe Farmaceutici S.p.A. Pharmacologically active 2-substituted 3-(2-ethoxyethyl) imidazo[4,5-b]pyridines and pharmaceutical compositions containing them. 5,011,838, Cl. 514-234.200.

Roberts, David L. *See*—
MacLean, Lachlan; Roberts, David L.; Barron, Kenneth; Nichol, Kenneth J.; and Harrison, Albert E., 5,011,931, Cl. 546-155.000.

Roberts, James M. *See*—
Roberts, Rose H.; and Roberts, James M., 5,011,158, Cl. 273-256.000.

Roberts, Rose H., and Roberts, James M. Numismatic coin game. 5,011,158, Cl. 273-256.000.

Robeson, Lloyd M.; and Harris, James E., to Amoco Corporation. Blends of a poly(aryl ether ketone) and a polyarylate. 5,011,894, Cl. 525-437.000.

Robins, Roland K.: *See*—
Goodman, Michael; Weigle, William; Bell, Stanley; Chen, Robert; Robins, Roland K.; and Hennen, William J., 5,011,828, Cl. 514-45.000.

Robles, Carlos, to Plasticos Cream, S.A. Cushioned framed article. 5,010,666, Cl. 40-154.000.

Roby Teknik AB: *See*—
Olanders, Par, 5,011,664, Cl. 422-292.000.

Rockstroh, Todd J.; and Mannava, SeethaRamaiah, to General Electric Company. Fiber optic safety system. 5,012,087, Cl. 250-227.150.

Rockwell International Corporation: *See*—
Jin, Korda K. D., 5,012,216, Cl. 335-216.000.
Wallschlaeger, Alan R., Sr., 5,010,818, Cl. 101-415.100.

Rodi, Anton; Blasius, Udo; Reithofer, Jurgen; and May, Karl-Heinz, to Heidelberger Druckmaschinen AG. Electronic device for controlling a printing machine. 5,010,812, Cl. 101-148.000.

Roe, Derrick I.: *See*—
Recker, Bradley J.; Roe, Derrick I.; and Rozman, Christopher J., 5,012,437, Cl. 364-701.000.

Roerig, Arnold J.: *See*—
Brown, Dale A.; and Roerig, Arnold J., 5,010,633, Cl. 29-113.200.

Rohde, Ottmar; Schaffner, Armin; Riediker, Martin; and Meier, Kurt, to Ciba-Geigy Corporation. Photoinitiator mixtures containing a titanocene and a 3-ketocoumarin. 5,011,755, Cl. 430-18.000.

Rohm GmbH: *See*—
Nuernberg, Eberhard; and Pfeuffer, Josef, 5,011,694, Cl. 424-464.000.

Rollman, Bruce L. Patient dosage regimen compliance bottle cap. 5,011,032, Cl. 215-230.000.

Rolls-Royce Inc.: *See*—
Ma, Kong; and Pinder, John T., 5,011,626, Cl. 252-582.000.
Nightingale, Douglas J., 5,011,195, Cl. 285-302.000.

Rolls-Royce PLC: *See*—
Cox, Michael J., 5,010,727, Cl. 60-39.060.

Romero, Ysmael E., to Seattle Bike Supply. Crank arm for a bicylce. 5,010,785, Cl. 74-594.100.

Romine, Charles F.: *See*—
Oriola, Ralph; Romine, Charles F.; and Meisner, Edward O., 5,011,121, Cl. 267-64.110.

Roncato, Giordano; and Federowsky, Robert, to Vetrotex Saint Gobain. Process and device for producing a yarn or ribbon formed from reinforcement fibers and a thermoplastic organic material. 5,011,523, Cl. 65-2.000.

Roop, Donald E.; Bachman, David L.; Mezey, Eugene J.; and Bartram, Philip W., to United States of America, Army. Emulsifier mixing cell. 5,011,293, Cl. 366-173.000.

Roop, Stevie C.: *See*—
Hall, Charles E.; and Roop, Stevie C., 5,010,745, Cl. 70-32.000.

Rosen, Karen L.: *See*—
Boyd, Bruce D.; Geoghegan, Robert J.; Metz, Barbara A.; Rosen, Karen L.; Rosen, Richard D.; Bally, Alex; and Sears, Ronald J., 5,011,005, Cl. 206-0.810.

Rosen, Richard D.: *See*—
Boyd, Bruce D.; Geoghegan, Robert J.; Metz, Barbara A.; Rosen, Karen L.; Rosen, Richard D.; Bally, Alex; and Sears, Ronald J., 5,011,005, Cl. 206-0.810.

Rosenau, Bernhard; Hisgen, Bernd; Heinz, Gerhard; Braun, Hans-Georg; Lausberg, Dietrich; and Zeiner, Hartmut, to BASF Aktiengesellschaft. Blends of thermotropic polymers with polyesters and polycarbonate. 5,011,884, Cl. 524-537.000.

Rosenberg, Toni J. Educational keyboard with removable keys. 5,011,412, Cl. 434-227.000.

Roshdieh, Al R.: *See*—
Walton, John F.; and Roshdieh, Al R., 5,012,157, Cl. 315-66.000.

Rosiek, Frank C.: *See*—
Mott, David M.; and Rosiek, Frank C., 5,011,302, Cl. 384-448.000.

Ross-Clunis, Robert A. Adjustable height bicycle seat mechanism. 5,011,174, Cl. 280-287.000.

Ross, Victor, Jr.: *See*—
Ross, Victor, Sr.; and Ross, Victor, Jr., 5,010,941, Cl. 160-330.000.

Ross, Victor, Sr.; and Ross, Victor, Jr. Golf cart drop curtain. 5,010,941, Cl. 160-330.000.

Rossato, Mark: *See*—
Zoland, Martin; and Rossato, Mark, 5,011,188, Cl. 281-30.000.

Rosswurm, Mark A.; to Cummins Electronics Company, Inc. Reflected electrostatic field angle resolver. 5,012,237, Cl. 340-870.370.

Roth, Steven P.: *See*—
Bodziak, Douglas P.; Hunder, Ray A.; Roth, Steven P.; Grovender, Steven L.; and Molenda, Robert P., 5,011,186, Cl. 281-12.000.

Roth, Thomas. Electrical service center. 5,011,033, Cl. 220-3.940.

Rothweiler, Joseph: *See*—
Liu, Yu J.; and Rothweiler, Joseph, 5,012,518, Cl. 381-42.000.

Rountre, Robert N., to Texas Instruments Incorporated. Electrostatic discharge protection circuit. 5,012,317, Cl. 357-38.000.

Rowlette, John R.: *See*—
Bowen, Terry P.; and Rowlette, John R., 5,011,255, Cl. 350-96.190.

Roxlo, Charles B.: *See*—
Flynn, Edward J.; Ketelsen, Leonard J.; and Roxlo, Charles B., 5,012,484, Cl. 372-96.000.

Royal Institution for the Advancement of Learning (McGill University), The: *See*—
Stanners, Clifford P.; and Cartier, Mireille, 5,011,776, Cl. 435-172.300.

Rozman, Christopher J.: *See*—
Recker, Bradley J.; Roe, Derrick I.; and Rozman, Christopher J., 5,012,437, Cl. 364-701.000.

Rstahl Schaltgerate GmbH: *See*—
Wettengel, Lothar; and Langer, Eberhard, 5,012,395, Cl. 362-222.000.

Rudakov, Ivan P.: *See*—
Neroznikov, Jury I.; Rudakov, Ivan P.; Fanshtein, Valentin N.; Medyanik, Vladimir A.; and Gavrilova, Valentina V., 5,010,963, Cl. 173-105.000.

Rudolf, Klaus: *See*—
Eberlein, Wolfgang; Engel, Wolfhard; Mihm, Gerhard; Rudolf, Klaus; Doods, Henri; and Mayer, Norbert, 5,011,836, Cl. 514-217.000.

Rueger, David C.: *See*—
Oppermann, Hermann; Kuberasampath, Thangavel; Rueger, David C.; and Ozkaynak, Engin, 5,011,691, Cl. 424-423.000.

Ruff, Gerd, to Teldix GmbH. Device for setting the rotor of a rotary switch. 5,012,292, Cl. 335-253.000.

Ruff, John D., to Thermadyne, Inc. Ice maker and water purifier employing pre-cooled make-up water. 5,011,524, Cl. 62-532.000.

Ruffner, Charles G.: *See*—
Barron, Milagros C.; Swope, Ronald L.; Wilkerson, John M., III; and Ruffner, Charles G., 5,011,978, Cl. 560-221.000.

Ruggeri, Stephane: *See*—
Guiberteau, Christian; Ruggeri, Stephane; and Le Paih, Michele, 5,012,084, Cl. 250-211.00R.

Rusmar Incorporated: *See*—
Kittle, Paul A.; and Manlowe, David, 5,011,330, Cl. 405-129.000.

Russell, David F.; and Mungo, Keith, to Lucas Industries Public Limited Company. Disc assemblies for vehicle disc brakes. 5,010,985, Cl. 188-218.0XL.

Russell, John P. System for inspecting bearing balls for defects. 5,012,116, Cl. 250-572.000.

Rutkowksi, David J.: *See*—
Dara, Paul C.; Mitchell, Clair E.; and Rutkowksi, David J., 5,012,168, Cl. 318-434.000.

Rutstrom, Lawrence L.: *See—*
Meyers, Frank; and Rutstrom, Lawrence L., 5,011,122, Cl. 267-154.000.

Rwe-Dea Aktiengesellschaft fur Mineraloel und Chemie *See—*
Buschfeld, Adolf; Lattekamp, Matthias; Ripkens, Gerd; and Schittek, Hans, 5,011,886, Cl. 524-596.000.

Ryusyo Industrial Co., Ltd.: *See—*
Iwamoto, Masakatsu, 5,011,276, Cl. 351-211.000.

S E A C S.r.l.: *See—*
Innocenti, Alberto, 5,011,663, Cl. 422-102.000.

S.N.R Roulements: *See—*
Sachet, Claude, 5,011,738, Cl. 428-422.000.

S.O.F.O Engineering & Distributing Co.: *See—*
Johstoneaux, Raphael B., 5,010,867, Cl. 123-511.000.

Saban, Oded, and Berger, Yaron. Drills. 5,011,343, Cl. 408-240.000.

Sabatier, Andre ; and Depraetere, Raymond. Union for fluid conduits, in particular for high purity gas. 5,011,196, Cl. 285-367.000.

Saccon, Gino. Animal trap. 5,010,682, Cl. 43-81.000.

Sachet, Claude, to S.N.R. Roulements. Procedure for the application of a PTFE-based self-lubricating coating on a bearing element, and the bearings thus obtained. 5,011,738, Cl. 428-422.000.

Sadoun, Michael; and Decker, Alain. Orthodontic bracket made from zirconium oxide. 5,011,403, Cl. 433-8.000.

Safeco Mfg. Limited: *See—*
Kalaam, Shaik M., 5,010,591, Cl. 2-93.000.

Safety 1st, Inc.: *See—*
Bernstein, Michael S.; Crossley, David W.; and Lerner, Michael I., 5,010,606, Cl. 4-572.000.

Sagala, Jozef: *See—*
Rathfelder, Paul; Sagala, Jozef; Landbeck, Friedrich; and Matschkal, Heinz, 5,011,499, Cl. 8-94.330.

Sagara, Kazuhiko: *See—*
Kawaji, Mikinori; Takakura, Toshihiko; Uchida, Akihisa; Kuroda, Shigeo; Tamaki, Yoichi; Shiba, Takeo, Sagara, Kazuhiko; and Kawamura, Masao, 5,011,788, Cl. 437-67.000.

Sagawa, Toyoaki, Sonoda, Makoto, and Umeda, Tokihiko, to Kawasaki Jukogyo Kabushiki Kaisha. Swash-plate type piston pump motor. 5,011,377, Cl. 417-269.000.

Sager, Thomas B., to Branson Ultrasonics Corporation. Method of ultrasonically cutting and sealing thermoplastic workpieces particularly a filter. 5,011,555, Cl. 156-73.100.

Saikawa, Isamu: *See—*
Suzuki, Yasuyuki; Takagawa, Noboru, Kawabata, Mikio; Hayashi, Mariko; Takagi, Akiko, Wakamiya, Takako; and Saikawa, Isamu, 5,011,973, Cl. 560-185.000.

Sailer, Michael P. Seat and harness device. 5,010,850, Cl. 119-96.000.

Saint-Gobain Vitrage: *See—*
Brochot, Jean-Pierre; Pilhias, Danielle; Wuest, Isabelle; Beaufays, Jean-Pierre; and Darmont, Maurice, 5,011,585, Cl. 204-192.130.

St. Louis Music, Inc.: *See—*
McKale, George A., 5,012,199, Cl. 330-51.000.

Saita, Masahiro: *See—*
Ando, Masaaki; Matsuzaka, Masaaki; and Saita, Masahiro, 5,012,105, Cl. 250-398.000.

Saito, Etsuro, to Sony Corporation. Apparatus for positioning a magnetic head on a head drum. 5,012,373, Cl. 360-107.000.

Saito, Hiromitsu: *See—*
Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi, Kasai, Masaji, Kawamoto, Isao; Iida, Takao; Sano, Hiroshi, Saito, Hiromitsu, Yamada, Koji; and Murakata, Chikara, 5,011,854, Cl. 514-541.000.

Saito, Itaru; Matsubara, Ken; Shingaki, Kouichi; Masuda, Tomohiko; and Kitano, Hirohisa, to Minolta Camera Kabushiki Kaisha. Light shutter arrays for forming images. 5,011,271, Cl. 350-356.000.

Saito, Katushi, Shindou, Yoshio, Murata, Toshimichi, Yamazaki, Fumio; and Shimazu, Takashi. Black surface treated steel sheet. 5,011,744, Cl. 428-623.000.

Saito, Sakae: *See—*
Ikeda, Senri; Saito, Sakae; Hanada, Shuji; and Hoshi, Hironobu, 5,011,545, Cl. 148-11.50F.

Saito, Takeshi: *See—*
Yokomizo, Shojiro; Izumida, Kouji; Saito, Takeshi; and Yanamoto, Yutaka, 5,010,759, Cl. 72-393.000.

Saito, Toranosuke. *See—*
Uesaka, Toshio; Niki, Akihiro; Ohsuga, Makoto, Saito, Toranosuke, Tsunomachi, Hiroki; Yamaguchi, Makoto, Doyama, Kazuo; and Kishimoto, Daishiro, 5,011,879, Cl. 524-290.000.

Saitoh, Noritaka *See—*
Okada, Hiroshi; Saitoh, Noritaka; Akabane, Hidetomo; and Tashiro, Shintaro, 5,012,198, Cl. 328-155.000.

Sakai Chemical Industry Co., Ltd. *See—*
Yoshimoto, Masafumi, Nakatsuji, Tadao, and Nagano, Kazuhiko, 5,011,674, Cl. 423-610.000.

Sakai, Kazunori: *See—*
Watanabe, Takashi; Fujimoto, Shusaku; and Sakai, Kazunori, 5,012,417, Cl. 364 426.020.

Sakai, Kouichi *See—*
Ouchi, Hideo; and Sakai, Kouichi, 5,011,460, Cl. 474-133.000.

Sakai, Minoru: *See—*
Sakai, Nobuo, and Sakai, Minoru, 5,011,764, Cl. 430-505.000.

Sakai, Nobuo, and Sakai, Minoru, to Fuji Photo Film Co., Ltd. Silver halide color photographic material which forms a color photographic image with improved preservability. 5,011,764, Cl. 430-505.000.

Sakai, Shigenobu *See—*
Masuda, Kiyoshi; Kohda, Shigeto; Sakai, Shigenobu, Kimura, Kazuo; and Nomura, Tomoyoshi, 5,012,228, Cl. 340-702.000.

Sakai, Tadashi: *See—*
Amemiya, Isao; Sakai, Tadashi; and Uno, Shigeki, 5,011,589, Cl. 204-416.000.

Sakakibara, Kenji: *See—*
Endo, Yoshinori, and Sakakibara, Kenji, 5,012,276, Cl. 355-27.000.

Sakakibara, Mitsuhiko: *See—*
Tsutsumi, Fumio; Morikawa, Akihiko; Sakakibara, Mitsuhiko; Oshima, Noboru; Hamada, Tatsuro, Fujimaki, Tatsuo; and Ohashi, Masayuki, 5,011,888, Cl. 525-98.000.

Sakamaki, Hiroshi; Horikoshi, Yukio; Jinnouchi, Takeshi; and Tanzawa, Kenji, to Eagle Industry Co., Ltd. Rotary vane machine having stopper engaging recess in vane means. 5,011,390, Cl. 418-256.000.

Sakamoto, Haruo, to Du Pont de Nemours, E. I., and Company. Connector apparatus having an ejecting mechanism. 5,011,420, Cl. 439-152.000.

Sakamoto, Ken-ichi: *See—*
Hiramitsu, Tokiyuki; and Sakamoto, Ken-ichi, 5,011,975, Cl. 560-147.000.

Sakamoto, Noriya; Kawai, Kiyoyuki; and Yasuki, Seijiro, to Kabushiki Kaisha Toshiba. Television signal transmitting and receiving system. 5,012,326, Cl. 358-11.000.

Sakamoto, Yuji; Umeda, Seiichi; and Ogishima, Hiroaki, to Kirin Beer Kabushiki Kaisha. Artificial seed comprising a sustained-release sugar granule. 5,010,685, Cl. 47-57.600.

Sakano, Chikashi, Nakada, Seiichi; Shimizu, Masao; Ito, Shinichi; and Yamamoto, Toshiyoshi, to Matsushita Electric Industrial Co., Ltd. Steam iron having a solenoid driven pump and heated evaporation chamber for providing steam and operable for further providing extra steam at specified intervals. 5,010,664, Cl. 38-77.700.

Sakashita, Mitsuaki *See—*
Fujikawa, Yoshihiro, Suzuki, Mikio; Iwasaki, Hiroshi; Sakashita, Mitsuaki, and Kitahara, Masaki, 5,011,930, Cl. 546-101.000.

Sakashita, Shigeo, to Casio Computer Co., Ltd. Electronic musical instrument with a tone parameter control function. 5,010,801, Cl. 84-735.000.

Sakito, Yoji: *See—*
Yoneyoshi, Yukio; Suzukamo, Gohfu; and Sakito, Yoji, 5,011,989, Cl. 564-8.000.

Sakurai, Akito, to Hitachi, Ltd. Fuzzy inference-based digital control method and apparatus. 5,012,430, Cl. 364-513.000.

Sakurai, Junji: *See—*
Ogawa, Tsutomu; Kamioka, Hajime; Kawamura, Seiichiro; and Sakurai, Junji, 5,011,783, Cl. 437-19.000.

Sakurai, Masaaki, Yamamoto, Iichiro; Goto, Masahiro; Kuge, Tsukasa; and Shigenobu, Michio, to Canon Kabushiki Kaisha. Elastic rotatable member and fixing apparatus. 5,011,401, Cl. 432-60.000.

Salco Product Inc.: *See—*
Schultz, Francis R., 5,011,038, Cl. 220-320.000.

Salem, Mohamed E. M., to University of South Florida. Endothelium stripper and method of using the same. 5,011,489, Cl. 606-159.000.

Salessiotis, Anastassios N. *See—*
Aebischer, Patrick; and Salessiotis, Anastassios N., 5,011,486, Cl. 606-152.000.

Saloda, Ryozo: *See—*
Tanikawa, Keizo, Saloda, Ryozo, Tanaka, Sakuya; and Shikada, Kenichi, 5,011,839, Cl. 514-247.000.

Salomon S.A.: *See—*
Bejean, Alain; and Graillat, Gerard, 5,011,179, Cl. 280-615.000.

Salzmann, Thomas N.: *See—*
Dininno, Frank P.; and Salzmann, Thomas N., 5,011,832, Cl. 514-210.000.

Sampson, Scott D.: *See—*
Fulton, Alfred L., Lakhani, Kishor M., Sampson, Scott D.; and Lowman, Kent, 5,012,261, Cl. 346-159.000.

Samsung Electronics Co., Ltd.: *See—*
An, Hyeong-keun; Kim, Young-cheol; Lee, Seok-jeong, and Yu, Jung-jae, 5,012,451, Cl. 365-230.050.

San-Apro Limited *See—*
Nakatani, Kenichi; and Nakasugi, Nobuyasu, 5,011,935, Cl. 548-336.000.

Sanders Associates: *See—*
Maben, James W.; and Brown, Raymond G., 5,012,131, Cl. 307-296.400.

Sanders, Donald J.: *See—*
McLeod, Andrew E., Fields, Gaines C.; and Sanders, Donald J., 5,010,908, Cl. 134-168.00C

Sanderson, Stanley W. Trailer hitch apparatus. 5,011,178, Cl. 280-483.000.

Sandoz Ltd.: *See—*
Fehr, Theodor, 5,011,844, Cl. 514-291.000.

Sandvik AB *See—*
Pettersson, Lars T., and Wiman, Jorgen V., 5,011,340, Cl. 407-114.000.

Sandy Hill Corporation *See—*
Keller, Martin B., 5,011,575, Cl. 162-299.000.

Sankaran, Viswanatha Molecular restructuring catalyst. 5,012,025, Cl. 585-415.000.

Sano, Hiroshi: *See—*
Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi, Kasai, Masaji, Kawamoto, Isao, Iida, Takao; Sano, Hiroshi; Saito, Hiromitsu, Yamada, Koji; and Murakata, Chikara, 5,011,854, Cl. 514-541.000.

Sano, Kenichi, Maki, Kenichiro; and Kamei, Hideyuki, to Showa Denko K.K. Process for preparation of allyl acetate. 5,011,980, Cl. 560-245.000.

Sano, Shoichi: *See—*
Hamada, Tetsuro; Sano, Shoichi; and Furukawa, Yoshimi, 5,010,971, Cl. 180-140.000.

Sanshin Kogyo Kabushiki Kaisha: *See—*
Tanbara, Hiroaki, 5,011,583, Cl. 204-148.000.

Sanyo Electric Co., Ltd.: *See—*
Isono, Haruo; Yasuda, Minoru; Watanabe, Hiroshi; Toyama, Tateo; Hioki, Toshiaki, Morita, Yoshihiko; and Yamada, Makoto, 5,012,351, Cl. 358-342.000
Tsujita, Hirayuki, 5,012,462, Cl. 369-77.100.

Saotome, Akira: *See—*
Nagai, Harushige; Kiryu, Masato; Sasaki, Takeshi; and Saotome, Akira, 5,011,096, Cl. 242-199.000

Saphores, Eugenio A.; Gleisner, Arturo G., Vega, Juan C.; and Mardones, Wladimir A., to Establecimientos Industriales Quimicos Oxiquim S.A. Process for production of methylene bisxanthates. 5,011,965, Cl. 558-245.000.

Sapp, Michael D.; and Gaskey, Donald R., Jr., to Textron Inc. Leaf blower back pack frame. 5,011,058, Cl. 224-261.000.

Saratoga Spa & Bath: *See—*
Maiuccoro, John V., and Gardenier, John, 5,010,699, Cl. 52-169.800.

Sarda, Jean-Claude. Web tensioning device for printing press. 5,010,816, Cl. 101-228.000.

Sardana, Karamvir Adaptive hybrid multiple access protocols. 5,012,469, Cl. 370-95.300

Sardano, Peter A.; and Kazmierczak, Irvin J., to Xerox Corporation. Retard feeder retard pad mounting. 5,011,124, Cl. 271-35.000.

Sargent, Charles L.; Antos, John M.; and Biba, Scott I., to Thetford Corporation. Toilet with pulsed flow of flush water. 5,010,602, Cl. 4-432.000.

Sarges, Reinhard, to Pfizer Inc. Imidazolidinedione derivatives in diabetes treatment. 5,011,840, Cl. 514-248.000.

Sartori, Guido; Ho, W. S. Winston; and Noone, Robert E., to Exxon Research and Engineering Company. Polyphthalatecarbonate membranes for aromatics/saturates separation. 5,012,035, Cl. 585-819.000.

Sartori, Guido; Ho, W. S. Winston, and Noone, Robert E., to Exxon Research and Engineering Company. Polyarylate membranes or aromatics/saturates separation (C-2415). 5,012,036, Cl. 585-819.000.

Sasabe, Junya; and Sugimori, Masao, to Mita Industrial Co., Ltd. Movable guide member in a receiving device of an image forming apparatus. 5,012,294, Cl. 355-309.000.

Sasabe, Minoru; Imamura, Masao; Yoshida, Yasunobu; Andoh, Shinya; and Miyake, Hiroshi, to Tosoh Corporation. Chromium additive and method for producing chromium alloy using the same. 5,011,798, Cl. 501-87.000

Sasaki, Eiichi, to Ricoh Company, Ltd. Density controlled thermal print head. 5,012,258, Cl. 346-1.100.

Sasaki, Isao; Yamamoto, Naoki, and Yanagase, Akira, to Mitsubishi Rayon Co., Ltd. Thermoplastic resin composition. 5,011,887, Cl. 525-63.000.

Sasaki, Takeshi: *See—*
Nagai, Harushige; Kiryu, Masato; Sasaki, Takeshi; and Saotome, Akira, 5,011,096, Cl. 242-199.000

Sasaki, Yoshio: *See—*
Fujioka, Keiji, Sato, Shigeji; Takada, Yoshihiro; Sasaki, Yoshio; and Tamura, Nobuhiko, 5,011,692, Cl. 424-426.000.

Sassi S.r.l.: *See—*
Sassi, Umberto, 5,011,365, Cl. 414-737.000.

Sassi, Umberto, to Sassi S.r.l. Apparatus for feeding bundles of laminations. 5,011,365, Cl. 414-737.000.

Sato, Hiroyuki, to Seikosha Co., Ltd. Paper feed mechanism for a printer. 5,011,313, Cl. 400-605.000.

Sato, Junichi; and Shimizu, Minoru, to Showa Denko K.K.; and Osaka Kongo Seito Co., Ltd. Diamond cutting method. 5,012,067, Cl. 219-121.720.

Sato, Katsuhiro: *See—*
Akasaki, Yutaka, Nukada, Katsumi; and Sato, Katsuhiro, 5,011,757, Cl. 430-58.000.
Akasaki, Yutaka; Nukada, Katsumi; and Sato, Katsuhiro, 5,011,969, Cl. 558-402.000.

Sato, Kazuhiro, to Sumitomo Electric Industries, Ltd. Cable with an overall shield. 5,012,045, Cl. 174-106.00R.

Sato, Kiyoshi; Ohtani, Shinichi; and Kawasaki, Mikio, to Konica Corporation. Apparatus for processing light-sensitive materials. 5,012,266, Cl. 354-319.000.

Sato, Koichi: *See—*
Ono, Yutaka; Muramatsu, Yasuhiko; Banzai, Hideo; Kikukawa, Yoichi; Hashida, Shigeru; Shindo, Shotaro; Higuchi, Haruo; Shinomiya, Hiroyuki, Nikaido, Mitsuhiro; and Sato, Koichi, 5,012,169, Cl. 318-568.000.
Yoshinaga, Kazuo; Kai, Takashi; Egara, Koichi; Toshida, Yomishi; Mitsutake, Hideaki; Sato, Koichi; and Miyazaki, Takeshi, 5,011,623, Cl. 252-299.500.

Sato, Masahiko: *See—*
Yamazaki, Shunpei; and Sato, Masahiko, 5,011,270, Cl. 350-350.00S.

Sato, Shigeji: *See—*
Fujioka, Keiji; Sato, Shigeji, Takada, Yoshihiro; Sasaki, Yoshio; and Tamura, Nobuhiko, 5,011,692, Cl. 424-426.000.

Sato, Tsunehiko: *See—*
Takahashi, Shinsuke; Shibata, Norio; and Sato, Tsunehiko, 5,011,714, Cl. 427-434.300.

Satoh, Toshio; Niiro, Yasunori; Kakegawa, Hisao; and Matsumoto, Hitoshi, to Nippon Hypox Laboratories, Inc. Ascorbic acid derivative. 5,011,949, Cl. 549-315.000.

Satoh, Toyomi; Hosoi, Kiyonori; Kinoshita, Katsuji; Murata, Shinjiro; Fukatsu, Shunzo; and Ichikawa, Tooru, to Kabushiki Kaisha Hosokawa Yoko. Container for packaging medicine. 5,011,019, Cl. 206-530.000.

Satou, Masahiko: *See—*
Ushijima, Nobuyoshi; Masuda, Hiroshi; Ishibashi, Akira; Satou, Masahiko; Haruna, Toshiyuki; Takayama, Norikazu; and Kudou, Yoshinobu, 5,012,166, Cl. 318-254.000.

Sauder, Robert A., to Thermal Ceramics, Inc. Insulation and the provision thereof. 5,010,706, Cl. 52-506.000.

Sauer-Sundstrand Inc.: *See—*
Johnson, Alan W., 5,010,733, Cl. 60-453.000.

Sauser, Martin H., Jr.: *See—*
Burton, Richard J.; Copeland, John A., III; Jernim, John W.; Nixon, Toby L.; Sauser, Martin H., Jr.; Weatherford, Robert E., Jr.; Becker, Larry D.; and Strawn, David F., 5,012,489, Cl. 375-8.000.

Savonjousi, Aslak, to ABB Stromberg Teollisuus Oy. Control method for a chip refiner. 5,011,088, Cl. 241-21.000.

Savonjousi, Aslak, to ABB Stromberg Teollisuus Oy. Method for controlling a chip refiner. 5,011,090, Cl. 241-21.000.

Sawamura, Tadahide; Nakamura, Yoko; and Kojima, Fumiyo, to Ricoh Company, Ltd. Color adjustment apparatus for color copying machine. 5,012,299, Cl. 355-326.000.

Sbarbaro, Franco, to Laboratori Guidotti. Process for the preparation of derivative of 2-diethylamino-1-methylethyl-1-hydroxy-(bicyclohexyl)-2-carboxylate. 5,011,974, Cl. 560-118.000.

Scally, Paul G.: *See—*
Blythe, Robert J.; and Scally, Paul G., 5,011,876, Cl. 524-77.000.

Scappaticci, Karen A., to Pfizer Inc. Treatment of depression. 5,011,841, Cl. 514-253.000.

Schaefer, Hans-Christian. *See—*
Dietrich, Anton, Hartig, Klaus; Schaefer, Hans-Christian; and Szczyrbowski, Joachim, 5,011,745, Cl. 428-630.000.

Schaeffer, Hans A.: *See—*
Calam, Henry D.; and Schaeffer, Hans A., 5,011,688, Cl. 424-195.100.

Schafer, Horst; Ludwig, Gerhard; and Sunderdiek, Rainer, to Ciba-Geigy Corporation. Contact lens care set. 5,011,661, Cl. 422-30.000.

Schaffner, Armin: *See—*
Rohde, Ottmar; Schaffner, Armin; Riediker, Martin; and Meier, Kurt, 5,011,755, Cl. 430-18.000.

Schaller, Klaus: *See—*
Elbe, Hans-Ludwig; Regel, Erik; Buchel, Karl H.; Schaller, Klaus; and Plempel, Manfred, 5,011,850, Cl. 514-383.000.

Schammel, Wayne P.: *See—*
Lane, Kelley R.; and Schammel, Wayne P., 5,012,030, Cl. 585-527.000.

Schank, Richard L.: *See—*
Limburg, William W.; Yanus, John F., Renfer, Dale S.; Schank, Richard L.; and Ong, Beng S., 5,011,939, Cl. 548-440.000

Schaubs, Randolph J.; and Naddor, David J., to Scientific Atlantic Inc. Dynamic callback technique. 5,012,510, Cl. 379-92.000.

Schauwecker, Friedrich, to Robert Bosch GmbH. Ball joint. 5,011,322, Cl. 403-141.000.

Scheiffele, Peter: *See—*
Zweigart, Gerhard; Greiner, Ferdinand; Baumert, Heinz; Scheiffele, Peter; and Nowak, Manfred, 5,011,213, Cl. 296-97.130.

Schelhase, Klaus: *See—*
Gresser, Wilhelm; Schelhase, Klaus; Frisch, Heinz; Kaschel, Klaus; Reinecke, Berent; and Trautmann, Wilhelm H., 5,011,614, Cl. 210-761.000.

Schell, Russell W.; and Losacco, Anthony R. Method for applying adhesive to a hologram film. 5,011,707, Cl. 427-39.000.

Schemmann, Hugo: *See—*
Bertram, Leo; Schemmann, Hugo; and Bukoschek, Romuald L., 5,012,147, Cl. 310-80.000.

Schepers, Frederik J., to Lever Brothers Company, division of CONOPCO, Inc. Liquid cleaning compositions and process for their preparation. 5,011,622, Cl. 252-174.150.

Schering Corporation: *See—*
Babad, Esther; Carruthers, Nicholas; and Steinman, Martin, 5,011,993, Cl. 564-273.000.
Blythin, David J.; Shue, Ho-Jane; and Ganguly, Ashit K., 5,011,845, Cl. 514-291.000.
Blythin, David J.; and Shue, Ho-Jane, 5,011,860, Cl. 514-861.000.

Scheurer, Raymond, to Davidoff of Geneva, Inc. Cigar storage and transportation container. 5,011,009, Cl. 206-270.000.

Schier, J. Alan. Position determining apparatus. 5,012,049, Cl. 178-19.000.

Schierling, Roland; and Dohse, Hans-Peter, to Andreas Stihl. Starter arrangement for an internal combustion engine. 5,010,858, Cl. 123-179.00P.

Schildge, Adam T., Jr. Cable-stay roof for stadium or arena and method of construction of same. 5,010,695, Cl. 52-6.000.

Schill & Seilacher GmbH & Co.: *See—*
Rathfelder, Paul, Sagala, Jozef; Landbeck, Friedrich; and Matschkal, Heinz, 5,011,499, Cl. 8-94.330.

Schipper, Paul H.: *See—*
Owen, Hartley; and Schipper, Paul H., 5,011,592, Cl. 208-113.000.

Schirmer, Henry G., to W. R. Grace & Co. Highly formable laminates. 5,011,735, Cl. 428-349.000.

Schittek, Hans: *See—*
Buschfeld, Adolf; Lattekamp, Matthias; Ripkens, Gerd; and Schittek, Hans, 5,011,886, Cl. 524-596.000.

Schleppinghoff, Bernhard; Niederberger, Hans-Ludwig; Gabel, Christian; Lange, Peter M.; and Mitschker, Alfred, to EC Erdoelchemie GmbH; and Bayer Aktiengesellschaft. Process for the preparation of tert.-olefins. 5,012,031, Cl. 585-639.000.

Schlumberger Technology Corp.: *See*—
Chen, Min-Yi, 5,012,193, Cl. 324-366.000.
Meek, Dale E.; and Hansen, Merlin D., 5,010,958, Cl. 166-382.000.

Schmelzer, Robert, to Tracto-Technik Paul Schmidt Maschinenfabrik KG. Self-propelled ram boring machine. 5,010,965, Cl. 175-19.000.

Schmerler, Elliott D.: *See*—
Bredesen, Mark S.; and Schmerler, Elliott D., 5,010,889, Cl. 128-715.000.

Schmidt, Helmbrecht: *See*—
Hermann, Dietmar, and Schmidt, Helmbrecht, 5,011,163, Cl. 277-26.000.

Schmidt, Wilhelm, to Ciba-Geigy Corporation. Apparatus for the detection of chemical equalization processes in an aqueous solution. 5,011,587, Cl. 204-401.000.

Schmitz, Thomas R.: *See*—
Chin, Arthur H. T.; and Schmitz, Thomas R., 5,010,952, Cl. 166-75.100.

Schneider, William J. Road simulation device. 5,010,763, Cl. 73-117.000.

Schoeppel, Sonja L.; Weeks, Kenneth J.; and Pruss, Kent R., to University of Michigan. CT compatible intracavity radiation applicator with afterloading shielding. 5,012,357, Cl. 378-65.000.

Schorwerth, Helmut: *See*—
Hall, Erich; and Schorwerth, Helmut, 5,010,636, Cl. 29-446.000.

Schottdorf, Johannes: *See*—
Breuer, Bernhard; and Schottdorf, Johannes, 5,011,305, Cl. 384-572.000.

Schrader, Karl-Heinz: *See*—
Pietsch, Gunter; and Schrader, Karl-Heinz, 5,011,634, Cl. 264-47.000.

Schulte, Burkart: *See*—
Hardt, Norbert; Sterner, Hakan; Wetzka, Gerhard; and Schulte, Burkart, 5,011,651, Cl. 376-261.000.

Schulte, Dietrich: *See*—
Heimerl, Albert; Schulte, Dietrich; Gotz, Gabriela; and Leutz, Reiner, 5,011,492, Cl. 606-215.000.

Schulte, Heinz-Guenther; Narum, Jeffrey L.; and Johnson, Michael R., to Henkel Research Corporation. Process for preparing 1-alkylimidazoles. 5,011,934, Cl. 548-335.000.

Schulte, Konrad: *See*—
Bueschl, Rainer; Echte, Adolf; Schulte, Konrad; and Mittnacht, Hans, 5,011,871, Cl. 523-436.000.

Schultz, Albert N., Jr.; and Zakary, Paul D., to AMP Incorporated. Molded electrical interconnection system. 5,012,391, Cl. 361-428.000.

Schultz, Francis R., to Saleo Product Inc. Hopper car inlet opening protector. 5,011,038, Cl. 220-320.000.

Schultz, Laurence D.: *See*—
Pan, Ju-Don T.; Curry, John W., II; and Schultz, Laurence D., 5,011,580, Cl. 204-15.000.

Schulz, Guenther: *See*—
Nick, Bernhard; Bott, Kaspar; and Schulz, Guenther, 5,011,991, Cl. 564-204.000.

Schuster, Daniel L., to Magni Systems, Inc. Graphics encoder video enhancement. 5,012,331, Cl. 358-37.000.

Schuster, Manfred; and Wich, Harald, to Diehl GmbH & Co. Radar receiver. 5,012,253, Cl. 342-203.000.

Schwaiger, Max: *See*—
Rieder, Heinz; and Schwaiger, Max, 5,010,655, Cl. 33-706.000.

Schwarten, Jerry C. Mausoleum construction. 5,010,697, Cl. 52-134.000.

Schwartz, Moshe; and Avni, Noam, to Omen Metal Products. Safe device and mechanism for operating the same. 5,010,751, Cl. 70-276.000.

Schwarz, Milan; and Mayer, Robert, to Revolving Door Control, Inc. Security door with improved sensor for detecting unauthorized passage. 5,012,455, Cl. 367-93.000.

Schwarzmann, Matthias: *See*—
Herzog, Klaus; Boehning, Karl-Heinz; Aichinger, Heinrich; Plueckhan, Juergen; Mross, Wolf D.; and Schwarzmann, Matthias, 5,011,809, Cl. 502-348.000.

Schwer, Mary L.: *See*—
Gossens, Anthonette A.; and Schwer, Mary L., 5,011,480, Cl. 604-385.100.

SCI Systems, Inc.: *See*—
Fulton, Alfred L.; Lakhani, Kishor M.; Sampson, Scott D.; and Lowman, Kent, 5,012,261, Cl. 346-159.000.

Scientific Atlantic Inc.: *See*—
Schaubs, Randolph J.; and Naddor, David J., 5,012,510, Cl. 379-92.000.

SciMed Life Systems, Inc.: *See*—
Voegele, Gerald G.; and Penny, William H., 5,011,537, Cl. 134-22.110.

Scott, Jeffrey W.; and Viswanathan, Thayamkulangara R., to AT&T Bell Laboratories. Integral switched capacitor FIR filter digital-to-analog converter for sigma-delta encoded digital audio. 5,012,245, Cl. 341-150.000.

Scott, John D., to Imperial Chemical Industries PLC. Oxychlorination catalyst composition and an oxychlorination process using it. 5,011,808, Cl. 502-225.000.

Seagate Technology, Inc.: *See*—
Toensing, Eyvand E., 5,012,367, Cl. 360-104.000.

Sears, Claude L.: *See*—
Hambleton, Larry G.; Sears, Claude L.; and Offutt, Elmer B., 5,010,660, Cl. 34-92.000.

Sears, Ronald J.: *See*—
Boyd, Bruce D.; Geoghegan, Robert J.; Metz, Barbara A.; Rosen, Karen L.; Rosen, Richard D.; Bally, Alex; and Sears, Ronald J., 5,011,005, Cl. 206-0.810.

Seattle Bike Supply: *See*—
Romero, Ysmael E., 5,010,785, Cl. 74-594.100.

Secretan, Stanley: *See*—
Nicholson, J. Dudley; and Secretan, Stanley, 5,011,175, Cl. 280-304.100.

Sedlmayr, Christopher J.: *See*—
Munroe, Ronald G.; and Sedlmayr, Christopher J., 5,012,495, Cl. 337-3.000.

Sedlmayr, Joachim, to Robert Bosch GmbH. Method and apparatus for improving vehicle traction and roadability. 5,010,982, Cl. 188-4.00B.

Seelbach, Walter: *See*—
Dixon, Robert; Kaveh, Golnaz; and Seelbach, Walter, 5,012,136, Cl. 307-475.000.

Segal, Marcos: *See*—
Opitz, Konrad; and Segal, Marcos, 5,011,917, Cl. 534-583.000.

Sei, Naoki: *See*—
Shima, Toshio; Miyamoto, Keiko; Izumi, Kouji; Hayashi, Yasuro; Karasawa, Yonenobu; Uematsu, Satoru; and Sei, Naoki, 5,010,605, Cl. 4-542.000.

Seibel, David D.: *See*—
Hewitt, Donald W.; and Seibel, David D., 5,012,073, Cl. 235-375.000.

Seibert, Gerhard: *See*—
Kretzschmar, Gerhard; Duwel, Dieter; Grabley, Susanne; Hammann, Peter; Seibert, Gerhard; Voelskow, Hartmut; and Giani, Carlo, 5,011,827, Cl. 514-32.000.

Seiffert, Volkhard; Ihlenfeld, Gerd; and Bienert, Klaus. Apparatus and method for determining the relative percentages of components in a mixture. 5,012,197, Cl. 324-696.000.

Seike, Shoji; Mima, Toshiyuki; and Nozaki, Masayuki, to NGK Insulators, Ltd. Lightning arrestor insulator and method of producing the same. 5,012,383, Cl. 361-120.000.

Seikosha Co., Ltd.: *See*—
Sato, Hiroyuki, 5,011,313, Cl. 400-605.000.

Seki, Akinori: *See*—
Konushi, Fumihiro; Seki, Akinori; Kudo, Jun; and Koba, Masayoshi, 5,011,550, Cl. 148-33.500.

Seki, Yasuharu: *See*—
Tsukushi, Masanori; Koyanagi, Osamu; Seki, Yasuharu; Goto, Tokio; and Kurosawa, Yukio, 5,012,051, Cl. 200-148.00B.

Sekiguchi, Shoji: *See*—
Tamamura, Hisashi; and Sekiguchi, Shoji, 5,011,265, Cl. 350-173.000.

Sekine, Masayoshi; Nakajima, Toshiyuki; Kai, Takashi; Yoshimura, Katsuji; and Toyama, Masamichi, to Canon Kabushiki Kaisha. Image shake detecting device. 5,012,270, Cl. 354-430.000.

Sekine, Yoshitada: *See*—
Uemura, Satoshi; Kawada, Susumu; Sekine, Yoshitada; and Miyauchi, Tatsuo, 5,010,634, Cl. 29-407.000.

Sekisui Kagaku Kogyo Kabushiki: *See*—
Uesaka, Toshio; Niki, Akihiro; Ohsuga, Makoto; Saito, Toranosuke; Tsunomachi, Hiroki; Yamaguchi, Makoto; Doyama, Kazuo; and Kishimoto, Daishiro, 5,011,879, Cl. 524-290.000.

Sekozawa, Teruji: *See*—
Takahashi, Shinsuke; Sekozawa, Teruji; and Funabashi, Motohisa, 5,012,422, Cl. 364-431.050.

Sell, Werner: *See*—
Jurgens, Gunter; Pickard, Jurgen; and Sell, Werner, 5,010,986, Cl. 188-250.00H.

Selleck, Albert B. Fire pin shield. 5,010,675, Cl. 42-70.110.

Sellschop, Jacques P.: *See*—
Nam, Tom L.; Keddy, Rex J.; and Sellschop, Jacques P., 5,012,108, Cl. 250-484.100.

Sember, James W., to General Electric Company. Control system for high speed switched reluctance motor. 5,012,171, Cl. 318-696.000.

Sember, James W., to General Electric Company. Control system for switched reluctance motor operating as a power generator. 5,012,172, Cl. 318-696.000.

Semeraro, Claudio; Micheli, Dino; Pieraccioli, Daniele; Gaviraghi, Giovanni; and Borthwick, Allan D., to Glaxo S.p.A. 1,4-dihydro pyridines. 5,011,848, Cl. 514-356.000.

Semiconductor Energy Laboratory Co., Ltd.: *See*—
Yamazaki, Shunpei; and Sato, Masahiko, 5,011,270, Cl. 350-350.00S.

Semma, Richard P.: *See*—
Fletcher, Mitchell S.; and Semma, Richard P., 5,012,409, Cl. 364-200.000.

Senkevich, William: *See*—
Singh, Ishwar; and Senkevich, William, 5,012,079, Cl. 235-467.000.

Senkler, George H., Jr.: *See*—
Chao, Tze; and Senkler, George H., Jr., 5,011,666, Cl. 423-82.000.

Sensormatic Electronics Corporation: *See*—
Drucker, Frank, 5,012,224, Cl. 340-551.000.

Sentop Rieder und Schwaiger Gesellschaft m.b.H.: *See*—
Rieder, Heinz; and Schwaiger, Max, 5,010,655, Cl. 33-706.000.

Seong, Teresa A.Y.C.; and Teck, Yap Y., to Molex Incorporated. Modular jack. 5,011,435, Cl. 439-676.000.

Serbicki, Jeffrey P.: *See*—
Harissis, Peter J.; and Serbicki, Jeffrey P., 5,012,380, Cl. 360-135.000.

Sertic, James L.: *See*—
Winchell, David A.; and Sertic, James L., 5,011,477, Cl. 604-132.000.

Servi-Tech, Inc.: *See*—
Nish, Terry E.; and McCray, Cecil R., 5,010,760, Cl. 73-1.00H.

Setinek, Karel: *See*—
Jerabek, Karel; Setinek, Karel; and Kastanek, Frantisek, 5,011,611, Cl. 210-674.000.

Seto, Kazunari: *See*—
Yoshizawa, Yasuo; Kawaguchi, Hiroichi; and Seto, Kazunari, 5,011,414, Cl. 434-431.000.

Sewell, Michael R., to Siemens Automotive Limited. Dual pole switch assembly for an inertia actuated switch. 5,012,050, Cl. 200-61.45R.

Sexton, Daniel W.; and Williams, Timothy J., to GE Fanuc Automation North America, Inc. Apparatus and method for detecting a carrier signal. 5,012,492, Cl. 375-82.000.

Sexton, Harold E.: *See*—
Hayes, Franklin A.; and Sexton, Harold E., 5,011,103, Cl. 248-99.000.

Seymour, Michael R. Adjustable outlet box assembly and method of application. 5,012,043, Cl. 174-57.000.

Sgro, Salvatore: *See*—
Polez, Laszlo; and Sgro, Salvatore, 5,011,442, Cl. 440-900.000.

SGS-Thomson Microelectronics S.r.l.: *See*—
Menegoli, Paolo; Morelli, Marco; and Tricoli, Francesco, 5,012,130, Cl. 307-272.200.

SGS-Thomson Microelectronics S.A.: *See*—
Bergemont, Albert, 5,012,446, Cl. 365-185.000.

Shackle, Dale R.; Fauteux, Denis G.; and Lundsgaard, Jorgen S. Process for making a solid state cell. 5,011,501, Cl. 29-623.100.

Shacklette, Lawrence W.; Townsend, Linda B.; and Jow, Taiguang R., to Allied-Signal. Rechargeable battery cathode from P2- phase sodium cobalt dioxide. 5,011,748, Cl. 429-50.000.

Sharp Kabushiki Kaisha: *See*—
Katoka, Shoei; Tsuchimoto, Shuhei; Nojima, Hideo; Kita, Ryusuke; and Nagata, Masaya, 5,011,818, Cl. 324-248.000.
Konushi, Fumihiro; Seki, Akinori; Kudo, Jun; and Koba, Masayoshi, 5,011,550, Cl. 148-33.500.
Okada, Yoshio; and Takano, Toshihiko, 5,011,250, Cl. 350-96.120.

Sharp, Kenneth G.: *See*—
Tarhay, Leo; and Sharp, Kenneth G., 5,011,706, Cl. 427-39.000.

Shaw, Douglas R., to Weyerhaeuser Company. Method of depressing readily floatable silicate materials. 5,011,596, Cl. 209-167.000.

Shaw, Wilfrid G.: *See*—
Gupta, Victor; Bodolus, Christopher L.; Paparizos, Christos; and Shaw, Wilfrid G., 5,012,028, Cl. 585-500.000.

Sheldon, Edward L., III: *See*—
Kung, Viola T.; Nagarajan, Peter A.; and Sheldon, Edward L., III, 5,011,770, Cl. 435-6.000.

Shell, John W., to Iolab Corporation. Treatment of glaucoma using phosphodiesterase inhibitors. 5,011,843, Cl. 514-259.000.

Shell Oil Company: *See*—
Buxton, John P., 5,011,503, Cl. 44-322.000.
Li, Simon M. K., 5,012,016, Cl. 568-720.000.
Stil, Jacob H.; Ooms, Adrianus J.; and Mink, Bernardus H., 5,011,507, Cl. 48-62.00R.
Weingaertner, David A.; and Slaugh, Lynn H., 5,012,034, Cl. 585-806.000.

Shen, Wen-Shin: *See*—
Lee, Rong-Jer; Lee, Chein-Dhau; and Shen, Wen-Shin, 5,011,762, Cl. 430-281.000.

Shen, Yang: *See*—
Rayson, Gary D.; and Shen, Yang, 5,012,065, Cl. 219-121.520.

Sheppard, Clyde H.: *See*—
Lubowitz, Hyman R.; and Sheppard, Clyde H., 5,011,905, Cl. 528-170.000.

Sheridan, William M.; and Ragland, Raymond E., to ATD Corporation. Pad including heat sink and thermal insulation areas. 5,011,743, Cl. 428-600.000.

Sherwood, Richard C.: *See*—
Jin, Sungho; Sherwood, Richard C.; and Tiefel, Thomas H., 5,011,823, Cl. 505-1.000.

Shiba, Takeo: *See*—
Kawaji, Mikinori; Takakura, Toshihiko; Uchida, Akihisa; Kuroda, Shigeo; Tamaki, Yoichi; Shiba, Takeo; Sagara, Kazuhiko; and Kawamura, Masao, 5,011,788, Cl. 437-67.000.

Shibagaki, Taro: *See*—
Takahashi, Shoichi; Ichiki, Sayohiko; Yorozu, Masatoshi; Kunishige, Seiji; Shibagaki, Taro; Shimizu, Fumihiko; Fujioka, Fumio; and Kondo, Toshinori, 5,012,240, Cl. 341-101.000.

Shibahashi, Yutaka: *See*—
Nakasuji, Norikazu; Kito, Tsutomu; and Shibahashi, Yutaka, 5,011,445, Cl. 446-14.000.

Shibata, Hiroshi: *See*—
Shobu, Toshifumi; Shibata, Hiroshi; and Ogasawara, Fumihiro, 5,012,470, Cl. 370-110.100.

Shibata, Norio: *See*—
Takahashi, Shinsuke; Shibata, Norio; and Sato, Tsunehiko, 5,011,714, Cl. 427-434.300.

Shichi, Hiroyasu; Nomura, Setsuo; and Mitani, Eisuke, to Hitachi, Ltd. Charged particle beam apparatus. 5,012,109, Cl. 250-491.100.

Shichman, Daniel, to United States Surgical Corporation. Vascular clamp assembly. 5,011,487, Cl. 606-158.000.

Shigematsu, Hideyuki: *See*—
Yamamoto, Yuji; Shigematsu, Hideyuki; Tanaka, Hiroshi; Ashikawa, Ryo; and Ishida, Tatsuo, 5,011,875, Cl. 524-45.000.

Shigenobu, Michio: *See*—
Sakurai, Masaaki; Yamamoto, Iichiro; Goto, Masahiro; Kuge, Tsukasa; and Shigenobu, Michio, 5,011,401, Cl. 432-60.000.

Shigeta, Akira: *See*—
Suzuki, Toshiyuki; Nohta, Masahide; Shigeta, Akira; Ina, Yoshimitsu; and Nozawa, Manami, 5,011,680, Cl. 424-64.000.

Shih, Jenn S.; Smith, Terry E.; Zamora, John; and Economidis, Minas, to GAF Chemicals Corporation. Precipitation polymerization of copolymers of a vinyl lactam and a polymerizable carboxylic acid using sub-surface feeding. 5,011,895, Cl. 526-88.000.

Shiina, Toshio; Miyamoto, Keiko; Izumi, Kouji; Hayashi, Yasuro; Karasawa, Yonenobu; Uematsu, Satoru; and Sei, Naoki, to Ricoh Company, Ltd. Body massaging apparatus of water current type. 5,010,605, Cl. 4-542.000.

Shikada, Kenichi: *See*—
Tanikawa, Keizo; Saloda, Ryozo; Tanaka, Sakuya; and Shikada, Kenichi, 5,011,839, Cl. 514-247.000.

Shikakura, Akihiro: *See*—
Yoshimura, Katsuji; Nagasawa, Kenichi; Kashida, Motokazu; and Shikakura, Akihiro, 5,012,352, Cl. 358-343.000.

Shiley, Inc.: *See*—
Buckberg, Gerald D.; Maloney, James V., Jr.; Jones, Kenneth A.; and West, Weldon D., 5,011,469, Cl. 604-4.000.

Shimazu, Takashi: *See*—
Saito, Katushi; Shindou, Yoshio; Murata, Toshimichi; Yamazaki, Fumio; and Shimazu, Takashi, 5,011,744, Cl. 428-623.000.

Shimizu Construction Co., Ltd.: *See*—
Yano, Hisato; Hashimoto, Shusa; and Horiyama, Tsuyoshi, 5,011,632, Cl. 261-81.000.

Shimizu, Fumihiko: *See*—
Takahashi, Shoichi; Ichiki, Sayohiko; Yorozu, Masatoshi; Kunishige, Seiji; Shibagaki, Taro; Shimizu, Fumihiko; Fujioka, Fumio; and Kondo, Toshinori, 5,012,240, Cl. 341-101.000.

Shimizu, Masao: *See*—
Sakano, Chikashi; Nakada, Seiichi; Shimizu, Masao; Ito, Shinichi; and Yamamoto, Toshiyoshi, 5,010,664, Cl. 38-77.700.

Shimizu, Minoru: *See*—
Sato, Junichi; and Shimizu, Minoru, 5,012,067, Cl. 219-121.720.

Shimizu, Tadafumi, to Minolta Camera Co., Ltd. Cleaning device for wire electrode of corona discharger. 5,012,093, Cl. 250-324.000.

Shimizu, Takao: *See*—
Tsugita, Hiroshi; and Shimizu, Takao, 5,011,557, Cl. 156-180.000.

Shimomura, Masakazu: *See*—
Nose, Kazuo; Yamamoto, Hiroyuki; Koike, Shiro; Shimomura, Masakazu; Tsubono, Hajime; Kitagawa, Soichi; Fujisaki, Yasumasa; Maeda, Yasushi; Wakebe, Tetsuya; and Katayama, Yasuyuki, 5,010,756, Cl. 72-9.000.

Shimono, Mamoru; Asada, Tomoyuki; Kawaguchi, Taiichi; Taya, Yoichi; Yukinaga, Kouji; Nomura, Susumu; and Tagawa, Hajime, to Kabushiki Kaisha Toshiba. Copying apparatus having a lamp to form or erase an image. 5,012,283, Cl. 355-229.000.

Shimosato, Masashi; and Ochiai, Kuniaki, to Tokyo Electric Co., Ltd. Releasing type dot printer head. 5,011,308, Cl. 400-124.000.

Shimp, Alan G.: *See*—
Hammond, Russell E.; Northup, Robert L.; Shimp, Alan G.; and Fassnacht, Francis B., 5,012,121, Cl. 307-64.000.

Shimura, Yasuhiko: *See*—
Kawano, Youzo; Takahashi, Tadashi; Shimura, Yasuhiko; and Takahashi, Yukihiro, 5,012,183, Cl. 324-96.000.

Shin-Etsu Chemical Co., Ltd.: *See*—
Amano, Tadashi; and Watanabe, Junichi, 5,011,897, Cl. 526-202.000.
Ogawa, Kazufumi; Tamura, Hideharu; Ishihara, Toshinobu; Tanaka, Yasuhisa; and Endou, Mikio, 5,011,963, Cl. 556-485.000.
Urasato, Nobuaki; Takamizawa, Minoru; Hayashida, Akira; Ohsaki, Hiromi; and Maruta, Jiyunitirow, 5,011,639, Cl. 264-65.000.

Shin, Hyungsoon: *See*—
Tasch, Aloysious F., Jr.; Shin, Hyungsoon; and Maziar, Christine M., 5,012,306, Cl. 357-23.400.

Shinagawanenryo Kabushikikaisha: *See*—
Totani, Tuyoshi; Yamamoto, Tatuo; and Kurihara, Yasuo, 5,011,602, Cl. 210-484.000.

Shindo, Shotaro: *See*—
Ono, Yutaka; Muramatsu, Yasuhiko, Banzai, Hideo; Kikukawa, Yoichi; Hashida, Shigeru; Shindo, Shotaro; Higuchi, Haruo; Shinomiya, Hiroyuki, Nikaido, Mitsuhiro; and Sato, Koichi, 5,012,169, Cl. 318-568.000.

Shindou, Yoshio: *See*—
Saito, Katushi; Shindou, Yoshio; Murata, Toshimichi; Yamazaki, Fumio; and Shimazu, Takashi, 5,011,744, Cl. 428-623.000.

Shingaki, Kouichi: *See*—
Saito, Itaru; Matsubara, Ken; Shingaki, Kouichi; Masuda, Tomohiko; and Kitano, Hirohisa, 5,011,271, Cl. 350-356.000.

Shingo, Naohito; and Kishida, Takahito, to Nippon Paint Co., Ltd. Aqueous coating composition. 5,011,882, Cl. 524-504.000.

Shinnippon Koki Kabushiki Kaisha: *See*—
Shinno, Nobuo; and Ohnishi, Yasuhiro, 5,011,563, Cl. 156-574.000.
Shinno, Nobuo; and Ohnishi, Yasuhiro, to Shinnippon Koki Kabushiki Kaisha. Automatic tape affixing apparatus. 5,011,563, Cl. 156-574.000.

Shinohara, Tatsuo: *See*—
Fujioka, Yoshiki; and Shinohara, Tatsuo, 5,012,173, Cl. 318-727.000.

Shinomiya, Hiroyuki: *See—*
Ono, Yutaka; Muramatsu, Yasuhiko, Banzai, Hideo; Kikukawa, Yoichi; Hashida, Shigeru; Shindo, Shotaro, Higuchi, Haruo, Shinomiya, Hiroyuki, Nikaido, Mitsuhiro, and Sato, Koichi, 5,012,169, Cl. 318-568.000.
Shinzato, Toru, to Shinzato, Toru, and Medecs Co. Ltd. Hemodiafiltration system. 5,011,607, Cl. 210-637.000
Shiokawa, Yoshihiro: *See—*
Tokura, Nobuyuki; Takefumi, Tadayoshi; Matsumoto, Shunichi, and Shiokawa, Yoshihiro, 5,011,987, Cl. 562-494.000
Shiomi, Makoto, Ozeki, Kosuke; Ohsawa, Michitaka, Matsumi, Kuninori, and Kawagishi, Tadahiro, to Hitachi, Ltd., and Hitachi Video Engineering, Inc. Correcting data reading device in a digital convergence correcting device. 5,012,332, Cl. 358-64.000.
Shionogi & Co., Ltd. *See—*
Yoshida, Tadashi, Inoue, Keizo; Arita, Hitoshi, Matsutani, Shigeru, Shoji, Jun'ichi; and Kawamura, Yoshimi, 5,011,952, Cl. 549-393.000.
Shiozawa, Akihiko *See—*
Tominaga, Kenji, Miki, Minoru; Takahashi, Tooru, Horiuchi, Tetsuo; Morishima, Hideo, Nakayama, Takashi, Moriya, Kumiaki, Matsumoto, Masaki, Akita, Minoru, Ninno, Tsuyoshi, Ochiai, Kanehiro, Shiozawa, Akihiko, Uchiyama, Yuichi, Yasuno, Toyoharu, Moriya, Kenji, Kinoshita, Shouichirou; Kage, Kazuo, and Kubota, Ryuji, 5,011,652, Cl. 376-283.000
Shipko, Frederick J. *See—*
Goode, Louis, Shipko, Frederick J., and Fearnot, Neal E., 5,011,482, Cl. 606-1.000.
Shirahase, Ichiro *See—*
Kise, Masahiro; Kitano, Masahiko, Ozaki, Masakuni, Kazuno, Kenji, Matsuda, Masahito, Shirahase, Ichiro, and Tomii, Yoshifumi, 5,011,831, Cl. 514-210.000.
Shirakawa, Hiroshi *See—*
Minagawa, Yoshiji, Shirakawa, Hiroshi, Yamazaki, Hiroshi, and Ito, Yoshiaki, 5,012,120, Cl. 307-35.000
Shirato, Takehide, to Fujitsu Limited. Semiconductor thin film device with thick insulator at gate edge. 5,012,311, Cl. 357-23.700
Shirota, Hiroyuki *See—*
Kurusu, Yasuo; Cho, Masamichi; Nagata, Shinichi, Tomohisa, Kunio; and Shirota, Hiroyuki, 5,012,089, Cl. 250-235.000
Shishikura, Toshibumi, to Daiwa Can Company. Method of non-overlap halftone-dot printing of colored original on cylindrical container outer surface. 5,010,814, Cl. 101-211.000
Shobu, Toshifumi, Shibata, Hiroshi, and Ogasawara, Fumihiro, to Ricoh Company, Ltd. Data terminal equipment and data transmission control method. 5,012,470, Cl. 370-110.100
Shoji, Jun'ichi *See—*
Yoshida, Tadashi; Inoue, Keizo, Arita, Hitoshi, Matsutani, Shigeru, Shoji, Jun'ichi, and Kawamura, Yoshimi, 5,011,952, Cl. 549-393.000
Sholder, Jason A., to Siemens-Pacesetter, Inc. Motion sensor for implanted medical device. 5,010,893, Cl. 128-782.000
Shono, Yoshinori *See—*
Takahashi, Junya, Nishida, Sumio, Fujimoto, Izumi, Shono, Yoshinori, and Fujimoto, Hiroaki, 5,012,004, Cl. 568-53.000
Showa Denko K K *See—*
Sano, Kenichi, Maki, Kenichiro, and Kamei, Hideyuki, 5,011,980, Cl. 560-245.000
Sato, Junichi, and Shimizu, Minoru, 5,012,067, Cl. 219-121.720
Shoyab, Mohammed, Marquardt, Hans, and Todaro, George J., to Oncogen. Vectors encoding brain derivable polypeptide factors. 5,011,777, Cl. 435-172.300
Shreve, Arthur L., III. Ladder stabilizing device. 5,010,979, Cl. 182-214.000
Shue, Ho-Jane *See—*
Blythin, David J., Shue, Ho-Jane, and Ganguly, Ashit K., 5,011,845, Cl. 514-291.000.
Blythin, David J., and Shue, Ho-Jane, 5,011,860, Cl. 514-861.000
Shur, Michael, to University of Minnesota, Regents of. Split-gate field effect transistor. 5,012,315, Cl. 357-23.140
Shuto, Katsuichi *See—*
Masada, Tomoaki, Ueno, Yasuhiko, Hayakawa, Eiji, Naganuma, Hirotake, Terajima, Mitsuru, Kureda, Tokuyuki, Shuto, Katsuichi, and Ichikawa, Shunji, 5,011,824, Cl. 514-13.000
Shuttleworth, Leslie, and McManus, Michael J., to Eastman Kodak Company. In situ dye generation for thermal transfer printing. 5,011,811, Cl. 503-201.000
Shvartsman, Alexandr Y. *See—*
Boenko, Sergei K., and Shvartsman, Alexandr Y., 5,011,491, Cl. 606-207.000
Siddiq, Mohammed, and Lo, I-Huan, to Tandy Corporation. Homogeneous magnetic head cleaning material. 5,012,377, Cl. 360-128.000
Siebold, Horst, and Meier, Konrad, to Siemens Aktiengesellschaft. Gradient coil system for a nuclear magnetic resonance tomography apparatus. 5,012,191, Cl. 324-318.000
Siebold, Horst, to Siemens Aktiengesellschaft. Gradient coil system for a nuclear resonance tomography apparatus. 5,012,192, Cl. 324-318.000
Sieg, Giselher *See—*
Boser, Werner, Sieg, Giselher, and Wedekind, Robert, 5,010,750, Cl. 70-276.000
Siegel, Stuart B., and Marriott, Jeffery C., to Allen-Bradley Company, Inc. Master slave industrial token passing network. 5,012,468, Cl. 370-85.500
Siemens Aktiengesellschaft *See—*
Krueger, Hans, and Welsch, Wolfgang, 5,012,480, Cl. 372-61.000
Kunze, Dieter, and Giebel, Wolfgang, 5,011,332, Cl. 405-158.000
Kuttner, Franz, 5,012,241, Cl. 341-120.000
Lieber, Winfried, and Eder, Thomas, 5,011,259, Cl. 350-96.210
Mattausch, Hans-Juergen, Althoff, Klaus, and Neuendorf, Gerd, 5,012,450, Cl. 365-208.000
Mattausch, Hans-Juergen, Althoff, Klaus; and Neuendorf, Gerd, 5,012,450, Cl. 365-208.000
Muellner, Ernst, 5,012,137, Cl. 307-475.000
Plies, Erich, and Quincke, Joerg, 5,012,100, Cl. 250-342.000
Siebold, Horst, and Meier, Konrad, 5,012,191, Cl. 324-318.000.
Siebold, Horst, 5,012,192, Cl. 324-318.000.
Steeger, Gerhard, 5,012,520, Cl. 381-68.000
Wiechert, Edelbert, 5,011,310, Cl. 400-207.000
Zietlow, Kurt, and Engst, Ernst, 5,012,434, Cl. 364-523.000
Siemens Automotive Limited *See—*
Sewell, Michael R., 5,012,050, Cl. 200-61.45R
Siemens-Pacesetter, Inc. *See—*
Sholder, Jason A., 5,010,893, Cl. 128-782.000
Thornander, Hans T., 5,010,887, Cl. 128-696.000
Siemens Telecommunicazioni S.p.A. *See—*
Cagnin, Tarcisio; and Ferraris, Giampiero, 5,011,761, Cl. 430-312.000
Siemens Telecomunicazioni S.p.A. *See—*
Marconi, Franco, and De Stena, Nicolo', 5,012,210, Cl. 333-209.000
Sierra, George H. *See—*
Terada, Takao, Ota, Hiroyuki; Makita, Shigeru; Herpichboehm, Bernd G., Sierra, George H., Summers, Robert B.; and Watlington, Thomas M., 5,011,290, Cl. 356-423.000
SIG Schweizerische-Industrie-Gesellschaft *See—*
Fluck, Rene', 5,010,715, Cl. 53-447.000
Sigmund, Sandra K. *See—*
Barnett, Charles J., Holmes, Richard E., Jungheim, Louis N., Sigmund, Sandra K., and Ternansky, Robert J., 5,011,938, Cl. 548-359.000
Sikkenga, David L., Zaenger, Ian C.; and Williams, Gregory S., to Amoco Corporation. Preparation of a dimethylnaphthalene. 5,012,024, Cl. 585-320.000
Silaghi, Victor *See—*
Cosman, John, and Silaghi, Victor, 5,011,396, Cl. 425-190.000
Silja, Karl T. I. *See—*
Gustavsson, Tord G., Myren, Harry I.; and Silja, Karl T. I., 5,011,574, Cl. 162-281.000
Silva, James M., and Fyvie, Thomas J., to General Electric Company. Low phosgene method for preparing aromatic bischloroformates. 5,011,966, Cl. 558-268.000
Silva, James M., and Pyles, Robert A., to General Electric Company. Method for preparing aromatic bischloroformate compositions. 5,011,967, Cl. 558-281.000
Silver, Gary L. *See—*
Martin, Frank S., and Silver, Gary L., 5,011,610, Cl. 210-667.000
Silvermint, Emanuel H., to Cardiac Pacemakers, Inc. Multiaxial transducer interconnection apparatus. 5,012,316, Cl. 357-26.000.
Silveston, Peter L. *See—*
Haure, Patricia, Silveston, Peter L., Hudgins, Robert R., and Bellut, Maxime, 5,011,675, Cl. 423-659.000
Simcock, John H., to Inductotherm Europe Limited. Induction melting. 5,012,487, Cl. 373-147.000
Simelunas, William, and Deloy, Joseph T., to Nabisco Brands, Inc. Apparatus for continuous pan coating. 5,010,838, Cl. 118-19.000
Simmonds Precision Products, Inc. *See—*
Spillman, William B., Jr., 5,012,090, Cl. 250-237.00G.
Simmons, Kenneth E. *See—*
Irick, Gether, Jr., Mercer, Patricia N.; and Simmons, Kenneth E., 5,011,806, Cl. 502-202.000.
Simmons, Randy G., to AMP Incorporated. Latch mechanism for electrical connector. 5,011,424, Cl. 439-352.000.
Simonsen, Christian C. *See—*
Levinson, Arthur D., Pennica, Diane, Kohr, William J., Vehar, Gordon A., Goeddel, David V., Yelverton, Elizabeth M., and Simonsen, Christian C., 5,011,795, Cl. 435-69.200.
Simpson, A. Phillip *See—*
Jungwirth, Douglas R., Simpson, A. Phillip; Kawahara, Mitsuo, Levine, Seymour; and Kennel, John M., 5,012,081, Cl. 250-203.600
Simpson, Clark C. and Weirs, Paul C., to Clark Equipment Company. Unified frame/body assembly for vehicle. 5,011,217, Cl. 296-203.000.
Sims, Richard E., and Weibler, Joseph C., to Curran Company, The. Screened window for shielded enclosure. 5,012,041, Cl. 174-35.0MS.
Singh, Ishwar, and Senkevich, William, to LazerData Corporation. Bar code scanner mirror assembly. 5,012,079, Cl. 235-467.000.
Singh, Shobha *See—*
Grim, Karen A., Singh, Shobha, Van Uitert, LeGrand G.; and Zydzik, George J., 5,011,794, Cl. 437-247.000
Sintobrator, Ltd. *See—*

Stobbs, Thomas J.; Patel, Kishor J., Fritz, Frank M., Knutson, Dale A., and Janecke, James P., to Applied Power Inc. Fluid control valve. 5,011,113, Cl. 251-129.160.
Stoddard, Darrell: *See*—
Kittler, Wilfred C., Jr., Czukor, Janos, and Stoddard, Darrell, 5,011,569, Cl. 156-656.000.
Stokley, Charles O.; and Haas, Richard C., to Chalkbus, Inc. Drilling method. 5,010,966, Cl. 175-66.000.
Stonehouse, David R., to Dennison Stationery Products Company. Flip chart pad. 5,010,671, Cl. 40-594.000.
Storz, Dieter, and Baas, Dieter, to Deutsche Thomson-Brandt GmbH. Phase control circuit for regulating a CD player drive. 5,012,204, Cl. 331-11.000.
Stoutenburg, Robert R., Dugas, Michael R., and Hazelton, Mark W., to Progressive Tool & Industries Co. Automotive body framing system. 5,011,068, Cl. 228-4.100.
Stradley, Carolyn A. Separable pants with integral underpants. 5,010,595, Cl. 2-227.000.
Strand, Oddbjorn E. *See*—
Jorgensen, Terje, Strand, Oddbjorn E.; and Asbjornsen, Odd A., 5,011,285, Cl. 356-335.000.
Strater, Kurt F.. *See*—
Bose, Ajit K., and Strater, Kurt F., 5,011,298, Cl. 383-8.000.
Strawn, David F.: *See*—
Burton, Richard J.; Copeland, John A., III; Jerrim, John W.; Nixon, Toby L., Sauser, Martin H., Jr.; Weatherford, Robert E., Jr., Becker, Larry D.; and Strawn, David F., 5,012,489, Cl. 375-8.000.

Streck, Donald A.; and Iggulden, Jerry R., to Iggulden, Jerry R.; and Streck, Donald A., a part interest. Television local wireless transmission and control. 5,012,350, Cl. 358-335.000.
Strepparola, Ezio. *See*—
Gregorio, Guglielmo; Roberti, Lamberto; and Strepparola, Ezio, 5,011,979, Cl. 560-223.000.
Stridh, Keijo A.: *See*—
Tolf, Anders K. H.; and Stridh, Keijo A., 5,010,920, Cl. 137-565.000.
Strobl, Georg, to Johnson Electric S.A. Assembled commutator for an electric motor. 5,012,149, Cl. 310-234.000.
Stroebel, Thomas: *See*—
Battin, John, and Stroebel, Thomas, 5,012,502, Cl. 378-58.000.
Strom, Peter H. *See*—
Ingraham, Ronald D.; Nykerk, Todd M.; and Strom, Peter H., 5,010,972, Cl. 180-178.000.
Strom, Terry B., to Beth Israel Hospital Association. Lysing or blocking unwanted cells with IL-2 receptor-specific binding substance. 5,011,684, Cl. 424-85.200.
Strong, David S.; and Dawson, John A., to Alcan International Limited. Metal/air battery with pulsed gas bubbling. 5,011,747, Cl. 429-27.000.
Stroup, H. B., Jr.: *See*—
Connor, John K., Connor, Charles M., Jr.; and Stroup, H. B., Jr., 5,010,673, Cl. 40-661.000.
Stryker Corporation: *See*—
Oppermann, Hermann; Kuberasampath, Thangavel; Rueger, David C., and Ozkaynak, Engin, 5,011,691, Cl. 424-423.000.
Studler, Richard. Boat/auto parking system for marina. 5,011,357, Cl. 414-253.000.
Stutz, Michael; and Modinger, Thomas, to TRW Repa GmbH. Locking means for a drive member of a passive safety-belt system. 5,011,185, Cl. 280-804.000.
Subramanian, Naranammalpuram S., to Hawkins Cookers Limited. Pressure regulating system for use in pressure cookers and pressure cooker having the same. 5,011,035, Cl. 220-203.000.
Sucht, Gayle A.; and Mattis, John S., to Raychem Corporation. Coaxial cable connector. 5,011,432, Cl. 439-584.000.
Suda, Shigeyuki. *See*—
Nakayama, Hiroki; Kitagishi, Nozomu; Hattori, Jun; Suda, Shigeyuki; and Horiuchi, Akihisa, 5,011,272, Cl. 350-427.000.
Sudo, Yasuhiro: *See*—
Suzuki, Daiji; and Sudo, Yasuhiro, 5,011,126, Cl. 271-227.000.
Suehiro Industrial Co., Ltd.: *See*—
Iame, Eiji, and Imura, Yasuo, 5,011,728, Cl. 428-156.000.
Suehiro, Urabe; Masayuki, Honma; and Tohru, Kamibeppu, to Nissan Motor Co., Ltd. Intake apparatus for V-type 8-cyl internal combustion engine. 5,010,854, Cl. 123-52.0MV.
Suenaga, Tatsuo. *See*—
Akihama, Shigeyuki; Kobayashi, Mikio; Suenaga, Tatsuo; Fukumoto, Toshiyuki, Taniguchi, Yoshikazu; and Nakagawa, Hiroaki, 5,010,705, Cl. 52-477.000.
Sugano, Kazuhiko; and Ueki, Akihiro, to Nissan Motor Co., Ltd. Automatic automotive transmission having 4-2 downshift sequence valve. 5,010,788, Cl. 74-868.000.
Sugasawara, Seiji, Tsuneki, Ken; Ohshima, Kazuyoshi; Nakayama, Yojiro; Hayakawa, Tatsuya, and Tamura, Seiichiro, to Sugatsune Industrial Co., Ltd. Coat lift hanger. 5,011,029, Cl. 211-104.000.
Sugatsune Industrial Co., Ltd.. *See*—
Sugasawara, Seiji; Tsuneki, Ken, Ohshima, Kazuyoshi; Nakayama, Yojiro, Hayakawa, Tatsuya; and Tamura, Seiichiro, 5,011,029, Cl. 211-104.000.
Sugaya, Toshihiro: *See*—
Isomura, Akihiro; and Sugaya, Toshihiro, 5,012,372, Cl. 360-106.000.
Sugimori, Masao: *See*—
Sasabe, Junya; and Sugimori, Masao, 5,012,294, Cl. 355-309.000.
Sugiura, Shinji. *See*—
Hiraki, Tadayoshi; Iwase, Osamu; Oosumimoto, Hirosi; Sugiura, Shinji; Tabushi, Ichiro; Kume, Masafumi; Udagawa, Takashi; Matsui, Komaharu; and Fujii, Yasuhiro, 5,011,733, Cl. 428-336.000.
Sugiyama, Yuuichi: *See*—
Takeda, Shiro; Namiki, Fumihiro; Sugiyama, Yuuichi; Iwase, Nobuhiro; Tadaki, Shinji; and Koshino, Nagaaki, 5,012,096, Cl. 250-327.200.
Suh, Kyung W., to Dow Chemical Company, The. Insulating alkenyl aromatic polymer foam. 5,011,866, Cl. 521-97.000.
Suhara, Sinsuke: *See*—
Asai, Koichi; Tsuda, Mamoru; Muto, Yasuo; Suhara, Sinsuke; and Kawada, Tousuke, 5,012,115, Cl. 250-561.000.
Sullivan, Carl J., to Arco Chemical Technology, Inc. Paint stripper compositions containing N-methyl-2-pyrrolidone and renewable resources. 5,011,621, Cl. 252-162.000.
Sulmone, Michael: *See*—
Laskaris, Michael A.; Brottman, Kalman; Teske, Richard E.; Miller, David L.; and Sulmone, Michael, 5,010,870, Cl. 123-576.000.
Sumitomo Bakelite Company Limited: *See*—
Miyazaki, Kazuoki, Noguchi, Yasuo; Inoue, Naohiko; and Idemoto, Morito, 5,011,471, Cl. 604-22.000.
Nambu, Masao; Onishi, Tadayuki; and Onohara, Masayuki, 5,012,503, Cl. 378-64.000.
Sumitomo Chemical Company, Limited: *See*—
Kadokura, Hidekimi; Yoshitake, Hiroshi; and Tanahashi, Masayoshi, 5,012,156, Cl. 313-509.000.
Matsuda, Teruo; Miki, Masayoshi; and Ochi, Hiromu, 5,011,539, Cl. 134-22.140.
Takahashi, Junya; Nishida, Sumio; Fujimoto, Izumi; Shono, Yoshinori; and Fujimoto, Hiroaki, 5,012,004, Cl. 568-53.000.
Terao, Masanobu; Maegawa, Yuzo; Ueda, Yasuyoshi; Hashimoto, Kiyoyasu; and Omura, Takashi, 5,012,015, Cl. 568-709.000.
Yoneyoshi, Yukio; Suzukamo, Gohfu; and Sakito, Yoji, 5,011,989, Cl. 564-8.000.
Sumitomo Electric Industries, Ltd.: *See*—
Degawa, Junji; and Tsuji, Kazuwo, 5,011,790, Cl. 437-134.000.
Hitotsuyanagi, Hajime; Fujita, Nobuhiko; Itozaki, Hideo; Nakagama, Syoji; Tanaka, Saburo; and Fukushima, Kazuhiko, 5,011,759, Cl. 430-128.000.
Sato, Kazuhiro, 5,012,045, Cl. 174-106.00R.
Sumitomo Pharmaceuticals Company, Limited: *See*—
Fujioka, Keiji; Sato, Shigeji; Takada, Yoshihiro; Sasaki, Yoshio; and Tamura, Nobuhiko, 5,011,692, Cl. 424-426.000.
Sumitomo Rubber Industries Limited: *See*—
Blythe, Robert J.; and Scally, Paul G., 5,011,876, Cl. 524-77.000.
Katayama, Hideaki; Murakami, Toshifumi; Soeda, Koji; Kubota, Yoshiya; Okamoto, Shoji; Kubota, Akinori, Kobayashi, Michihito; and Ijiri, Masaaki, 5,011,392, Cl. 425-35.000.
Numata, Kazuki; and Ochiai, Kiyoshi, 5,010,936, Cl. 152-209.00R.
Summach, Harley R. W., to Northern Telecom Limited. Cable entry device for EMI shielded cabinets. 5,012,042, Cl. 174-35.00C.
Summers, Robert B.: *See*—
Terada, Takao; Ota, Hiroyuki; Makita, Shigeru; Herpichboehm, Bernd G.; Sierra, George H.; Summers, Robert B.; and Watlington, Thomas M., 5,011,290, Cl. 356-423.000.
Sunami, Hideo: *See*—
Kimura, Shinichiro; Kawamoto, Yoshifumi; Kaga, Toru; and Sunami, Hideo, 5,012,310, Cl. 357-23.600.
Sundaram, Meenaksi: *See*—
Parthasarathy, V. R.; Sundaram, Meenaksi; Jameel, Hasan; Gratzl, Josef S.; and Klein, Ronald J., 5,011,572, Cl. 162-56.000.
Sunder, Shyam: *See*—
Peet, Norton P.; and Sunder, Shyam, 5,011,835, Cl. 514-212.000.
Sunderdiek, Rainer: *See*—
Schafer, Horst; Ludwig, Gerhard; and Sunderdiek, Rainer, 5,011,661, Cl. 422-30.000.
Sundstrand Corporation: *See*—
Dhyanchand, P. John; Patel, Sunil; Ng, Chai-Nam; and Nguyen, Vietson, 5,012,177, Cl. 322-10.000.
Frantz, Gary A.; Aleem, Mohd A.; Rademacher, Loren; and Ratcike, Lee R., 5,012,145, Cl. 310-68.00D.
Recker, Bradley J.; Roe, Derrick I.; and Rozman, Christopher J., 5,012,437, Cl. 364-701.000.
White, Robert C., 5,011,464, Cl. 475-260.000.
Sung, Chien-Min: *See*—
Cho, Hyun S.; Sung, Chien-Min; Merrill, Leo; Chen, Sy-Hwa; and Csillag, Frank, 5,011,514, Cl. 51-295.000.
Sunsoft Lenses: *See*—
Neefe, Charles W., 5,011,633, Cl. 264-1.100.
Superior Industries International, Inc.: *See*—
Cohen, Bernard; Caplan, Don B.; and Edwards, Edward G., 5,010,761, Cl. 73-40.700.
Superloon K.K.: *See*—
Watanabe, Hajime, 5,011,447, Cl. 446-220.000.
Supkis, Stanley: *See*—
Zador, Eugene; Hsu, Shyiguei; Kaczmarek, Wesley R.; Ravipati, Sitaramaiah; Supkis, Stanley; and Vogel, Richard H., 5,011,513, Cl. 51-295.000.
Surles, Billy W.: *See*—
Friedman, Robert H.; and Surles, Billy W., 5,010,953, Cl. 166-288.000.
Susak, David M.; and Bader, Scott K., to Motorola Inc. Full wave rectifier/averaging circuit. 5,012,139, Cl. 307-490.000.
Suyama, Shuji; and Nakamura, Tomoyuki, to Nippon Oil and Fats Company, Limited. T-ethyl-1,5-dimethylhexylperoxy acid esters. 5,012,010, Cl. 568-561.000.
Suzukamo, Gohfu: *See*—
Yoneyoshi, Yukio; Suzukamo, Gohfu; and Sakito, Yoji, 5,011,989, Cl. 564-8.000.
Suzuki, Akira: *See*—
Aoki, Masakazu; and Suzuki, Akira, 5,011,388, Cl. 418-95.000.
Suzuki, Daiji; and Sudo, Yasuhiro, to Dai Nippon Insatsu Kabushiki Kaisha. Automatic sheet stack loading mechanism of sheet feeding apparatus. 5,011,126, Cl. 271-227.000.
Suzuki, Daisuke: *See*—
Furukawa, Kazunari; and Suzuki, Daisuke, 5,010,977, Cl. 181-160.000.
Suzuki Jidosha Kogyo Kabushiki Kaisha: *See*—
Onishi, Kazuhiko, 5,010,731, Cl. 60-313.000.
Suzuki, Mamoru: *See*—
Suzuki, Takao; Suzuki, Mamoru; and Hayashi, Yasufumi, 5,011,415, Cl. 439-63.000.
Suzuki, Masami: *See*—
Yoshio, Junichi; and Suzuki, Masami, 5,012,242, Cl. 341-131.000.
Suzuki, Mikio: *See*—
Fujikawa, Yoshihiro; Suzuki, Mikio; Iwasaki, Hiroshi; Sakashita, Mitsuaki; and Kitahara, Masaki, 5,011,930, Cl. 546-101.000.
Suzuki, Minoru: *See*—
Kouda, Masanori; Suzuki, Minoru; Okamura, Tetsuya; and Tobisawa, Toshihisa, 5,010,923, Cl. 137-625.340.
Suzuki, Nobuo: *See*—
Ono, Mitsunori; and Suzuki, Nobuo, 5,011,923, Cl. 536-17.900.

Suzuki, Osamu: *See—*
Yasui, Yoshiharu; Nakane, Katsumi, Suzuki, Osamu; and Kimbara, Masahiko, 5,010,725, Cl. 57-281.000

Suzuki, Satoshi. *See—*
Takahashi, Mineo; Nakayama, Susumu; Yamashima, Osamu; Suzuki, Satoshi; Harada, Toshihiko; and Aiso, Keiji, 5,010,642, Cl. 29-868.000.

Suzuki, Shigeaki; and Inoue, Hideo, to Japan Air Lines Co., Ltd. Dampening mask for use in aircraft. 5,010,594, Cl. 2-206.000.

Suzuki, Sigeru: *See—*
Mine, Koichi; and Suzuki, Sigeru, 5,011,369, Cl 415-55.100.

Suzuki, Takao; Suzuki, Mamoru; and Hayashi, Yasufumi, to Japan Aviation Electronics Industry Limited. Right angle coaxial receptacle. 5,011,415, Cl 439-63.000.

Suzuki, Takashi, to Yamaha Corporation. Interface circuit for asychronous data transfer. 5,012,138, Cl 307-475.000.

Suzuki, Takumi; and Uehara, Kiyohiro, to Ricoh Company, Ltd. Liquid crystal display device. 5,011,266, Cl. 350-335.000.

Suzuki, Tetsuo: *See—*
Yoshimura, Shigeru; Suzuki, Tetsuo; and Takemura, Makoto, 5,012,260, Cl. 346-139.00R.

Suzuki, Toshimitsu, to Daichi Canada Inc. Blower for the production of a mist or the like. 5,011,522, Cl. 62-12.000.

Suzuki, Toshiyuki; Nohta, Masahide; Shigeta, Akira; Ina, Yoshimitsu; and Nozawa, Manami, to Kao Corporation. Solid cosmetic preparation. 5,011,680, Cl. 424-64.000.

Suzuki, Yasuyuki; Takagawa, Noboru, Kawabata, Mikio, Hayashi, Mariko; Takagi, Akiko; Wakamiya, Takako, and Saikawa, Isamu, to Toyama Chemical Co., Ltd. Novel process for producing bischolinedisulfonate derivatives. 5,011,973, Cl. 560-185.000.

Svenska Rotor Maskiner AB. *See—*
Timuska, Karlis, 5,011,389, Cl 418-152.000.

Svensson, E. Gunnar, to Autopart Sweden AB. Sun visor for motor vehicles. 5,011,211, Cl. 296-97.100.

Swann, David A. *See—*
Donahoe, Patricia K.; and Swann, David A., 5,011,687, Cl 424-559.000

Swanson, Eric J. *See—*
Wellard, David R.; Kerth, Donald A., Del Signore, Bruce P., and Swanson, Eric J., 5,012,244, Cl 341-143.000

Swaroop, Srinivas H.: *See—*
Hogue, Kathryn E.; Swaroop, Srinivas H.; and Wusirika, Raja R., 5,011,529, Cl. 75-235.000

Swart, Nicholaas C., to Heuft-Qualiplus B.V. Method and an apparatus for checking an object for the presence of filling compound 5,011,289, Cl 356-394.000

Sweeney, Donald C. Adjustable arrow holder 5,011,028, Cl 211-60.100

Sweeney, Mark A.: *See—*
Xu, Jingming, Sweeney, Mark A., and Day, Derek J., 5,012,301, Cl 357-4.000.

Swiss Aluminium Ltd.: *See—*
Werner, Martin, Bloeck, Margarete; and Bichsel, Heinz, 5,011,657 Cl. 420-538.000.

Swope, Ronald L. *See—*
Barron, Milagros C.; Swope, Ronald L.; Wilkerson, John M., III; and Ruffner, Charles G., 5,011,978, Cl 560-221.000

Sybert, Paul D., to General Electric Company. Copoly(aromatic sulfone carbonate - aromatic alkylcarbonate) - polysiloxane block copolymer 5,011,899, Cl. 528-26.000.

Szala, Lawrence E. *See—*
Borom, Marcus P.; Szala, Lawrence E.; Brun, Milivoj; Miller, Steven A.; and Mourer, David P., 5,011,049, Cl 222-590.000

Szczyrbowski, Joachim. *See—*
Dietrich, Anton, Hartig, Klaus; Schaefer, Hans-Christian; and Szczyrbowski, Joachim, 5,011,745, Cl. 428-630.000

Tabak, Samuel A. *See—*
Child, Jonathan E.; Huss, Albin, Jr., Kennedy, Clinton R., Marler, David O.; and Tabak, Samuel A., 5,012,033, Cl 585-722.000

Tabata, Yasushi; Kobayashi, Takeo; Numako, Norio, and Nagai, Katsutoshi, to Asahi Kogaku Kogyo Kabushiki Kaisha. Indication control unit for an electronically controlled camera 5,012,272, Cl. 354-465.000.

Tabushi, Ichiro: *See—*
Hiraki, Tadayoshi, Iwase, Osamu, Oosumimoto, Hiroshi, Sugiura, Shinji; Tabushi, Ichiro, Kume, Masafumi, Udagawa, Takashi, Matsui, Komaharu, and Fujii, Yasuhiro, 5,011,733, Cl 428-336.000

Tachi-S Co., Ltd. *See—*
Ikeda, Tetsuo, and Nemoto, Akira, 5,011,226, Cl. 297-403.000
Inoue, Nobuhiro, 5,011,210, Cl 296-69.000.
Kato, Sakae, 5,011,223, Cl 297-284.000
Nagata, Kojiro, 5,011,109, Cl. 248-564.000.
Nemoto, Akira, 5,011,225, Cl 297-408.000

Tachibana, Kimie, and Kaneko, Yutaka, to Konica Corporation. Dye forming coupler for photographic use 5,011,765, Cl 430-548.000

Tacker, Willis A., Jr. *See—*
Bourland, Joe D.; Barbs, Charles F.; Geddes, Leslie A., Tacker, Willis A., Jr., and Graber, George P., 5,010,772, Cl. 73-862.040

Tackett, Donald L. W. Security door block 5,011,203, Cl 292-343.000

Tadaki, Shinji. *See—*
Takeda, Shiro, Namiki, Fumihiro; Sugiyama, Yuuichi; Iwase, Nobuhiro, Tadaki, Shinji, and Koshino, Nagaaki, 5,012,096, Cl 250-327.200.

Taga, Yuji; and Katoh, Masashi, to Alps Electric Co., Ltd. Rotary head type magnetic recording/reproducing apparatus with read-after-write feature. 5,012,355, Cl. 360-31.000

Taga, Yutaka *See—*
Tsukamoto, Kazumasa; Ishikawa, Kazunori; Taniguchi, Takuji, Iwatsuki, Kunihiro; and Taga, Yutaka, 5,010,991, Cl. 192-3.300

Tagawa, Hajime *See—*
Shimono, Mamoru; Asada, Tomoyuki; Kawaguchi, Taiichi; Taya, Yoichi, Yukinaga, Kouji; Nomura, Susumu; and Tagawa, Hajime, 5,012,283, Cl 355-229.000

Taheri, Hassan, to Amoco Corporation. Continuous process for the production of maleic anhydride 5,011,945, Cl 549-260.000.

Taiwan Fu Hsing Industry Co., Ltd. *See—*
Lin, Jui C., 5,010,749, Cl 70-190.000
Lin, Ruey J., 5,010,752, Cl. 70-277.000.

Takabayashi, Naoki *See—*
Kobayashi, Kazuhiro; Koboshi, Shigeharu; Goto, Nobutaka, Kurematsu, Masayuki; and Takabayashi, Naoki, 5,011,571, Cl 159-47.300

Takada, Akihiro *See—*
Nakajima, Yoshihiro; and Takada, Akihiro, 5,012,279, Cl 355-205.000

Takada, Mitsuru, Itoh, Hiroshi; Takahashi, Tokuyuki, and Funahashi, Makoto, to Toyota Jidosha Kabushiki Kaisha. Hydraulic control device for automatic transmission for vehicle adapted to engage clutch at different speed according to engine output power 5,010,787, Cl 74-867.000.

Takada, Shunji: *See—*
Yamashita, Seiji, and Takada, Shunji, 5,011,767, Cl 430-567.000

Takada, Yoshihiro *See—*
Fujioka, Keiji; Sato, Shigeji; Takada, Yoshihiro; Sasaki, Yoshio, and Tamura, Nobuhiko, 5,011,692, Cl. 424-426.000.

Takagawa, Noboru *See—*
Suzuki, Yasuyuki, Takagawa, Noboru, Kawabata, Mikio; Hayashi, Mariko, Takagi, Akiko, Wakamiya, Takako, and Saikawa, Isamu, 5,011,973, Cl 560-185.000.

Takagi, Akiko *See—*
Suzuki, Yasuyuki; Takagawa, Noboru, Kawabata, Mikio; Hayashi, Mariko; Takagi, Akiko, Wakamiya, Takako, and Saikawa, Isamu, 5,011,973, Cl 560-185.000.

Takahashi, Daisuke *See—*
Onmori, Shozo; Takahashi, Daisuke; and Oishi, Kengo, 5,012,378, Cl 360-132.000
Onmori, Shozo; Takahashi, Daisuke; and Oishi, Kengo, 5,012,379, Cl. 360-132.000

Takahashi, Hisao; Yamane, Kaoru; Hirakami, Kiyomi, and Ikeda, Kazuo, to Mazda Motor Corporation. Front structure of vehicle body 5,011,201, Cl 296-203.000

Takahashi, Junya; Nishida, Sumio; Fujimoto, Izumi, Shono, Yoshinori, and Fujimoto, Hiroaki, to Sumitomo Chemical Company, Limited. Ether compounds and their production, and insecticidal and/or acaricidal compositions containing them 5,012,004, Cl. 568-53.000.

Takahashi, Katsuya *See—*
Fukuoka, Daisuke, Takahashi, Katsuya; and Hashimoto, Isao, 5,011,950, Cl 549-336.000

Takahashi, Kenjiro, to Standard Products Company, The. Weather seal for a door 5,010,691, Cl 49-482.000

Takahashi, Kiyoshi; Takashiba, Nobuyoshi; Kojima, Shinji; Okuda, Haruji; Ohmiya, Shigeru; and Ikeda, Ryuichi, to Kawasaki Steel Corporation. Method and apparatus for degassing molten metal utilizing RH method 5,011,531, Cl. 75-511.000

Takahashi, Mineo, Nakayama, Susumu, Yamashima, Osamu; Suzuki, Satoshi, Harada, Toshihiko, and Aiso, Keiji, to Yazaki Corporation. Method and apparatus for making a flat wiring harness. 5,010,642, Cl. 29-868.000.

Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi; Kasai, Masaji, Kawamoto, Isao, Iida, Takao, Sano, Hiroshi, Saito, Hiromitsu, Yamada, Koji, and Murakata, Chikara, to Kyowa Hakko Kogyo Co. Ltd. Hydroxamic acid derivatives and use thereof in combatting lipoxygenase-mediated diseases. 5,011,854, Cl. 514-541.000

Takahashi, Shinsuke, Shibata, Norio, and Sato, Tsunehiko, to Fuji Photo Film Co., Ltd. Method of applying a liquid to a moving web 5,011,714, Cl. 427-434.300.

Takahashi, Shinsuke, Sekozawa, Teruji, and Funabashi, Motohisa, to Hitachi, Ltd. Controlling engine fuel injection 5,012,422, Cl. 364-431.050

Takahashi, Shoichi, Ichiki, Sayohiko, Yorozu, Masatoshi; Kunishige, Seiji, Shibagaki, Taro, Shimizu, Fumihiko; Fujioka, Fumio, and Kondo, Toshinori, to Nippon Hoso Kyokai, and Kabushiki Kaisha Toshiba. Parallel to serial converter with complementary bit insertion for disparity reduction 5,012,240, Cl 341-101.000.

Takahashi, Tadashi *See—*
Kawano, Youzo, Takahashi, Tadashi, Shimura, Yasuhiko; and Takahashi, Yukihiro, 5,012,183, Cl. 324-96.000.

Takahashi, Tokuyuki *See—*
Takada, Mitsuru, Itoh, Hiroshi, Takahashi, Tokuyuki, and Funahashi, Makoto, 5,010,787, Cl 74-867.000

Takahashi, Tooru *See—*
Tominaga, Kenji, Miki, Minoru; Takahashi, Tooru, Horiuchi, Tetsuo, Morishima, Hideo, Nakayama, Takashi, Moriya, Kumiaki, Matsumoto, Masaki; Akita, Minoru, Niino, Tsuyoshi, Ochiai, Kanehiro, Shiozawa, Akihiko; Uchiyama, Yuichi, Yasuno, Toyoharu, Moriya, Kenji; Kinoshita, Shouichirou, Kage, Kazuo, and Kubota, Ryuji, 5,011,652, Cl 376-283.000

Takahashi, Yukihiro: *See—*
Kawano, Youzo; Takahashi, Tadashi, Shimura, Yasuhiko; and Takahashi, Yukihiro, 5,012,183, Cl. 324-96.000.

Takakura, Toshihiko *See—*
Kawaji, Mikinori; Takakura, Toshihiko; Uchida, Akihisa; Kuroda, Shigeo; Tamaki, Yoichi; Shiba, Takeo; Sagara, Kazuhiko; and Kawamura, Masao, 5,011,788, Cl. 437-67.000.

Takamizawa, Minoru. *See—*
Urasato, Nobuaki; Takamizawa, Minoru; Hayashida, Akira; Ohsaki, Hiromi; and Maruta, Jiyunitirow, 5,011,639, Cl. 264-65.000.

Takano, Kimio, to Omron Tateisi Electronics Co. Credit and debit card processing terminal. 5,012,077, Cl. 235-380.000.

Takano, Toshihiko: *See—*
Okada, Yoshio; and Takano, Toshihiko, 5,011,250, Cl. 350-96.120.

Takarabe, Isamu; Honma, Mikio; and Hayakawa, Hatsuo, to Ohi Seisakusho Co., Ltd. Arrangement for mounting seat sliding device on vehicle floor. 5,011,209, Cl. 296-65.100.

Takasago International Corporation: *See—*
Kumobayashi, Hidenori; and Taketomi, Takanao, 5,012,002, Cl. 568-17.000.

Takase, Akira: *See—*
Nakazato, Wataru; and Takase, Akira, 5,010,784, Cl. 74-498.000.

Takashiba, Nobuyoshi: *See—*
Takahashi, Kiyoshi; Takashiba, Nobuyoshi; Kojima, Shinji; Okuda, Haruji; Ohmiya, Shigeru; and Ikeda, Ryuichi, 5,011,531, Cl. 75-511.000.

Takatani, Ichiro; Nakatani, Nobuyuki; and Minami, Shigeru, to Glory Kogyo Kabushiki Kaisha. Coin stacking apparatus. 5,011,457, Cl. 453-61.000.

Takayama, Norikazu: *See—*
Ushijima, Nobuyoshi; Masuda, Hiroshi; Ishibashi, Akira; Satou, Masahiko, Haruna, Toshiyuki; Takayama, Norikazu; and Kudou, Yoshinobu, 5,012,166, Cl 318-254.000.

Takayanagi, Hiroshi: *See—*
Kobayashi, Tadashi; Wada, Mitsuo; Obuchi, Shouzi; and Takayanagi, Hiroshi, 5,011,936, Cl. 548-343.000.

Takeda Chemical Industries, Ltd.: *See—*
Nakai, Yoshikazu; and Kubota, Tsutomu, 5,011,560, Cl. 156-273.300.

Takeda, Mitsuru, to Daichi Denshi Kogyo Kabushiki Kaisha. Optical fiber connector 5,011,258, Cl. 350-96.200.

Takeda, Shiro; Namiki, Fumihiro; Sugiyama, Yuuichi; Iwase, Nobuhiro; Tadaki, Shinji, and Koshino, Nagaaki, to Fujitsu Limited. Digital X-ray apparatus. 5,012,096, Cl. 250-327.200.

Takefumi, Tadayoshi: *See—*
Tokura, Nobuyuki; Takefumi, Tadayoshi; Matsumoto, Shunichi; and Shiokawa, Yoshihiro, 5,011,987, Cl. 562-494.000.

Takemoto, Kazuo: *See—*
Yoshimura, Hiroshi; Fujiwara, Takuji; Ishi, Kozo; and Takemoto, Kazuo, 5,010,990, Cl. 192-3.300.

Takemura, Hiroshi, and Okamoto, Yasuji, to Murata Manufacturing Co., Ltd. Self-oscillation type converter. 5,012,399, Cl. 363-18.000.

Takemura, Makoto: *See—*
Yoshimura, Shigeru, Suzuki, Tetsuo; and Takemura, Makoto, 5,012,260, Cl. 346-139.00R.

Takenaka Corporation: *See—*
Endo, Yasuo; Akimichi, Shinji; Hirose, Tadayoshi, Furukawa, Motonori; and Yoshida, Kyoko, 5,012,521, Cl. 382-1.000.

Takeshita, Jack. *See—*
Haber, William, and Takeshita, Jack, 5,010,590, Cl. 2-12.000.

Taketomi, Takanao: *See—*
Kumobayashi, Hidenori; and Taketomi, Takanao, 5,012,002, Cl. 568-17.000.

Takeuchi, Toru; and Matsugawa, Minoru, to Orion Machinery Co., Ltd. Vacuum-pressure supply device. 5,010,844, Cl. 119-14.250.

Takeuchi, Yukihisa; Ishikawa, Masayasu; and Kimura, Koji, to NGK Insulators, Ltd. Glass ceramic substrate having electrically conductive film 5,011,732, Cl. 428-209.000.

Taki, Kazunari, to Brother Kogyo Kabushiki Kaisha. Thin-film optical function element, and optical head using the same. 5,011,248, Cl. 350-96.110.

Takigawa Kabushiki Kaisha: *See—*
Takigawa, Koichi, 5,010,648, Cl 30-195.000.

Takigawa, Koichi, to Takigawa Kabushiki Kaisha. Gray hair cutter. 5,010,648, Cl. 30-195.000.

Takikawa, Makito: *See—*
Ohkita, Masao; Akiyama, Yasuhiro; Takikawa, Makito; and Arayama, Yoshihiko, 5,012,366, Cl. 360-102.000.

Takita, Masaaki: *See—*
Kitagawa, Toshiharu; Nishiyama, Ryuji; Takita, Masaaki; and Tsuru, Yoshikazu, 5,011,315, Cl. 400-624.000.

Talarmo, Reino: *See—*
Makinen, Jarmo; and Talarmo, Reino, 5,012,208, Cl. 332-103.000.

Tam, Chun P.: *See—*
Basso, Richard J.; Hansen, Randall S.; Kolasa, Edward P.; Reynolds, Mark L.; and Tam, Chun P., 5,012,512, Cl. 379-218.000.

Tamaki, Kimie, Nishiya, Tsuguaki; and Tatsumi, Kiyoshi, to Snow Brand Milk Products Co., Ltd. Process for producing textured protein food materials. 5,011,702, Cl. 426-583.000.

Tamaki, Yoichi: *See—*
Kawaji, Mikinori; Takakura, Toshihiko; Uchida, Akihisa; Kuroda, Shigeo; Tamaki, Yoichi; Shiba, Takeo; Sagara, Kazuhiko; and Kawamura, Masao, 5,011,788, Cl. 437-67.000.

Tamamura, Hisashi; and Sekiguchi, Shoji, to Sony/Tektronix Corporation. Optical attenuator. 5,011,265, Cl. 350-173.000.

Tammi, Anssi, to Cimcorp Oy. Paint toner dispensing machine. 5,011,045, Cl. 222-318.000.

Tamura, Hideharu: *See—*
Ogawa, Kazufumi; Tamura, Hideharu; Ishihara, Toshinobu; Tanaka, Yasuhisa; and Endou, Mikio, 5,011,963, Cl 556-485.000

Tamura, Hirotaka, to Fujitsu Limited. Superconducting device. 5,012,303, Cl. 357-5.000.

Tamura, Nobuhiko: *See—*
Fujioka, Keiji; Sato, Shigeji; Takada, Yoshihiro; Sasaki, Yoshio; and Tamura, Nobuhiko, 5,011,692, Cl. 424-426.000

Tamura, Seiichiro: *See—*
Sugasawara, Seiji; Tsuneki, Ken; Ohshima, Kazuyoshi; Nakayama, Yojiro; Hayakawa, Tatsuya; and Tamura, Seiichiro, 5,011,029, Cl. 211-104.000.

Tamura, Yuzo: *See—*
Ogino, Masanori; Iwahara, Yoshiaki; Tamura, Yuzo; and Kuroda, Shoji, 5,011,277, Cl. 353-94.000.

Tanahashi, Masayoshi: *See—*
Kadokura, Hidekimi; Yoshitake, Hiroshi; and Tanahashi, Masayoshi, 5,012,156, Cl. 313-509.000.

Tanaka, Chiaki: *See—*
Moriya, Hideshige; Kitahara, Hiroshi; Minami, Shohei; Isobe, Keijiro; Nakata, Yoshinori; and Tanaka, Chiaki, 5,010,879, Cl. 128-69.000.

Tanaka, Eiichi; and Uchida, Hiroshi, to Hamamatsu Photonics Kabushiki Kaisha. Radiation detector. 5,012,103, Cl. 250-368.000.

Tanaka, Hiroshi: *See—*
Yamamoto, Yuji; Shigematsu, Hideyuki; Tanaka, Hiroshi; Ashikawa, Ryo; and Ishida, Tatsuo, 5,011,875, Cl 524-45.000

Tanaka, Kikuji; and Hanzawa, Kohtaro, to Casio Computer Co., Ltd. Electronic keyboard instrument with key displacement sensors. 5,010,799, Cl. 84-627.000.

Tanaka, Masanao: *See—*
Hattori, Tsuyoshi; Tanaka, Masanao; and Matsuzaka, Syoji, 5,012,259, Cl. 346-108.000.

Tanaka Medical Instrument Manufacturing Co.. *See—*
Moriya, Hideshige; Kitahara, Hiroshi; Minami, Shohei; Isobe, Keijiro; Nakata, Yoshinori; and Tanaka, Chiaki, 5,010,879, Cl. 128-69.000.

Tanaka, Saburo: *See—*
Hitotsuyanagi, Hajime; Fujita, Nobuhiko; Itozaki, Hideo; Nakagama, Syoji, Tanaka, Saburo; and Fukushima, Kazuhiko, 5,011,759, Cl. 430-128.000.

Tanaka, Sakuya: *See—*
Tanikawa, Keizo; Saloda, Ryozo, Tanaka, Sakuya; and Shikada, Kenichi, 5,011,839, Cl. 514-247.000

Tanaka, Susumu, to Tel Sagami Limited. Plasma processing method. 5,011,705, Cl. 427-39.000.

Tanaka, Takayoshi: *See—*
Miyamoto, Masaaki; Nakanishi, Hidemi; and Tanaka, Takayoshi, 5,011,893, Cl. 525-420.500.

Tanaka, Yasuhisa: *See—*
Ogawa, Kazufumi; Tamura, Hideharu; Ishihara, Toshinobu; Tanaka, Yasuhisa; and Endou, Mikio, 5,011,963, Cl 556-485.000.

Tanaka, Yasuyuki, Ibata, Koichi; Mizuno, Masao; Ninagawa, Yoichi; and Nishida, Takashi, to Kuraray Co., Ltd. Polyprenyl composition of compounds and process for the production thereof. 5,012,018, Cl. 568-909.500.

Tanbara, Hiroaki, to Sanshin Kogyo Kabushiki Kaisha. Corrosion prevention for a marine propulsion system. 5,011,583, Cl. 204-148.000.

Tancredi, Michael R.: *See—*
Smagula, Michael S.; and Tancredi, Michael R., 5,011,704, Cl. 426-660.000.

Tandy Corporation: *See—*
Siddio, Mohammed; and Lo, I-Huan, 5,012,377, Cl. 360-128.000.

Taniguchi, Takuji: *See—*
Tsukamoto, Kazumasa; Ishikawa, Kazunori; Taniguchi, Takuji; Iwatsuki, Kunihiro; and Taga, Yutaka, 5,010,991, Cl. 192-3.300.

Taniguchi, Yoshikazu: *See—*
Akihama, Shigeyuki; Kobayashi, Mikio; Suenaga, Tatsuo; Fukumoto, Toshiyuki; Taniguchi, Yoshikazu; and Nakagawa, Hiroaki, 5,010,705, Cl. 52-477.000.

Tanikawa, Keizo; Saloda, Ryozo; Tanaka, Sakuya; and Shikada, Kenichi, to Nissan Chemical Industries Ltd. 3(2H)pyridazinones for antagonistic agent against srs-a. 5,011,839, Cl 514-247.000.

Tanimoto, Yasufumi: *See—*
Kawano, Hisaaki; Tanimoto, Yasufumi; and Ishida, Kouji, 5,012,286, Cl. 355-246.000.

Tankersley, Lawrence L.: *See—*
Reintjes, John F.; Tankersley, Lawrence L.; Cooper, David G.; and Dexter, James L., 5,012,483, Cl. 372-95.000.

Tanzawa, Kenji: *See—*
Sakamaki, Hiroshi; Horikoshi, Yukio; Jinnouchi, Takeshi; and Tanzawa, Kenji, 5,011,390, Cl. 418-256.000.

Tap, Henry H.: *See—*
Bartosiak, George; Siskovic, Christopher; Tap, Henry H.; Paris, Sam; and Goldberg, Arthur E., 5,011,296, Cl. 374-131.000.

Tapmatic Corporation: *See—*
Johnson, Allan S., 5,011,344, Cl. 408-240.000.

Tarczy-Hornoch, Zoltan: *See—*
Lundquist, Ingemar H.; Tarczy-Hornoch, Zoltan; and Kardos, Thomas J., 5,011,468, Cl. 600-18.000.

Tarhay, Leo; and Sharp, Kenneth G., to Dow Corning Corporation. Method of forming coatings containing amorphous silicon carbide. 5,011,706, Cl. 427-39.000.

Tasch, Aloysious F., Jr ; Shin, Hyungsoon; and Maziar, Christine M , to Board of Regents, The University of Texas System Hot-carrier suppressed sub-micron MISFET device. 5,012,306, Cl. 357-23 400.

Tashiro, Shintaro *See*—
Okada, Hiroshi; Saitoh, Noritaka; Akabane, Hidetomo; and Tashiro, Shintaro, 5,012,198, Cl. 328-155.000.

Tatsumi, Kiyoshi *See*—
Tamaki, Kimie; Nishiya, Tsuguaki; and Tatsumi, Kiyoshi, 5,011,702, Cl. 426-583 000

Tatung Company of America, Inc *See*—
Fang, Roger C., 5,011,104, Cl 248-125 000.

Tavernier, Serge M ; Janssens, Robert F., and Zwijsen, Jan A., to Agfa-Gevaert, N.V. Dry toner development. 5,012,288, Cl. 355-259 000

Taya, Yoichi *See*—
Shimono, Mamoru; Asada, Tomoyuki; Kawaguchi, Taiichi, Taya, Yoichi; Yukinaga, Kouji; Nomura, Susumu; and Tagawa, Hajime, 5,012,283, Cl 355-229 000

Taylor, David E., to Marathon Oil Company Method and apparatus for logging short radius horizontal drainholes. 5,010,764, Cl 73-151 000

Taylor, Gary L. *See*—
Alcorn, Byron A ; Cherry, Robert W , Coleman, Mark D ; Rauchfuss, Brian D., and Taylor, Gary L., 5,012,163, Cl 315-383 000

Taylor, Martin S *See*—
Gustafson, Keith W ; Kalet, George W ; and Taylor, Martin S , 5,011,700, Cl 426-477 000

Taylor, Matthew F *See*—
Nakanishi, Todd G ; and Taylor, Matthew F , 5,011,062, Cl. 228-1 100

Taylor, Paul D *See*—
Liu, Kou-Chang, and Taylor, Paul D., 5,012,011, Cl 568-610.000

Taylor, Raymond E *See*—
Anderson, Jim L., Beltz, Terry W ; and Taylor, Raymond E , 5,010,807, Cl 99-450 600.

Taylor, Stewart S., to TriQuint Semiconductor, Inc Low impedance automatic gain control circuit 5,012,202, Cl. 330-284 000

Teal Electronics Corporation *See*—
Carpenter, William D., Redding, Randy J , and McLoughlin, Robert C , 5,012,382, Cl 361-93 000.

Technicon Instruments Corporation *See*—
Cram, Donald J , Chapoteau, Eddy; Czech, Bronislaw P , Gebauer, Carl R , Helgeson, Roger C , Kumar, Anand, and Leong, Koon-Wah, 5,011,924, Cl. 540-469 000

Techter, Ronald R.; Mangialardi, Gregg M.; and Esparza, Raymond R , to Skil Corporation. Portable circular saw 5,010,651, Cl 30-376.000.

Teck, Yap Y *See*—
Seong, Teresa A. Y. C ; and Teck, Yap Y , 5,011,435, Cl 439-676.000.

Tedesco, James M ; Owen, Harry, and Chang, Byung J , to Kaiser Optical Systems Detection system for Raman scattering employing holographic diffraction. 5,011,284, Cl 356-301 000

Tektronix, Inc *See*—
Bateman, Glenn, 5,012,140, Cl 307-491 000

Tel Sagami Limited *See*—
Tanaka, Susumu, 5,011,705, Cl 427-39 000

Teldix GmbH *See*—
Ruff, Gerd, 5,012,292, Cl 335-253 000

Teleco Oilfield Services Inc *See*—
Duckworth, Allen, Barnes, Derek, and Gennings, Thomas L , 5,010,765, Cl 73-153 000
Helm, Walter A , 5,012,412, Cl. 364-422 000

Telefind Corporation *See*—
Andros, Andrew A , and Campana, Thomas J , Jr , 5,012,235, Cl 340-825 440

Telemecanique *See*—
Faffart, Andre , 5,012,214, Cl 335-6 000.
Floc'h, Noel, 5,012,215, Cl 335-132 000.

Telenokia Oy *See*—
Makinen, Jarmo; and Talarmo, Reino, 5,012,208, Cl. 332-103 000.

Telenorma GmbH *See*—

Uchida, Hiroshi *See*—
Tanaka, Eiichi, and Uchida, Hiroshi, 5,012,103, Cl. 250-368.000

Uchida Yoko Co., Ltd. *See*—
Yoshizawa, Yasuo, Kawaguchi, Hiroichi, and Seto, Kazunari, 5,011,414, Cl. 434-431.000

Uchiyama, Yuichi *See*—
Tominaga, Kenji, Miki, Minoru, Takahashi, Tooru, Horiuchi, Tetsuo, Morishima, Hideo, Nakayama, Takashi, Moriya, Kumiaki, Matsumoto, Masaki, Akita, Minoru, Ninno, Tsuyoshi, Ochiai, Kanehiro, Shiozawa, Akihiko, Uchiyama, Yuichi, Yasuno, Toyoharu, Moriya, Kenji, Kinoshita, Shouichirou, Kage, Kazuo, and Kubota, Ryuji, 5,011,652, Cl. 376-283.000

Udagawa, Takashi *See*—
Hiraki, Tadayoshi, Iwase, Osamu, Oosumimoto, Hiroshi, Sugiura, Shinji, Tabushi, Ichiro, Kume, Masafumi, Udagawa, Takashi, Matsui, Komaharu, and Fujii, Yasuhiro, 5,011,733, Cl. 428-336.000

Udomkesmalee, Suraphol, and Tiemsanjai, Phaichitr. Golf practice device. 5,011,155, Cl. 273-200.00A.

Ueda, Kazuhiro, to Mitsubishi Denki Kabushiki Kaisha. Ion beam irradiation apparatus. 5,012,111, Cl. 250-492.300.

Ueda, Shuzo *See*—
Ohori, Manabu, Koshizuka, Noriaki, Kataoka, Yoshihiro, and Ueda, Shuzo, 5,011,656, Cl. 420-109.000

Ueda, Tatsuya, to Mitsubishi Denki Kabushiki Kaisha. Data processor with instruction cache memory. 5,012,410, Cl. 364-200.000.

Ueda, Yasuyoshi *See*—
Terao, Masanobu, Maegawa, Yuzo, Ueda, Yasuyoshi, Hashimoto, Kiyoyasu, and Omura, Takashi, 5,012,015, Cl. 568-709.000.

Uehara, Kiyohiro *See*—
Suzuki, Takumi, and Uehara, Kiyohiro, 5,011,266, Cl. 350-335.000.

Ueki, Akihiro *See*—
Sugano, Kazuhiko, and Ueki, Akihiro, 5,010,788, Cl. 74-868.000.

Uematsu, Satoru. *See*—
Shuna, Toshio, Miyamoto, Keiko; Izumi, Kouji; Hayashi, Yasuro; Karasawa, Yonenobu, Uematsu, Satoru; and Sei, Naoki, 5,010,605, Cl. 4-542.000

Uemura, Satoshi, Kawada, Susumu, Sekine, Yoshitada; and Miyauchi, Tatsuo, to Nissan Motor Company, Ltd. Vehicle assembly method and apparatus 5,010,634, Cl. 29-407.000.

Uemura, Tsuyoshi *See*—
Wakita, Naohide, Uemura, Tsuyoshi; Ohnishi, Hiroyuki; Ohba, Noriko, and Ota, Isao, 5,011,269, Cl. 350-350.00S.

Ueno, Kazuyoshi, and Imoto, Katsushi, to IMV Corporation. Vibration control system. 5,012,428, Cl. 364-508.000.

Ueno, Ryuzo, Masada, Yoshiyasu, and Mori, Toru, to Kabushiki Kaisha Ueno Seiyaku Oyo Kenkyujo Manufacturing method for 2-hydroxynaphthalene-6-carboxylic acid. 5,011,984, Cl. 562-425.000.

Ueno, Yasuhiko *See*—
Masada, Tomoaki; Ueno, Yasuhiko; Hayakawa, Eiji; Naganuma, Hirotake; Terajima, Mitsuru, Kuroda, Tokuyuki, Shuto, Katsuichi, and Ichikawa, Shunji, 5,011,824, Cl. 514-13.000.

Uesaka, Toshio, Niki, Akihiro, Ohsuga, Makoto; Saito, Toranosuke; Tsunomachi, Hiroki; Yamaguchi, Makoto; Doyama, Kazuo; and Kishimoto, Daishiro, to Sekisui Kagaku Kogyo Kabushiki; and Kabushiki Kaisha Sanko Kaihatsu Kagaku Kenkyusho. Engineering plastic composition and an article made of the same. 5,011,879, Cl. 524-290.000

Ueyama, Masayuki; and Kuwana, Minoru, to Minolta Camera Kabushiki Kaisha. Lens barrel of a zoom lens. 5,011,273, Cl. 350-429.000.

Ukiana, Motohide *See*—
Kobayashi, Hiroyuki; Izawa, Shigeru; and Ukiana, Motohide, 5,012,092, Cl. 250-311.000.

Ultra-Centrifuge Nederland N V *See*—
Godfried, Herman P., 5,011,584, Cl. 204-157.220.

Ultra Precision Manufacturing, Ltd *See*—

Pfohl, Robert L., and Uphold, James D., 5,010,890, Cl. 128-773.000.

Vithayathil, Joseph. AC machine system with induced DC field. 5,012,148, Cl. 310-165.000.

VMK Fish Machinery AB: *See—*
Leander, Leif, 5,010,713, Cl. 53-142.000.

Vock, Friedrich; Kissau, Gerd; and Warnke, Klaus, to BASF Lacke+-Farben AG. Dispersing process and stirred ball mill for carrying out this process. 5,011,089, Cl. 241-21.000.

Voegele, Gerald G., and Penny, William H., to SciMed Life Systems, Inc. Pressure gauge cleaning method. 5,011,537, Cl. 134-22.110.

Voelskow, Hartmut: *See—*
Kretzschmar, Gerhard; Duwel, Dieter; Grabley, Susanne; Hammann, Peter; Seibert, Gerhard, Voelskow, Hartmut; and Giani, Carlo, 5,011,827, Cl. 514-32.000.

Vogel, Richard H.: *See—*
Zador, Eugene; Hsu, Shyiguei; Kaczmarek, Wesley R.; Ravipati, Sitaramaiah; Supkis, Stanley; and Vogel, Richard H., 5,011,513, Cl. 51-295.000.

Voith, Donald J., to Water Services of America, Inc. Ball strainer for circulating ball cleaning system. 5,010,950, Cl. 165-95.000.

Vokac, James P.: *See—*
Khadder, Wadie N.; Vokac, James P.; and Dobkin, Robert C., 5,012,305, Cl. 357-22.000.

Volterra, Giovanna. *See—*
Meli, Alberto; Volterra, Giovanna; Giannotti, Danilo; and Pestellini, Vittorio, 5,011,833, Cl. 511-211.000.

Von Duprin, Inc.: *See—*
Lowe, Peter E.; Muller, Peter H.; Coleman, Michael D.; and Haeck, Paul J., 5,011,199, Cl. 292-92.000.

von Recum, Andreas F.; and Campbell, Craig E., to Clemson University. Soft tissue implant with micron-scale surface texture to optimize anchorage. 5,011,494, Cl. 623-11.000.

Vora, Bipin V.; and Cottrell, Paul R., to UOP. Process for the production of alkylaromatic hydrocarbons using solid catalysts. 5,012,021, Cl. 585-315.000.

Vorhauer, Marjorie, to Soniform, Inc. Buoyancy compensator with interchangeable accessories. 5,011,334, Cl. 405-186.000.

Vortec Corporation: *See—*
York, Michael L.; and Broerman, Steven E., 5,010,736, Cl. 62-5.000.

VSI Corporation: *See—*
Motoshige, Inaba, 5,011,355, Cl. 411-552.000.

Vyas, Dolatrai M.; and Skonezny, Paul M., to Bristol-Myers Company. Intermediates for the production of epipodophyllotoxin and related compounds and processes for the preparation and use thereof. 5,011,948, Cl. 549-298.000.

W. R. Grace & Co.: *See—*
Schirmer, Henry G., 5,011,735, Cl. 428-349.000.

W. R. Grace & Co.-Conn.: *See—*
Thunberg, Jon C.; and Begonis, Walter B., 5,011,968, Cl. 558-341.000
Thunberg, Jon C., 5,011,988, Cl. 562-554.000.

Treleven, Robert E., 5,010,659, Cl. 34-41.000.

Wachholz, Winfried, to Hochtemperatur-Reaktorbau GmbH. High temperature reactor utilizing a graphite reflector. 5,011,653, Cl. 376-313.000.

Wacker-Chemie GmbH: *See—*
Staiger, Gerhard; Muller, Johann; and Doskocil, Walter, 5,011,962, Cl. 556-453.000.

Wacker-Werke GmbH & Co. KG: *See—*
Riedl, Franz, 5,010,778, Cl. 74-61.000.

Wada, Mitsuo: *See—*
Kobayashi, Tadashi; Wada, Mitsuo; Obuchi, Shouzi; and Takayanagi, Hiroshi, 5,011,936, Cl. 548-343.000.

Wagner, Reiner, to OBE-Werk Ohnmacht & Baumgartner GmbH & Co. KG. Eyeglass frame comprising a screw joint which is protected from becoming loose. 5,011,274, Cl. 351-121.000.

Waibel, Brigitte. *See—*
Martin, Wolfram; and Waibel, Brigitte, 5,012,324, Cl. 357-81.000.

Wakabayashi, Hiroshi: *See—*
Yukimoto, Sadao, Hirose, Toshifumi; Wakabayashi, Hiroshi; and Isayama, Katsuhiko, 5,011,900, Cl. 525-477.000.

Wakamiya, Takako: *See—*
Suzuki, Yasuyuki; Takagawa, Noboru; Kawabata, Mikio; Hayashi, Mariko; Takagi, Akiko, Wakamiya, Takako; and Saikawa, Isamu, 5,011,973, Cl. 560-185.000.

Wakebe, Tetsuya: *See—*
Nose, Kazuo; Yamamoto, Hiroyuki; Koike, Shiro; Shimomura, Masakazu; Tsubono, Hajime; Kitagawa, Soichi; Fujisaki, Yasumasa; Maeda, Yasushi; Wakebe, Tetsuya; and Katayama, Yasuyuki, 5,010,756, Cl. 72-9.000.

Wakita, Naohide; Uemura, Tsuyoshi; Ohnishi, Hiroyuki; Ohba, Noriko; and Ota, Isao, to Matsushita Electric Industrial Co., Ltd. Method of driving a ferroelectric liquid crystal matrix panel. 5,011,269, Cl. 350-350.00S.

Wald, Vernon M.; and Kirk, Robert S., to Minnesota Mining and Manufacturing Company. Shelling-resistant abrasive grain, a method of making the same, and abrasive products. 5,011,508, Cl. 51-293.000.

Wald, Vernon M.; Masson, Richard A.; Brown, Fredrick D.; and Broberg, David E., to Minnesota Mining and Manufacturing Company. Coated abrasive products employing nonabrasive diluent grains. 5,011,512, Cl. 51-295.000.

Walker, James K.: *See—*
Spencer, James T., III; and Walker, James K., 5,010,833, Cl. 112-262.100.

Walker, James L.: *See—*
Pangrazi, Ronald; and Walker, James L., 5,011,712, Cl. 427-389.900.

Walker, Richard C.: *See—*
Lai, Benny W. H.; and Walker, Richard C., 5,012,494, Cl. 375-120.000.

Walker, Roger C., Reese, Scott P.; Joyce, David L.; and Kastrup, David A., to General Electric Company. Active clearance control for gas turbine engine. 5,012,420, Cl. 364-431.020.

Wall, Robert A.: *See—*
Adamson, Arthur P.; Butler, Lawrence; and Wall, Robert A., 5,010,729, Cl. 60-226.100.

Walling, Jorg-Hein: *See—*
Cornibert, Jacques; and Walling, Jorg-Hein, 5,011,880, Cl. 524-371.000.

Wallschlaeger, Alan R., Sr., to Rockwell International Corporation. Tensionless plate lock-up. 5,010,818, Cl. 101-415.100.

Walsh, Dennis E.: *See—*
Han, Scott; Martenak, Daniel J.; Palermo, Robert E.; and Walsh, Dennis E., 5,012,029, Cl. 585-500.000.

Walton, David W.; and Harrison, Roger, to Ferguson Limited. Switching circuitry. 5,012,516, Cl. 381-3.000.

Walton, John F.; and Roshdieh, Al R. Long-life luminaires. 5,012,157, Cl. 315-66.000.

Wandrey, Christian: *See—*
Rao, Nagaraj N.; Wandrey, Christian; Petersen, Maike; and Alfermann, August W., 5,011,775, Cl. 435-135.000.

Wands, Jack R.: *See—*
Bellet, Dominique; and Wands, Jack R., 5,011,771, Cl. 435-7.940.

Wang, Ping, to Xicor, Inc. Dual mode high voltage coupler. 5,012,132, Cl. 307-296.100.

Wang, Shoou-I: *See—*
Davis, Ruth A.; Nicholas, David M.; Smith, Dale D.; Wang, Shoou-I; and Wright, Richard A., 5,011,670, Cl. 423-450.000.

Wang, Yu-chang J.; Lee, William A.; and Narog, Blair, to California Biotechnology Inc. Composition and method for administration of pharmaceutically active substances. 5,011,678, Cl. 424-45.000.

Wang, Zhaoyin, to Merck Frosst Canada, Inc. FK-506 C_{10}–C_{24} process intermediates. 5,011,943, Cl. 549-214.000.

Wankel GmbH: *See—*
Eiermann, Dankwart, 5,011,385, Cl. 418-61.200.
Speiser, Josef, 5,011,387, Cl. 418-94.000.

Wanou, Masahiro; Kimura, Masatoshi; and Nakajima, Junzo, to Fujitsu Limited. Brush contact type charging unit in an image forming apparatus. 5,012,282, Cl. 355-219.000.

Ward, Roger W.: *See—*
EerNisse, Errol P.; and Ward, Roger W., 5,012,151, Cl. 310-346.000.

Ware, Robert A.; and Wong, Stephen S., to Mobil Oil Corporation. Catalytic hydrodesulfurization. 5,011,593, Cl. 208-213.000.

Warner-Lambert Company: *See—*
Keegan, James J., 5,011,868, Cl. 523-120.000.

Warnke, Klaus: *See—*
Vock, Friedrich; Kissau, Gerd; and Warnke, Klaus, 5,011,089, Cl. 241-21.000.

Warren, Tommy M.: *See—*
Brett, J. Ford; and Warren, Tommy M., 5,010,789, Cl. 76-108.200.

Washburn, Billy D. Window sill armrest for motor vehicles. 5,010,996, Cl. 296-153.000.

Washington University: *See—*
Marshall, Garland R.; and Toth, Mihaly V., 5,011,910, Cl. 530-329.000.
Olney, John W., 5,011,853, Cl. 514-454.000.

Wasmer, David: *See—*
Nigrelli, Nicholas B.; and Wasmer, David, 5,011,372, Cl. 415-211.200.

Watanabe, Hajime, to Superloon K.K. Balloon holder. 5,011,447, Cl. 446-220.000.

Watanabe, Hiroshi: *See—*
Isono, Haruo; Yasuda, Minoru; Watanabe, Hiroshi; Toyama, Tateo; Hioki, Toshiaki; Morita, Yoshihiko; and Yamada, Makoto, 5,012,351, Cl. 358-342.000.

Watanabe, Junichi: *See—*
Amano, Tadashi; and Watanabe, Junichi, 5,011,897, Cl. 526-202.000.

Watanabe, Mitsuo, to Hamamatsu Photonics K.K. Two-dimensional incident position detector device for light or radiation. 5,012,082, Cl. 250-208.200.

Watanabe, Takashi; Fujimoto, Shusaku; and Sakai, Kazunori, to Nippondenso Co., Ltd.; and Toyota Jidosha Kabushiki Kaisha. Motor vehicle running control apparatus. 5,012,417, Cl. 364-426.020.

Watanabe, Toshie: *See—*
Yamaguchi, Takashi; Tsutsumi, Tadahiko; and Watanabe, Toshie, 5,011,556, Cl. 156-83.000.

Watanabe, Yutaka; Fukuda, Yasuaki; and Ogura, Shigetaro, to Canon Kabushiki Kaisha. X-ray mask support member, X-ray mask, and X-ray exposure process using the X-ray mask. 5,012,500, Cl. 378-35.000.

Water Services of America, Inc.: *See—*
Voith, Donald J., 5,010,950, Cl. 165-95.000.

Waterloo Industries, Inc.: *See—*
Meisner, Edward; Ballone, Michael P.; and Park, Young, 5,011,013, Cl. 206-373.000.

Waterman, John K.: *See—*
Licter, Philip L.; and Waterman, John K., 5,012,194, Cl. 324-405.000.

Waters, Mark H., to AMP Incorporated. Hermaphroditic keys. 5,011,436, Cl. 439-681.000.

Watkins, Thomas H. Golf putting aid and teaching device. 5,011,153, Cl. 273-186.00A.

Watlington, Thomas M.: *See—*
Terada, Takao; Ota, Hiroyuki; Makita, Shigeru; Herpichboehm, Bernd G.; Sierra, George H.; Summers, Robert B.; and Watlington, Thomas M., 5,011,290, Cl. 356-423.000.

Watts, Christopher J., to John Crane UK Limited. Mechanical face seals. 5,011,166, Cl. 277-88.000.

Wavelength Lasers, Inc.: *See—*
Campbell, Bruce D., 5,012,475, Cl. 372-29.000.

Weatherford, Robert E., Jr.: *See—*
Burton, Richard J.; Copeland, John A., III; Jerrim, John W.; Nixon, Toby L.; Sauser, Martin H., Jr.; Weatherford, Robert E., Jr.; Becker, Larry D.; and Strawn, David F., 5,012,489, Cl. 375-8.000.

Weber, Bret S.: *See—*
Gates, Dennis E.; and Weber, Bret S., 5,012,127, Cl. 307-269.000.

Weber, David S. Chevrolet rally cap keeper. 5,011,231, Cl. 301-37.0AT.

Weber, Eckard; Keana, John F. W.; and Barmettler, Peter, to State of Oregon, acting by and through the Oregon State Board of Higher Education, acting for and on behalf of the Oregon Health Sciences University and the University of Oregon. PCP receptor ligands and the use thereof. 5,011,834, Cl. 514-212.000.

Weber, George: *See—*
Blin, Philippe; Weber, George; and Barbe, Jacques, 5,010,948, Cl. 164-428.000.

Weber S.r.l.: *See—*
Ausiello, Francesco P.; and Ricco, Mario, 5,011,082, Cl. 239-585.000.

Weck, Wener: *See—*
Ehrhart, Peter; Grundel, Andreas; Heidelberg, Gotz; and Weck, Wener, 5,011,820, Cl. 505-1.000.

Wedekind, Robert: *See—*
Boser, Werner; Sieg, Giselher; and Wedekind, Robert, 5,010,750, Cl. 70-276.000.

Weeks, Kenneth J.: *See—*
Schoeppel, Sonja L.; Weeks, Kenneth J.; and Pruss, Kent R., 5,012,357, Cl. 378-55.000.

Weibler, Joseph C.: *See—*
Sims, Richard E.; and Weibler, Joseph C., 5,012,041, Cl. 174-35.0MS.

Weidman, David L.: *See—*
Miller, William J.; Truesdale, Carlton M.; Weidman, David L.; and Young, Donald R., Jr., 5,011,251, Cl. 350-96.150.

Weigle, William: *See—*
Goodman, Michael; Weigle, William; Bell, Stanley; Chen, Robert; Robins, Roland K.; and Hennen, William J., 5,011,828, Cl. 514-45.000.

Weihrauch, Georg, to Coronet-Werke Heinrich Schlerf GmbH. Process for the production of brushware. 5,011,230, Cl. 300-21.000.

Weil, Peter. Method and apparatus for treating objects in a closed vessel with a solvent. 5,011,542, Cl. 134-38.000.

Weingaertner, David A.; and Slaugh, Lynn H., to Shell Oil Company. Process for separating styrene from styrene-containing hydrocarbon streams. 5,012,034, Cl. 585-806.000.

Weinreb, Robert N.; Lewak, Jerzy J.; and Dreher, Andreas W., to Acumetric, Inc. Drop counting system. 5,012,496, Cl. 377-21.000.

Weirs, Paul C.: *See*—
Simpson, Clark C.; and Weirs, Paul C., 5,011,217, Cl. 296-203.000.

Weis, Alexander L.: *See*—
Illig, Carl R.; and Weis, Alexander L., 5,012,000, Cl. 564-489.000.

Weisbrod, Norbert; and Kobler, Norbert, to Albert-Frankenthal AG. Doctor device. 5,010,815, Cl. 101-217.000.

Weisburger, John H.: *See*—
Jones, Ronald C.; and Weisburger, John H., 5,011,697, Cl. 426-92.000.

Weiss, Frederick G.; and Knierim, Daniel G., to TriQuint Semiconductor, Inc. Low noise DAC current source topology. 5,012,178, Cl. 323-269.000.

Weissman, Joseph C.: *See*—
Wilde, Edward W.; Benemann, John R.; Weissman, Joseph C.; and Tillett, David M., 5,011,604, Cl. 210-602.000.

Wellard, David R.; Kerth, Donald A.; Del Signore, Bruce P.; and Swanson, Eric J., to Crystal Semiconductor Corporation. Delta-sigma modulator with oscillation detect and reset circuit. 5,012,244, Cl. 341-143.000.

Welsch, Wolfgang: *See*—
Krueger, Hans; and Welsch, Wolfgang, 5,012,480, Cl. 372-61.000.

Welter, Patrick: *See*—
Viertel, Lothar; and Welter, Patrick, 5,011,212, Cl. 296-97.900.

Welygan, Dennis G.; Zemke, Ronald O.; and Pawlikowski, Walter W., Jr., to Minnesota Mining and Manufacturing Company. Method of making extruded article. 5,011,642, Cl. 264-167.000.

Welzel, Josef: *See*—
Pfeiffer, Otmar; Geuns, Guy; and Welzel, Josef, 5,011,433, Cl. 439-589.000.

Werner, Bernd: *See*—
Laucht, Horst; Baur, Richard; Werner, Bernd; Nilsson, Karl E.; and Hora, Peter, 5,011,181, Cl. 280-731.000.

Werner, Martin; Bloeck, Margarete; and Bichsel, Heinz, to Swiss Aluminium Ltd. Cathode foil for electrolytic capacitors. 5,011,657, Cl. 420-538.000.

Werner Turck GmbH & Co. KG: *See*—
Tigges, Burkhard, 5,012,206, Cl. 331-65.000.

West, Michael W. J.: *See*—
Henry, Cyrus P.; and West, Michael W. J., 5,011,504, Cl. 44-392.000.

West, Weldon D.: *See*—
Buckberg, Gerald D.; Maloney, James V., Jr.; Jones, Kenneth A.; and West, Weldon D., 5,011,469, Cl. 604-4.000.

Westbrook, Barbara-Ann, to Westec Corporation. Pulsed galvanic stimulator. 5,010,896, Cl. 128-798.000.

Westec Corporation: *See*—
Westbrook, Barbara-Ann, 5,010,896, Cl. 128-798.000.

Westich, Bryan: *See*—
Emeric, Dario A.; Miller, Christopher E.; and Westich, Bryan, 5,011,551, Cl. 148-248.000.

Westinghouse Electric Corp.: *See*—
Duke, Jonathan W.; and Richards, Barry R., 5,011,421, Cl. 439-213.000.
Fero, Arnold H., 5,011,650, Cl. 376-247.000.
Garland, Richard V., 5,010,726, Cl. 60-39.050.
King, Ian J.; and Chow, Michael P., 5,010,769, Cl. 73-660.000
McCullough, Charley E., 5,011,821, Cl. 505-1.000.

Wettengel, Lothar; and Langer, Eberhard, to Rstahl Schaltgerate GmbH. Modular explosion protected lamp fixture meeting "increased safety" standards. 5,012,395, Cl. 362-222.000.

Wettengel, Paul F.; and Bishop, Kevin M., to British Telecommunications public limited company. Optical fiber patch panel. 5,011,257, Cl. 350-96.200.

Wetzka, Gerhard: *See*—
Hardt, Norbert; Sterner, Hakan; Wetzka, Gerhard; and Schulte, Burkart, 5,011,651, Cl. 376-261.000.

Wexler, Barry A., to Du Pont de Nemours, E. I., and Company. Herbicidal heterocyclic sulfonamides. 5,011,527, Cl. 71-93.000.

Weyerhaeuser Company: *See*—
Shaw, Douglas R., 5,011,596, Cl. 209-167.000.

Whigham, Roger C.; and Bearden, John H., to Coca-Cola Company, The. Post-mix beverage dispenser valve with continuous solenoid modulation. 5,011,043, Cl. 222-63.000.

Whirlpool Corporation: *See*—
Buchser, William J., 5,011,101, Cl. 248-27.300.

Whitaker, Robert J., to DNA Plant Technology Corporation, and Firmenich SA. Somaclonal variants of *Nicotiana glutinosa*. 5,012,040, Cl. 800-200.000.

White Consolidated Industries, Inc.: *See*—
Brown, Ralph W.; Beach, Sammie C.; and Peter, Gary R., 5,010,738, Cl. 62-135.000.

White, Ian H.; and Linton, Richard S., to British Telecommunications public limited company. Polarization switching in active devices. 5,012,474, Cl. 372-27.000.

White, Robert C., to Sundstrand Corporation. Two-speed automatic transmission. 5,011,464, Cl. 475-260.000.

Whitefield, Martin, to Diomed Developments Limited. Haemostatic agents. 5,011,693, Cl. 424-455.000.

Whitney, Raymond A.: *See*—
Colvin, David P.; Whitney, Raymond A.; Marsh, Bernard R.; Kline, William M.; Rizzo, Ronald R.; and Orlosky, Mark E., 5,010,892, Cl. 128-774.000.

Whitney, Robert: *See*—
Johnson, Bruce; and Whitney, Robert, 5,010,915, Cl. 137-423.000.

Whittaker Ordnance, Inc.: *See*—
Folsom, Mark, 5,010,822, Cl. 102-201.000.

Whysall, Michael: *See*—
Doshi, Kishore J.; Mitariten, Michael J.; and Whysall, Michael, 5,012,037, Cl. 585-822.000.

Whyte, John R., Jr.: *See*—
Kuznicki, Steven M.; and Whyte, John R., Jr., 5,011,667, Cl. 423-118.000.

Wich, Harald: *See*—
Schuster, Manfred; and Wich, Harald, 5,012,253, Cl. 342-203.000

Widmann, Bruno: *See*—
Witzel, Gunther; Widmann, Bruno; and Muller, Franz, 5,012,348, Cl. 358-229.000.

Wiechert, Edelbert, to Siemens Aktiengesellschaft. Inked ribbon cartridge with removable carrier member. 5,011,310, Cl. 400-207.000

Wiest, Engelbert: *See*—
Medwed, Emmerich; and Wiest, Engelbert, 5,010,714, Cl. 53-412.000.

Wight, E. W.: *See*—
Busker, L. H.; and Wight, E. W., 5,010,840, Cl. 118-421.000.

Wight, J. David A.: *See*—
Friesen, Randolph K.; and Wight, J. David A., 5,011,214, Cl. 296-100.000.

Wilde, Edward W.; Benemann, John R.; Weissman, Joseph C.; and Tillett, David M. Use of microalgae to remove pollutants from power plant discharges. 5,011,604, Cl. 210-602.000.

Wildman, Alexander J. Orthodontic setup and archwire fixing method. 5,011,406, Cl. 433-24.000.

Wilen, Joseph M., to Wilen Manufacturing. Twisted yarn which will maintain its twist and products produced therefrom. 5,010,723, Cl. 57-210.000.

Wilen Manufacturing: *See*—
Wilen, Joseph M., 5,010,723, Cl. 57-210.000.

Wilkerson, John M., III: *See*—
Barron, Milagros C.; Swope, Ronald L.; Wilkerson, John M., III; and Ruffner, Charles G., 5,011,978, Cl. 560-221.000

Wilkey, Paul D.: *See*—
Matouka, Michael F.; Rajput, Yudh V.; Wilkey, Paul D.; and Bright, James A., 5,011,237, Cl. 303-115.000

Wille, Jurgen-Albin, to Beiersdorf Aktiengesellschaft. Self-adhesive cover film. 5,011,724, Cl. 428-130.000.

Williams, Gregory S.: *See*—
Sikkenga, David L.; Zaenger, Ian C.; and Williams, Gregory S., 5,012,024, Cl. 585-320.000.

Williams International Corporation: *See*—
Joy, John R., 5,010,728, Cl. 60-39.464.

Williams, James D. Shingle pry bar. 5,010,791, Cl. 81-45.000.

Williams, Kenneth J. Fodder conditioning and packing process. 5,010,809, Cl. 100-35.000.

Williams, Timothy J.: *See*—
Sexton, Daniel W.; and Williams, Timothy J., 5,012,492, Cl. 375-82.000.

Willis, John W.: *See*—
Rada, Mark Z.; Willis, John W.; and Stewart, Marta E., 5,012,054, Cl. 200-314.000.

Willis, Mitchell J.: *See*—
Berube, Richard R.; Babiec, John S., Jr.; Jameson, M. Phillip; Negele, Andrew R.; and Willis, Mitchell J., 5,011,534, Cl. 106-416.000.

Willner, David: *See*—
Monkovic, Ivo; and Willner, David, 5,011,992, Cl. 564-167.000.

Wilson, Diane O.: *See*—
Newman, Walter; and Wilson, Diane O., 5,011,778, Cl. 435-240.270.

Wilson, Donald S.: *See*—
Chen, Hsiang M.; Lewis, Paul; and Wilson, Donald S., 5,011,108, Cl. 248-550.000.

Wilson, John A.: *See*—
Hamilton, Thomas A.; Kerrigan, Michael M.; and Wilson, John A., 5,011,127, Cl. 271-262.000.

Wilson, John C.: *See*—
Nielsen, Paul L.; and Wilson, John C., 5,011,739, Cl. 428-425.800.

Wilson, Kenneth: *See*—
Joannou, Kyriacos; Wilson, Kenneth; and Lowry, Alan B., 5,012,376, Cl. 360-128.000.

Wilson, Philip J.; and Chhatwal, Harprit, to Pacific Communication Science, Inc. Adaptive transform coder having long term predictor. 5,012,517, Cl. 381-31.000.

Wiman, Jorgen V.: *See*—
Pettersson, Lars T.; and Wiman, Jorgen V., 5,011,340, Cl. 407-114.000.

Wimmer, Ignaz; and Billenstein, Siegfried. Process for the purification of alkylene oxide adducts. 5,012,013, Cl. 568-621.000.

Winchell, David A.; and Sertic, James L., to Baxter International Inc. Continuous/bolus infusor. 5,011,477, Cl. 604-132.000.

Winter, Heike: *See*—
Traitler, Helmut; and Winter, Heike, 5,011,855, Cl. 514-558.000.

Winter, Josef: *See*—
Kubis, Herbert; and Winter, Josef, 5,010,853, Cl. 123-41.840.

Winzer, Stephen R.: *See*—
Bridger, Keith; Jones, Lorianne; and Winzer, Stephen R., 5,011,796, Cl. 501-12.000.

Wirtgen AG: *See*—
Antonioli, Giuseppe, 5,011,325, Cl. 404-6.000.

Wisconsin Alumni Research Foundation: *See*—
Beyer, James B.; and Deibele, Steven, 5,012,203, Cl. 330-286.000.
Farrell, Patrick V., 5,011,278, Cl. 356-28.000.
Lorenz, Robert D.; and Jackson, Gregory T., 5,010,773, Cl. 73-862.040.

Wisconsin Tissue Mills Inc.: *See*—
Giesen, William E., 5,011,017, Cl. 206-494.000.

Wise, Robert D., to Century Products Company. Baby carrier. 5,011,221, Cl. 297-191.000.

Wishart, Bruce W.: *See*—
Abram, David A. S.; and Wishart, Bruce W., 5,011,360, Cl. 414-424.000.

Witte, Vernon C.: *See*—
Baer, Cynthia C.; Buliga, Gregory S.; Hassenheutti, Gerard L.; Henry, George A.; Heth, Alice A.; Jackson, Linda K.; Kennedy-Tolstedt, Jill M.; Kerwin, Phillip J.; Miller, Mark S.; Parker, Elizabeth M.; Paul, Neela K.; Pechak, David G.; Smith, Gary F.; and Witte, Vernon C., 5,011,701, Cl. 426-573.000.

Witzel, Gunther; Widmann, Bruno; and Muller, Franz, to Telenorma GmbH. Terminal device for picture communication. 5,012,348, Cl. 358-229.000.

Wolfert, Ludwig G.: *See*—
Flint, Graham W.; Papazian, Harold A.; and Wolfert, Ludwig G., 5,012,112, Cl. 250-493.100.

Wolff, Mark C.: *See*—
Dishart, Kenneth T.; and Wolff, Mark C., 5,011,620, Cl. 252-118.000.

Wolff Walsrode Aktiengesellschaft: *See*—
Hoppe, Lutz; Koch, Wolfgang; Luhmann, Erhard; and Piepho, Michael, 5,011,874, Cl. 524-30.000.

Wolinski, Leon: *See*—
Melber, George E.; and Wolinski, Leon, 5,011,862, Cl. 521-54.000.

Wong, Stephen S.: *See*—
Ware, Robert A.; and Wong, Stephen S., 5,011,593, Cl. 208-213.000.

Woodward, David A., to Allergan, Inc. Use of prostaglandin $F_3\alpha$ as an ocular hypotensive agent. 5,011,856, Cl. 514-573.000.

Woodward, John G. Hand portable light with extendable lamp housing. 5,012,394, Cl. 362-198.000.

Woodworth, Fred P.: *See*—
Thornton, Peter B.; Woodworth, Fred P.; and Cone, Stanley H., 5,011,183, Cl. 280-743.000.

World Health Organization: *See*—
Buchs, Peter; and Brossi, Arnold, 5,011,951, Cl. 549-348.000.

Worlock, John M.: *See*—
Kash, Kathleen; and Worlock, John M., 5,012,304, Cl. 357-007.000.

Wormald U.S., Inc.: *See*—
Grant, Dale A., 5,010,911, Cl. 137-68.100.

Wortmann, Juergen: *See*—
Auweter, Helmut; Horn, Dieter; Lilge, Dieter; and Wortmann, Juergen, 5,011,279, Cl. 356-28.500.

WPM, Inc.: *See*—
Agresta, Frank J., 5,010,922, Cl. 137-359.000.

Wrangler: *See*—
Spencer, James T., III; and Walker, James K., 5,010,833, Cl. 112-262.100.

Wright, John J.: *See*—
Catt, John D.; and Wright, John J., 5,011,947, Cl. 549-292.000.

Wright, John T. M.: *See*—
Myers, David J.; Leever, Richard; Gibbs, Mary; and Wright, John T. M., 5,011,481, Cl. 606-1.000

Wright, Raymond L.: *See*—
Clark, Carl A.; and Wright, Raymond L., 5,011,337, Cl. 405-261.000.

Wright, Richard A.: *See*—
Davis, Ruth A.; Nicholas, David M.; Smith, Dale D.; Wang, Shoou-I; and Wright, Richard A., 5,011,670, Cl. 423-450.000.

Wu, Cheng-Kuang: *See*—
Palepu, Prakash T.; Wu, Cheng-Kuang; and Adler, Robert J., 5,011,022, Cl. 209-155.000.

Wu, Margaret M.: *See*—
Jackson, Andrew; and Wu, Margaret M., 5,012,020, Cl. 585-10.000.

Wuest, Isabelle: *See*—
Brochot, Jean-Pierre; Pillias, Danielle; Wuest, Isabelle; Beaufays, Jean-Pierre; and Darmont, Maurice, 5,011,585, Cl. 204-192.130.

Wurtz, Ike. Pneumatic temperature control. 5,011,076, Cl. 236-49.400.

Wusirika, Raja R.: *See*—
Hogue, Kathryn E.; Swaroop, Srinivas H.; and Wusirika, Raja R., 5,011,529, Cl. 75-235.000.

Wuts, Peter G. M., to Upjohn Company, The. Intermediate for the preparation of deferoxamine. 5,011,976, Cl. 560-159.000.

Wyerehaeuser Company: *See*—
Kychakoff, George; and Ort, Gene P., 5,010,827, Cl. 110-185.000.

Xerox Corporation: *See*—
Babler, Egon S.; and Olsen, Alf J., 5,011,309, Cl. 400-184.000.
Berkes, John S.; and Bonsignore, Frank J., 5,012,290, Cl. 355-271.000.
Bock, Edward C., 5,012,275, Cl. 355-25.000.
Daughton, John W.; and Sklut, Robert L., 5,012,284, Cl. 355-243.000.
Knapp, John F., 5,012,287, Cl. 355-253.000.
Limburg, William W.; Yanus, John F.; Renfer, Dale S.; Schank, Richard L.; and Ong, Beng S., 5,011,939, Cl. 548-440.000.
Martin, Robert G.; and Litman, Alan M., 5,012,072, Cl. 219-469.000.
Mayer, David M.; and Cisneroz, Jay J., 5,011,093, Cl. 242-56.00R.
Ong, Beng S.; Keoshkerian, Barkev; and Baranyi, Giuseppa, 5,011,906, Cl. 528-176.000.
Sardano, Peter A.; and Kazmierczak, Irvin J., 5,011,124, Cl. 271-35.000.

Xicor, Inc.: *See*—
Wang, Ping, 5,012,132, Cl. 307-296.100.

Xie, Ya-Hong: *See*—
Luryi, Sergey; and Xie, Ya-Hong, 5,012,486, Cl. 372-45.000.

Xinix, Inc.: *See*—
Rhiner, Walter, 5,012,119, Cl. 250-574.000.

Xu, Jingming; Sweeney, Mark A.; and Day, Derek J., to Northern Telecom Limited. Three terminal semiconductor device. 5,012,301, Cl. 357-4.000.

Yachi, Shigeru: *See*—
Tobita, Toshio; Yachi, Shigeru; and Gofuku, Eishi, 5,012,314, Cl. 357-23.120.

Yagi, Isao, to Jidosha Kiki Co., Ltd. Hydraulic pressure booster with a restrictor producing a braking sensation. 5,010,732, Cl. 60-413.000.

Yahav, Shimon: *See*—
Daar, Yair; and Yahav, Shimon, 5,011,485, Cl. 606-133.000.

Yamada, Hirokazu: *See*—
Kusumoto, Keiji; Yamada, Hirokazu; and Ideyama, Hiroyuki, 5,012,281, Cl. 355-206.000.

Yamada, Katsuyuki: *See*—
Harigaya, Makoto; Ide, Yukio; Yamada, Katsuyuki; and Iwasaki, Hiroko, 5,011,723, Cl. 428-64.000.

Yamada, Koji: *See*—
Takahashi, Mitsuru; Kitamura, Shigeto; Kase, Hiroshi; Kasai, Masaji; Kawamoto, Isao; Iida, Takao; Sano, Hiroshi; Saito, Hiromitsu; Yamada, Koji; and Murakata, Chikara, 5,011,854, Cl. 514-541.000.

Yamada, Makoto: *See*—
Isono, Haruo; Yasuda, Minoru; Watanabe, Hiroshi; Toyama, Tateo; Hioki, Toshiaki; Morita, Yoshihiko; and Yamada, Makoto, 5,012,351, Cl. 358-342.000.

Yamada, Masaki: *See*—
Odaka, Kentaro; Ozaki, Shinya; Yamada, Masaki, Inazawa, Yoshizumi; and Ishibashi, Hiroshi, 5,012,459, Cl. 360-32.000.

Yamada, Shuji; and Ando, Hironori, to Mita Industrial Co., Ltd. Document density detector apparatus. 5,012,278, Cl. 355-55.000.

Yamada, Takahiro: *See*—
Yoshino, Eiji; Matsuda, Yasumasa; and Yamada, Takahiro, 5,012,353, Cl. 358-401.000.

Yamagata, Hiroshi, to Yoshida Kogyo K.K. Coupling element row for slide fastener and surface treating method for the same. 5,010,628, Cl. 24-405.000.

Yamagishi, Frederick G.; and Miller, Leroy J. Acrylate polymer-dispersed liquid crystal material and device made therefrom. 5,011,624, Cl. 252-299.500.

Yamaguchi, Akira, to Kabushiki Kaisha Toshiba. Reciprocal arithmetic circuit with ROM table. 5,012,438, Cl. 364-765.000.

Yamaguchi, Hiroshi; and Yamaguchi, Masashi, to Yamaguchi, Hiroshi; and Kimura, Hiroshi. Rotary ring winding device. 5,010,722, Cl. 57-124.000.

Yamaguchi, Jun; Okazaki, Masaki; and Inagaki, Yoshio, to Fuji Photo Film Co., Ltd. Photopolymerizable composition. 5,011,760, Cl. 430-281.000.

Yamaguchi, Keiji, to Terumo Kabushiki Kaisha. Electronic clinical thermometer. 5,011,294, Cl. 374-107.000.

Yamaguchi, Makoto: *See*—
Uesaka, Toshio; Niki, Akihiro; Ohsuga, Makoto; Saito, Toranosuke; Tsunomachi, Hiroki; Yamaguchi, Makoto; Doyama, Kazuo; and Kishimoto, Daishiro, 5,011,879, Cl. 524-290.000.

Yamaguchi, Masashi: *See*—
Yamaguchi, Hiroshi; and Yamaguchi, Masashi, 5,010,722, Cl. 57-124.000.

Yamaguchi, Takashi; Tsutsumi, Tadahiko; and Watanabe, Toshie, to Japan Synthetic Rubber Co., Ltd. Process for the production of polyvinylidene fluoride laminated product. 5,011,556, Cl. 156-83.000.

Yamaguchi, Yuzo: *See*—
Kohno, Takashi; Matsushita, Osami; Ida, Michiaki; Kikuchi, Katsuaki; Sonoda, Taro; and Yamaguchi, Yuzo, 5,012,359, Cl. 360-71.000.

Yamaha Corporation: *See*—
Furukawa, Kazunari; and Suzuki, Daisuke, 5,010,977, Cl. 181-160.000.
Hayashi, Yoshinori; and Iijima, Kenzaburou, 5,012,238, Cl. 341-15.000.
Suzuki, Takashi, 5,012,138, Cl. 307-475.000.
Tomisawa, Norio, 5,012,141, Cl. 307-594.000.

Yamaha Hatsudoki Kabushiki Kaisha: *See*—
Yokoi, Hidetoshi, 5,011,543, Cl. 136-211.000.

Yamamiya, Kazuo: *See*—
Nomura, Isao; and Yamamiya, Kazuo, 5,011,873, Cl. 523-466.000.

Yamamoto, Hiroyuki: *See*—
Nose, Kazuo; Yamamoto, Hiroyuki; Koike, Shiro; Shimomura, Masakazu; Tsubono, Hajime; Kitagawa, Soichi; Fujisaki, Yasumasa; Maeda, Yasushi; Wakebe, Tetsuya; and Katayama, Yasuyuki, 5,010,756, Cl. 72-9.000.

Yamamoto, Iichiro. *See*—
Sakurai, Masaaki, Yamamoto, Iichiro; Goto, Masahiro; Kuge, Tsukasa; and Shigenobu, Michio, 5,011,401, Cl. 432-60.000.

Yamamoto, Isao, to Nissan Motor Company, Ltd. System and method for automatically controlling vehicle speed to desired cruise speed. 5,012,419, Cl. 364-426.040.

Yamamoto, Naoki: *See*—
Sasaki, Isao; Yamamoto, Naoki, and Yanagase, Akira, 5,011,887, Cl 525-63.000.

Yamamoto, Tatuo: *See*—
Totani, Tuyoshi; Yamamoto, Tatuo, and Kurihara, Yasuo, 5,011,602, Cl. 210-484.000

Yamamoto, Toshihiko, to Mazda Motor Corporation. Power-assisted steering system. 5,010,970, Cl. 180-79.100.

Yamamoto, Toshiyoshi *See*—
Sakano, Chikashi; Nakada, Seiichi, Shimizu, Masao, Ito, Shinichi; and Yamamoto, Toshiyoshi, 5,010,664, Cl 38-77.700.

Yamamoto, Yuji; Shigematsu, Hideyuki, Tanaka, Hiroshi, Ashikawa, Ryo, and Ishida, Tatsuo, to Hiroshima Kasei Ltd., and Mitsubishi Jidosha Kogyo Kabushiki Kaisha. Corrosion resistant, water expandable composition. 5,011,875, Cl. 524-45.000.

Yamane, Hiroshi: *See*—
Yukumoto, Masao; Ozawa, Michiharu, and Yamane, Hiroshi, 5,010,947, Cl. 164-428.000.

Yamane, Kaoru: *See*—
Takahashi, Hisao; Yamane, Kaoru; Hirakami, Kiyomi, and Ikeda, Kazuo, 5,011,201, Cl. 296-203.000.

Yamashima, Osamu: *See*—
Takahashi, Mineo; Nakayama, Susumu, Yamashima, Osamu; Suzuki, Satoshi; Harada, Toshihiko, and Aiso, Keiji, 5,010,642, Cl 29-868.000.

Yamashita, Hiroki, Kinoshita, Keichi; Matsui, Toshio; Kurahashi, Wataru; and Yasuda, Katsuya, to Minolta Camera Kabushiki Kaisha. Sheet storing apparatus provided for a copying machine. 5,012,297, Cl. 355-321.000

Yamashita, Seiji; and Takada, Shunji, to Fuji Photo Film Co., Ltd. Silver halide photographic emulsion. 5,011,767, Cl. 430-567.000.

Yamauchi, Shiro; and Rito, Naotake, to Mitsubishi Denki Kabushiki Kaisha. Dehumidifier for magnetic disc apparatus. 5,012,360, Cl 360-97.020.

Yamazaki, Fumio: *See*—
Saito, Katushi; Shindou, Yoshio; Murata, Toshimichi, Yamazaki, Fumio, and Shimazu, Takashi, 5,011,744, Cl 428-623.000

Yamazaki, Hiroshi: *See*—
Minagawa, Yoshiji; Shirakawa, Hiroshi; Yamazaki, Hiroshi, and Ito, Yoshiaki, 5,012,120, Cl 307-35.000

Yamazaki, Kouji, to NEC Corporation. Semiconductor device having high-reliable interconnections with titanium silicide film. 5,012,320, Cl 357-67.000.

Yamazaki, Shigeko, to Merck & Co., Inc. Process for purifying recombinant hepatitis antigens. 5,011,915, Cl 530-414.000

Yamazaki, Shunpei; and Sato, Masahiko, to Semiconductor Energy Laboratory Co., Ltd. Liquid crystal electro-optical device and manufacturing method therefor. 5,011,270, Cl. 350-350.00S

Yanagase, Akira: *See*—
Sasaki, Isao; Yamamoto, Naoki; and Yanagase, Akira, 5,011,887, Cl 525-63.000.

Yanamoto, Yutaka: *See*—
Yokomizo, Shojiro; Izumida, Kouji; Saito, Takeshi, and Yanamoto, Yutaka, 5,010,759, Cl 72-393.000

Yang, Hung H., to Du Pont de Nemours, E. I., and Company. Process for making oriented, shaped articles of para-aramid/thermally-consolidatable polymer blends. 5,011,643, Cl 264-171.000

Yang, Phillip: *See*—
Le, Son, and Yang, Phillip, 5,011,479, Cl. 604-198.000.

Yanke, Charles H. *See*—
Sisson, Fred U., Jr., 5,012,114, Cl. 250-519.100.

Yannuzzi, Gilbert N., Jr.: *See*—
Black, Richard A., Jr.; and Yannuzzi, Gilbert N., Jr., 5,011,299, Cl 383-126.000.

Yano, Hisato; Hashimoto, Shusa; and Horiyama, Tsuyoshi, to Shimizu Construction Co., Ltd. Ultrasonic fragrance generation apparatus 5,011,632, Cl. 261-81.000.

Yanus, John F.: *See*—
Limburg, William W.; Yanus, John F., Renfer, Dale S.; Schank, Richard L., and Ong, Beng S., 5,011,939, Cl 548-440.000.

Yashiro, Toshinori. *See*—
Nogami, Shingo; Yashiro, Toshinori; Okitsu, Toshio; Furushima, Kiyoshi; and Korenaga, Itsuo, 5,010,946, Cl 164-312.000

Yasuda, Katsuya: *See*—
Yamashita, Hiroki; Kinoshita, Keichi, Matsui, Toshio, Kurahashi, Wataru; and Yasuda, Katsuya, 5,012,297, Cl. 355-321.000

Yasuda, Minoru: *See*—
Isono, Haruo; Yasuda, Minoru; Watanabe, Hiroshi; Toyama, Tateo, Hioki, Toshiaki; Morita, Yoshihiko; and Yamada, Makoto, 5,012,351, Cl 358-342.000

Yasuda, Nobuyuki, to Kabushiki Kaisha Toshiba. DC/AC power converting apparatus including DC component remover. 5,012,400, Cl 363-95.000

Yasuda, Shiro, to Sony Corporation. Input device for digital processor based apparatus. 5,012,230, Cl. 340-706.000.

Yasui, Yoshiharu; Nakane, Katsumi; Suzuki, Osamu; and Kimbara, Masahiko, to Kabushiki Kaisha Toyoda Jidoshokki Seisakusho, and Nisshinbo Industries, Inc. System for transporting roving bobbins between roving and spinning processes. 5,010,725, Cl. 57-281.000

Yasuki, Seijiro: *See*—
Sakamoto, Noriya, Kawai, Kiyoyuki; and Yasuki, Seijiro, 5,012,326, Cl. 358-11.000.

Yasuno, Toyoharu *See*—
Tominaga, Kenji, Miki, Minoru; Takahashi, Tooru; Horiuchi, Tetsuo, Morishima, Hideo; Nakayama, Takashi, Moriya, Kumiaki, Matsumoto, Masaki; Akita, Minoru, Niino, Tsuyoshi, Ochiai, Kanehiro, Shiozawa, Akihiko; Uchiyama, Yuichi; Yasuno, Toyoharu, Moriya, Kenji, Kinoshita, Shouichirou, Kage, Kazuo, and Kubota, Ryuji, 5,011,652, Cl. 376-283.000.

Yates, George, Jr *See*—
Yates, Paul M., Yates, George R.; and Yates, George, Jr., 5,011,222, Cl. 297-195.000.

Yates, George R *See*—
Yates, Paul M., Yates, George R., and Yates, George, Jr., 5,011,222, Cl. 297-195.000.

Yates, Paul M., Yates, George R.; and Yates, George, Jr. Orthotic cycle saddle. 5,011,222, Cl. 297-195.000.

Yazaki Corporation *See*—
Matsumoto, Etsuji, Araki, Mamoru; and Ozaki, Keiichi, 5,011,417, Cl. 439-76.000
Takahashi, Mineo; Nakayama, Susumu; Yamashima, Osamu, Suzuki, Satoshi; Harada, Toshihiko, and Aiso, Keiji, 5,010,642, Cl 29-868.000

Yeda Research and Development Co., Ltd.: *See*—
Manassen, Joost; and Cabasso, Israel, 5,011,749, Cl 429-101.000

Yeh, Ming-Hwa. Coaxial cable output terminal safety plug device 5,011,422, Cl 439-307.000.

Yehi, James E., and Coppom, Rex R., to American Environmental Systems, Inc. Apparatus and method for establishing selected environmental characteristics. 5,010,777, Cl. 73-864.810.

Yelverton, Elizabeth M *See*—
Levinson, Arthur D.; Pennica, Diane; Kohr, William J.; Vehar, Gordon A., Goeddel, David V.; Yelverton, Elizabeth M., and Simonsen, Christian C., 5,011,795, Cl. 435-69.200

Yen, Richard C K. Apparatus for removing a soft stopper from a container. 5,010,790, Cl 81-3.450.

Yokogawa Electric Corporation *See*—
Ono, Yutaka, Muramatsu, Yasuhiko; Banzai, Hideo, Kikukawa, Yoichi; Hashida, Shigeru, Shindo, Shotaro, Higuchi, Haruo; Shinomiya, Hiroyuki, Nikaido, Mitsuhiro; and Sato, Koichi, 5,012,169, Cl 318-568.000

Yokohama Rubber Co., Ltd., The *See*—
Kikuo, Kanaya, Kanamori, Katsuhiko; and Masuda, Ryosuke, 5,010,774, Cl 73-862.040.

Yokoi, Hidetoshi, to Yamaha Hatsudoki Kabushiki Kaisha. Thermocouple type temperature sensor. 5,011,543, Cl 136-211.000

Yokomizo, Shojiro, Izumida, Kouji, Saito, Takeshi; and Yanamoto, Yutaka, to Topy Kogyo Kabushiki Kaisha. Wheel rim shaping apparatus having a single cotter supportable at both ends thereof 5,010,759, Cl. 72-393.000.

Yokota, Shinjiro *See*—
Asuka, Masahiro, Yokota, Shinjiro, Tonogouchi, Makoto, and Kasai, Mitsuo, 5,010,830, Cl 110-347.000.

Yokoyama, Akio *See*—
Morita, Yoichi, Komori, Hiroshi; and Yokoyama, Akio, 5,012,201, Cl 330-252.000

Yokoyama, Tadashi, to Mitsubishi Denki Kabushiki Kaisha. Magnetic disc filter apparatus. 5,012,365, Cl. 360-97.030.

Yokoyama, Tomoaki *See*—
Oka, Tateki, Toyoshi, Naoki, Yokoyama, Tomoaki; Mizuno, Hiroshi; Murasaki, Hiroshi, Ikegawa, Akihito, Etou, Kouichi; and Nakagawa, Shuichi, 5,012,285, Cl. 355-245.000.

Yoneyama, Sachiko, Ohsawa, Toshiyuki; Kimura, Okitoshi, and Kabata, Toshiyuki, to Ricoh Company, Ltd. Electrochemical device 5,011,751, Cl 429-192.000.

Yoneyoshi, Yukio, Suzukamo, Gohfu, and Sakito, Yoji, to Sumitomo Chemical Company, Limited. Optically active hydroxybenzylamine 5,011,989, Cl. 564-8.000.

Yorisue, Shyozo *See*—
Kawase, Shinji, and Yorisue, Shyozo, 5,010,744, Cl. 66-93.000

York, Michael L., and Broerman, Steven E., to Vortec Corporation. Cooling system for enclosures. 5,010,736, Cl. 62-5.000.

Yorke, John A *See*—
Rambo, Robert D., and Yorke, John A., 5,010,902, Cl. 128-888.000.

Yorozu, Masatoshi *See*—
Takahashi, Shoichi, Ichiki, Sayohiko, Yorozu, Masatoshi; Kunishige, Seiji, Shibagaki, Taro, Shimizu, Fumihiko, Fujioka, Fumio, and Kondo, Toshinori, 5,012,240, Cl 341-101.000.

Yoshida, Katutoshi *See*—
Hashimoto, Toru; Kamura, Hitoshi, Yoshida, Katutoshi, Jimbo, Takeshi, and Inuzuka, Tokushige, 5,010,862, Cl. 123-339.000

Yoshida Kogyo K K *See*—
Yamagata, Hiroshi, 5,010,628, Cl 24-405.000.

Yoshida, Kyoko *See*—
Endo, Yasuo; Akimichi, Shinji, Hirose, Tadayoshi, Furukawa, Motonori, and Yoshida, Kyoko, 5,012,521, Cl 382-1.000

Yoshida, Satoshi, to Casio Computer Co., Ltd. Electronic musical instrument capable of selecting between fret and fretless modes. 5,010,800, Cl. 84-646.000

Yoshida, Shigeru; and Ito, Yoshimasa, to Aisan Kogyo Kabushiki Kaisha. Fuel pump. 5,011,367, Cl 415-55.100

Yoshida, Tadao; and Ando, Ryo, to Sony Corporation. Disk recording apparatus for re-establishing a recording mode at a desired address. 5,012,461, Cl 369-44.330

Yoshida, Tadashi; Inoue, Keizo; Arita, Hitoshi; Matsutani, Shigeru; Shoji, Junichi; and Kawamura, Yoshimi, to Shionogi & Co., Ltd. Phospholipase A2 inhibitor. 5,011,952, Cl. 549-393.000.

Yoshida, Takeshi: *See*—
Hiratsuka, Katsuo; Odaka, Yoshiyuki; and Yoshida, Takeshi, 5,010,832, Cl. 112-68.000.

Yoshida, Yasuhisa, to Hitachi, Ltd. Transaction method wherein transaction amount is compared with account balance before ID is entered. 5,012,076, Cl. 235-379.000.

Yoshida, Yasunobu: *See*—
Sasabe, Minoru; Imamura, Masao; Yoshida, Yasunobu; Andoh, Shinya; and Miyake, Hiroshi, 5,011,798, Cl. 501-87.000.

Yoshiki Industrial Co., Ltd: *See*—
Yoshizawa, Yasuo; Kawaguchi, Hiroichi; and Seto, Kazunari, 5,011,414, Cl. 434-431.000.

Yoshimoto, Masafumi; Nakatsuji, Tadao; and Nagano, Kazuhiko, to Sakai Chemical Industry Co., Ltd. Method of producing titanium oxides. 5,011,674, Cl. 423-610.000.

Yoshimura, Hiroshi; Fujiwara, Takuji; Ishi, Kozo; and Takemoto, Kazuo, to Mazda Motor Corporation. Slip control system for lockup torque converter. 5,010,990, Cl. 192-3.300.

Yoshimura, Katsuji; Nagasawa, Kenichi; Kashida, Motokazu; and Shikakura, Akihiro, to Canon Kabushiki Kaisha. Digital signal recording apparatus time-division multiplexing video and audio signals. 5,012,352, Cl. 358-343.000.

Yoshimura, Katsuji: *See*—
Sekine, Masayoshi; Nakajima, Toshiyuki; Kai, Takashi; Yoshimura, Katsuji, and Toyama, Masamichi, 5,012,270, Cl. 354-430.000.

Yoshimura, Shigeru; Suzuki, Tetsuo; and Takemura, Makoto, to Canon Kabushiki Kaisha. Image forming apparatus for oscillating the recording head and fixing same with respect to a recording medium. 5,012,260, Cl. 346-139.00R

Yoshinaga, Kazuo, Kai, Takashi; Egara, Koichi; Toshida, Yomishi; Mitsutake, Hideaki, Sato, Koichi; and Miyazaki, Takeshi, to Canon Kabushiki Kaisha. Nonlinear optical material and nonlinear optical device. 5,011,623, Cl. 252-299.500

Yoshinaga, Yoko *See*—
Haruta, Masahiro; Munakata, Hirohide; Yuasa, Satoshi; and Yoshinaga, Yoko, 5,011,644, Cl. 264-184.000.

Yoshino, Eiji; Matsuda, Yasumasa, and Yamada, Takahiro, to Hitachi, Ltd. Apparatus for reading original. 5,012,353, Cl. 358-401.000.

Yoshio, Junichi; and Suzuki, Masami, to Pioneer Electronic Corporation. Input data processor for D/A converter utilizing dithering. 5,012,242, Cl. 341-131.000.

Yoshioka, Tetsuo *See*—
Kido, Masaro, and Yoshioka, Tetsuo, 5,011,727, Cl 428-141.000.

Yoshitake, Hiroshi *See*—
Kadokura, Hidekimi; Yoshitake, Hiroshi; and Tanahashi, Masayoshi, 5,012,156, Cl. 313-509.000

Yoshizawa, Atsutomo. *See*—
Ikkatai, Masatoshi, Yoshizawa, Atsutomo; and Honma, Toshio, 5,012,295, Cl. 355-311.000

Yoshizawa, Yasuo; Kawaguchi, Hiroichi; and Seto, Kazunari, to Yoshiki Industrial Co., Ltd, and Uchida Yoko Co., Ltd. Key-input apparatus or CAI system. 5,011,414, Cl. 434-431.000.

Young, Donald R., Jr *See*—
Miller, William J.; Truesdale, Carlton M.; Weidman, David L.; and Young, Donald R., Jr., 5,011,251, Cl. 350-96.150.

Young, Frederick A., and Rikimaru, Roy K., to Hughes Aircraft Company. Low-loss wide-band microwave filter. 5,012,211, Cl. 333-212.000.

Young, Lydia J., to Etec Systems, Inc. Thermally stable magnetic deflection assembly and method of making same. 5,012,104, Cl. 250-396.0ML.

Young, Ronald E. Stall and pasture vacuum machine. 5,010,620, Cl. 15-347.000.

Youngblood, Dale; and Hutchins, Harry L. Post puller. 5,011,117, Cl 254-30.000

Yu, Jung-jae *See*—
An, Hyeong-keun, Kim, Young-cheol; Lee, Seok-jeong; and Yu, Jung-jae, 5,012,451, Cl 365-230.050.

Yuasa, Satoshi. *See*—
Haruta, Masahiro, Munakata, Hirohide; Yuasa, Satoshi; and Yoshinaga, Yoko, 5,011,644, Cl. 264-184.000.

Yue, Chongshan: *See*—
Stetter, Joseph R.; Findlay, Melvin W.; and Yue, Chongshan, 5,012,432, Cl 364-557.000

Yukimoto, Sadao; Hirose, Toshifumi; Wakabayashi, Hiroshi; and Isayama, Katsuhiko, to Kanegafuchi Kagaku Kogyo Kabushiki Kaisha. Curable composition. 5,011,900, Cl. 525-477.000.

Yukinaga, Kouji: *See*—
Shimono, Mamoru; Asada, Tomoyuki; Kawaguchi, Taiichi; Taya, Yoichi; Yukinaga, Kouji; Nomura, Susumu; and Tagawa, Hajime, 5,012,283, Cl. 355-229.000.

Yukumoto, Masao; Ozawa, Michiharu; and Yamane, Hiroshi, to Kawasaki Steel Corporation. Twin cooling roll apparatus for producing rapidly solidified metal strip. 5,010,947, Cl. 164-428.000.

Zador, Eugene; Hsu, Shyigue; Kaczmarek, Wesley R.; Ravipati, Sitaramaiah; Supkis, Stanley; and Vogel, Richard H., to Norton Company. Single step, radiation curable ophthalmic lining pad. 5,011,513, Cl. 51-295.000.

Zaenger, Ian C.: *See*—
Sikkenga, David L.; Zaenger, Ian C., and Williams, Gregory S., 5,012,024, Cl. 585-320.000

Zahnradfabrik Friedrichshafen, AG.: *See*—
Petzold, Rainer, 5,012,418, Cl 364-426.040.

Zakary, Paul D.: *See*—
Schultz, Albert N., Jr.; and Zakary, Paul D., 5,012,391, Cl. 361-428.000.

Zamora, John: *See*—
Shih, Jenn S.; Smith, Terry E.; Zamora, John; and Economidis, Minas, 5,011,895, Cl. 526-88.000.

Zanchetta, Aldo, to Zanchetta & C. S r.l. Process for spheronization and device for implementing said process. 5,011,640, Cl 264-69.000.

Zanchetta & C. S.r.l.: *See*—
Zanchetta, Aldo, 5,011,640, Cl. 264-69.000.

Zane, Michael S.; and Zane, Peter L., to Kryptonite Corporation. Bicycle lock. 5,010,746, Cl. 70-39.000.

Zane, Peter L.: *See*—
Zane, Michael S.; and Zane, Peter L., 5,010,746, Cl. 70-39.000.

Zeiner, Hartmut: *See*—
Rosenau, Bernhard; Hisgen, Bernd; Heinz, Gerhard; Braun, Hans-Georg; Lausberg, Dietrich; and Zeiner, Hartmut, 5,011,884, Cl. 524-537.000.

Zeligson, Stephen J. Advertising device for airliner seat back or snack tray table. 5,010,668, Cl. 40-324.000.

Zemke, Ronald O.: *See*—
Welygan, Dennis G.; Zemke, Ronald O.; and Pawlikowski, Walter W., Jr., 5,011,642, Cl. 264-167.000.

Zenion Industries, Inc.: *See*—
Lee, Jimmy L., 5,010,869, Cl. 123-539.000.

Zenith Electronics Corporation: *See*—
Park, Yong S., 5,011,443, Cl. 445-2.000.

Ziegler, Manfred; and Koerner, Edmund, to Fischerwerke Artur Fischer GmbH & Co. KG. Container for magnetic tape cassettes with set displacing spring means. 5,011,015, Cl. 206-387.000.

Ziemann, Heinz: *See*—
Kiel, Wolfgang; and Ziemann, Heinz, 5,011,996, Cl. 564-321.000.

Zietlow, Kurt; and Engst, Ernst, to Siemens Aktiengesellschaft. Apparatus and method for selective rotation of data printed by a matrix printer. 5,012,434, Cl. 364-523.000.

Zilog, Inc.: *See*—
Dalrymple, Monte J.; Brubaker, Lois F., and Smith, Don, 5,012,180, Cl. 324-73.100

Zimpro Passavant Environmental Systems, Inc.: *See*—
Depuydt, Kent T.; and Tikalsky, Joseph S., 5,011,114, Cl. 251-144.000.

Zinnen, Hermann A., to UOP. Zeolitic para-xylene separation with diethyltoluene heavy desorbent. 5,012,038, Cl. 585-828.000

Zohler, Steven R., to Carrier Corporation. High performance heat transfer tube for heat exchanger. 5,010,643, Cl. 29-890.048.

Zoland, Martin; and Rossato, Mark. Folder. 5,011,188, Cl. 281-30.000.

Zoran Corporation: *See*—
Retter, Refael, 5,012,441, Cl. 364-900.000.

Zupancic, Anton Z.; Palermo, Anthony; and Levar, Robert E., to Picker International, Inc. Fluidic slip ring for CT scanners. 5,012,505, Cl. 378-130.000.

Zweigart, Gerhard; Greiner, Ferdinand; Baumert, Heinz; Scheiffele, Peter; and Nowak, Manfred, to Daimler-Benz AG. Swivel bearing for a sun visor. 5,011,213, Cl. 296-97.130.

Zwijsen, Jan A.: *See*—
Tavernier, Serge M.; Janssens, Robert F.; and Zwijsen, Jan A., 5,012,288, Cl. 355-259.000.

Zydzik, George J.: *See*—
Grim, Karen A.; Singh, Shobha; Van Uitert, LeGrand G., and Zydzik, George J., 5,011,794, Cl. 437-247.000.

3Com Corporation: *See*—
Crane, Ronald C., 5,012,467, Cl. 370-85.300.

501 Greenfield Industries, Inc.: *See*—
Hsu, George, 5,011,342, Cl 408-224.000

501 Multivac Sepp Haggnemuller KG: *See*—
Medwed, Emmerich; and Wiest, Engelbert, 5,010,714, Cl. 53-412.000.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 30TH DAY OF APRIL, 1991

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Automotive Products plc: *See*—
Bass, Richard A., Re. 33,578, Cl. 60-594.000.

Bass, Richard A., to Automotive Products plc. Hydraulic master cylinder assembly. Re. 33,578, Cl. 60-594.000.

Elings, Virgil B.: *See*—
Nicoli, David F.; and Elings, Virgil B., Re. 33,581, Cl. 435-7.200.

Fraioli, Joseph. Infrared dehydrator unit for minced fish. Re. 33,580, Cl. 426-242.000.

Mazur, Edward J.: *See*—
Voltmer, Helmut; Schwenzer, Alfred F.; and Mazur, Edward J., Re. 33,579, Cl. 156-552.000.

New Jersey Machine Inc.: *See*—
Voltmer, Helmut; Schwenzer, Alfred F.; and Mazur, Edward J., Re. 33,579, Cl. 156-552.000.

Nicoli, David F.; and Elings, Virgil B. Immunoassay using optical interference detection. Re. 33,581, Cl. 435-7.200.

Schwenzer, Alfred F.: *See*—
Voltmer, Helmut; Schwenzer, Alfred F.; and Mazur, Edward J., Re. 33,579, Cl. 156-552.000

Voltmer, Helmut; Schwenzer, Alfred F.; and Mazur, Edward J., to New Jersey Machine Inc. Literature applying mechanism. Re. 33,579, Cl. 156-552.000.

LIST OF REEXAMINATION PATENTEES

TO WHOM

CERTIFICATES WERE ISSUED

Barkan, Edward D.: *See*—
Shepard, Howard M., Barkan, Edward D.; and Swartz, Jerome, B1 4,845,350, Cl. 235-472.000.

Bhaskar, Kasi S.; Carlson, Alden J.; Couper, Alastair N.; Lambert, Dennis L.; and Scott, Marshall H., to John Fluke Mfg. Co., Inc. Test apparatus for electronic assemblies employing a microprocessor. B1 4,455,654, 4-30-91, Cl. 371-16.200.

Bonsky, Elmer C.: *See*—
Curtis, Lawrence A.; and Bonsky, Elmer C., B1 3,723,656, Cl. 379-82.000.

Carlson, Alden J.: *See*—
Bhaskar, Kasi S.; Carlson, Alden J.; Couper, Alastair N.; Lambert, Dennis L.; and Scott, Marshall H., B1 4,455,654, Cl. 371-16.200.

Couper, Alastair N.: *See*—
Bhaskar, Kasi S.; Carlson, Alden J.; Couper, Alastair N.; Lambert, Dennis L.; and Scott, Marshall H., B1 4,455,654, Cl. 371-16.200.

Curtis, Lawrence A.; and Bonsky, Elmer C., to Virsonic Corporation. Telephone answering system. B1 3,723,656, 4-30-91, Cl. 379-82.000.

Excello Specialty Company, The: *See*—
Isaksen, Robert A.; Frappier, David E.; and Jones, Wallace R., B1 4,604,302, Cl. 427-208.600.

Fischer & Porter Company: *See*—
Schmoock, Roy F., B1 4,420,982, Cl. 73-861.120.

Frappier, David E.: *See*—
Isaksen, Robert A.; Frappier, David E.; and Jones, Wallace R., B1 4,604,302, Cl. 427-208.600.

Isaksen, Robert A.; Frappier, David E.; and Jones, Wallace R., to Excello Specialty Company, The. Method of manufacturing water deflector for vehicle doors. B1 4,604,302, 4-30-91, Cl. 427-208.600.

John Fluke Mfg. Co., Inc.: *See*—
Bhaskar, Kasi S.; Carlson, Alden J.; Couper, Alastair N.; Lambert, Dennis L.; and Scott, Marshall H., B1 4,455,654, Cl. 371-16.200.

Jones, Wallace R.: *See*—
Isaksen, Robert A.; Frappier, David E.; and Jones, Wallace R., B1 4,604,302, Cl. 427-208.600.

Kremkau, William P., to W. R. Grace & Co. Film laminates having a reirradiated layer. B1 4,044,187, 4-30-91, Cl. 428-212.000.

Lambert, Dennis L.: *See*—
Bhaskar, Kasi S.; Carlson, Alden J.; Couper, Alastair N.; Lambert, Dennis L.; and Scott, Marshall H., B1 4,455,654, Cl. 371-16.200.

Schmoock, Roy F., to Fischer & Porter Company. Unitary electromagnetic flowmeter with sealed coils. B1 4,420,982, 4-30-91, Cl. 73-861.120.

Scott, Marshall H.: *See*—
Bhaskar, Kasi S.; Carlson, Alden J.; Couper, Alastair N.; Lambert, Dennis L.; and Scott, Marshall H., B1 4,455,654, Cl. 371-16.200.

Shepard, Howard M.; Barkan, Edward D.; and Swartz, Jerome, to Symbol Technologies Inc. Narrow-bodied, single- and twin-windowed portable laser scanning head for reading bar code symbols. B1 4,845,350, 4-30-91, Cl. 235-472.000.

Swartz, Jerome: *See*—
Shepard, Howard M.; Barkan, Edward D.; and Swartz, Jerome, B1 4,845,350, Cl. 235-472.000.

Symbol Technologies Inc.: *See*—
Shepard, Howard M.; Barkan, Edward D.; and Swartz, Jerome, B1 4,845,350, Cl. 235-472.000.

Virsonic Corporation: *See*—
Curtis, Lawrence A.; and Bonsky, Elmer C., B1 3,723,656, Cl. 379-82.000.

W. R. Grace & Co.: *See*—
Kremkau, William P., B1 4,044,187, Cl. 428-212.000.

LIST OF DESIGN PATENTEES

A-Dec, Inc.: *See*—
Austin, George K., Jr.; and LaPlante, Pierre, 316,600, Cl. D24-14.000.

A-VEDA Corporation: *See*—
Recchelbacher, Horst M., 316,487, Cl. D4-114.000.

Ancona, Bruce: *See*—
Ancona, Jane; and Ancona, Bruce, 316,502, Cl. D7-641.000.

Ancona, Jane; and Ancona, Bruce, to M. Kamenstein, Inc. Wooden gadget organizer. 316,502, 4-30-91, Cl. D7-641.000.

Antonious, Anthony J. Hosel for a golf club head. 316,584, 4-30-91, Cl. D21-221.000.

Apple Computer, Inc.: *See*—
Esslinger, Hartmut H.; Gruenberg, Eric I.; and Stewart, James R., 316,544, Cl. D14-106.000.

Esslinger, Hartmut H.; Gruenberg, Eric I.; and Stewart, James R., 316,545, Cl. D14-106.000.

Arakawa, Eric: *See*—
Skedeleski, David; and Arakawa, Eric, 316,585, Cl. D21-230.000.

Aube, Richard, to Les Entreprises Aube et Khacho Inc. Game board. 316,572, 4-30-91, Cl. D21-34.000.

Austin, George K., Jr.; and LaPlante, Pierre, to A-Dec, Inc. Dental syringe. 316,600, 4-30-91, Cl. D24-14.000.

Azima, Farad, to Mission International Limited. Audio power supply. 316,538, 4-30-91, Cl. D13-110.000.

Azima, Farad, to Mission International Limited. Audio amplifier. 316,553, 4-30-91, Cl. D14-265.000.

Barry, Michael, to Johnson & Johnson Medical, Inc. Soap dispenser or the like. 316,498, 4-30-91, Cl. D6-542.000.

Basin Produce Corp.: *See—*
Walsh, Richard J.; and Waldren, Dale W., 316,515, Cl. D9-423.000.
Beckles, James. Mixed drink machine. 316,567, 4-30-91, Cl. D20-5.000.
Beckman, Wellington E., Sr. Measuring vessel. 316,529, 4-30-91, Cl. D10-46.200.
Bengtson, Alan D.: *See—*
Kohler, Herbert V., Jr.; Reid, Mary J., Sauter, Bruce M., and Bengtson, Alan D., 316,593, Cl. D23-255.000.
Bird, Fiona R.: *See—*
Rue, Peter J.; Spray, Glenda; and Bird, Fiona R., 316,615, Cl. D28-2.000.
Black & Decker Inc.: *See—*
Nusse, Octavio K., and Krause, Wolf-Dieter, 316,506, Cl. D8-30.000.
Blackiston, Lester N. Bait preparation container. 316,589, 4-30-91, Cl. D22-136.000.
Boitani, Maria. Case. 316,482, 4-30-91, Cl. D3-76.000.
Bridgestone Corporation. *See—*
Tsuda, Toru; and Watanabe, Shinichi, 316,532, Cl. D12-147.000.
Brinker, Barry, to 'totes', incorporated. Tread design for footwear. 316,476, 4-30-91, Cl. D2-320.000.
Brown Jordan Company: *See—*
Frimer, Richard, 316,489, Cl. D6-361.000.
Frimer, Richard, 316,491, Cl. D6-379.000.
Brunner, Karen L. T.: *See—*
Brunner, Paul B.; and Brunner, Karen L. T., 316,478, Cl. D2-610.000.
Brunner, Paul B.; and Brunner, Karen L. T. Handwarmer. 316,478, 4-30-91, Cl. D2-610.000.
Cabela's Inc.: *See—*
Highby, Dennis N., 316,588, Cl. D22-107.000.
Cain, Ann S., to 'totes', incorporated. Umbrella handle. 316,480, 4-30-91, Cl. D3-12.000.
Candusso F.lli S.r.l. - Bilicbora: *See—*
Stocca, Sergio, 316,609, Cl. D25-138.000.
Carter, Joseph F.: *See—*
Stewart, John F.; Carter, Joseph F.; Maass, James A.; and Richardson, Russell D., 316,508, Cl. D8-68.000.
Casio Computer Co., Ltd.: *See—*
Ido, Yukinori, 316,557, Cl. D18-1.000.
Cervone, Carolyn M. Display stand for dinnerware. 316,495, 4-30-91, Cl. D6-467.000.
Charet, Pierre; and Kraai, Duke, to Rally Manufacturing, Inc. Combined automobile splash guard and display unit. 316,536, 4-30-91, Cl. D12-185.000.
Chesebrough-Pond's U.S.A. Co., division Conopco, Inc.: *See—*
Wiseman, Kay E.; and Kichenside, Brian E., 316,514, Cl. D9-409.000.
Cheung, Ying S. Combined toothpick and flosser. 316,617, 4-30-91, Cl. D28-64.000.
Chilcutt, Robert W.: *See—*
Kemp, Bert W., 316,504, Cl. D7-649.000.
Child Growth and Development Corporation, The: *See—*
Finiw, Maryann; and Williams, David M., 316,573, Cl. D21-59.000.
Chow, Ivan Y. C., to Maxpat Trading & Marketing (Far East) Ltd. Adjustable colander for steaming food. 316,505, 4-30-91, Cl. D7-667.000.
Clifton, Leyman E. Bow clasp. 316,530, 4-30-91, Cl. D11-202.000.
Coffey, Todd M. Holder for cooking artichokes. 316,499, 4-30-91, Cl. D7-409.000.
Constable, Alan: *See—*
Smith, Martin L.; and Constable, Alan, 316,597, Cl. D23-342.000.
Cooper Industries, Inc.: *See—*

Kee, Peter M. Y., 316,494, Cl. D6-465.000.
Warren, Nancy, 316,575, Cl. D21-68.000.
Roulston, Gary H.: *See*—
Mahaffey, Steven J.; and Roulston, Gary H., 316,583, Cl. D21-214.000.
Rue, Peter J.; Spray, Glenda; and Bird, Fiona R., to Glaxo Group Limited. Tablet. 316,615, 4-30-91, Cl. D28-2.000.
Rust, Z. Lee. Combined portable holder for file and assorted desk articles. 316,565, 4-30-91, Cl. D19-75.000
Sanford, Harry W. Handgun. 316,587, 4-30-91, Cl. D22-104.000
Sauber, Charles J. Ventilator for vehicle bodies. 316,595, 4-30-91, Cl. D23-324.000.
Sauter, Bruce M.: *See*—
Kohler, Herbert V., Jr.; Reid, Mary J.; Sauter, Bruce M.; and Bengtson, Alan D., 316,593, Cl. D23-255.000.
Schadner, Gerhard; and Nordberg, Agneta. Automobile gear selector lock. 316,486, 4-30-91, Cl. D8-331.000.
Scott, Marcia J. Light bulb attachment for supporting scented fragrant oil or the like. 316,612, 4-30-91, Cl. D26-113.000.
Seber, Brett P., to McGuire-Nicholas Company, Inc. Combined nail and tool bag. 316,485, 4-30-91, Cl. D3-105.000.
Seiko Epson Corporation: *See*—
Frenkler, Friedrich F.; Igarashi, Hitoshi; and Isao, Kaneko, 316,563, Cl. D18-13.000.
Hirabayashi, Yoshio, 316,523, Cl. D10-32.000.
Koyabu, Akira, 316,561, Cl. D18-12.000.
Shalvi, Ram, to Solar Wide Industrial Limited. Ultrasonic distance estimator. 316,526, 4-30-91, Cl. D10-70.000.
Sharp Corporation: *See*—
Kosako, Mikio; Hattori, Atsuko; and Mano, Yasuhiko, 316,564, Cl. D18-39.000.
Morooka, Shinichi, 316,598, Cl. D23-356.000.
Ooi, Hiroshi; and Okamura, Sho, 316,554, Cl. D16-202.000.
Ooi, Hiroshi; and Hattori, Atsuko, 316,555, Cl. D16-202.000
Ooki, Mitsugu; Yamaguchi, Kiminori; and Yokoyama, Shinichi, 316,596, Cl. D23-335.000.
Shibata, Yoshinori: *See*—
Fushiya, Fusao; Ito, Katsuyasu; and Shibata, Yoshinori, 316,507, Cl. D8-64.000.
Shichman, Daniel, to United States Surgical Corporation. Surgical vascular clamp. 316,601, 4-30-91, Cl. D24-27.000.
Shirai, Mitsue, to Twin Bird Industrial Company Limited. Clock. 316,521, 4-30-91, Cl. D10-21.000.
Sirois, Michael G. *See*—
Leggate, William E.; and Sirois, Michael G., 316,569, Cl. D20-10.000.
Skedeleski, David; and Arakawa, Eric, to Surfco of Hawaii. Water sport board safety tip. 316,585, 4-30-91, Cl. D21-230.000
Smith Corona Corporation: *See*—
Pierce, Paul M., 316,558, Cl. D18-1.000.
Smith, Martin L.; and Constable, Alan, to Valor Heating Limited. Gass fired heater. 316,597, 4-30-91, Cl. D23-342.000
Sogabe, Takashi, to Sony Corporation. Combined earphone and receiver. 316,550, 4-30-91, Cl. D14-168.000.
Solar Wide Industrial Limited: *See*—
Shalvi, Ram, 316,526, Cl. D10-70.000.
Soledad-Duran, Maria: *See*—
Romero-Comas, D.; and Soledad-Duran, Maria, 316,571, Cl. D20-29.000.
Sony Corporation: *See*—
Ichikawa, Kazuo, 316,551, Cl. D14-205.000.
Sogabe, Takashi, 316,550, Cl. D14-168.000.
Space Adventures, Incorporated: *See*—
Kovats, John J., 316,577, Cl. D21-88.000.
Kovats, John J., 316,578, Cl. D21-88.000.
Spalding & Evenflo Companies, Inc.: *See*—
Mahaffey, Steven J.; and Roulston, Gary H., 316,583, Cl. D21-214.000.
Spina, Charles, to MDT Corporation. Handle for surgery lamp. 316,611, 4-30-91, Cl. D26-113.000.
Spray, Glenda. *See*—
Rue, Peter J.; Spray, Glenda; and Bird, Fiona R., 316,615, Cl. D28-2.000.
Stein, Frank. Light fixture lens. 316,613, 4-30-91, Cl. D26-122.000.
Stewart, James R.: *See*—
Esslinger, Hartmut H.; Gruenberg, Eric I.; and Stewart, James R., 316,544, Cl. D14-106.000.
Esslinger, Hartmut H.; Gruenberg, Eric I.; and Stewart, James R., 316,545, Cl. D14-106.000.
Stewart, John F.; Carter, Joseph F.; Maass, James A.; and Richardson, Russell D., to Cooper Industries, Inc. Airfeed peck drill. 316,508, 4-30-91, Cl. D8-68.000.
Stocca, Sergio, to Candusso F.lli S.r.l. - Bilicbora. Tile. 316,609, 4-30-91, Cl. D25-138.000.
Storey, William R.: *See*—
Tager, Leon H., and Storey, William R., 316,586, Cl. D21-237.000.
Stormby, Nils, to Medscand AB. Cleaning brush for the urethra or the like. 316,488, 4-30-91, Cl. D4-131.000.
Stucky, LeRoy D. Garden sprinkler. 316,590, 4-30-91, Cl. D23-215.000.
Sun, Jam. Paper clip container. 316,566, 4-30-91, Cl. D19-75.000.
Surfco of Hawaii *See*—
Skedeleski, David; and Arakawa, Eric, 316,585, Cl. D21-230.000.
Tager, Leon H.; and Storey, William R., to Poolmaster, Inc. Float with water squirter. 316,586, 4-30-91, Cl. D21-237.000.
Tateco AB: *See*—
Hampf, Jan E. H., 316,549, Cl. D14-159.000.
Teranishi, Hirotomi: *See*—
Faranda, Robert; Teranishi, Hirotomi; and Maurer, Bernard, 316,547, Cl. D14-113.000.
Texas Instruments Incorporated: *See*—
Grimm, Thomas R.; Watts, LaVaughn F., Jr.; and Pope, Hermon L., Jr., 316,543, Cl. D14-106.000.
Times Three Pty. Limited: *See*—
Kounis, James B., and Tully, Zane E., 316,484, Cl. D3-104.000.
'totes', incorporated. *See*—
Brinker, Barry, 316,476, Cl. D2-320.000.
Cain, Ann S., 316,480, Cl. D3-12.000.
Trossman, Martin M., to Quaker Oats Company, The. Floating toy duck. 316,581, 4-30-91, Cl. D21-160.000.
Truth Incorporated. *See*—
Nolte, Douglas A., 316,509, Cl. D3-337.000.
Tsuda, Toru; and Watanabe, Shinichi, to Bridgestone Corporation. Automobile tire. 316,532, 4-30-91, Cl. D12-147.000.
Tully, Zane E.: *See*—
Kounis, James B.; and Tully, Zane E., 316,484, Cl. D3-104.000.
Twin Bird Industrial Company Limited: *See*—
Shirai, Mitsue, 316,521, Cl. D10-21.000.
Uniroyal Goodrich Tire Company, The: *See*—
Hutz, John A., 316,534, Cl. D12-147.000.
Killian, Laurie W., 316,533, Cl. D12-147.000.
U.S. Philips Corporation: *See*—
Van Surksum, Gerrit-Jan, 316,621, Cl. D32-70.000.
United States Surgical Corporation: *See*—
Shichman, Daniel, 316,601, Cl. D24-27.000.
Valor Heating Limited: *See*—
Smith, Martin L.; and Constable, Alan, 316,597, Cl. D23-342.000.
VanHuystee, Maarten W., to Quaker Oats Company, The. Wagon. 316,576, 4-30-91, Cl. D21-71.000.
Van Surksum, Gerrit-Jan, to U.S. Philips Corporation. Electric iron. 316,621, 4-30-91, Cl. D32-70.000.
Varitronic Systems, Inc.: *See*—
Lavander, Nancy, 316,562, Cl. D18-13.000.
Vogeley, James H., to nView Corporation. Computer keyboard. 316,542, 4-30-91, Cl. D14-100.000.
Wada, Yukio: *See*—
Kunimune, Noriaki; and Wada, Yukio, 316,481, Cl. D3-35.000.
Waddell, Robert; and Orser, Roger N. Measuring gauge for wrench sizing. 316,525, 4-30-91, Cl. D10-64.000.
Wagner, John E. Ladder leveling attachment. 316,608, 4-30-91, Cl. D25-68.000.
Waldren, Dale W.: *See*—
Walsh, Richard J.; and Waldren, Dale W., 316,515, Cl. D9-423.000.
Walsh, Richard J.; and Waldren, Dale W., to Basin Produce Corp. Potato carton. 316,515, 4-30-91, Cl. D9-423.000.
Walter Henkels GmbH: *See*—
Holterscheidt, Siegfried, 316,522, Cl. D10-24.000.
Wang, Jui-Shang, to Duracraft Corporation. Portable electrical fan. 316,599, 4-30-91, Cl. D23-378.000.
Warren, Nancy, to Rosalco, Inc. Simulative rocking toy. 316,575, 4-30-91, Cl. D21-68.000.
Watanabe, Shinichi. *See*—
Tsuda, Toru; and Watanabe, Shinichi, 316,532, Cl. D12-147.000.

Watts, LaVaughn F., Jr.: *See*—
Grimm, Thomas R.; Watts, LaVaughn F., Jr.; and Pope, Hermon L., Jr., 316,543, Cl. D14-106.000.
Weidman, Richard C.; and Weidman, W. Jeffrey. Combined shirt and suspenders. 316,473, 4-30-91, Cl. D2-209.000.
Weidman, W. Jeffrey: *See*—
Weidman, Richard C.; and Weidman, W. Jeffrey, 316,473, Cl. D2-209.000.
Werner, John: *See*—
Fuller, Mark W.; Robinson, Alan S.; and Werner, John, 316,574, Cl. D21-59.000.
Wet Enterprises, Inc.: *See*—
Fuller, Mark W.; Robinson, Alan S.; and Werner, John, 316,574, Cl. D21-59.000.
Wetzel, Timothy D., to International Business Machines Corporation. Control unit for electronic cash register or the like. 316,559, 4-30-91, Cl. D18-4.000
White, Frederick E., Jr., to Panduit Corp. Cable tie mount. 316,511, 4-30-91, Cl. D8-373.000
Williams, David M.: *See*—
Finiw, Maryann; and Williams, David M., 316,573, Cl. D21-59.000.
Wilson, Samuel D., Jr. Trolling motor tilt position alarm. 316,528, 4-30-91, Cl. D10-106.000.
Winn, Craig A. Adjustable table lamp. 316,610, 4-30-91, Cl. D26-65.000.
Wiseman, Kay E.; and Kichenside, Brian E., to Chesebrough-Pond's U.S.A. Co., division Conopco, Inc. Combined bottle and cap. 316,514, 4-30-91, Cl. D9-409.000.
Wolff, Martin J., to Dart Industries Inc. Food container or the like. 316,513, 4-30-91, Cl. D9-431.000.
Yamaguchi, Kiminori: *See*—
Ooki, Mitsugu; Yamaguchi, Kiminori; and Yokoyama, Shinichi, 316,596, Cl. D23-335.000.
Yeung, Wai C., to Goly Industrial Company Limited. Combined telephone, digital clock and radio. 316,548, 4-30-91, Cl. D14-144.000.
Yokoyama, Shinichi: *See*—
Ooki, Mitsugu; Yamaguchi, Kiminori; and Yokoyama, Shinichi, 316,596, Cl. D23-335.000.
Yoshino, Hiroyuki, to Kabushiki Kaisha Tamiya Mokei. Toy racing car. 316,580, 4-30-91, Cl. D21-137.000
Yuen, David Y. Shower drain hair-trap. 316,594, 4-30-91, Cl. D23-261.000.

LIST OF PLANT PATENTEES

Bear Creek Gardens, Inc.: *See*—
Kordes, Wilhelm, 7,509, Cl. 18.000.
Kordes, Wilhelm, 7,510, Cl. 21.000
Warriner, William A., 7,508, Cl. 7.000.
Kordes, Wilhelm, to Bear Creek Gardens, Inc. Rose plant Korbolak. 7,509, 4-30-91, Cl. 18.000.
Kordes, Wilhelm, to Bear Creek Gardens, Inc. Rose plant Korxenna. 7,510, 4-30-91, Cl. 21.000.
VandenBerg, Cornelis P., to Yoder Brothers, Inc. Chrysanthemum plant named Dark Yellow Fina. 7,511, 4-30-91, Cl. 74.000.
VandenBerg, Cornelis P., to Yoder Brothers, Inc. Chrysanthemum plant named Donna. 7,512, 4-30-91, Cl. 74.000.
VandenBerg, Cornelis P., to Yoder Brothers, Inc. Chrysanthemum plant named Naomi. 7,513, 4-30-91, Cl. 74.000.
Warriner, William A., to Bear Creek Gardens, Inc. Rose plant Jaccart. 7,508, 4-30-91, Cl. 7.000.
Yoder Brothers, Inc.: *See*—
VandenBerg, Cornelis P., 7,511, Cl. 74.000.
VandenBerg, Cornelis P., 7,512, Cl. 74.000.
VandenBerg, Cornelis P., 7,513, Cl. 74.000.

CLASSIFICATION OF PATENTS

ISSUED APRIL 30, 1991

NOTE —First number, class; second number, subclass; third number, patent number

CLASS 2

1	5,010,589
12	5,010,590
93	5,010,591
	5,010,592
